TRAVELERS TO THE SOUTHWEST! Take the "BEE LINE"—Cleveland, Columbus, Cincinnati and Indianapolis Railway—from Cleveland, Ohio, by way of Crestline, Bellefontaine, Indianapolis, Terre Haute, St. Louis, etc., or by way of Columbus, Cincinnati, Louisville, etc., for all points South or West. PALACE DAY and SLEEPING CARS from Cleveland to Columbus, Cincinnati, Indianapolis and Louisville, without change.
E. S. FLINT, General Superintendent, Cleveland, Ohio.

IOWA FARMING LANDS
THE CHICAGO, ROCK ISLAND & PACIFIC RAILROAD COMPANY
Is now offering for sale to actual settlers more than
500,000 ACRES
of the finest and most desirable Farming Lands in the West.
The lands are chiefly situated along the line of its railroad between the cities of Des Moines and Council Bluffs, and are the most fertile and accessible lands offered for sale at low prices in the State. Prices will range from $5 per acre, the average being about $7 or $8.
Sales are made either for cash, or on short or long time, so as to suit all purchasers. Full warranty deeds given.
EXPLORING TICKETS,
entitling the purchaser of land to a credit of amount paid for fare upon his land, are for sale at the principal ticket offices of the Company.
For pamphlet (with map), or any information regarding the lands, address
J. L. DREW, Land Commissioner, Davenport, Iowa.

KIDDER'S PASTILLES.—A sure relief for ASTHMA. Price, 40c. by mail. Stowell & Co., Charlestown, Mass

AGENTS WANTED FOR

HISTORY OF THE GREAT FIRES

In CHICAGO and the WEST.

By Rev. E. J. GODSPEED, D. D., of Chicago. The record of a proud city overtaken by sudden and awful calamity, of towns destroyed by the wasting element, of forests burned, of homes and farms desolated, of men of wealth made beggars, of families separated. Abounds with thrilling incidents of marvelous escapes, etc., and is the only complete History of these great events. 600 8vo. pages; 50 Engravings; price $2.50; outfit, $1. Secure the best territory at once. 70,000 already sold. The profits go to relieve the sufferers. Address H. S. GOODSPEED & CO., 37 Park Row, New York, or J. W. Goodspeed, Chicago, St. Louis, Cincinnati, or New Orleans.

Agents Wanted, $75 to $250 per month, everywhere, male and female, to introduce the GENUINE IMPROVED COMMON SENSE FAMILY SEWING MACHINE. This machine will stitch, hem, fell, tuck, quilt, cord, bind, braid and embroider in a most superior manner. Price only $15. Fully licensed and warranted for five years. We will pay $1,000 for any machine that will sew a stronger, more beautiful, or more elastic seam than ours. It makes the "Elastic Lock Stitch." Every second stitch can be cut, and still the cloth cannot be pulled apart without tearing it. We pay Agents from $75 to $250 per month and expenses, or a commission from which twice that amount can be made. SECOMB & CO., *Boston, Mass.; Pittsburgh, Pa.; Chicago, Ill.; or St. Louis, Mo.*

Howe's Concentrated Syrup cures Catarrh, Cancer, Scrofula, &c. Howe's Never-Failing Ague Cure and Tonic Bitters. Cure or no pay. Sold by Druggists.

THE "LIGHT RUNNING" "DOMESTIC"

"BEST TO USE." "EASIEST TO SELL."

S. M. Agents: It don't pay you to fight the best machine. Prove our claims. Get the agency and sell it.

"DOMESTIC" S. M. Co., 96 Chambers St., N. Y.

SEND for "THE OMNIUM-GATHERUM." Price 50 cents, post-paid. Address J. T. YARRINGTON, Carbondale, Penn.

ORIENT SAFETY LAMPS,

Entirely of metal, are the only lamps in use which can neither break, leak nor explode. Are ornamental and cheap. Adapted to all household uses; also, to stores, factories, churches, &c.

AGENTS MAKE $10 A DAY SELLING THESE LAMPS.

Manufactured by

WALLACE & SONS,

89 Chambers St., New York.

AGENTS WANTED—BEST TERMS Given for our New and Popular Works, including Bibles, &c. For full particulars, address QUAKER CITY PUBLISHING CO., 217 and 219 Quince St., Philadelphia.

ROANOKE VALLEY, Va.—Farms at great bargains; soil productive; water and timber plenty and good; climate unsurpassed; society excellent. For Circulars, address ENDLY & BOYD, (late of Penn'a.) Christiansville, Mecklenburg Co., Va.

A GREAT CHANCE FOR AGENTS.

Do you want an agency, *local or traveling*, with a chance to make $5 to $20 per day selling our new 7 strand *White Wire Clothes Lines? They last forever*; sample free, so there is no risk. Address *at once Hudson River Wire Works*, cor. Water St., and Maiden Lane, N. Y. or 16 Dearborn St., Chicago, Ill.

A TEMPERANCE LECTURE.

[THE solemn ceremony that taking a drink is likely to become if the adulteration of liquor is continued, as of course it will be.]

Stout Party.—Good-by, JIM!—There's no knowing what it will do to a feller.

Other Party.—Farewell, old chap—farewell!

H.W. JOHNS' PATENTED ASBESTOS ROOFING

First Premium [Medal] awarded in 1870, and Indorsed by Certificate from AMERICAN INSTITUTE *in 1871, as*

"THE BEST ARTICLE IN THE MARKET."

The ASBESTOS ROOFING is not a temporary substitute for a roof, but is a substantial and reliable material, which can be safely used in place of tin, slate, etc., on steep or flat roofs, in all climates, and can be easily and cheaply transported and applied.

☞ Also, manufacturer of ASBESTOS ROOF COATING, ASBESTOS BOILER FELTING, ROOFING and SHEATHING FELTS, BOILER SCALE PREVENTIVE, SILICA and PARAFFINE PAINTS, ACID, WATER and FIRE-PROOF COMPOSITIONS, and Dealer in ASBESTOS, ASPHALTUM and GENERAL ROOFING MATERIALS.

Descriptive Pamphlets, Price Lists, Terms to Dealers, etc., by mail.

(*Established in* 1858.) H. W. JOHNS, 78 William St., New York.

ESTAB. 1809. ENOCH MORGAN'S SONS' SAPOLIO

Office, 211 Washington St., N. Y.

Cleans windows, scours knives and table ware, removes stains and rust, and is the very best thing ever used for *general house cleaning.*

DENSLOW & BUSH'S "SAFETY" OIL

WILL NOT EXPLODE *even if a lighted lamp be upset and broken!* SAFEST AND PUREST OIL KNOWN. *Fire Test guaranteed over* 150°. Used in 100,000 families. For sale everywhere. Dealers address DENSLOW & BUSH, 130 Maiden Lane, N. Y.; 40 India St., Boston; 34 S. Calvert St., Baltimore; 479 S. Canal St., Chicago.

BUILDING PAPER

FOR SHEATHING, PLASTERING, ROOFING, DEAFENING AND CARPET LINING.

Samples and Circulars sent free, by ROCK RIVER PAPER CO., Chicago, Ill.; or, B. E. HALE & CO., 22 & 24 Frankfort St., N.Y. Sole Agents for Eastern States.

MINTON'S ENCAUSTIC TILES, FOR FLOORS.

GARNKIRK VASES, for Lawns and Gardens.

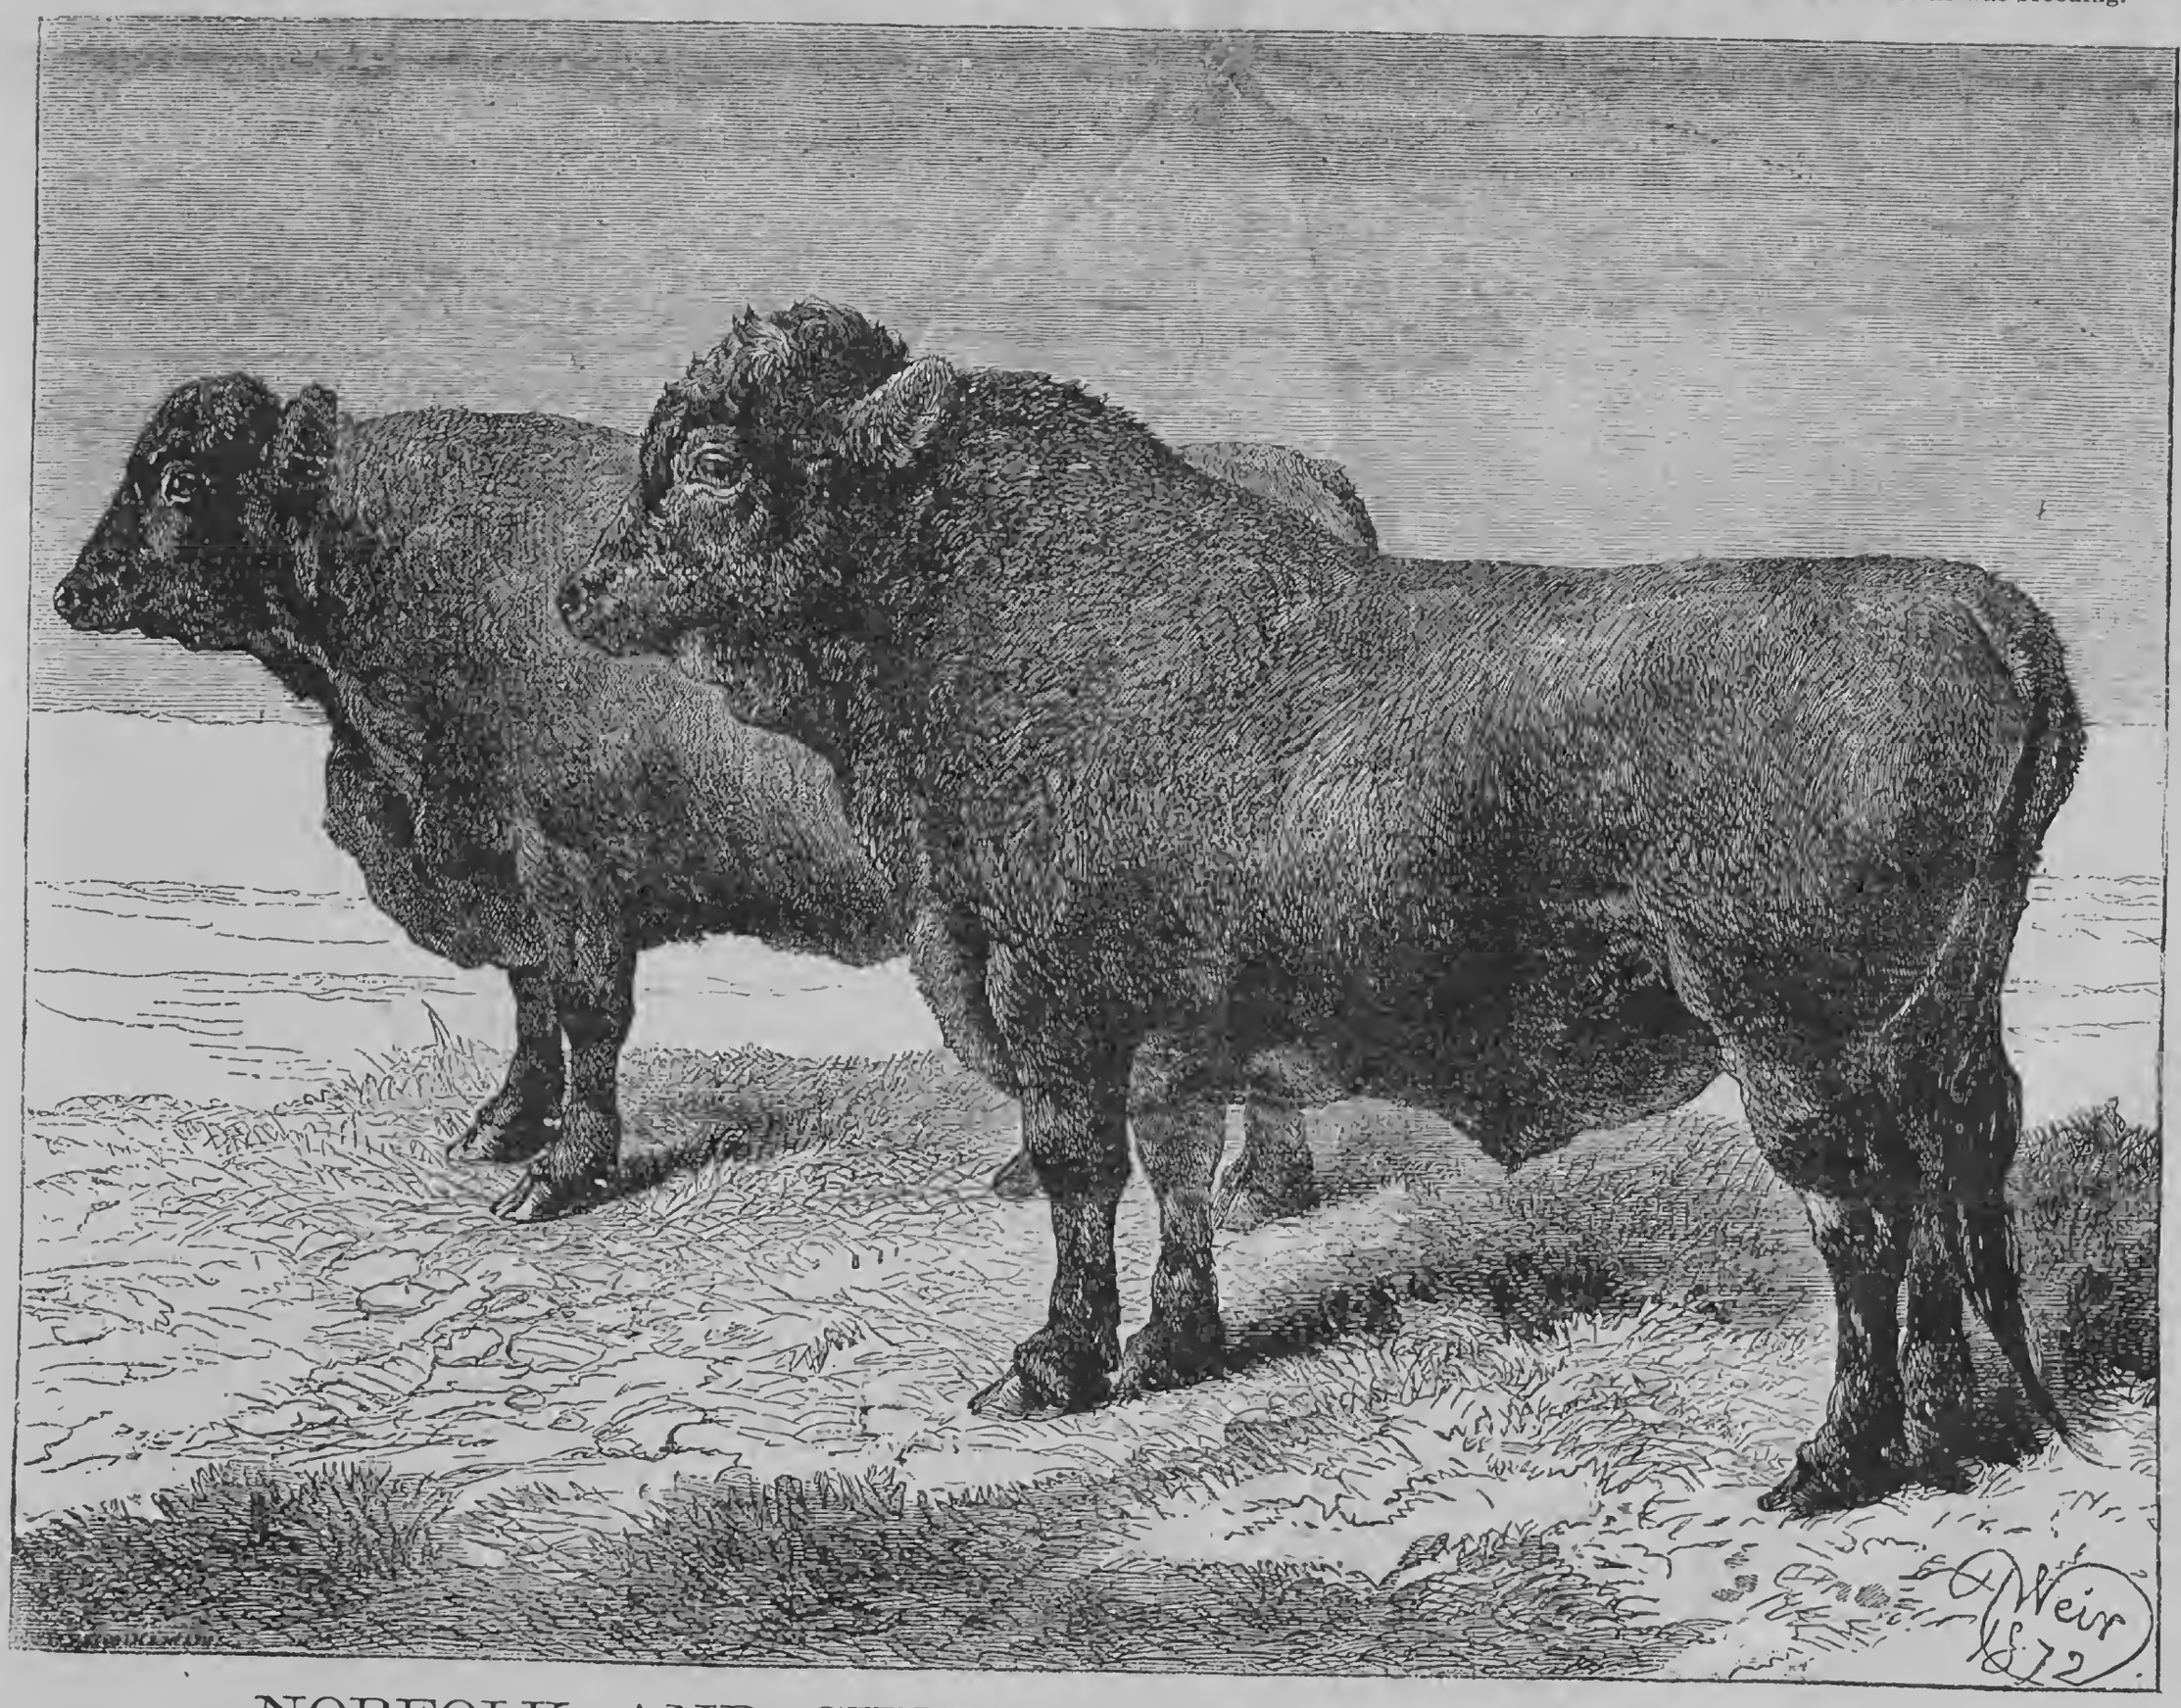
RED POLLED CATTLE.

THE Norfolk and Suffolk Red Polled Cattle are attracting attention. The native cattle of Norfolk are described as a small, hardy, thriving race; fattening as freely and finishing as highly at three years old as cattle in general do at four or five; they are small-boned, short-legged, round-barrelled, well-loined, thin-thighed, clean-chapped; the head in general fine, and the horns clean, middle sized, and bent upward; the favorite color a blood-red, with a white or mottled face. The breed of Norfolk is the Herefordshire breed in miniature, except that the chine and the quarter of the Norfolk breed are more frequently deficient. If the London butchers are judges of beef, there are no better fleshed beasts sent to London market.

THOMAS FULCHER, Elmham, Norfolk, says: — "From a very early period large numbers of polled Galloway cattle were brought into the counties of Norfolk and Suffolk. There can be little doubt that these were crossed with one or other (probably both) the native races, and that thus the present breed of Norfolk and Suffolk Red Polled cattle was called into existence." He does not accept the theory of some that the Norfolk Polls are simply red Galloways. There is a resemblance, the heads of the two breeds being each furnished with a thick tuft of hair, covering the forehead. But the Norfolk tuft is frequently composed of a mixture of red and white hair. More rarely a large spot of pure white makes its appearance in the face. The deep, blood-red color of the Norfolk Polls is, moreover, many shades darker than we have seen in any specimens of the Galloway breed. These two peculiarities go far to support the conclusion we have arrived at—that the old native race had a due share in the concoction of the present breed. As to when this cross was first resorted to, we have no precise information. The Norfolk Red Polled cattle are now bred with more or less care on upwards of a hundred farms in that county. The Norfolk and Suffolk Red Polls are not regarded as distinct. They are of the same type, and, so far as evidence goes, seem to have had the same origin.

Mr. FULCHER says:—"Amongst the good qualities that may be fairly claimed for the Red Polls are hardiness of constitution, enabling them to thrive on scanty pasturage and to withstand the severe winters and piercingly cold springs usually experienced in the eastern counties; their milking properties are unquestionable, and they have not that tendency to go dry which belongs to the Alderney, Ayrshire, and most other breeds having a reputation as dairy cattle. It not unfrequently happens that a cow will continue to yield a good quantity of milk from one calving to another."

What the breed of the present day is like is well described by Mr. J. K. FOWLER of Aylesbury, who, in the capacity of judge at the last meeting of the Norfolk Agricultural Association, held at Dereham, June, 1871, was pleased to say of them: — "He was struck with the remarkable usefulness and value of the cattle of this district; the cows had good, useful udders, so that they were likely to be capital cows for the dairy; while the bullocks had capital chines and good backs, but they were somewhat deficient in the springing of the ribs and in the hind quarters. Amongst the lot they scarcely found an animal that was not fit for a show-yard. As a Short-Horn breeder, he wished he could put some of the good points he found upon the Norfolk Polled cattle on the animals he was breeding."



NORFOLK AND SUFFOLK RED POLLED CATTLE.

Field Crops.

MARKETING VS. HOGGING CORN.

THE marketing and disposing of the immense corn crop grown in the West is one of paramount interest to farmers and, for a starting point, I will say, that it is bad economy to ever sell any of it off the farm without converting it into stock, and thereby saving all the manure possible; but the writer is fully aware that in many localities this is hardly practicable, on account of the large quantities raised and the want of proper feeding facilities, to wit: dry feeding lots, shelter, shade, and good supply of water. Probably the largest return per bushel is realized from feeding hogs, and I am very favorable to "hogging down," as we term it out West; that is, to turn the hogs into the field of growing or maturing corn, about September 1, the size of the field to be in proportion to the number of hogs, say 100 hogs to every 10 acres of corn that will yield 50 bushels per acre. When this is consumed, fence off another like amount, until each hog has consumed about 16 bushels of corn, which we assume, from long experience and observation, will make 150 pounds of pork, gross weight, on an average lot of hogs. When fed in this way, taking present prices, $4.25 gross weight, it will give a return of 39 14-16 cts per bushel. This is being done this year, when corn hauled off to market is only bringing from 30 to 40 cents per bushel, which can only be done in many instances, at an expense of 12 to 15 cents per bushel.

We will now proceed to make safe figures: say you realize only 35 cents per bushel for your corn that you turn your hogs on to eat down, for you will probably have a hog or two to die. One acre corn, 50 bushels "hogged off," at 35 cents, $17.50; expense, nothing; hauled off to market, 50 bushels average per acre, 35 cents, $17.50; stalks worth for pasture per acre, $1, $18.50; expense of gathering and hauling to market, 12 cents per bushel, 50 bushels, $6; net, $12.50.

Summary, 50 bushels hogged off, net $17.-50; 50 do. marketed, net $12.50—difference in favor of feeding to hogs in this way, $5 per acre. What a vast sum this would make, to include all the corn-growing regions—$500 on every 100 acres of corn. "But," says one, "you have not made any allowance for salt, and fencing off the ground, where it has to be done, and pumping water, as this will be necessary in many localities." True, but this is far over-balanced by the deposit of manure left on the fields by the hogs; which, also, is a grand reason for disposing of the corn crop in this way, as none of our ground but will be greatly benefited thereby. I have known fields, very much exhausted, made to produce good crops under this treatment.

We would advise farmers throughout the West to prepare themselves for feeding hogs in this way, by digging wells in suitable places, where they have not got running water; and to have some fencing, that they can move from place to place, as required, and thus maintain, if not improve, the fertility of their soil. We would add, to be sure, to select a good breed of hogs, as it will make considerable difference in the income, if you feed inferior stock.

Now, I know many of your Eastern readers, who cook corn for hogs in cosy pens, and advise feeding hogs on manure heaps, will exclaim:—"Oh, how shiftless! What a waste!" But I think my thoughts will be appreciated by every farmer in the West who rears and fattens 50 hogs and upward, where corn is only worth from 30 to 40 cents per bushel, and labor high; and, although a seeming waste, it is, in fact, scarcely any waste at all.—WILLOW BROOK FARM.

SUGAR BEET CULTURE.

IN a late RURAL NEW-YORKER I saw an inquiry as to what variety of roots is best for milch cows. From an experience of thirty years with different root crops, I have found none that pays me as well as the American Improved Imperial Sugar Beet, all things considered. It yields the most feed per acre, is raised and housed with less labor, is ahead of most root crops from the fact that there are very few fibrous roots—quite an item in cleaning. Instead of their imparting an unpleasant flavor to milk, as is complained of the turnip, I think they are a great improvement both in quantity and quality of milk. As to soil, any land (perhaps green sward excepted) that will produce a good crop of corn or potatoes, will give a paying crop of beets. Still my experience is that the richer the land the larger the crop.

Mode of Culture.—Plow good depth, say any where from eight to twelve inches; harrow fine and mellow. Lay the ground off in fair ridges, from eighteen to twenty-four inches apart; rake down lengthwise so as to leave them about three inches above the general surface; plant the seed so that when the ground or drill is smoothed or rolled, the seed will be one inch under ground; in fact, they are sown after about the same manner as other root crops. As soon as the rows can be seen, hoe them close up to the beet, but lightly. As soon as they are an inch or two high, go through them again, and weed out the rows. The great secret of raising profitably is the same as other small crops, or in fact any crop. Don't let the weeds get the start. When the beets are from four to six inches high, they should be thinned out to one good straight plant to fifteen inches. If the land is quite rich, they grow large and require room; keep them clean from weeds, and it is a pleasure to harvest them.

As the root is half or two-thirds above the surface, I go between two rows, taking them by the tops, and when both hands are full slap them gently together to remove the dirt, break off the tops, and they are ready for the cellar, clean and nice. If suitable care is taken to keep the tops clean, put in snug heaps; they make nice feed for cows when grass is scarce and of poor quality. I consider that the tops pay well for pulling the crop. They should be harvested before the ground freezes; freezing to any amount, hurts their keeping qualities. I got my first seed of ROLLIN LANE, Addison Co., Vt., five years ago this winter. I have yet to find the man who has produced it who has not been satisfied with it as a crop. I have fed about 2 bushels per day all winter to my stock. I feed to all kinds of stock. For sheep, I run them through a root cutter; for cattle, I put them on the barn floor, and with a clean shovel or spade, cut a bushel in about a minute; for horses, feed whole.—AARON A. FISK.

GROWING CARROTS.

IN answer to inquiries about raising carrots, I would say, select a piece of good dry land, suitable for corn, either corn stubble or greensward. Plow in the fall, if possible, or early in the spring. Pulverize thoroughly with cultivator and harrow. Plow again just before planting; manure and work in with cultivator and harrow; mark, for seed, twenty inches apart, leaving drills two inches deep. Soak seed over night in water as hot as the hand can be held in; drain and mix with dry ashes until the seed will separate. Sow about the 10th of May. After sowing, brush a little dirt on the seed. The row should be rolled or stamped hard, leaving the spaces between as light and loose as possible. The carrots (if seed is good) will appear in about ten days, or about two weeks sooner than by the ordinary manner of planting. They should be hoed as soon as they begin to come up. The previous rolling in the row will hold the small plants so that the hoe may cut close without disturbing them. Repeat the hoeing in about a week. The weeds and surplus carrots may now be easily pulled from the rows. Stir the ground often, either with the hoe or cultivator, and dig them out with a good plow, turning them out every other furrow. After twenty years experience I think 1,000 bushels per acre an average crop.

Otsego Co., N. Y. HENRY HOWE.

FIELD NOTES AND QUERIES.

Sprouting Potatoes to Advance the Crop.—The Germantown *Telegraph* says: "Sprouting white potatoes will advance the crop two weeks. They should be cut so that about two eyes are allowed to each piece, and these should be planted in hot beds with very thin covering of soil; or it is better to plant in boxes and set these in a hot bed, so that after they are properly sprouted they can be at once carried to the place of planting. If the nights should be anyway cold, protect with thin covering of straw when the plants make their appearance above ground. Some persons who want a large quantity sprouted, cut the potatoes as desired, and spread them on boards, boxes or crates, in a dark place, and when sprouted, say from an inch to an inch and a half, expose them to the light, moistening two or three times a week with tepid water. They should be planted out so that there is not more than two inches of soil over the top of the sprouts."

Fowl Meadow-Grass on Wet Land.—I have got some swamp land that forty years ago was an open cranberry marsh; but lately it had grown up to a thick growth of bushes. Last Summer I cut the bushes and burned them off. It is covered with a coat of roots and wild grass, and is so soft I can easily run a pole down ten feet. Now, I wish to ask if any one can tell me whether I can sow fowl meadow grass seed on it, and have it catch and grow? If so, where can I get seed, and when sow?—L. A. BURROUGHS, *Geauga Co., O.*

IT will grow; sow at once if water does not stand on it. We do not know where the seed can be obtained, but presume of any seedsman.

Result of Selecting Corn.—HENRY KLIPERD, Clinton Co., Ohio, sends us a few kernels of what he calls "mammoth yellow corn." These kernels are, certainly, splendid. He obtained it, he says, by planting large kinds of corn mixed together; then selected the finest ears to plant for a number of years, until he has what he asserts to be "A No. 1 variety of corn." He selects the best ears, and the best grains out of the middle of these best ears for planting.

Applying Hen Manure to Corn.—S. SHERMAN is informed that we should mix about ten bushels of gypsum, or plaster, with the thirty bushels of hen manure, and drop a small quantity of it in the hill, hauling the earth slightly over the manure before dropping the corn. Or, if you have much that has been exposed to frost the past winter, mix it in equal quantity with the hen manure, and apply in the hill.

Bresee's Peerless Potato planted by A. G. T., Factoryville, Pa., beside King of the Earlies, Early Mohawks, Early Rose, Excelsior and Bresee's Prolific, No. 4, yielded (in 1870) 40 pounds for each pound planted, the most prolific of the other varieties, (Excelsior) yielding but 23 pounds. In 1871 he planted 30 pounds of Peerless and the product was 21 bushels.

Remedy for Cutworm in Corn.—The Practical Farmer says:—"After the corn is dropped and covered, and *before* it is up, apply on the surface of each hill, about one tablespoonful of ground salt. Unless it is carbolic acid, nothing makes worms squirm like salt."

Sheep Husbandry.

NOTES AND QUERIES.

Liquid Soap for Cleaning Wool.—An excellent liquid soap, for cleaning and washing raw wool, according to Moser, may be prepared by using a kettle in which the mass can be heated, by means of a steam tube opening directly into it. The kettle (holding 150 gallons) is first to be half filled with water, which is then to be heated, and 68 pounds of caustic soda of 42° (B), and 125 pounds of oleine added to it. This soap is to be boiled thoroughly for twenty or thirty minutes with continued stirring, and is then ready for use, forming a very homogeneous, so-called, soap-glue, of a sirupy consistency, and especially adapted for washing wool. Should the soap be required for fulling, an addition of some ammoniacal salt will be of advantage, to be introduced immediately before using. Instead of caustic soda, which it is sometimes difficult to obtain, we may use ordinary soda salt, which is to be rendered caustic by leaching through freshly burned and slightly moistened lime. Even ordinary potash lye, obtained from ashes, mixed with fresh quicklime, can be employed in this preparation.

Foot-Rot in Sheep.—I have tried this with success:—Whenever the disease appears let the feet be washed and the hoof pared off as much as possible (and not cause it to bleed), and let the sheep stand upon a dry stable floor, sprinkled with lime, for four hours. After this keep them in a dry pasture, and there will be no further danger.

Or, after the foot has been pared, apply spirits of turpentine and blue vitriol, in equal parts. bind a cloth over the foot, and let it remain four days. Sheep that are diseased should be kept separate from the flock, as the disorder is infectious.—E. F. W., *Hardin Co., Iowa.*

Ewe with Diseased Tail.—I have a ewe in my possession which has got a hard substance in her tail, which appears like a worm to me. Her tail, which was formerly fat, has dwindled away to almost nothing. It also causes her to scratch very much. Will you or some of your readers tell me the cause of it, and what will help it?—W. H. H., *Newburgh, N. Y.*

Industrial Topics.

FARMER GARRULOUS TALKS.

OUGHT a man to be knighted who suggests something new, Mr. Editor? At any rate, it strikes me I have something new. Every man and woman loves distinction—don't they?—of some sort. How hard men will work to get the prefix "Hon." before and A. M., D. D., LL. D., etc., for a suffix to their names. Don't we poor plodding farmers need some such professional stimulant, I wonder? I believe so! Look how Emperor WILLIAM of Germany is distributing his cast-iron crosses to his soldiers. True, they are of no intrinsic value, since iron is so cheap! But they mean something. Look at the significance attached to a simple ribbon worn in some of the courts of Europe. They are passports to favor when worn—they are insignia of the distinction of their wearers as *doers*.

Now, why should not the Government, through the Department of Agriculture, or the respective States through their respective Boards of Agriculture, distinguish Agriculturists who really merit it or who may hereafter reach, or rise above, a fixed standard of excellence, by some such insignia? Wouldn't it be better than giving medals to stallions and bulls, and diplomas to washing machines and churns? Shouldn't we honor men for what they *do*, *pro bono publico*, rather than attach blue, red, yellow and white ribbons to cows' horns, long carrots, beehives and butter tubs? These last are getting to mean little, because they are too easily obtained. Let us devise something worth working for, and for which whoever wins *must work!*

My Hired Man.

HIS name is JOHN. He is a model. He can be trusted to put up bars, or shut a gate, or put a tool in its place, or pick up a piece of board, a fence stake, a rail, and set it up where it will not be in the way; or to milk a cow without bawling at, or kicking, or pounding her with a milking stool; or to plow, with an excitable team, a stony, stumpy piece of land, without jerking or screeching at the horses, or tearing the plow to pieces; or to saw a board, without running the saw into an old nail; or to plow an orchard, without barking the trees; or to drive a mower without falling off his seat, and losing a limb in the midst of hay harvest; or to pass under my specimen pear trees, and among my specimen grape vines, without plucking the fruit I want saved; or to plow the garden without rooting up my wife's favorite dill, or my daughter's patch of pansies; or to pitch manure all day without breaking my favorite fork; or to haul manure, without running the wagon over and breaking my hoe handles; or to plow corn without destroying two or three rows in turning; or to feed my pigs and calves at the right time, and the right quantity, when I am absent; or to do his level best at any work I set him at, even if my eye is not on him; or to wait on the women folk without scowling or grumbling; or to wash the wagon, and grease it, when it needs it; or to put the right harness in the right place; or to drive a nail where and when it needs to be driven, and fasten a nut when it is loose; or to look after young lambs when it is wet and cold; or watch a cow soon to calve, and provide her a quiet and secure isolation; or to destroy foul weeds wherever he sees them; or to open the mouth of a drain when it is closed; or to lay up a fence properly which the wind has leveled; or to go of an errand, and waste no time in idle gossip; or to know family secrets and keep his mouth closed; or to go into the cellar for cider without leaving it running from the faucet; or go fishing or hunting and be back by "cow time"; or to deliver a message to a third person correctly; or to get my mail without tearing the wrappers all off the papers, and studying the postmarks on the letters; or to stow away the most hay or grain in the smallest space; or to blanket and water a team at the right time; or to take off and save a loose horse-shoe; or to select seed corn at husking; or to weed onions and carrots without complaining of the backache; or clean his boots before entering the house, and his finger nails before sitting at the table; or to receive a direction without expressing an opinion until it is asked; or to do what I ask him to do, and in the manner I tell him to do it.

Such a man is JOHN; and such are a few indices of his merits. Sometime I'll tell you what makes him a Model Hired Man—that is, what has conspired to produce such a phenomenal creature in these days of degeneracy.—FARMER GARRULOUS.

Farm Economy.

UTILIZING BONES.

DR. NICHOLS gives the following interesting information, based on actual experiment, in the Journal of Chemistry. It is so specific and detailed, we print it: If a farmer has collected a pile of bones which he desires to fit for plant food, he can accomplish the end in two or three different ways: 1st, by dissolving them in sulphuric acid in the raw condition; 2d, by dissolving after burning to whiteness; 3d, by dissolving them in connection with caustic lye from ashes and soda.

Bones cannot be dissolved in acid economically, unless they are reduced to a fine powder. Pounding them into small fragments will not do, as but a part of the bone substance can be acted upon by the acid when fragments are submitted to its action. An insoluble coating of sulphate of lime forms around each fragment after the first action of the acid, and this arrests further decomposition. As a matter of experiment, we have submitted powdered bones to the action of strong and dilute acid, for six months, and the solution at the end of that time was far from being complete.

Raw bones are very difficult to grind in any mill accessible to farmers, and therefore it will be best, if it is desired to make "superphosphate," to construct a kiln of stones, throw into it the bones, along with sufficient wood to kindle them; and, by igniting the wood, the bones will readily take fire and burn to whiteness. In this state they are brittle, and can be ground in a bark, plaster or grist-mill. The organic matter, or the gelatine, is destroyed in this process, and the bones lose about twenty-seven per cent. in weight.

To convert the bone ash into superphosphate, procure two or three good sound molasses casks, divide them in the middle with a saw, and into each half put two hundred pounds of the powder moistened with a couple of buckets of water. A common hoe may be used to turn over and mix the powder and water, and also it may be used to stir up the mass after the acid is added. Oil of vitriol or sulphuric acid should be purchased in carboys, and the common commercial strength is suitable, that of specific gravity, 1.70, or 140° Twaddell. A stone pitcher holding a gallon is a suitable vessel in which to receive and measure the acid; and in turning it out of the carboy, do not be nervous or act in a hurry. Turn it out gently, and be careful that it does not spatter upon the face or clothing. Place the carboy upon a low box, remove the stopper, and, tipping the vessel, allow a small, smooth stream to fall into the pitcher. The two hundred pounds of bone powder will require the entire contents of the carboy of acid; in fact, a little more is needed to produce perfect decomposition. A carboy holds about one hundred and fifty pounds, and one hundred and seventy-five will be appropriated by the bone if the action is perfect and entire. The contents of a carboy, however, have answered in our experience. The acid must be added gradually, one gallon at a time, stirring with a hoe, and waiting for the effervesence to subside before more is added. In a few hours the action will be over, and a liquid resembling water will be seen floating upon the top of the powder. This liquid is excessively sour, being free phosphoric acid, holding a little soluble lime in combination. Many who have tasted of this liquid have supposed that it was uncombined oil of vitriol, and fearing that it would burn up the crops, have been afraid to use the mixture.

To dry this pasty mass so that it can be pulverized, is the most troublesome and protracted part of the labor. Superphosphate should be made by the farmer in the summer after hoeing, when the weather is warm. He should provide twenty or thirty rough, shallow boxes, in which the moist mass can be placed and put in the sun to dry. They can be taken under cover in wet weather. Before drying, a barrel of sifted loam should be mixed with the bone paste, and thoroughly worked into it. This greatly facilitates the drying process. When the mass is dry it can be pounded fine with a mallet, or it can be ground in any kind of a mill. The powder thus manufactured is most excellent, and when further diluted with two more barrels of dry soil or loam, is equal to the best superphosphate found in the market. A handful put in each hill of corn or potatoes at time of planting will give fine results. This superphosphate must not be mixed with lime or ashes, as from their action it will undergo decomposition, and new salts will be formed. It may be mixed up with dry fish pomace, and form a very perfect and excellent fertilizer for all kinds of crops.

The manipulation described above is adapted to the preparation of superphosphate from ground raw bones. The only variation is in the amount of acid needed. For raw bone powder, only half as much acid should be used, or six gallons for a barrel of bone dust. The processes for its manufacture are the same.

Bones may be dissolved in moistened wood ashes, if care is taken to bring them completely under the action of the caustic lye. To accomplish this, it is necessary to break the bones into fragments and pack them in a tight, shallow box with an equal weight of good, sound wood ashes. Mix with the ashes, before packing, twenty-five pounds of slaked lime and twelve pounds of powdered sal soda (carbonate of soda) to every one hundred pounds of the ashes. The box in which to conduct that process may be made of rough boards, but it must be tight, and it should not be over eighteen inches deep. It may be as broad as necessary. The bones should be packed in layers; first upon the bottom a layer of ashes, then a layer of bones, and so alternately until the box is filled. About twenty gallons of water must be poured upon the heap (that is, for every one hundred pounds of bones) to saturate the mass, but more may be added from time to time to maintain permanent moisture. In three, four, or six weeks, the bones will be broken down completely, and the whole may be beaten up together, after adding an equal bulk of good sifted soil. This compost is of the highest efficacy, as it embraces all the great essentials of plant food, namely, potash, soda, lime, phosphoric acid, and the nitrogenous element. This is a very convenient way for farmers who have ashes to dispose of their store of bones. If plenty of ashes can be procured, it will facilitate the decomposition of the bones to employ twice as much ashes as there are bones; the solution will be effected sooner, and more perfectly.

If powdered bones are employed, a barrel of the powder may be mixed with a barrel of good ashes, and the whole turned into the half of a molasses cask, moistened with two bucketfuls of water, and stirred up well with a hoe. In a week this will be ready for use, and it forms a most efficient and convenient fertilizer for all the cereal crops. We think it does more for corn, in giving plump, full kernels, than any concentrated fertilizer we have employed. A handful is enough for a hill, put in at time of planting. Before dropping the seed, a little earth should be kicked over the powder, so that it may not come in direct contact with it.

ECONOMICAL NOTES.

Draining a Blue Clay.—There are two good ways of doing this. If the subsoil is uniformly blue clay, and the area to be drained large, the most economical way of draining it is by the use of a mole-ditcher, such as have been extensively used in Ohio and Illinois. If you have abundance of stone, a well laid stone drain, in a blue clay soil, will last a life-time nearly, if it is laid three to four feet deep, as it should be. The costliest and best drain is a tile drain. This, in answer to E. B. E., who, if he has much draining to do, will do well to read French's Farm Drainage, price $1.50.

Leachy Land.—Whether sandy land leaches or not, depends upon the purity of the land. Pure white lake sand will allow water to pass through it without filtering it. But if charcoal, or muck, or loam is added to the sand in sufficient quantity, any liquid manure passing through will lose its color. Sow clover on sandy land, and plow the first growth in, and the sand is supplied with a substance which absorbs fertilizing materials suspended in water, or liquid manure. Clover supplies carbon to the soil as well as nitrogen.

To Kill "Live-Forever."—W. W., *Yorktown, N. Y.*, asks if he can "kill a patch of 'Live-Forever' by covering it thickly with straw, or is there some easier method?" Yes, you can kill it if you put on straw enough to prevent growth, and if you've the straw, that is, perhaps, the easiest method.

Coal Ashes will not, we think, prevent worms working on gooseberry bushes. But the ashes will not harm the bushes, especially if the soil is a stiff clay, provided they are well mixed with it.

Killing Couch Grass.—C. L. B,, says he has known couch grass destroyed by pasturing it with sheep three or four years.

Industrial Traveler.

COLUMBIA, SOUTH CAROLINA.

Horticulture and Vegetation Letter from Geo. Ellwanger.

DEAR RURAL:—I have been sojourning in this beautiful city of the South for the past month, and presume a few horticultural items from this region will be acceptable to your readers. The wide streets, shaded with noble trees, first attract the stranger's attention. The projectors of Columbia must have been men of taste and liberality. The streets are 100 feet wide, and originally had a triple row of trees, mostly Oaks, with some Elms, which are now full-grown. The center row in many of the streets was destroyed during the war. I have never seen in any city trees so uniform in size and beauty.

About 1,400 houses were burned during the war, and notwithstanding this extensive destruction many fine residences and gardens still remain. The wealthiest citizens occupied a square of four acres; others from one to two acres, giving plenty of room for gardens.

The streets are clean and dry, even after a heavy rain, followed by an hour of sunshine. The climate, during the spring months, is delightful, and, I think, preferable to that of Florida, it being drier, with a clear sky and pure atmosphere.

A great consideration in favor of this place, in addition to its pleasant climate, is its easy access from New York.

The soil is generally sandy, with often a mixture of clay and sand, and is well-adapted to all kinds of fruit trees, particularly peaches and pears; but with the exception of a few trees in private gardens, no attention is paid to fruit culture.

All the apples in market come from the North, mostly Baldwins; price per barrel, $4 to $5. Summer apples could be grown here, and Winter apples in the northern part of the State. Where apples succeed well, I have no doubt that an apple orchard of ten acres might be made more profitable than a cotton plantation of one hundred, or even two hundred acres, with the present material and price of labor.

The farming-lands here are worn out with constant cropping of cotton, and the long continued use of *Phosphates* seems to be as detrimental to the land as unsuitable food to a dyspeptic stomach. People here do not seem to know the value of stable manure and compost; and vegetable matter which could easily be obtained from the woods, is seldom or never used. Clover in many places could be grown advantageously. Oats and rye can be grown all over the State for green crops, and plowed under for enriching the soil at less cost and with better results than with the use of special manures.

JOHN A. CRAWFORD, Esq., one of the leading bankers before the war, although over 75 years of age, is as devoted to his garden of plants as ever, and his large plant houses still contain some interesting specimens. He lost nearly everything by the war, except his home, good name, and taste for horticulture.

The following, in his garden, I think are worthy of note—viz.:—*Gardenia Florida*, 7 ft. high, and 12 ft. wide at base; Tree Box, 18 ft. high, 9 ft. at base; *Euonymus japonicus*, 15 ft. high, 9 ft. at base; *Magnolia purpurea*, in full bloom, 16 ft. high; also *M. Santaugeana*, about the same size; English Laurel, 30 ft. high; *Petosporum*, about 10 ft. high, and as broad; a White *Banksia* Rose covers one side of a large, three-story house. In his front garden are some very old pear trees, mostly Dutchess, producing fine large fruits annually.

The "Wade Hampton Place," now owned by Gen. PRESTON, before the war was rich in plants and trees. The Conservatory and Vinery were destroyed, and the once famous garden has been neglected. The garden (four acres, in a square) is enclosed with a brick wall 10 feet high, Among some fine specimens are the following—viz.:—*Cedrus Deodora*, 40 ft. high, and branches at the base 30 ft. broad; *Librocedrus decurrens*, about 40 ft. high; Camellia (single), 10 ft. high, and about as broad at the base—this plant stands the winter well here; *Pinus excelsa*, 30 ft. high, richer and more silvery in color than at the North.

Mrs. LYONS' garden also contains some interesting specimens of the above. One noble *Magnolia grandiflora*. Among a collection of pear trees here, I noticed one in bloom with full-grown foliage, three weeks before any of the other varieties showed any sign of new growth. The owner of the place being absent, I obtained no information in regard to it.

Early flowering shrubs have been in bloom over three weeks, yet the season is nearly a month later than usual. Roses flourish exceedingly well here, and often grow to a very large size. A yellow Banksia Rose now coming into bloom in the garden of Col. CHILDS, covers about 50 square feet of his house.

The weather is charming, and has been for the past month, and with sufficient rain, vegetation is now coming forward very rapidly. G. E.

Columbia, S. C., April 3, 1872.

The Apiarian.

TRANSFERRING BEES.

At the meeting of the Northeastern Bee Keepers' Association "the best method of transferring combs from box hives to movable comb hives" was discussed. Captain HETHERINGTON said he had had much experience in this. The hive that contains the swarm to be transferred is inverted, and a box nearly the size of the hive is placed over it. The bees are then driven from the hive to the box. After the edges of the comb are cut loose from the hive, the sides of the hive are split into small pieces and removed, which leaves the comb standing on the hive-top. The comb is then fitted into the frames and held in place by thorns of the red haw until such time as the bees shall fasten them. He transferred the swarms at all seasons of the year. Mr. HETHERINGTON said he had tried two or three other methods, but he found this one the most successful.

Mr. QUINNY had adopted another method. He took the hive to be transferred in the latter part of April, and placed it in a room with all the windows darkened save one. When the bees are driven out, they explore the room as if it were a new country, and then the process is as before. Instead of thorns, he had used wooden sticks, but the bees endeavor to eat them away. In transferring the comb, the drone comb should be thrown away. It had been recently settled that an egg laid in a drone cell would produce a drone; that the same egg in a worker cell would produce a worker.

Mr. SISSON said that he had known drones to come from worker cells. He had experimented upon the matter. He thought that it was a part of the bee nature that made drones a neccessity in the hive. Capt. HETHERINGTON had something to explain in regard to that circumstance. Queens gradually become barren. He had kept track of one for five years. He observed that she was laying fewer and fewer eggs, and many of them became drones.

Mr. SISSON said the result of this experiment was not the rule but an exception. The rule might generally hold good. He came back to the subject under discussion with an explanation of his manner of transferring. His frame was without a bottom piece, and without braces. The honey was retained in place by a block of wood placed in the middle of the frame, and suspended from the top, and the sides of the frame were narrower than the comb, so that the latter was built around it. When the frame was removed from the hive he rested it in a box similar to the hive.

Mr. CLARKE advised every one to abstain from transfer near or at evening time. The bees are then stupid and difficult to manage. The best time to transfer is between breakfast and afternoon on a warm day.

BEE NOTES AND QUERIES.

How to Get Rid of Fertile Workers.—Mr. Cox says:—"You can always tell the presence of fertile workers by the irregularity with which they lay their eggs, placing them any place in the comb, instead of near the center, as the queen does. Recommends taking out the frames, shaking off bees into the old hive, putting these frames then into a new hive, and setting this new hive in the place of the old one. Take old hive away."

Overstocking the Country with Bees.—At the Iowa Bee-Keepers' Convention this matter was discussed. The possibility of overstocking was considered; but Mrs TUPPER was not afraid to try 1,000 swarms per square mile.

The Red Ant and Bees.—Dr. OVERMAN destroys the ant by sprinkling a solution of carbolic acid and water on their nests. Mr. Cox drives them away with tansy. Ashes and oil were also recommended.

Arboricultural.

FULLER ON FORESTRY.

THE New York State Agricultural Society submitted certain questions to ANDREW S. FULLER for answer. The first was:—"What kinds of timber yield the greatest profit to foresters?"

Mr. FULLER said, in a paper read before the Society, to answer this question in a general way I would say deciduous trees, evergreens requiring greater age before becoming available for the purposes for which the timber is used. The next question which would naturally arise would be, for what purpose the timber was required? Hoop poles in some portions of the country would yield a greater profit and be produced in less time than any other kind of timber. In other localities where this article is not in demand, timber required for railroad ties might be the most profitable, such as larch and chestnut, both being among our most rapidly-growing and durable timber. The locust tree should certainly be added in regions where the "locust borer" does not attack it.

"What length of time elapses between the planting of the seed and maturity of the tree for cord wood? and how long between the planting of the seed and maturity of the tree for timber?"

Maples.—to these the reply is:—The Silver Maple (*Acerdasy carpum*) is one of the most rapidly-growing trees we possess, and is adapted to the climate and soil of this State. Its seeds ripen in June, and if sown immediately and covered lightly, seedlings two or three feet high may be produced the first year. The following spring they should be transplanted into nursery rows about four feet apart, and the trees twelve to eighteen inches apart in the row. At this distance eight to ten thousand trees can be set on an acre. The trees should be thinned out annually until those remaining have sufficient room to mature. I have raised this species of maple, from seed, which at four years old were four inches in diameter at the base and fifteen feet high; at ten years of age a foot in diameter and sufficiently large to be cut into cord wood. It is true that the wood is not so valuable as the sugar maple or hickory, but it can be produced in less than one-half the time.

It will require fifteen to twenty-five years to produce trees large enough to be hewn or sawed into lumber which will answer for the frames of barns or other buildings. Another merit of this species of maple is its adaptation to dry as well as moist soils, growing rapidly even on sandy plains.

The Red Maple (*Acer, rubrum*) ripens its seed at the same time as the Silver Maple, and both need the same treatment, but the former is not so rapid a grower, and requires a rich, moist soil. The timber is similar, but of the two trees the Silver Maple is far preferable for cultivation.

The Sugar or Rock Maple (*Acer saccharinum*) is certainly one of our most valuable forest trees. The seed ripens in autumn, and although they may be sown at this time, I have found that mixing them with sand and keeping them in a moist, cool position until spring is a better way. If sown in autumn the earth is likely to become so hard and compact over them that a portion at least will fail to break through. They should be sown in nursery rows and transplanted when one or two years old

To avoid repetition allow me to be a little more explicit in regard to transplanting seedlings. All seedling fruit or forest trees should be transplanted while young as a a hastening process, as well as to insure safe removal in later years. Transplanted seedlings grow more rapidly than untransplanted, and when the operation is properly performed a tree will be as large in ten years as it would have been at twenty if allowed to remain where the seed was sown or naturally grew as it fell from the parent tree. I do not know of any exception to this rule for the hickory, butternut, and black walnut, which are generally considered difficult trees to remove. If transported when one or two years old, and deprived of the greater portion of their tap-root, they will throw out numerous side or lateral roots, which not only causes vigorous growth but insures success in transplanting. One of the most erroneous theories ever promulgated is that a tree will grow more rapidly and remain healthy longer if it is never meddled with from the time the seed is placed in the earth. Such a theory belongs to the barbarian, and non-progressive ages, and not to the nineteenth century.

But to return to the tree under consideration. The Sugar Maple is comparatively a slow grower during the first half dozen years from seed, but after it gets well established it makes a rapid growth. If cultivated for fuel or for sugar the trees should be given an abundance of room, because the roots will naturally extend to a considerable distance laterally. From my observation and acquaintance with this tree I think that twenty-five years are required to produce specimens large enough for cord wood or available for sugar.

Hickories.—There are such a number of species of the hickory, all of which are not adapted to the same kind of soil, that some care will be necessary in making a selection for plantations. Some of the species appear to succeed best upon a rather light or open, porous soil, such as sandy or stony ridges and deep declivities; while others, like the common shell-bark hickory (*Carya alba*) and the bitter-nut (*Carya amara*) prefer a moist, rather compact soil. They are all naturally very slow growing trees; but with cultivation and proper pruning, timber large enough for making farm implements can be produced in fifteen or twenty years. There is one thing to be said in favor of the hickories which is applicable to but few other native trees, and it is, that the first cutting of a hickory forest may be made available for hoop-poles; and if they are removed at the proper season, the stumps throw up sprouts which will grow so rapidly, that the check in growth is scarcely perceptible after a few years.

The Ash.—The remarks that I have made in regard to the hickories are equally applicable to the different species of the ash. The white ash (*Fraxinus Americana*) and blue ash (*F-quadrangulata*) are the two most valuable native species for cultivation upon moderately dry soils, while the green ash (*F-verdis*) and black or water ash (*F. sambucifolia*) are more suitable for low, wet soils. The first two are trees deserving of special attention, on account of their valuable timber for all kinds of agricultural implements. The seeds ripen in autumn, and should be treated the same as other kinds which ripen at this season. The young seedlings produce a great number of small fibrous roots, and consequently are easily transplanted without danger of loss. The trees grow more rapidly than the hickory, and arrive at an available size in less time.

The Elm.—The two most valuable Northern species of the elm are the white, or weeping (*Ulmus Americana,*) and corky white elm (*Ulmus racemosa*). These trees are more valuable while young, in comparison to the amount of wood produced, than when old or very large. When small the trees are valuable for hoop-poles, and at the age of ten to twenty years their stems are in great demand for wagon hubs and other purposes where a very tough timber is required. The seeds ripen with the silver and scarlet maple, or a little earlier, and should be treated in the same manner. There is no tree more readily propagated or more satisfactory in growth than our common weeping elm, as it will flourish on almost any soil which is not too dry.

BEAUCARNEA RECURVATA.—[See Next Page.]

Black Walnut.—This is a valuable tree, but its timber is not available until of great age, at least not for the purpose to which it is generally applied. From thirty to fifty years are required to produce black walnut lumber suitable for cabinet work. The tree, however, should not be neglected even if no immediate profit can be expected from its culture, for a few specimens, interspersed here and there among other species, would always enhance the prospective value of a plantation; and I am not certain but a black walnut plantation would be a good investment, and, like Government bonds, payable many years hence at a low rate of interest, would always command purchasers at par, if not above.

There are several other species of native forest trees that might be placed in this list of trees chiefly valuable when of large size, such, for instance, as the white wood (*Liriodendron tulipifera*), basswood or linden, beach, birch, and butternut. But if we are to cultivate trees it is useless to spend time upon inferior kinds.

The Chestnut.—I might have placed this tree higher up on the list of valuable trees, but it is so well known that there is little danger of any one mistaking its position. In rapidity of growth upon dry soils it has few equals. Ten to twenty years are necessary to produce trees from the seed of a size large enough for fence posts or rails, and about twenty to twenty-five for railroad ties.

The European Larch.—Considerable attention has been given to the culture of this tree in the past few years, and from present indications it will prove to be as valuable here as in Great Britain, where many thousands of acres are now covered with larch forests. The tree grows so rapidly that timber large enough for railroad ties can be produced within twenty years from planting. For the first few years the seedlings require careful culture.

Trimming Trees.—"Should trees be trimmed or left untrimmed on plantations? If they should be trimmed, what is the best method?"

I should as soon adopt the system of non-cultivation as of non-trimming of trees. Branches that are carefully cut off close to the main stem, are not nearly so liable to decay and disease the whole tree, as when left to die and drop off naturally. Besides this, when a proper system of pruning is pursued, all the vital forces of the tree can be directed into channels leading to desired results.

It would be difficult to lay down any set of rules as the *best method* of pruning, because different species as well as individual specimens of each may require special treatment. For instance, certain specimens may become stunted and dwarfed in growth, and the best method of restoring vigor would be to cut the stem down to its very base, depending upon a chance shoot from the root for the future tree. In cultivating or in restoring plantations of oaks, hickories, and chestnut, this is often practiced with the best results. Pruning will often do more toward increasing the growth of a tree than the best of culture. Again, the method of pruning would have to be varied in accordance with the form desired in the trees. If a tall, slender stem was of more value than one of less hight and greater diameter, then the trees should be planted nearer together, and the lower branches removed as rapidly as possible without checking growth. A slight acquaintance with general principles of vegetable physiology, and a little observation and practice will usually be sufficient to enable any one to do what little pruning is necessary in a plantation.

How to Renew Woodlands.—Is it more profitable to renew woodlands by planting, or by leaving them to grow up naturally by sprouting, or otherwise?

This would depend very much upon circumstance. If the natural growth were trees of a valuable kind, and of those species which readily produce healthy sprouts from roots or seed, it might be more profitable in the end to encourage such a second growth than to replant with other kinds. There are thousands of acres of uncultivated lands now occupied with choice timber, and with such it would be poor policy to destroy all, and undertake to replant. There are few of our natural forests which do not contain more or less valuable species which might be encouraged, and the less valuable destroyed.

There is, certainly, a great lack of proper discrimination among farmers in regard to the preservation of valuable timber trees. Whenever a certain tract is set aside as permanent woodland, the greatest care should thenceforth be given, not only in removing trees that have arrived at maturity, but in preserving the more valuable of the young growth. It may also be well to introduce valuable species not native of the locality; but this, as a general rule, will be found quite difficult in old forests.

If it is desirable to remove all the timber from land easily brought under cultivation, then it would be better to make thorough work of it, and after subduing the land, plant it with the most desirable species.

Our people do not as yet fully realize the importance of this subject, but the time is not far distant when the restoration, cultivation, and preservation of forests will rank among the greatest of our many very important industries.

ARBORICULTURAL NOTES.

American Beech in the West.—I think your advice, in the RURAL NEW-YORKER, in regard to propagating the Beech in the Northwest for a timber tree, will not be well received by those who have tried the experiment. After a residence of many years west of the Mississippi, and having tried the experiment, I should not advise any one in the section referred to to depend upon the Beech. I believe the roots spread too near the surface to withstand our climate. If any one has succeeded in this vicinity, I should be glad to hear of it.—G. O. H., *Keokuk, Iowa.*

Early Flowering Willow.—If F. W. R. of Ohio will send us some of the catkin's when fully developed, also leaves of the willow referred to in his letter, we may be able to give him the botanical name. Persons desiring names of plants should endeavor to send good specimens of both flowers and fully developed leaves. It is sufficiently difficult to name plants from dried specimens without having these imperfect.

Mahonia from Colorado.—Enclosed find flowers and leaves of a plant from Colorado. Please give the name through the RURAL NEW-YORKER.—R. H. P., *Nebraska City, Col.*

IT is, probably, *Mahonia repens*, a low-growing, evergreen shrub, which is quite common on the Rocky Mountains. There are also two species which are found on the west side of the Mountains, viz.: *M. Aquifolium*, and *M. nervosa;* both are hardy.

Entomological.

COLLECTING INSECTS.

How to Collect, Preserve, and Transport Them.—Having frequently invited our correspondents in various parts of the world to collect and send to us insects, we now propose to give them brief but plain instructions in regard to the simplest modes of collecting and transporting. In every country and locality there are insects which interest the entomologist, and persons who have no knowledge of the subject, may do much towards aiding investigation, if they will collect and forward specimens to those who make this branch of science a specialty.

The larvæ of butterflies and moths prey upon our trees, shrubs, grains and garden vegetables, and those of some of the beetles are equally as destructive, while bugs of various species are the pests of our fields. There are also cannibal beetles and bugs as well as various parasitic insects which aid in checking the increase of certain species, and the habits of all these must be known if we are to work understandingly and in harmony with natural laws, and thereby assist our friends in destroying our enemies.

The farmer and gardener should be particularly interested in the science of Entomology, inasmuch as they are constantly brought into close contact with those very beings of which we know so little, but should desire to know more. Entomology, as a science, is certainly attracting more attention in this country at the present time, than ever before; but it would advance far more rapidly if every man, woman and child would only do what they could, however trifling that might be, instead of leaving the entire work to a few, who are so overtaxed, that their labors must necessarily be very incomplete.

It should not be considered as labor or an irksome task by any one to collect a few insects and forward them to a scientific institution, or to an individual who may be spending his time and money in endeavoring to enrich science and benefit mankind. There are scores of men who have traveled the world over, but never experienced the pleasure or received the honor of contributing as much as one grain of sand to the welfare of mankind, or the advance of science. The very butterflies, moths, or other insects which constantly crossed their path, would have been more highly appreciated by some entomologist, than the most precious mineral. Pioneers in our new States and Territories, and travelers in foreign countries should not be negligent, but observe the habits of local species of insects, and forward specimens to us whenever convenient.

Collecting Apparatus.—To collect insects rapidly in summer, a net of some kind is quite indispensable. In Fig. 1, two forms of nets are shown; *a* is made of common muslin, or cambric, and about a foot in diameter, and 18 inches long, and is used for sweeping bushes, weeds, or dragging over the grass, where hundreds of minute but interesting specimens of insects may be taken with a net, which would not otherwise be found. The other net, *b*, is made of netting or thin gauze; a common musquito netting will answer, and it is used for taking butterflies, moths, and other insects on the wing. These nets can be purchased in our large cities, but one that will answer every purpose for the amateur can be made of any strong wire bent to form a hoop, and the two ends driven into the end of a stick four to six feet long, that will answer for a handle. In the first or sweep net it will be noticed that the front side is straight, the taper being entirely from the back to the front. This form is far better for this kind of a net than to have it a regular cone, inasmuch as when sweeping along, the insects are thrown forward into the point, and held there more securely than they would be if the smallest part was exactly in the center.

Killing Bugs and Beetles.—All the harder kinds of insects, such as Beetles (Coleoptera) and Bugs (Hemiptera), which have firm wing cases, may be preserved for almost any length of time in spirits, such as alcohol or whisky. Some bottles with wide mouths should be provided and these partly filled with spirits, into which the beetles and bugs may be put as soon as caught. Vials holding two or three ounces will usually be most convenient to carry in the pocket or collecting bag. Entomologists use glass tubes similar to the one shown in Fig. 2, as these may be emptied more readily than vials of the ordinary form. Dry collecting vials may also be employed by obtaining a few pieces of cyanide of potassium and drop these into the vial, covering with a thin layer of cork, paper, cotton or any similar material that will hold them firmly at the bottom and not prevent the poisonous fumes reaching the insects to be killed. If this cannot be obtained, use ether, chloroform, gum camphor, or ordinary benzine—anything that will kill the insects quickly and not injure their color. In using the dry bottle it is always best to put in a few small, loose bits of blotting paper to absorb any liquid ejected by the insects, and prevent their discoloration. The tube shown in figure 2 is one we have used for collecting our ordinary beetles, although not large enough for all species. In the bottom, *a*, is a little cotton saturated with benzine; a thin piece of cork is put in to hold the cotton in its place and prevent small species from crawling into it and become entangled in the fiber. Any other form of vial can be used instead, but the beetles should not be allowed to remain any longer than is actually necessary in the dry bottle, but should be emptied into the jars or larger bottles of alcohol or other spirits and kept there until required for mounting or transporting to some other locality.

How to Pack and Send Beetles and Bugs.—The most certain way of preserving specimens in good condition, especially if sent a long distance, is to send them in alcohol. In packing large bottles and jars, see that they are corked tight and the corks tied in; or, what is still better, fastened with copper or brass wire; but a good strong cord will answer. If they are to be

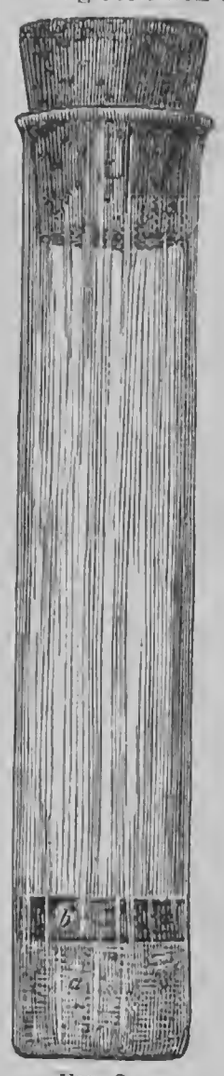


FIG. 2.

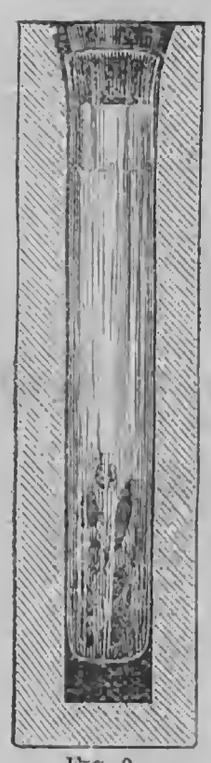

FIG. 3.

sent by express or similar mode of transportation, the bottles should be enclosed in fine hay, grass, or other soft material, and then enclosed in a strong box. This, of course, is only necessary when a large number are sent, and a long distance; but where a small number, say from one hundred to a thousand of various species, large and small, they may be sent by mail packed in the following manner: Select a few strong tin boxes, holding a gill or more, according to the number of insects to be sent away; get some fine sawdust; now take the beetles out of the spirits and put a layer in the bottom of the box; then fill up all insterstices between with sawdust; then put in more beetles, and so on in alternate layers until the box is filled. The box should be full, to prevent any moving about and breaking of its contents. The whole should be rolled in paper, and the direction written on the outside wrapper and then sent by mail.

We have received insects by mail from the most distant parts of the country, packed in this manner, and they have invariably arrived in good order.

Another most excellent method of sending by mail is to take a small piece of pine plank one or two inches square, and of the proper length; into this bore a hole lengthways of the grain, and just large enough to admit the vial to be used, as shown in fig. 3. The insects are sent in the alcohol or spirits, and the vial should be corked tight; also the space in the case should be filled either with a cork or plug of wood to keep it from falling out. The package is then wrapped and directed. This is the safest way of sending minute specimens, as well as large ones, by mail, although the weight of the alcohol is greater than the sawdust, and the postage more in proportion.

Numbering Specimens.—It often occurs that those sending insects desire to obtain the names of specimens sent. In such cases, all that is necessary is to number the specimens, retaining one or more of each with a corresponding number. If the specimens are packed either in sawdust or alcohol, roll in soft tissue paper, enclosing with each a small bit of paper, upon which the number is written with a soft *pencil*. Ink will spread, and be obliterated when wetted, but a pencil mark will remain legible for years, even if constantly immersed in spirits. If it is desirable to pin the specimens retained, always thrust the pin through the right wing case, near the inside edge, and at a point where it will pass between the second and third pair of legs, as shown in Fig. 4, *a*, leaving enough of the pin above to take hold of conveniently; usually about three-eighths of an inch is sufficient. Smaller species may be gummed upon little lance-shaped pallets, or pasteboard.

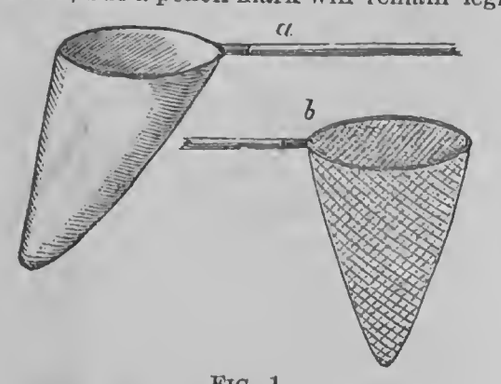

FIG. 1.

In mounting bugs and other kinds of insects, the pin should be thrust through the middle of the thorax.—[To be continued.

Diary of a Ruralist.

DAILY RURAL LIFE.

FROM THE DIARY OF A GENTLEMAN NEAR NEW YORK CITY.

Among the Raspberries.—*April 2.*—Last fall I went over my specimen vineyard and destroyed about nine-tenths of all the varieties planted, and I am now doing the same with my raspberries. Having expended several thousands of dollars during the past ten or fifteen years in testing new and old varieties of the raspberry, I begin to think it is time to hold up a little and enjoy the fruits of my experience.

I have tested about one hundred species and varieties in the past ten years, paying extravagant prices in a number of instances for the plants; and now, what have I gained for all this expenditure of time and money? Why, simply a little practical knowledge in regard to the habits of the different sorts. I have no better varieties for my table, or more profitable ones for market, than I had fifteen years ago. These famous old sorts, such as Miami, Doolittle, Franconia, Brinckle's Orange, Knevitt's Giant, and Hudson River Antwerp, have, as yet, no superiors. We have, it is true, made some progress in numbers of varieties, but have added no merits nor made any advance on the whole, but only in certain important qualities. The Clarke is certainly a richer berry than the Franconia,

FIG. 4.

and the plants a little more hardy; but the berry is too soft for market, and few persons would notice its superior flavor.

The Philadelphia is a larger berry than its probable parent, the Purple Cane, but it is inferior in flavor.

All these points have been thoroughly discussed in the agricultural and horticultural journals; and now that my spade is at work lessening the number of sorts, I shall try to make pretty clean work with uncertain varieties. To-night we are to have a grand bonfire. The following have been marked for destruction: — Allen, Pearl, Stever, Scarlet, Belle de Fontenay, Burlington, Bagley's Perpetual, Cape, Wilder, Cushing, Prince of Wales, Duhring, Emily, Fillbasket, Janet, Rivers' Monthly, Magnum Bonum, Merveille de Quatre Saisons, Pilate, Rivers' Seedlings of various varieties, Arnold's Seedlings, five varieties, Russell's, Walker, and many more of the same or similar standing in our small fruit lists. Of about twenty-five more varieties belonging to the foreign species, I shall save one or two clumps of each, as monuments of my folly or wisdom, just as visitors to my garden may choose to designate them.

Among the Black-Cap varieties I shall save a row or two of the following: — Doolittle, Mammoth Cluster or Miami, Seneca, and Fay's Thornless. For specimen plants only, I reserve one or two each of American White Cap, Canada Black, Davison's Thornless, Elsie, Minnesota Yellow, Garden, Gardiner, Golden Thornless, Ontario, Summit Yellow, Surprise, and Westchester. The ground occupied by the above will make a splendid melon patch, and I anticipate great pleasure from the result of this day's work.

A Strike at the Blackberries.—*April 3.*—Having begun the cleaning out of brambles yesterday, I concluded to continue until the rubbish was all out of the way. In blackberries, we have not as many varieties as in raspberries; still there are quite a number that it is folly to cultivate, when we have far better sorts. I have cut my list down to barely two among the well-known sorts, viz:—Kittatinny and Dorchester; a little further South, I should certainly plant the Wilson for market, it being the largest variety in cultivation. I have also saved specimen plants of Lawton, Holcomb, Triumph, Furley, Claret, and Crystal White. But I shall never again have room for Mason's Mountain, Dodge's Thornless, Needham's White, Cumberland, Cape May, Felton, Newman's Thornless, Albion, Cutter, and Missouri Mammoth. Fighting the suckers that will spring from the roots of these varieties for the next two years will keep their names and good or bad qualities fresh in my memory.

Plowing.—*April 4.*—We are nearly one month later in plowing for oats and other early crops than last year. Oats, peas, and early potatoes should go into the ground as soon as the frost is out in the spring; but because the season is late, it should not be considered a sure sign of late ripening crops. Warm weather and warm rains will do much toward hastening vegetation.

Floricultural.

BEAUCARNEA RECURVATA.

THE Beaucarneas are of recent introduction, consequently seldom seen in our conservatories. They belong to the *Liliaceæ*, or Lily family, and are native of the temperate regions of Mexico. The *B. recurvata*, of which we herewith give an illustration, is an exceedingly graceful ornamental plant, quite tropical in appearance, and alike suitable for the conservatory or for bedding out in summer. The stem is remarkable for its bulb-like swelling at the base, and for the long tuft of gracefully recurved leaves at the top. The plants require considerable heat and a liberal supply of water during the season of most active growth. The soil best suited to the *Beaucarneas* is one composed largely of fibrous peat, with an admixture of sharp, coarse sand. Large plants should be allowed a full exposure to the sun during summer, and kept constantly supplied with water, because they require almost as much as the common Calla (*Richardii*).

An English writer says that they thrive best with their roots in water and their heads in an oven; but we have found no difficulty in growing the species which we figure in an ordinary green house without special care. As autumn approaches, gradually withhold water, and give the plant an opportunity to rest and ripen, and keep it, quiet until spring. Young seedlings, of course, can be kept growing, both summer and winter, until they are a few years old. The plants are of slow growth, and the specimen from which our illustration was taken is supposed to be ten or fifteen years old.

Bone for Fuchsias.—The editor of Kentucky People says that, knowing that bone dust is an excellent fertilizer for fuchsias, he potted several plants, and placed a piece of bone over the drain in each pot. In a short time the plants began to sicken, and the lives of several fine roses, geraniums, etc., were saved by transferring them to other pots. Instead of finding the fibrous roots twining themselves about the bone, they were brown and discolored, and shrinking away as fast as possible.

Dairy Husbandry.

SHALL WE SKIM THE CHEESE VATS?

In the London market, French butter (Normandy) is quoted * at 154s. sterling the cwt. In the same market, American cheese, extra fine, brings but 66s. the cwt., while the common sorts sell for 44s. to 50s. Both of these products are largely imported into England. The price for Normandy butter has not varied much for the past two years. These rates suggest the question whether American Dairymen cannot export butter with as much profit as they do cheese.

The cheese trade during the past year has not been very satisfactory to producers, while dealers claim they have made but little money in their transactions. It is likely that this claim may be true in many instances. It is said by some that the American Cheese trade the past season has been very poorly managed—that there has been no effort anywhere to sustain prices—that dairymen have been over anxious to sell, eager to go to the slaughter, and have accepted the situation, from week to week, and month to month, as inevitable.

The buyer is naturally solicitous for his own interests, but no further than his own profits are concerned. He buys from week to week, and is satisfied if he can make quick sales at small percentages above cost. The real value of the goods, or the cost of production, does not enter into his calculations. He deals with the markets; and so long as he can purchase so as to make a tolerable margin on his transactions, it is all well. If the producer is making no profit, or is losing money in producing, that is a matter belonging wholly to the producer—to use a homely expression, "he must paddle his own canoe."

Foreign transactions in cheese are now regulated very much by cable telegrams. The cable dispatches fix upon certain rates, and the dealer goes to work buying his goods at a margin on cable prices. He has no time and no opportunity to inquire whether cheese is worth more money in England than cable quotations. A few large houses in Liverpool, in London, and in other cities, have control of the cheese shipping trade. They import to sell to country traders, and it is an object to get goods cheaply and to sell low in order to make a brisk trade. They think it better to depend upon large transactions and quick sales to make profits than upon any considerable gains from a single week's importations.

The ease with which American cheese can be bought at low figures, and the readiness with which American factories respond to declining cable dispatches, it is thought, has had much to do in bringing about the low tone of the market during the past season. If the English had made the market 10s. or 20s. lower, there would have been no difficulty in filling orders; for so eager have dairymen been to part with their goods that they would have yielded to much lower rates than have ruled.

Choice American brands, rich in meat and perfect in flavor—cheese which the English expert pronounces equal to the best manufacture—could be bought in Liverpool and London during the past fall at nearly if not quite the same prices as the Dutch brands which have always been regarded in England as inferior, and suitable only for the poorer classes, or such as cannot afford to indulge in a rich-tasting, high-priced cheese.

"The time was" when American cheese would command in England 20s. Sterling, the cwt., more than the Dutch "Edams and Gondas." To-day, Edams and Gondas strut along by the side of meaty, fine-flavored Americans and ask no favors. In evidence of this affirmation, we have only to quote from the price list of one of the leading produce brokers in London. It is for the last week in November, as follows: American cheese, extra fine, 64s. to 66s.; good, 54s. to 59s.; seconds, 44s. to 50s. Dutch cheese, Edams, 60s. to 66s.; Gondas, 56s. to 57s.; Derby shape, 54s. to 64s.

How is this to be accounted for, or explained! Has American cheese manufacture taken a sudden retrograde this past year? Has the general quality of our cheese depreciated at the rate of 20s. sterling the cwt.,—falling down to the Dutch standard? Or has the Dutch manufacturer taken a sudden leap and caught up with the American in quality and prices? If this last be a correct solution of the matter, American factories may as well lay down their laurels, for if the Dutch can in one year make such rapid strides in face of all our painstaking efforts, then it is easy to see where our cheese will rank in the scale another year.

But we are sometimes told that America is making too much cheese—that we are over-producing, and low prices must, as a consequence, fall in a glut on the market. Are we over-producing? The markets are cleaned bare every year, and no considerable stocks are carried over. It is exceedingly difficult to obtain old cheese anywhere, and although there is a premium on such cheese, it cannot be had. We are not over-producing. Our cheese is all needed, but it is distributed as a spendthrift wastes his patrimony—rushed off on the principle that there is an over-production—a scramble to get cheese forward without judgment as to time or economy as to prices.

It was not our purpose to discuss the intricate questions of trade, or to point out causes that have led to decline in the American cheese product. Accepting the fact that our best cheese brings but 64s. to 66s., we go back to the question, whether as much money cannot be made by exporting butter as cheese.

We hold that, with the conveniences and skill found in American butter factories, butter can be made as fine in flavor, and as nice in texture and quality, as that produced in Normandy. We have no statistics at hand to show the average quantity of milk required to make a pound of butter at factories where all the cream is taken from the milk, and the skimmed milk fed to swine; but Hon. ZADOCK PRATT, who kept accurate statistics from a large herd during a series of years, reports that he so systematized his dairy operations that he was able, on an average, to get one pound of butter from twenty pounds of milk. Assuming that this can be done at the butter factories, we have a basis for comparing results from a given quantity of milk, whether it be made into butter or cheese; since for the latter, ten pounds of milk is the average. In other words, it takes twice the quantity of milk to make a pound of butter that it does for a pound of cheese.

If the labor of making, caring for, and marketing the one product be the same as the other for a given quantity of milk used, then the cheese ought to be worth one-half as much as the butter—indeed, rather more than half, because the sour milk from the butter is worth more than the whey from the cheese-making, while it costs less to transport and handle the pound of butter than the two pounds of cheese. If butter, then, is worth 154s. the cwt., cheese should bring, at least, 77s. But, as it brings only 60s. to 66s. there is a loss of 11s. to 17s. the cwt. We do not say that, by taking all the cream from the milk, and feeding the skimmed milk to the swine, it would be the most economical way of handling the milk. Probably more could be made by removing less cream and working the skimmed milk into cheese; but the point to which we wish to draw attention at this time is the difference in price between the butter and the cheese exports of Great Britain.

It may be more difficult to export butter so that it will arrive in good order than to export cheese. That is a matter, of course, to be taken into account, still, as a good share of our cheese is quoted at from 44s. to 50s, butter at 88s. to 100s., is the equivalent.

If the price of cheese is to remain at the same rates for next year, the question may well occupy the attention of dairymen, Whether a portion of the cream may not better be removed from the milk and the milk then converted into cheese, instead of the whole milk process now generally practiced.

With the skill of our manufacturers, it is presumed as good cheese can be made from milk partially skimmed as that of the Dutch brands with which we are now competing in the English markets. At any rate, there does not seem to be much inducement to export rich, meaty cheese, which will command in England no more than English skims and inferior Dutch brands.

The price of English Cheddar is quoted at 72s. to 86s.; Cheshire fine, from 76s. to 84s. Our best factory is acknowledged to be fully equal to these kinds. But American cheese is evidently not sold in England upon its merits, but at prices corresponding with what it costs. It can be bought cheaply, and it can be sold cheaply.

Another trouble growing out of our export trade is, that the home trade will not pay any more for cheese than the export prices. Thus, our 60,000,000 of pounds exported, makes the price on our whole product of 240,000,000 of pounds.

* This article was written some time since, and deferred.—[EDS.]

Domestic Economy.

TO MAKE GOOD COFFEE.

"A YOUNG HOUSEKEEPER" in the RURAL NEW-YORKER, March 30, wishes to know how to make good coffee, "that will please her husband." She will perhaps find all she wants in the articles by Mrs. M. N. R.; still I will give her *our way*, and we are famous among our friends for having nice coffee. First, get *good coffee*—best quality of Java is good enough; pick it over carefully, and roast with great care, bringing it evenly to a rich dark brown. While roasting add a small piece of good, sweet butter; this gives increased richness, and helps to preserve the aroma; a piece the size of a hickory nut to a half pound of coffee is about right. Keep in a close jar, and grind as wanted for use. If you wish to make coffee for two or three, allow a large heaping tablespoonful to each person; place in a bowl, and mix it very thoroughly with egg, so that every particle of the coffee shall be moistened (one will do for two messes if eggs are scarce). Then put it in your coffee pot and pour on boiling water, a little at first; shake the pot, to prevent the coffee from congealing in a mass, then add as much water (and no more) as you need for your desired cups of coffee, and let it boil slowly, but steadily, for fifteen minutes. (Some people never boil, only simmer.) Just before taking to the table, pour out half a cupful, to remove the grains of coffee in the spout, and pour back. In a minute it will pour out clear as amber, and will be perfectly delicious if served hot with cream and white sugar.

Cream is indispensable to having coffee in perfection. This I have always secured, though living in a city the last twelve years, and never keeping a cow. I got milk from the best milkman I could find; then I carefully set my quart in a basin, and suffered it on no account to be disturbed till morning; then with my own hands I carefully removed the cream with a spoon, never trusting a servant to waste or dilute the precious luxury. I always had enough for my four large coffee cups. Now that I am in the country, I have abundance for a half dozen from a quart. Scalding the milk will make both cream and milk richer, and in hot weather is always necessary. It is very important to keep the coffee-pot well cleaned and rinsed each time after using; servants will often, if not watched, leave the old grounds in until the coffee-pot is again wanted for use; this blackens the inner coating, and spoils the flavor of the coffee. If you follow the above directions carefully, I think your husband will be well pleased with the result.—Mrs. F. A. D., *Cowlesville, N. Y.*

Let "Young Housewife" see that her coffee is browned thoroughly, being very dark and brittle. If the grain crumbles easily when bitten, it is done; but should it be tough, with a hard center, return to the oven until crisp. While it is still warm beat the white of an egg to a stiff froth and stir in the grains till dry. Next have it properly ground, neither too fine or too coarse, and put it away in a close covered tin box. Get a Eureka coffee-pot and put one heaping tablespoon of coffee for each cup desired, and if that coffee does not "please her husband," he ought to be hung; so says my husband.—L. F. D., *Griffin, Ga.*

FLOATING ISLAND.

TAKE one quart new milk in a sauce-pan, and place in a kettle of boiling water to prevent its burning on the bottom while the milk is heating to the boiling point; stir, smoothly, a tablespoonful of corn starch, (or arrow-root, which is better,) in a little milk, and mix with it three well-beaten eggs, (reserving the whites of two of them,) stir this slowly into the heated milk, and keep stirring steadily till it thickens evenly to the consistency of boiled custard or mock cream, which it is. Then remove it from the fire and sweeten with white sugar. Flavor or not, as you choose, with vanilla or lemon; but let your flavoring, if any, be very slight, if you would have your custard delicate; be careful not to get it too sweet. Place it in a glass dish; beat the whites of your eggs to a stiff froth, and drop over the top of custard.—F. A. D.

I WILL send you my receipe, as I know how very nice it is:—One quart of milk, four eggs, reserving the white of two for the Island; beat the eggs with four tablespoonfuls white sugar and a trifle of salt; then stir in the milk, which should be scalding hot; let boil until curdy; then pour into a dish; then beat quickly the remaining white to a stiff froth; add two or three tablespoons of sugar, and drop on the custard while hot; season to taste; I use nutmeg. Should eggs be scarce, which is often the case, one can substitute some corn starch; one tablespoon corn starch is equal to one egg.—E. M. VANNESS.

THREE pints of milk, eight eggs, a little salt and nutmeg, and four tablespoonfuls of sugar. Put the milk over the fire to boil, and drop the whites of the eggs in by the spoonful; let it boil a moment, and turn the whites over; remove in a minute more to a plate. Beat the yolks of eggs to a froth, with sugar, etc., and stir in the milk; turn into your dish and spread the whites over the top; ornament with drops of currant jelly over the top or sugar-sand put on in flowers or figures.—L. E. R.

PUT one quart of sweet milk (cream is much better if one has it) into a tin kettle of hot water; let it scald, then stir into it gradually the yolks of five eggs and one cup of sugar, beaten together; when cool, flavor with one teaspoon of lemon. Beat the whites of the eggs to a froth and put on to a basin of hot water; let it remain five minutes, then place it on the top of the other; when cold it is ready for the table.—C. L. J.

I SEND you the following:—One quart of milk, 4 eggs; take the yolks and put them in the milk; add sugar to your taste; put over the fire and let it come to a boil; if you boil it, it will curdle; season to suit the taste; put some milk over the fire, and beat the whites of the eggs to a froth; when the milk boils, put the beaten eggs on the milk to boil; then place it on the custard, and your Island will be Floating.—MILLIE.

SET a quart of milk to boil, then stir into it the beaten yolks of six eggs; flavor with lemon or rose, and sweeten to taste; whip the whites of the eggs to a stiff froth. When the custard is thick (don't let it get watery), put it in a deep dish and heap the frothed eggs upon it. Serve cold.—S.

Domestic Inquiries.—C. L. J. wants a good recipe for citron cake. . . . . "A Young Housekeeper" asks for the methods of cooking egg plants used by our readers. . . . Emma V. P. "*does wish* that about ten thousand contributions from our readers, as to their respective modes of making different kinds of salad, could be secured." She *so* loves salad!

Pomological.

POMOLOGICAL GOSSIP.

The Dwarf Pomegranate I have had four years. It bears as large and fine-flavored fruit as the taller-growing varieties, and blooms the entire year here. I think it is as ornamental as any plant I know of. In February, 1871, I planted some seeds of it, and put down some cuttings; in six weeks, the cuttings were well rooted, and perfectly full of flowers. The stems were so tender they bent down, and the flowers rested on the ground. The seedlings commenced blooming in September of the same year, at from one-half a foot to one foot tall, and they continued in bloom until I gave them away in the winter; but they did not ripen any fruit.—A. B. N., *Brownsville, Texas.*

Peaches for New Jersey.—Wm. PARRY furnished the following select list of peaches for profit in New Jersey, at the meeting of the Pennsylvania Fruit-Growers' Society, giving a succession from earliest to latest: Hale's Early, Troth's Early, Mountain Rose, Large Early York, Crawford's Early, Oldmixon Free, Stump the World, Ward's Late Free, Harker's Seedling, Late Rareripe, Crawford's Late, Beer's Smock, Heath Cling and Salway. The latest of these would not ripen well as far north as New York state.

Monarch of the West Strawberry.—Can you give me your opinion of the strawberry called "Monarch of the West?" How would it thrive in Eastern Massachusetts? Is it a very large berry when properly cultivated?—JOHN WAYLAND.

WE do not know anything of this variety except what has been said in the Western papers.

Flemish Beauty Pear in Iowa and Kansas.—The Western Pomologist says that this pear is peculiarly fitted to a light-ish soil, for the finest fruit grown in the above-named States has been grown on a light sandy loam.

Grape for Name.—A. P. H., East Nassau, is informed that we cannot name grapes without seeing them—we could only guess at it, which would be most unsatisfactory to ourselves and of no advantage to him.

The Literary World.

NEW PUBLICATIONS.

Jesus. By CHAS. F. DEEMS, Pastor of the Church of the Strangers, New York. United States Publishing Company.

THIS great work, by Rev. Dr. DEEMS, is worthy a much longer notice than we can give it. It is one of the great books of the times, and will surprise all who are fortunate enough to read it. In a large volume of over 700 pages, Dr. DEEMS has given us the history of the Life and Times of JESUS, with a lucid and rational account of all the events connected with his advent upon earth. The whole is woven together in the form of a historical narrative, exceedingly interesting, and as fascinating as the History of WASHINGTON, by IRVING, or NAPOLEON, L., by ABBOTT. Dr. DEEMS takes nothing for granted, but examines all points, and gives the reasons for every statement made. The book is a fund of information which every Christian should possess; it is a rare casket of treasures, and should be read with the Bible. The pure, simple, devotional style of the work is one of its chief beauties. No one who once takes up the book will throw it aside until it is finished. The author has given long study and research to his subject, and the work produced is no holiday book or romance; it is a patiently built monument to the memory of a "dear friend," every stone of which is carved and polished with the utmost care. No such work has come from the American press in long years. Those who wish for a profound but plainly exhaustive, fascinating, simple yet learned story of CHRIST, will find it in this book. In these days of infidelity and doubt Dr. DEEMS' book will do a world of good. It gives us the historical fact of JESUS' existence, and is neither dogmatical, doctrinal nor theological, but simply a narrative and an explanation. The book is beautifully printed on tinted paper, fully illustrated and handsomely bound.

Vesta. By HESTER A. BENEDICT. Philadelphia: Claxton, Remsen & Haffelfinger.

HERE is a gem volume, made up in the finest style of the book-maker's art, and within all aglow with a wealth of brilliant flowers of poetry. "VESTA," the leading poem, is a heart-piece of personal experience, portraying a young mother's joy and triumph, and her after bereavement, desperation and final resignation; into which the writer has thrown a tender, terrible, and pathetic earnestness, which will reach the hearts of all readers of like experience. The miscellaneous poems are chiefly remarkable for their tenderness of sentiment and fineness of fancy. Mrs. BENEDICT is an accomplished artist, in both music and painting, and thus her poems are always musical in cadence and artistic in execution—never tame or ungraceful. She is a native of Ohio, at present residing in Philadelphia, occupied in writing for the literary press of the Eastern cities.

The Dessert Book. By a Boston Lady. Boston: J. E. Tilton & Co.

A USEFUL book for any household, especially for those who live at a distance from the confectioners or bakers. All who wish to prepare their own dessert will be glad of this complete manual. It treats of puddings and pies, cake making, almond cakes, wafers in general, iced biscuits, glaces, creams, water and fruit ices, iced puddings, graniti, punch, coffee, chocolate, tea, acidulated drinks, cordials, wines, jellies, brandy fruits, compotes, and many other things. The whole makes a volume of 200 pages.

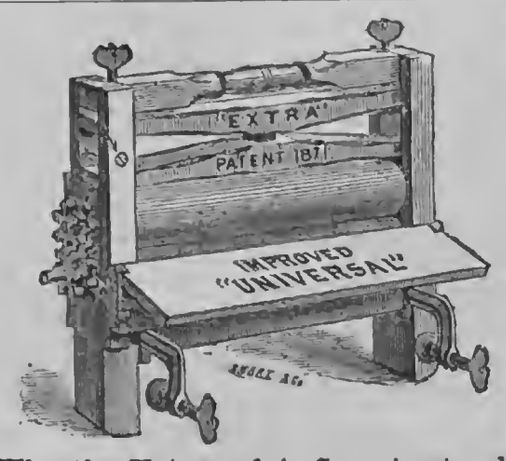
Yesterdays with Authors. By JAMES T. FIELDS. Boston: James R. Osgood & Co.

THIS most admirable and readable book, by the well-known publisher, lecturer and author, consists of sketches of Pope, Thackeray, Hawthorne, Dickens, Wordsworth, and Miss Mitford. Mr. FIELDS knew all of these people, visited them, received letters from them, and has thus been able to write of them in a way which is at once fascinating, original, and new. All who admire the works of any of these writers will be glad and fortunate to possess a copy of this book. It makes a handsome volume of 352 pages.

Supplement to Bicknell's Village Builder. New York: A. J. Bicknell & Co.

A HANDSOME quarto, containing 18 modern designs for country and suburban houses of moderate cost, with elevations, plans, sections, and a variety of details, all drawn to scale. The colored plates in this book are very handsome, and the plans appear to be well adapted for their purpose. All the specifications are given. Those contemplating building will do well to consult this fine work.

Implements, Machinery, &c.



Why the Universal is Superior to all other Wringers.

It has ROWELL'S PATENT DOUBLE COGS, with longer teeth, which play apart further without disconnecting, never crowd together so as to bind, and turn easier than any other cogs.

It has the PATENT STOP, which keeps the Cogs from disconnecting, yet allows the rolls to play apart far enough to wring the largest article easily.

It has the MALLEABLE IRON FOLDING CLAMP, which cannot be broken, and fastens securely to tubs of any curve, and fits washing machines or stationary tubs of fully two inches in thickness.

It has the FOLDING APRON or Guide, to conduct the clothes safely over the side of the tub, free from contact with the clamp or screws.

It has the peculiar advantage of TWO PRESSURE SCREWS, so arranged that each screw presses on both ends of the roll alike, the same as if it was in the center, while the two together *give double the capacity for pressure.*

The RUBBER between the springs makes the machine turn easier, and saves the rolls from strain.

The IRON parts are WROUGHT or MALLEABLE, not liable to break, and well galvanized.

It is very LIGHT and PORTABLE, yet built so substantially it cannot be broken.

WITH ALL THESE ADVANTAGES, its price is no greater than that of any wringer with cogs.

☞ *Sold by the House Furnishing and Hardware Trade generally.*

FASHIONS.

943.

Polonaise, is one of the great novelties in Spring fashions. By unbuttoning the lapels at the side and back, and by loosening the belt, it is a plain pelisse, without plait or gather; by readjusting again it becomes a tight-fitting polonaise. As this can be done in less time than it takes to describe it, we feel assured of its appreciation by those who use the Dolly Varden—much in vogue—or any kind of wash goods. Requires only six yards of cloth one yard in width. All sizes. Pattern, with cloth model, $1. See

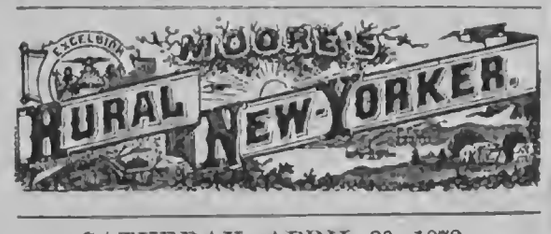
Reading "	3.00	"

☞ No advertisement inserted for less than $3.



SATURDAY, APRIL 20, 1872.

THE GLOOM OF A DAY.

HAS the reader ever stopped to think of the aggregate gloom of a day? Reading the daily papers before breakfast, one may form some estimate of the tragedies daily enacted—of the sorrow and darkness they bring—of the pall of gloom they cast over the lives of thousands upon thousands. And yet precious little thought is given it by the mass of readers. We read these stories compressed into paragraphs much as we eat our beefsteak, thinking not of the cost to some one of producing it. We are apt to forget how abstract are the facts—how only the outline of the picture is given, and that the details involve suffering and heart-aches that shadow the lives, and make desolate the homes of those immediately interested.

But look into what seem the happiest homes. Study the faces of those who seem prosperous. Read the hearts of even the cheerful-faced men of business, and of the wives who meet friends and neighbors with smiles, and shower compliments and *bon mots* in conversation as if there were no bitter waters flowing from the fountain of their daily experiences. Who can tell how much dull, steady, dreary ache, apprehension, distrust, real sorrow and depression prevails. Talk with the most cheerful; win, by sympathetic confidence, a frank confession, and it will be found that every face, nearly, wears a mark, every heart carries its weight, every shoulder is bending beneath a burthen, and for every smile there is the complement tear.

Why is this gloomy topic taken for an editorial? Because the stories of suffering, of unrest, discontent, unrealized hopes, unsatisfied desires, press upon us daily—because we would have our readers more contented and cheerful—if for no other reason than that misery loves company; and if they are miserable, we may assure them there is plenty of misery extant, and they have plenty of company. The duty of cheerfulness and content, of work and worship, ought to be enforced in the beginning of this Spring-time brightness. The forces of regeneration are beginning to act throughout nature, and to enliven life with the stimulus of reaction after a long winter of rest under the lock and key of frost. Let us thaw out! Let the new season of growth be one that shall bear us beautiful blossoms and wholesome fruit. Let us remember that culture and sunlight have to do with the fruits we bear as well as those the trees produce. It is well to remember that our lives are not the only ones in the shadow—if they are—that suffering is contagious, and we have no right to propagate the disease—that sorrow should be isolated and quarantined as soon as it appears, and that we have no right to add to the general gloom by displaying the pall which covers our dead. Let the dead bury their dead.

RURAL NOTES AND QUERIES.

"Books for Ruralists."—Under this heading we give (in a Supplement accompanying this number) a revised list of works on Agriculture, Horticulture, and kindred branches—including standard treatises on Stock, Dairy and Sheep Husbandry, Poultry and Bee Keeping, Fruit Culture, Gardening, Floriculture, Rural Architecture, and other prominent specialties of rural life and production. Many of these works will prove valuable guides at this season, and ought to be procured for present use and future reference. Every progressive farmer or horticulturist will find it for his interest to possess such works as will aid him in his special department. For instance, no one engaged in the production of Butter or Cheese, even on a small scale, can afford to do without Mr. WILLARD'S new work on Dairy Husbandry—while, now that wool and sheep are again at the top of the wave, every flock-master who has not a copy of Dr. RANDALL'S Practical Shepherd should obtain the new edition of that standard authority. And fruit growers, gardeners, florists, etc., should secure works which treat upon their respective branches of culture. Such works as Barry's "Fruit Garden," (a revised and enlarged edition of which has just been published,) Quinn's "Money in the Garden," Henderson's "Practical Floriculture," and a score of similar ones, ought to be in great demand at the present season. A careful examination of our list will probably enable the reader to find from one to a dozen works that it would pay him to obtain.

Obituary.—CHARLES KENNICOTT, the eldest son of the late Dr. JOHN A. KENNICOTT, died Thursday, March 28, at Jacksonville, Ill. He was born at Buffalo, N. Y., August 14, 1831. His father removed to New Orleans while he was an infant, and settled in Illinois in 1836, at "The Grove," sixteen miles from Chicago. Here "The Old Doctor" and the eldest boy began the cultivation of trees, flowers and plants, CHARLES developing rare taste for rural adornment and a love of arboriculture and horticulture, which, combined with the father's taste and knowledge, created a most charming and hospitable home. When thirteen years of age, CHARLES was sent to Buffalo, N. Y., to school, and spent much of his time with the nurseryman, BENJ. F. HODGE. On his return to "The Grove," he induced his father to engage in the Nursery business, which was continued to the time of the "Old Doctor's" death. Meantime his writings in the Prairie Farmer and elsewhere had attracted attention, and when EMERY'S Journal of Agriculture (afterwards consolidated with the Prairie Farmer) was started in 1858, he became its horticultural editor, and his contributions to that department attracted deserved attention. He subsequently removed to Sandoval, Ill., and established a nursery in connection with JOHN P. REYNOLDS, late Secretary of Illinois Agricultural Society. Here his enthusiasm and industry made again a beautiful home in the heart of Egypt; and his labors here resulted in physical prostration and mental inability to work, and finally in his death. He was a staunch, true friend, a most agreeable editorial associate, and one who, with greater physical strength, would have made for himself a more prominent name than his too short life enabled him to do, although none more honorable.

Unfair Criticism.—It is with much surprise and regret that we have read the censorious comments of such able agricultural journals as the RURAL NEW-YORKER and the Country Gentleman, upon the work of organizing the late National Agricultural Convention. Their remarks on the President of the Convention are not more improper than groundless.—*Massachusetts Ploughman.*

WE find the above paragraph in the Country Gentleman, with appropriate comments. Now, so far as the RURAL NEW-YORKER is concerned, we defy the Massachusetts Ploughman to point to one word of censorious comment upon the organization of the late National Agricultural Convention in this journal. Nor were its remarks on the President of the Convention improper or groundless. We said he was a ponderous body; so he is—a man of force, weight, and influence, and who succeeded in getting his delegation and himself recognized and admitted to the Convention in spite of the plan of the Commissioner to exclude them; and who secured, by such force, weight, and influence, his own election as President of the Convention. We stated facts simply. If the Ploughman is fishing for compliments for the President of that Convention, we cheerfully give it the morsel of sweetness it desires, by saying that we have rarely attended a Convention, the presiding officer of which discharged his duties with more dignity, tact, promptness, and impartiality! How is that?

The Equitable Life Assurance Society.—The report of Hon. J. L. CLARKE, the Massachusetts Insurance Commissioner, and the able gentlemen associated with him in the investigation of the affairs of this old and prominent Insurance Company, proves the falsity of sundry charges lately made and widely published against it, and also shows that the Equitable Life is well and judiciously managed. The fact that the Company is fully exonerated, after a thorough examination by a committee composed of experts and business men of high character, must be satisfactory to the officers and policy holders, as well as the public generally. The indorsement of its management by such reputable gentlemen as Mr. CLARKE and his associates is strong testimony in behalf of the Equitable Life, and ought to augment its popularity and business.

Our Supplement.—In consequence of the continued pressure of advertising upon our pages, we are constrained to issue a Supplement this week. Almost every week this year we have been obliged to defer from a column to a page of advertisements. This Supplement ought to relieve us somewhat—as it contains advertising matter which has been deferred for some time—and we hope there will be less infringement upon reading departments in future. A certain quantity of advertising is well enough, but we have been favored with "too much of a good thing" for the past three months. Advertisers whose favors have been deferred from time to time, are assured that we have endeavored to accommodate them so far as we could consistently with our idea that Subscribers have rights which we are bound to respect.

Cock Fighting.—SAMUEL B. N., "a young man very fond of fowls," asks where he "can get first-class fighting games." He says he "has a fancy that it will pay him to grow them for the pit," or asks if we do not "think he can make money by cock-fighting?" He has "a friend who made $2,000 last year, raising, selling, and fighting games." We advise the father of this young man to send him, at once, to some Theological School, where he may get this "fancy" drilled, or washed, or prayed out of him. If he is bent upon following his fancy, we advise him to put himself in immediate communication with some of the Sixth Ward b'hoys of this city, and keep as shy of HENRY BERGH, as he will be, likely, to all morality, if he enters upon his proposed profession.

To Anybody.—A correspondent says:—"I have ways of doing things that I think are better than those I see published often; but I am not a writer, and hesitate to send them to you, although I might give information that would benefit many." Don't you (nor any one else) hesitate any longer. Give us the facts in just as few words as possible, and give all of them, and we will see that they appear in a shape that will bring you no discredit. It is just what we want every one who profits by the experiences of others as given in these columns to do. Do not hesitate a moment!

Swivel Plows.—A correspondent asks us if we regard swivel plows a saving of labor and time. We do; especially on uneven farms. They save time in travel on head lands and labor to a man and team, because furrows can all be turned down-hill. A *good* swivel plow is a good and economical implement on almost any farm.

Mr. Josiah Hooper's Essay on Planting Small Grounds, read before the Rural Club of New York city December 7, 1871, and published in the RURAL NEW-YORKER December 23, is being republished in the English horticultural papers.

Preserving Horse Records.—The New York State Senate has passed the following bill, which will interest horsemen in this State:

AN ACT for the better preservation of horse records.

The people of the State of New York, represented in Senate and Assembly, do enact as follows:

SECTION 1.—Any person or persons owning or keeping a stallion for breeding purposes shall be required, before advertising the services of said stallion, to file a certificate with the County Clerk of the county where said stallion is owned or kept, stating name, color, age, size, together with the pedigree of said stallion, as full as attainable, and the name of the person by whom said stallion was bred. Any person who shall neglect to make and file the certificate required by the provisions of this act, or who shall wilfully make and file a false certificate of the statements aforesaid, shall forfeit the sum of $100, to be recovered in any court of competent jurisdiction. It shall be the duty of the District Attorney of the county wherein said stallion is owned or kept to commence an action for the recovery of the forfeiture hereby allowed, upon his receiving satisfactory evidence that such advertisement has been made, and that the certificate has not been filed as herein required, or that a false certificate has been so filed; such action to be brought in the name of the people of this State. In all actions wherein the penalty prescribed by this act shall be recovered and collected, one-half thereof shall be paid to the person furnishing the proof upon which such recovery was procured, and one-half shall be paid to the Treasurer of the county for the support of the poor.

SEC. 2.—This act shall take effect immediately.

THE SEASON, CROPS, PRICES, ETC.

Elizabethton, Carter Co., Tenn., March 25.—We have had much snow the last few weeks. Farmers are backward with their work. Grain and provender for cattle are scarce. Wheat, $1.50; corn, 75c.; oats 60c.; stock low.—T. E. R. H.

Marcellus, Onondaga Co., N. Y., April 2.—We have had a long, cold winter, without rain, and but little snow. March 30 we had some rain. Our wells are mostly dry, and have been so since Dec. 1st. Streams are frozen up, and very little business is doing. Wagoning has been good most of the winter, the roads being frozen hard and smooth.—A. W.

Union Co., Iowa, April 2.—Weather pleasant; snow not all gone; Spring backward; no grain sowed. No Winter wheat grown here. Rye does well. Prices are:—Good wheat, 95c.@$1 per bush.; oats, 18c. for black, and 20c. for white; corn, 18c.; potatoes, 50c., and scarce; barley, 40c. @45c.; good fat hogs 3½c. per lb.; farm labor $18@$20 per month.—ED.

Kalamazoo Co., Mich., April 6.—Have had a snug winter. The last of March we had a rain which froze so that the trees and everything else were covered with ice. A great many peach trees are badly broken. Farm hands are scarce; have all gone to the cities that were burned last fall. Farmers are expecting to have to pay $20 to $25 and even $30 per month this season.—F. L. C.

Monroe Co., N. Y., April 8.—March was cold and rough, with a very sharp, keen air the most of the time, and April followed suit for one day (the first) at least, but since that time the weather has been very mild and pleasant. The roads in the country are very bad, except those that are graveled. Hired help is very high, and in some sections very scarce. Men get from $20 to $26 per month and board, and $32@35 where they board themselves. Wheat is looking very poor, and the indications are that it will advance in price. Hay is scarce and farmers are feeding cut feed to get their stock through.—E. L. B.

Saratoga Springs, N. Y., April 1.—We have had a long, cold winter, and it seems more like winter now than it does like April. The snow will average from three to four feet deep in the middle and northern towns of this county. It is very cold and the snow is drifting badly; some roads are impassable. Hay is getting scarce, and cattle are on short allowance; barns will all be cleaned out this spring; many are empty now. Cattle are very low, and not much call for horses. Most of the early pigs have frozen to death. Grain is low and must take the place of hay. We have had good sleighing here since the 13th of December.—S. S. W.

Hall's Corners, Ontario Co., N. Y., April 8.—Yesterday afternoon and evening we had a light warm rain, with a fair sun to day, which has changed the appearance of the brown and lifeless looking wheat fields very much. The frost is coming out of the ground very slowly, and unless we have heavy rains it will soon be light and dry and in good order for plowing. I see by last RURAL that our Tariff on Wool is in danger. Now I do hope that our accumulated wisdom at Washington will exercise ordinary common sense, and let well enough alone for the present. —P. F. B.

RURAL BREVITIES.

THE Iowa Homestead has a neat, new dress.

THE Arkansas State Industrial University is reported to have fifty students.

CATTLE in Green Co., Ill., are said to be dying in large numbers from some strange and unknown disease.

WE do not know any one who deals in English sparrows here. We do not advise our Illinois correspondent to introduce them there.

F. H. G., Adrian, Mich., is informed that AVERILL'S chemical paint, so far as we have knowledge and observation, is most excellent.

WE are indebted to EDWIN W. BISWELL, Corresponding Secretary for a copy of the Transactions of the Massachusetts State Horticultural Society.

CHAS. E. CASH is informed that the Poultry World comes to us regularly, and we know no reason why it should not to him, provided he has paid for it.

CATTLE dealers are now contracting with feeders in Morgan Co., Ill., for fat cattle for May delivery, at $5.50@$5.60; for June delivery, at $5.75@$6 per cwt.

THE latest horticultural fashion out is that of transplanting hair from one head to another, by removing some portions of the scalp, with the hair on, from one head to another that is bald. The question is who will suffer himself to be scalped to supply his neighbor?

PUBLISHER'S SPECIAL NOTICES.

The Rural New-Yorker is electrotyped, and hence Back Numbers can always be supplied. Copies for sale by all News Dealers; price Six Cents.

NEW QUARTER—SUBSCRIBE NOW!

ALL OUR READERS interested in the success of the RURAL NEW-YORKER will please bear in mind that a New Quarter commenced *last week*—April 6th. Now, therefore, is a good time to subscribe, and we trust Agents and others will govern themselves accordingly—notifying non-subscribers of the fact and inviting them to join the Rural Brigade. Those forming new clubs, or making additions to old ones, will be entitled to the same Premiums offered in January—so that all aiding the RURAL will not only have the consciousness of doing good to others, but be liberally rewarded therefor.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or more. A host of people are subscribing for papers about these days, and we hope our Agent-Friends will give everybody an opportunity to subscribe for the best.

Show Bills, Specimen Numbers, Etc., of the RURAL NEW-YORKER sent free.

BUSINESS NOTICES.

Lung Complaints, Bronchitis, Asthma, &c., are speedily relieved, and if taken in time, permanently cured by Dr. Jayne's Expectorant. You will find it also a certain remedy for Coughs and Colds.

HOW TO OBTAIN A "COLLINS"

Solid *Cast* Cast-Steel Plow for $5. For particulars, address COLLINS & CO., 212 Water St., N. Y.

THE WAKEFIELD EARTH CLOSET.

Get Descriptive Pamphlet at 36 Dey St., New York.

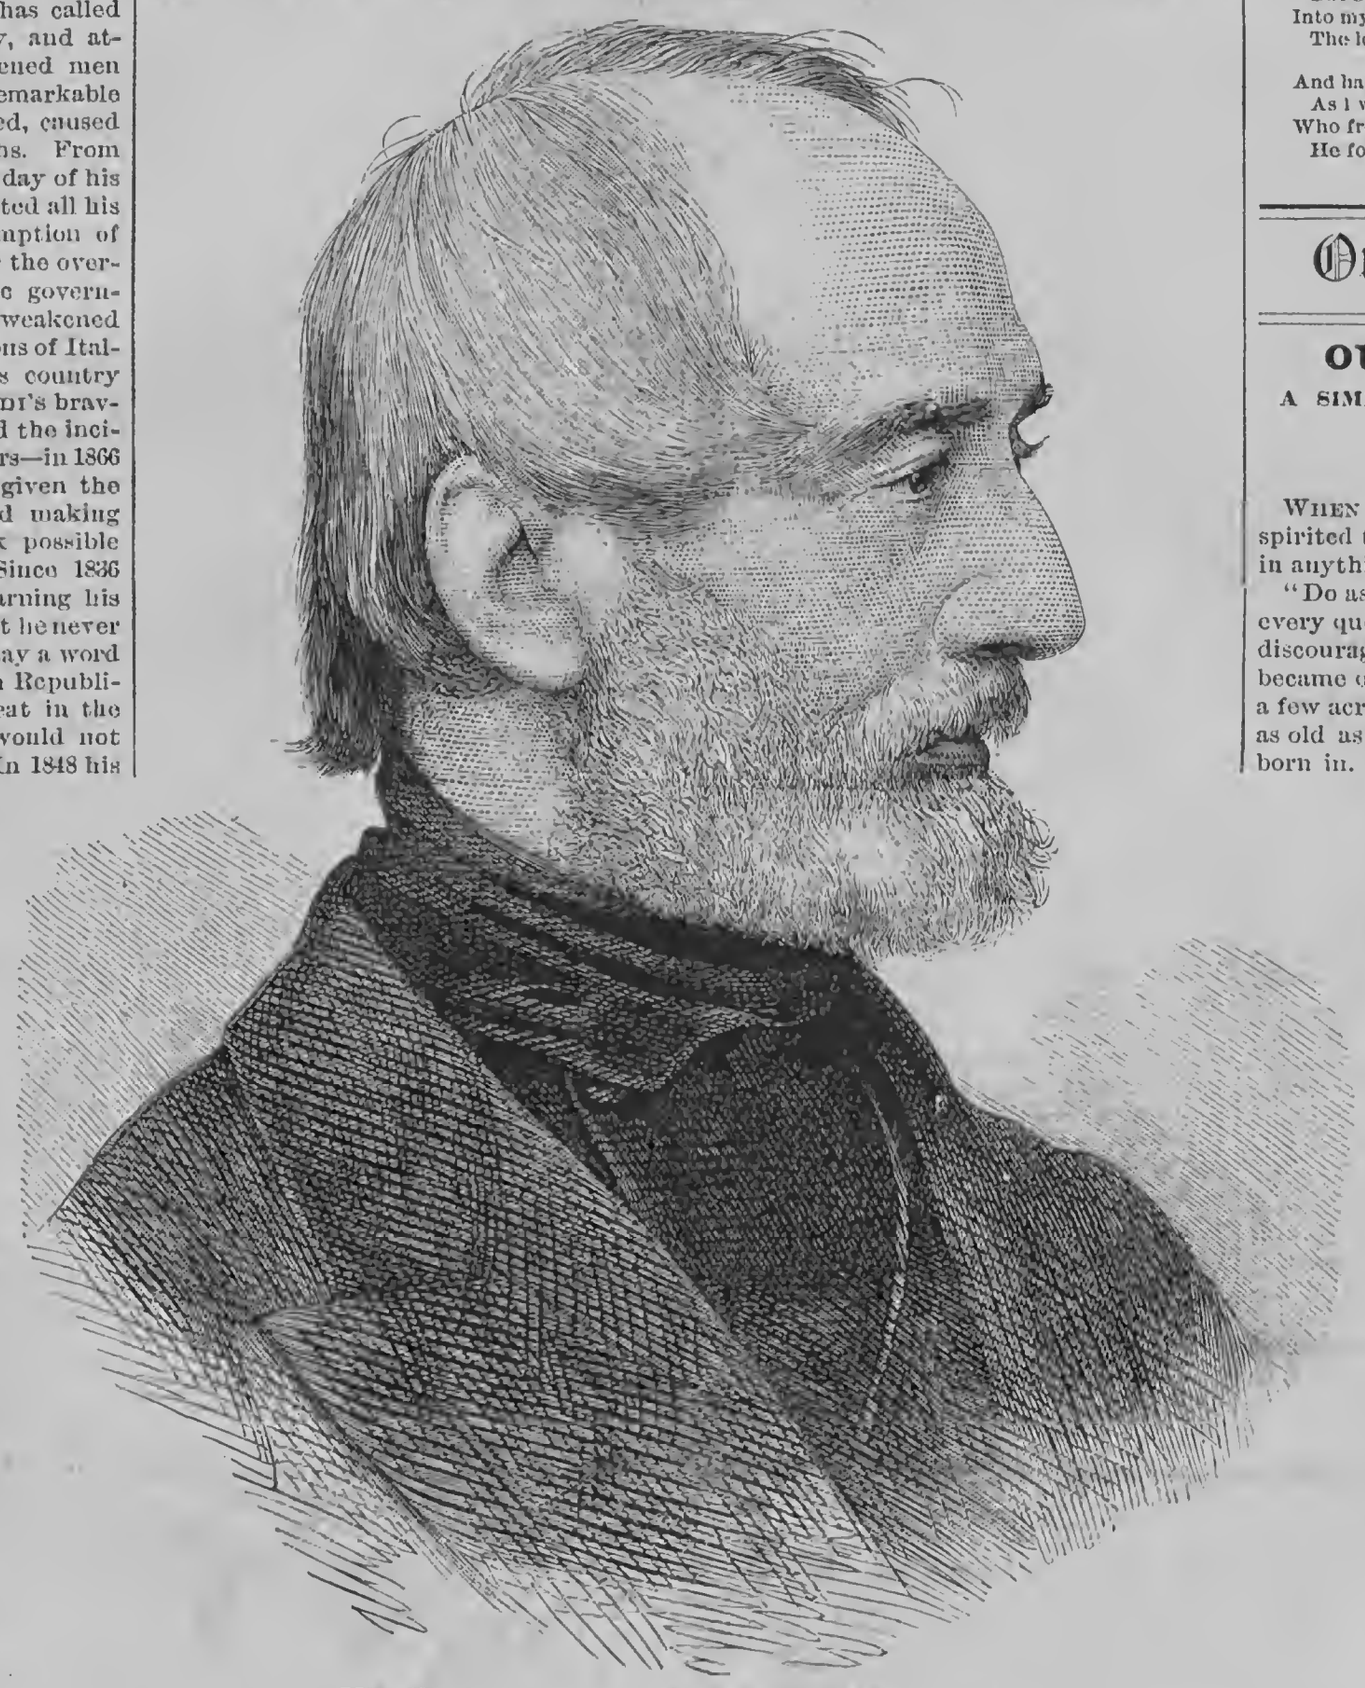
Grocers, Spice Dealers and Druggists all sell Burnett's Standard Flavoring Extracts.

Various Topics.

JOSEPH MAZZINI.

THE recent death of this famous Republican and Revolutionist, at Pisa, has called out universal mourning in Italy, and attracted the attention of enlightened men everywhere. MAZZINI was a remarkable man, whose career, while it lasted, caused much terror to European monarchs. From his early youth at Genoa, to the day of his death, at the age of 63, he devoted all his time and strength to the redemption of Italy, working in his own way for the overthrow of all those petty despotic governments of the Peninsula which weakened and divided the twenty-six millions of Italians. MAZZINI lived to see his country made free by the aid of GARIBALDI'S bravery, CAVOUR'S statesmanship, and the incidental effects of two European wars—in 1866 and 1870—but to him must be given the credit of rousing the people, and making the accomplishment of that task possible which other men completed. Since 1836 MAZZINI has lived in London, earning his living as a teacher and writer; but he never allowed an occasion to pass to say a word for Italy. He worked for Italian Republicanism, and refused to take a seat in the Italian Parliament, because he would not acknowledge an Italian King. In 1848 his scheme of Republicanism for Italy had an apparent success. At that time the Pope had been frightened out of Rome, and a nominal Republic was set up, with MAZZINI, SAFFI and ARMELLINI as its dictators, while GARIBALDI commanded the army against the French besiegers. His ceaseless agitation, numerous pamphlets, correspondence, etc., have attracted the attention of all Europe, and once or twice caused his imprisonment. He made large contributions to English and Italian literature, and some day we expect to see his critical essays and discussions of ethical themes collected for our library shelves.

The funeral of MAZZINI took place at Genoa, his native city, and was attended by thousands from all parts of Italy. His memory has recently been honored in Rome, with an immense procession, orations, etc. The portrait which we have engraved is drawn from a recent photograph taken in London, and is supposed to be a life-like representation of the celebrated Italian Patriot and Revolutionist.



THE LATE JOSEPH MAZZINI.

THE DRAGON TREE.

ON the last page of this week's issue we give a representation of the famous dragon tree, (*Dracœna Draco*,) sometimes called the dragon's blood tree, on account of a resinous exudation which it emits at certain times from cracks in the trunk. This resin was once highly esteemed as a medicine. The tree is a native of the Canaries, Madeira, and grows wild in the island of Teneriffe. The view presented this week is that of a colossal tree which once grew in the town of Orotava, in the island of Teneriffe. It was 45 feet in circumference a short distance above the ground, while at its top it was near 80 feet around. This tree was an object of veneration among the Gouanches. HUMBOLDT first brought it into notice. He computed it to be 6,000 years old. The trunk was hollow, and in the interior there was a stairway, by which one might ascend to the branches. It was 70 feet in hight. Unfortunately this tree was destroyed by a hurricane in the autumn of 1867. Young plants of this species are considered valuable for the conservatory at all seasons.

STUDENTS IN THE COUNTRY.

WILL M CARLETON, the poet, now of the Detroit Tribune is publishing some Rural Sketches, which are very notable. In a recent article he narrates the trials of Students on the Farm, in this pleasant wise:

Four jolly students are these four fellows, just at the close of a two-weeks' vacation in the country. They have been demonstrating What They Knew about Farming, in the Winter. They have enjoyed it, upon the whole. They have fattened upon it. The fresh air has brought color to their cheeks, and the rough work and long sleigh-rides have given appetite to their stomachs. In short, they have taken a vote and passed resolutions to the effect that they have had a grand old time.

To be sure, the two weeks have not, figuratively speaking, been to them one gush of golden sunshine. Smythe, for instance, has lost his faith in Cows. It was on a bitter, frosty morning, that Smythe lost his faith in Cows. He had volunteered to milk Cle. (short for Cleopatra, because she was handsome, and queen of the herd). Cle. was not in good humor, that morning, and Smythe tried to conciliate her by performing a surgical operation upon some warts which she had on her lacteal tubes,—with his finger nails. There came a flash of bovine lightning, and Smythe laid down, and gravely kicked up his heels; with a vague impression that he had discovered several new planets. He also felt, to use a pun which he perpetrated after it was all over, as if he were in the Milky Way—an assertion in which the soiled condition of his nobbiest suit fully bore him out.

Tullups, for another instance, does not like to have the rest of the boys ask him, supposing he were going to harness a horse, which side foremost he would put the collar, and of which end of said horse the crupper could be used to best advantage. He says he thinks he knows—now; but he would rather talk about something else, such as conic sections, or Cicero de Amicitia, or Brachiopods, or regulation base ball, or something he feels perfectly strong on.

Philipson, for still another instance, declares that if, on his return to college, the question: "Are rams all right?" shall happen to be brought up in any of the debating societies, he shall feel it to be his duty to unhesitatingly and unqualifiedly take the negative. When, upon one glorious winter's morning, he went forth leisurely through the bright rays of the rising sun, to feed the sheep;—when he had succeeded in convincing most of them that he was a good and bounteous fellow;—when some of the older and less timid matrons of the flock had come near unto him, and even ventured lovingly to lick his hand;—he was somewhat surprised, and a trifle puzzled, to see, at a distance of four or five rods, the Worthy Patriarch of the flock, gravely shaking his head at this bead sight on the innovator, and went for him quite naturally. Philipson, whose great boast was that he never ran on any occasion, ran, on this occasion. He afterwards remarked, that it seemed to him to be a very hurrying season of the year. He glided several times around the great straw-stack in the center of the yard, the ram in hot pursuit. Tullups, who was a base-ballist, was seated on the big gate, out of danger; and he kindly did his best to encourage his brother student, just as if he were running bases. "Go!" he shouted cheerfully. * * * "Get down on her! * * * You've *got* to go! * * * Pick up them legs!" * * * And as the victim made a surprisingly agile spring over the fence, the ram coming up just in time to assist him, Tullups gravely shouted, "How's that, umpire? Tally one for Philipson."

SICILIAN FLEAS.

AN enthusiastic professor of entomology, having entertained a friend over night, accosted him in the morning with the usual inquiry as to how he slept:—"Not very well. A strange bed, perhaps. But—" "Ah!" quoth the doctor, eagerly, "ye were just bitten by something, eh?" "Well, to tell the truth, doctor I was." "Just think of that! Bitten, were ye? Now can you say that it was anything noteworthy that bit ye? peculiar, eh?" "Fleas, I think. But such chaps for biting I never saw in my life." "I should think so, indeed!" (with great glee) "They're Sicilian fleas. *I imported them!*"

MIND AND MATTER.—The intellect is superior to the physical system. While the world lasts, the sun will gild the mountain tops before it shines upon the plain.

LIBERTY.—True liberty consists in the privilege of enjoying our own rights—not in the destruction of the rights of others.

THE MOUNTAIN BROOK.

Thou little brook, so silver bright,
Thou wanderest onward day and night
I think and think and fain would know
Whence comest thou? where dost thou go?

In th' cold rock's gloomy lap I lay,
But now 'mid flowers and moss I play;
Into my mirror, clear and mild,
The lovely face of Heaven hath smiled.

And happy child-thoughts have I there.
As I wander on I know not where;
Who from the cold rock set me free,
He forever my guide will be.

[*Translated from the German.*

Our Story-Teller.

OUR OLD HOME:

A SIMPLE STORY OF RURAL LIFE.

BY SUE.

WHEN father died mother became so low spirited that she did not take any interest in anything about the place.

"Do as you like, girls," was her reply to every question we asked her. I became so discouraged that I did not care what really became of us. Father left us nothing but a few acres of badly tilled land, and a house as old as the hills—the old cottage he was born in.

MARY ANN kept her spirits in a hopeful state. She said as long as we had mother left, and a shelter for her head, we all might be thankful, and go about our duties cheerfully. MARY ANN was different from the most of us—she was like the MOGANS, mother's family.

"But this old place will never pay a farm hand, and JENNIE is too small to help much," feeling, as I spoke, rather hopelessly. How were we to live, I asked of her.

"I shall farm it myself. You take care of the house and keep mother from fretting, and I'll see to the farm," said MARY ANN, cheerfully.

It was getting along in March, and nothing had been attended to, for we were so confused about father's death, and the loss of our dear homestead, which went to pay off father's debts. The old home was small, only sixty acres, not much like the lost one. SAM JAY bought it, and we felt it had fallen into good hands. He would be kind to the stock, which went with the place.

The last week in March we moved to the old home on the hill. It had stood empty for years. Once in a while father used it for corn and grain, when the harvest was plentiful; it had been a sort of store house for a long time. I managed the inside of the house, and soon had it in good order. The rooms looked cheerful. Mother brightened up, when everything was fixed. The memory of her early wedded life clustered round its ample hearth.

She said, pointing to different parts of the sitting-room—she was growing rather queer:—"Your father sat there the night JOHN came home from college. How proud we were of JOHN. There is where the table stood upon which they placed his coffin the day he was buried. And there was NEDDIE'S cradle—little baby NED, who fell from the door-sill yonder, and rolled down the stone steps on to his head, breaking his neck."

You see she was bound to gather up all the sad events in her life and hold them in view like mourning garments.

The departure of the snow revealed an unsightly array of refuse lumber round the house, broken carts and wagons, which father had thought too good to cut up. A pile of stumps and old boards, whose rugged and ugly proportions effectually warded off the best view of the fine mansion in the valley, was MARY ANN'S first attack. She was bound to have a clean door yard and surroundings, and she went about it in good earnest, too. Soon the farm buildings and yards were in splendid order, the fences whitewashed, and doors which had hung by one hinge gracefully swung on two; windows were mended, and, lastly, she obtained paint and brushes, and actually painted the house and outbuildings. People passing would wonder what power had transformed the old place. Instead of the wood-colored house, broken fences and unsightly sheds, we had a new white cottage, with plain, substantial fences, inclosing a clean plot of ground for a front yard.

MARY ANN was always fond of flowers, and she ornamented the garden with shrubs and flowers. SAM JAY allowed her to take all the plants she loved best from his garden. They were hers and he would not deprive her of them. He sent his head man to plow the five-acre lot, and came up himself to help her top-dress the west field and the lower meadow. She displayed a wonderful lot of thrift, the neighbors said. We had three cows and fifty-eight hens, and, by good management, I made the cows and hens provide food for the family. We had pork and beef left from last year.

We got on finely. Vines and climbing rosos rendered our back kitchen one of the pleasantest rooms in the house. SAM JAY used to sit there and talk for hours with MARY ANN about the farm, and what seed and roots would grow with the smallest amount of work; and together they studied how to make the farm pay the best. The first year was a perfect success. MARY ANN cleared from her oats, hay and corn, nearly five hundred dollars. JAMIE was kept at school. Mother was cared for like a lady, and we felt comfortable. SAM JAY spent long winter evenings at our house, reading books and papers with MARY ANN. He took the RURAL NEW-YORKER and brought it to us every week.

So the spring came round again and we found our hands full. "Doing the chores" fell upon me; the burden of milking the cows, raising calves, and nursing sickly lambs, was my share, while MARY ANN attended to feeding the pigs, and raising the chickens, and other work round the barn. Some very fine rose bushes and a box of rare flower seeds were sent us from the city and caused MARY ANN to pay some extra regard to horticulture. I knew SAM gave the seeds, and wondered if her small brown hands had not opened a wound in his heart. He was very kind to us all, I believe; he managed to find a hand to do all the hardest of our work. He did not like to see MARY ANN'S hands sunburned and blistered. She was so merry all the time—there was something about her so refining and humanizing—she loved so passionately the beauties of Nature. Her mind was well stored with the beauties of thought and language, suggestive of nature and life—her kindly feelings and religious principles rendered her a superior character. Her simple piety threw over our home a holy influence, beautiful as it was touching.

SAM was a gentleman of refinement and mental cultivation. His manly qualities invested him with a wonderful charm. His gentle dignity, the sweetness and gravity of his speech, together with his wide range of thought and elevated sentiments, attracted MARY ANN; and later in the season I noticed her face would flush when his name was mentioned.

There was a gay party down to the JAY mansion; SAM'S two sisters were home from a boarding school. They brought a number of their schoolmates with them. SAM had forsaken us—so we thought. He had not been to see us for three weeks. MARY ANN saw him riding every day with a dark-eyed girl from the city, and once they passed the field where MARY ANN was weeding corn. He lifted his hat gracefully, but the beauty by his side laughed sneeringly, saying, "What rustic beauty is that?"

MARY ANN heard her ask this in a haughty tone.

"She is beautiful, but not rustic; she is a queen among women," was his gay reply.

MARY ANN heard this answer, and felt like weeping. She finished her work before tea, and came to the house looking as if she had seen a spirit. She was as white as a sheet. I did not say a word to her, for I knew she had seen SAM JAY riding by with a lady, and know MARY ANN thought more of him than was good for the peace of her soul.

Mother saw how ill she looked, and remarked about it. Mother was very proud and fond of MARY ANN. She resembled JOHN, who was mother's idol while he lived. JAMIE, and little NED, who was killed by a fall, did not seem half so near. NED did not live long enough to display any peculiar smartness; he was killed the same year JOHN died. I don't think father rightly got over the death of his sons. JAMIE, the baby, did not seem to fill their places in his his heart.

"Are you sick, child?" said mother, in a frightened tone; "you do look dreadfully, MARY ANN."

"No, dear mother, I am only weary; pulling weeds in the hot sun gave me a dreadful headache."

I thought of SAM, and that he had given her the heartache—heart and head both.

"I am not going out again to-day, and will change my dress. Would you like to have me sing to you, mother?" she said, cheerfully.

She knew mother was troubled, and put on a gay expression, in order to banish her fears. That was MARY ANN'S way—to hide her own suffering from a fear of making others uncomfortable. She was never selfish.

"I would love dearly to hear you sing, child. I was thinking, to-day, that you must have forgotten your music."

"I'll change my dress in a moment, and sing you that new song I composed last summer," said MARY ANN, leaving the room.

She returned after a while, dressed in a nice new print, white apron, and lace collar, made by myself. I had a talent for fancy work as well as bread and butter making. She looked so fresh and fair, no one would have guessed that she had plowed and planted, hoed and weeded, all the spring. Her hands were brown and hard, but small and shapely, and they glided over the ivory-keyed instrument gracefully enough to suit even quality people. Mother was proud of her, and it did not much matter if other folks did not like it, if mother was satisfied.

"What shall I sing, mother?" she said, smiling, while her eyes were full of tears.

"Sing 'The dearest spot on earth to me,'" said mother; "And then, if you will, sing that pretty thing you composed last fall, for JAMIE. I have not heard it for a long time."

MARY ANN'S voice was sweet and clear. The instrument was a cabinet organ, presented to her by father on her last birthday but one. She sang "Home, sweet home," and after a moment's thought sang one of her own about the "Heavenly Home."

Mother was weeping softly behind her handkerchief. MARY ANN'S face had a happy expression like sunshine over flowers. I think we got a glance of the faith which had given her so much strength to labor through all seasons. If anybody ever knew the glory of prayer, our MARY ANN did. She was a true woman.

Mother said she was glad she was so near the "Heavenly Home;" and thought she had already put on autumnal shades, touching her silvery locks with her fingers. "I hope to see you both happily married, dears, before I go," she said smiling. "I think you will prove a crown-jewel in somebody's home, MARY ANN."

"The LORD grant it may be mine!" said SAM, who had come in noiselessly, just in time to hear mother's speech. He said in a trembling voice:

"Will you come back to the old home, my darling?" He opened his arms and MARY ANN sprang into them, and was clasped to a faithful heart. Brother SAM does the farming now.

ROMANCE OF THE BARLEY STRAW.

A LESSON FOR LOVERS.

A YOUNG married couple were walking down a country lane. It was a peaceful, sunny morning in autumn, and the last of the honeymoon.

"Why are you so silent and thoughtful?" asked the young, beautiful wife. "Do you already long for the city and its turmoil? Are you weary of my love? You regret, I fear, that you have renounced your busy life yonder, and consented to live only for me and our happiness."

He kissed her forehead, which she tenderly raised up to him. She received no other answer.

"What can you miss here?" she continued. "Can all the others together love you more than I, my single self? Do I not suffice? We are rich enough, so that you need not work; but if you absolutely must do something—well, then, write romances and read them to me alone."

The young man again replied with a kiss. He then stepped across a ditch into a stubble field and picked up a straw left by the gleaners. It was an unusually fine and large straw, yet attached to its root, and entwined by the withered stalks of a parasitical plant, upon which a single little flower might be discerned.

"Was that a very rare flower you found?" asked the little lady.

"No; it was a common bind-weed."

"A bind-weed?"

"Yes, that is its vulgar name. The botanists call it *Convolvulus arvensis*. The peasantry name it fox-vine; in some localities it is called tangle-wood."

He paused and gazed thoughtfully on the straw.

"Pray, what interesting thing is it, then, that you have discovered?"

"It is a romance."

"A romance?"

"Yes—or a parable, if you like."

"Is it in the flower?"

"Yes; the flower and—the straw."

"Please tell me the story about it."

"But it is a sad one."

"No matter for that; I should like to hear it very much."

She seated herself at the edge of the grassy bank; her husband did the same, close at her side, and told the story of the straw.

At the outer edge of the barley field, near the ditch of the highway, grew a young, vigorous barley shoot. It was taller, stronger and darker than the others; it could look over the whole field.

The first thing it noticed was a little violet. It stood beyond, over the other edge of the ditch, and peered through the grass with its innocent azure eyes. The sun shone, and the balmy wind breathed over toward the field from the field where the violet grew. The young straw rocked itself in spring air and spring dreams. To reach one another was out of the question; they did not even think about it. The violet was a pretty little flower, but it clung to the earth and soon disappeared among the growing grass. The barley, on the contrary, shot up higher and higher each day, but the dark green shoot still above all the rest. It rejoiced already in a long, full ear, before any of the others had commenced to show their boards.

All the surrounding flowers looked up to the gallant ear of barley. The scarlet poppy blushed yet a deeper red whenever it swung over it. The corn-flower made its aroma still more piquant than usual, and the flaunting yellow field cabbage expanded its bold flower. By-and-by the barley straw blossomed in *its* manner. It swayed about, now here, now there, in the balmy atmosphere; sometimes bending over the corn-flower, at times over the poppy, and then over the tare and wild field cabbage; but when it had peered down in their chalices it swung back again, straightened up, and thought, "You are but a lot of weeds after all."

But in the grass at the ditch flourished a bind weed, with its small leafy vines; it bore delicate snowy and rose-colored flowers, and emitted a delicate fragrance. To that the barley straw bent longingly down.

"You gallant straw," it smiled; "bend yet lower, that I may embrace you with my leaves and flowers."

The straw essayed to do it with its best will, but in vain.

"I cannot," it sighed; "but come to me, lean on me, and cling to me, and I will raise you above all the proud poppies and conceited corn-flowers."

"I have never had any ambition to rise in the world, but you have been my constant dream ever since I was budding, and for your sake I will leave the green sward and all the little flowers in whose company I grew. We will twine ourselves together, and flower *alone for each other*."

Thus said the bind-weed, and stretched its tendrils into the field. It clung tenderly to the straw, and covered it with its green leaves and modest flowers up to its topmost blade.

It was a beautiful sight. The two seemed to suit each other to perfection. The straw felt now really proud, and shot up higher and higher.

"Do you wish to leave me?" sighed the weed.

"Are you dizzy already?" smiled the straw.

"Stay with me; cling to me. Why do you rise higher?"

"Because I *must*. It is my nature."

"But it is not mine."

"Follow me, if you love me."

"You won't stay? I know now that you do not love me any more."

And the weed loosened its tender arms, and sank to the earth; but the straw continued to shoot ever upward.

The bind-weed began to wither. Its flowers grew more and more pale. "I have but lived and flowered for you. For your sake have I sacrificed my spring and my summer. But you do not notice my flowers—you leave my little buds to wither in the air; you think upon anything else but me and the beautiful summer—*my* time."

"I think upon the harvest; my time has also its claim."

Presently the rain came. Great drops fell upon the desolate leaves.

"My time is soon over," wept the weed, and closed its little flowers to hide the cold tears.

Tears are heavy. The straw came near sinking under its burden. But it felt the importance of keeping upright; it straightened up, gallantly facing the storm. It grew stiffer in the body—harder in the joints.

It was one of the dark days. The heavens were gray and the earth dark; it had been raining for a long time. The weed had grown downward into the earth, as if it would hide itself from the storm.

"Bend down once more as you did in days of yore, when my love was all in all to you," begged the weeping flower.

"I cannot, I dare not," groaned the straw.

"And I, who have bent a thousand times for your sake—I who now bend myself to the very dust before your feet," wailed the weed, groveling on the earth.

Then fell a couple of large rain drops upon the blades; the weight was too much; the brave straw yielded, the weed pulled it down, and both straw and weed sank down on the wet earth, never more to rise again.

The harvest came. All the golden corn was bound in sheaves, and brought in the barn with song and joy. But that which once so gallantly had reared its head above all the others remained prostrate on the stubble field. The grain was moldy and straw withered. Of the beautiful vine, whose loving embrace had been so fatal, only the dry, blackened stalks remained.

Thus ended the romance of the barley straw.

The young wife had tears in her beautiful eyes, but they were the balmy tears which strengthen, not the scalding ones which crush the soul to the earth. She wound her arms around her husband's neck, and whispered a single word in his ear. It was "Thanks."

Then she plucked the last half-withered blossom from the bind-weed.

"It is a flower of memory, that I will take with me, when I to-morrow return with you to the city again," she said, softly, as she hid it in her bosom. "Love is good, but labor and love is better. Pleasure is perfect only when it harmonizes with our permanent interests, as it is also true that no delight can be enduring which interferes with duty."

OLD CHESTNUT TREES ON MOUNT ETNA.

MT. ETNA is celebrated for the great age and colossal dimensions of its chestnut trees; for one of the largest and oldest trees of the kind in the world is that on Mount Etna, which is called Castagno di Cento Cavalli. It is said JEANNE of Arragon, on her road from Spain to Naples, visited Mount Etna, attended by her principal nobility, and being caught in a heavy shower, she and a hundred cavaliers took refuge under the branches of this tree, which completely sheltered them. A century ago, according to BRYDON, this tree measured 204 feet in circumference near the ground; but more recent travelers give only 180 feet as its girth. There are also two other celebrated chestnuts on Mount Etna, one called the Castagno di Santa Agata, which measures 70 feet in girth, and the other, Castagno della Navo, which measures 64 feet; the stems, however attain no great hight, but soon branch off above the ground. According to Dr. PHILIPPI, the Castanea vesca does not appear to be wild in any part of Mount Etna, but always to be cultivated.—*The Garden.*

A STRING OF PEARLS.

SENSE shines with a double luster when it is set in humanity. An able yet humble man is a jewel worth a kingdom.

BASE all your actions upon a principle of right; preserve your integrity of character, and in doing this never reckon the cost.

SINCERITY is to speak as we think, to do as we pretend and profess, to perform and make good what we promise, and really to be what we would seem and appear to be.

A MAN who has no enemies ought to have very faithful friends, and one who has no such friends ought not to think it a calamity that he has enemies to be his effectual monitors.

It will afford sweeter happiness in the hour of death to have wiped one tear from the cheek of sorrow than to have ruled an empire, to have conquered millions, or to have enslaved the world.

A PHILOSOPHER says that the true secret of earthly happiness is to enjoy pleasures as they arise; for that man who can keep his eye upon the bright present, while it is bright, tastes the cup of sweetness prepared

NATURE is the only workman to whom no material is worthless, the only chemist in whose laboratory there are no waste products, and the only artist whose compositions are infinitely varied, and whose fertility of invention is inexhaustible.

Ladies' Port-Folio.

REPINING.

BY WINNIFRED.

Why do we weep for pleasures past? for joys now gone forever?
We knew the while they could not last, that death all ties must sever;
Why do we pine at Heaven's decree, and mourn the friends who love us?
Knowing they are forever free, in brighter realms above us.

Why do we wish our joys were more, and cares and trials fewer,
When all the griefs that gather o'er but teach us to be truer?
Why do we roam for happiness, when it is ever near us,
Is ready even now to bless, and only wants to cheer us?

Why do we idly sit and grieve for the sin of those around us?
Remaining as the moments leave no better than they found us.
Why as we on life's journey go, its pleasures bright before us,
Leave all its joys, because we know that dark clouds hover o'er us?

Why let bright moments o'er us fly, and taste but half their sweetness?
Because we know they're passing by with such unerring fleetness.
Why is it, too, that when we feel no present cause for sorrow,
We're not content until we steal some trouble from the morrow?
If we would take less note of care, our trials would seem lighter,
And joy and sunshine everywhere would make life's pathway brighter.

FASHION AND FOLLY.

"A PERFECT woman I nobly planned—
To warn, to comfort, to command."

So said the poet—but *I* would omit the "command," if it related to the husband, for I consider *that* his business. Woman as I am, I believe that man should always command, and woman obey. Yes, that was what the ALMIGHTY intended should be the case from the beginning, else ADAM would not have been created, or made his appearance, first and foremost. Now-a-days *nous avons changé tout cela* (all that is changed), and *woman* trundles along first and foremost, sometimes making herself very ridiculous in so doing. Do not think I wish to abuse my own sex; far from it! I love and admire a noble-minded, sensible woman *almost* as much as I do the same sort of a man; but such a woman, I regret to say, as far as my observation extends, is not met with as often as she might be, in these degenerate days.

I do not wonder at men ridiculing the fashions and follies of women; but I regret that many of the sterner sex should so seldom discriminate between "the wise and the foolish virgins." Men seem to think that all women are alike in their vanities and frivolities. Let me tell you, Sirs and Gentlemen, that a sensible woman despises the weak and silly ones of her own sex as much, nay, more, than you do; for, sometimes, you must acknowledge, you are so taken by a bright eye, or a rosy lip, that you overlook the folly and frivolity for the sake of a *neat little flirtation*.

The foolishness of fashion, as a matter of course, always attains its hight in the city; and yet we often find the ultra-fashionables residing in country towns. Still, as a general thing (I must defend my country cousins), taste and moderation in dress is a characteristic of farmers' wives and daughters. Their good sense and innate appreciation of the beautiful combine to effect in their toilets a graceful and pleasing *tout-ensemble*, peculiar to well-bred women.

My ideal of a well-bred lady is one who is richly yet plainly dressed, without all that ornamentation which now characterizes our sex, and who wears but little jewelry—a watch, perhaps, and a brooch; and we will also allow her bracelets, but no ear-rings—barbarous inventions!—let us leave them to savages, who are in the habit of cutting their flesh for the purpose of inserting ornaments. A modest woman, modestly and becomingly attired in rich fabrics—silk, satin or velvet, as the case may be—is, in the eyes of men, a noble and charming vision. She may also, if she be of a domestic turn—which fact, I regret to say, is becoming rarer every day—dress herself neatly and becomingly even in calico. What prettier sight is there, in the eyes of a loving husband, than the goddess of his heart and home presiding over the breakfast table in her quiet, well-fitting morning dress, and white collar with its knot of pink or blue ribbon, her soft hair all right, and her sweet face full of smiles! Happy man! how his eyes shine! and how delicious is the coffee prepared by her own fair hands! And the white bread and rolls that she made yesterday during his absence, how sweet and crisp to his taste! He goes away to his daily avocations with a sunbeam in his heart, the remembrance of his morning goddess haunting him until the day's decline, when a coming vision of an evening fairy begins to present itself to his mind. And when he reaches his home she stands ready to receive him, bright and charming, in her soft, lustrous silk and a flower in her hair. She presides at his dinner table as gracefully as at the morning meal, just as if she had not haunted the kitchen the best part of the forenoon, and then is ready to amuse her "dearly beloved" in singing to or playing upon her piano or guitar, if he chooses music, or to talk to him quietly for an hour or two if he should prefer a little social chat. Oh, yes! there are some happy homes yet left in married life. Would that there were many, many more,

"Where two hearts beat in unison,
And two souls seem as one."

C. H. C.

Sycamore Villa, L. I., April, 1872.

THE LADY'S REPENTANCE.

ON our way from Wem to Hawkestone, we passed a house, of which Mr. LEE told me the following occurrence:—"A young lady, the daughter of the owner of the house, was addressed by a man who, though agreeable to her, was disliked by her father. Of course, he would not consent to their union, and she determined to elope. The night was fixed, the hour came, he placed the ladder to the window, and in a few minutes she was in his arms. They mounted a double horse, and were soon at some distance from the house. After a while, the lady broke silence by saying:—'Well, you see what a proof I have given you of my affection; I hope you will make me a good husband.' He was a surly fellow, and gruffly answered:—'Perhaps I may, and perhaps not.' She made him no reply; but after a silence of some minutes, she suddenly exclaimed:—'O, what shall we do? I have left my money behind me in my room.' 'Then,' said he, 'we must go back and fetch it.' They were soon again at the house, the ladder was again placed, the lady remounted, while the ill-natured lover waited below. But she delayed to come, and so he gently called, 'Are you coming?' when she looked out of the window, and said:—'Perhaps I may, and perhaps not;' and then shut down the window, and left him to return upon the double horse alone."

COUNTRY LIFE PREFERABLE.

Oh, this constant, never-ceasing twirl in the current of city life! Will it always be so? Will the whirl, and bustle, and confusion always have such an attraction? As long as moths flutter around a candle, human moths will doubtless flutter around the light that the city extends. And yet how much sweeter and more attractive life in the country is! Especially is it to a woman. In the country, whatever her circumstances of fortune, woman finds that which is an imperative want of her nature—a refined home. In a city, if poor, she cannot escape, or shield her children from the noisy, vulgar life swarming around her; the tenement-lodging or the second-rate lodging-house only remain to her. But under a pure sky, in a balmy atmosphere, the humblest cottage nestling at the foot of the mountain, or under the shadow of one of our majestic elms, can be the fitted home, we will not say of a lady—the word is associated with vulgar pretensions—but of a gentle-woman.

DRESS YOUR DAUGHTERS WELL.—Every woman has such a strong repugnance to being ill dressed, that a mother should never gratuitously wound this natural feeling, associated, as it is, with a fear of ridicule, which is, in some degree, connected with modesty. Take care, therefore, that your daughter be well dressed; and allow her to follow the fashion, when this is neither improper nor extravagant. The more she feels she is dressed like others, the less will she think about the matter.

THE standards of beauty in woman vary with those of taste. Socrates called beauty a short-lived tyranny; Plato, a privilege of nature; Theophrastus, a silent cheat; Theocritus, a delightful prejudice; Carneades, a solitary kingdom; and Aristotle affirmed that it was better than all the letters of recommendation in the world.

THE "Dolly Varden" bonnets are said to be the prettiest and most becoming headgear that has been worn by women for centuries.

Reading for the Young.

SING PRAISE.

BIRDS sing praise
As they fly
And glad notes raise
To GOD on high.

Thus, children, raise
From hearts of love,
Your song of praise
To GOD above. E.

WISHES.

BY ROSE GERANIUM.

I WOULD be like the birdie that soars in the air
Dropping lightly my fragments of song here and there,
I would flit o'er the flowers on the earliest breeze
And catch the first sunbeam that brightens the seas.

I would be like the snow-flakes, as pure and as white,
And my spirit, unfettered by sin should be light,
And some day I would follow the mist as it flies,
And find me a home in the far-away skies.

TRY—DON'T GIVE UP.

A GENTLEMAN traveling in the northern part of Ireland heard the voices of children, and paused to listen.

Finding the sounds proceeded from a small building used as a schoolhouse, he drew near; and, as the door was open, he entered, and listened to the words the boys were spelling.

One little fellow stood apart, looking sad and dispirited.

"Why does that boy stand there?" asked the gentleman.

"Oh, he is good for nothing!" replied the teacher. "There's nothing in him. I can make nothing of him. He is the most stupid boy in the school."

The gentleman was surprised at this answer. He saw that the teacher was so stern and rough, that the younger and more timid boys were nearly crushed. He said a few kind words to them; then, placing his hands upon the noble brow of the little fellow who stood apart, he said, "One of these days you may be a fine scholar. *Don't give up*; but TRY, my boy; TRY."

The soul of the boy was roused. His dormant intellect awoke. A new purpose was formed. From that hour he became studious, and ambitious to excel. And he did become a fine scholar, and the author of a well-known commentary on the Bible; a great and good man, beloved and honored. It was Dr. Adam Clark. The secret of his success is worth knowing:—"*Don't give up; but try, my boy; try.*"

THE SILVER RULE.

YOU all know the golden rule, "Do unto others as you would wish them to do unto you." Here is a rule which is almost a part of the golden rule, but which we will put by itself, and because of its value call it the Silver Rule. "Think and say all you can of the good qualities of others; forget and keep silent concerning their bad qualities." You cannot conceive how much such a course will lighten your own happiness and raise you in the esteem of your companions. Did you ever think any more of a boy or girl because he or she found fault with others? Never call your schoolmates or playmates ugly or cross to their faces nor behind their backs. If they are ugly, or stingy, or cross, it does not make them better for you to talk or think about it, while it makes *you* love to dwell upon the faults of others, and causes your own soul to grow smaller and become like the foul bird that prefers carrion for food. Rather tell all the good you can, and try to think of some good quality of your mates.

OUR LETTERS FROM BOYS AND GIRLS.

The Daughter of a Light-House Keeper.—(B. May C.) writes: I am a girl twelve years old. My father is the keeper of the Tibbitt's Point Light-house, Cape Vincent, and has been for six years. It is a very pleasant place in the summer time. We have a great many visitors to see the Light-house. They say it is a very pleasant place and they should like to live here in the Summer, but not in the Winter. We have a large yard and a nice swing, there are nice places to go in bathing too. We have a horse and father takes me to school in the Summer, it is three miles to the school house. I am a great lover of flowers, and so is my mother and we have a great many. We do not keep a boat, I wish we did, for there is nothing I like better than a boat ride by moonlight.

A Buckeye Girl's Figures.—LILLIE B. F., writing from Fremont, Ohio, says: Now what do you think of this city of six or seven thousand people, who let their cows, pigs and geese run in the streets and get their living out of the farmers' wagons? I am twelve years' old. * * * It is vacation now, and I am helping mamma cut and sew carpet rags, but I do not neglect my arithmetic: I study one hour each day. Papa is a farmer, and owns 185 acres of land. He raised last year 567 bushels of wheat, 1701 bushels of oats, and 600 bushels of corn; he sold $127 worth of cloverseed, $105 worth of hogs. Potatoes were poor; he sold but one load, for fifty-five cents per bushel. Colorado bugs were plenty. He raises horses, cattle and sheep.

A Big Wax Doll.—MINNIE S., Niles, Mich., says:—I read "Cousin Johnnie's" letter and liked it very much. I have no big brother and sister to "fix up" my letters, for I am the oldest of four girls. My little sister ETTIE has a big wax doll; its name is Mabel. Last fall, at the Fair, I found a money purse with one dollar and seventy-five cents in it. We tried to find the owner, but could not, and so I bought ETTIE her Mabel. We are going to make a large book of our RURALS. We made one once and it was so nice we are going to try again.

A Fortunate Girl.—ANNA B. MC., eleven years old, writes:—My father follows gardening. We live within the city limits of Newcastle, Pa. I have been going to school all this winter. I was fortunate enough to be in my seat every time at roll call, and answered to my name 240 times. I never missed one day during the term of six months; so I got the nice prize, as there was no other scholar so fortunate. I have no pets. My father raises plenty of berries, and it is nice to help gather them for market.

Inez, of Rockport, Ind., writes:—I am a girl only fifteen years old. I like to read the nice letters that the boys and girls write very much. I have been wanting to write you one, but feared you would not think it worthy of publication. I shall be very much pleased if you publish this, and, if you do, you shall hear from me again. We have a nice town, on the Ohio River; we will soon have a railroad. We have a fine Methodist church, a Presbyterian church, and several others.

Martha J. P. of Knox Co., Ohio, writes:—"I have five little canary birds in one cage, a nice doll, a Maltese cat, and several little Bantam chickens which come round the door every morning to pick up the crumbs that fall from the table; they are so nice and white."

Leroy S., of Clinzy, Clinton Co., N. Y., says:—"We live away off here, most to the Canada line. My father is a farmer, and I go to school and help do the chores. I have one pet; it is a little puppy, three months old. I have learned him to shut the door."

The Puzzler.

The Queen returned to England on the 7th.. Conviction gains ground that O'Connor is insane. His trial for an attempt upon the life of the Queen has been commenced....The Prince of Wales has gone to Florence....Minister Schenck has returned from Paris....John Bright has taken his seat in Parliament....April 7 was a very fine day in London, and all the city turned out to get the fresh air and sunshine....It is reported that the Geneva Convention has been postponed until the 15th of June ...Lord Dufferin sails for Canada in June...The Grand Jury has found a true bill against the Tichborne claimant for forgery and perjury....O'Connor has been indicted for misdemeanor. He pleads insanity... Mr. Gladstone has accepted an invitation to visit Belfast, Ireland....The Tichborne claimant has pleaded not guilty to all the counts. He will be tried in June.

From France.

The President is giving dinners at the palace of Elysee, in Paris.... Gambetta is making a tour of the provinces....M. Rouher has gone to Chiselhurst. Rumor says he took three millions of francs for Napoleon. The passport system has been abolished....Gambetta is advocating the Republic. He assaulted the party of the right, and said France distrusts it.

THE WINTER OF 1871-2 IN THE NORTH-WEST.

The following table gives the average temperature during the past winter (1871-2), at the points named. Except in two instances, the figures are furnished by the United States Signal Office at Washington, and represent three daily quotations of the thermometer at each place—morning, noon and evening:

	Dec.'71.	Jan.'72.	Feb.'72.	Mar.'72.	Mean
Louisville, Ky....	35°	33°	33°	35°	34
St. Louis, Mo.....	31	28	32	36	31¾
Chicago.....	23	27	26	29	26
Baltimore.....	30	35	36	33	33½
Philadelphia.....	30	29	32	29	30
Washington.....	33	33	34	33	33
New York.....	30	30	30	29	29¾
Helena, Montana.	18	26	36	42	30
Kalama, W. T....	31	32	44	—	36

The temperature at Helena, Montana, may properly be taken as a fair average for the territory, and hence for the mountain section of the Northern Pacific Railroad, where climatic difficulties should be encountered if anywhere. Helena is on the general route of the road, directly in the mountains, and but a few hundred feet below the highest point on the line. Notwithstanding the past winter has been the coldest ever known in Montana, and a surprise to the people, it will be observed:

1. That the average temperature at Helena (latitude 46½°) for the four months was the same as that of Philadelphia, although the latter city is 4,200 feet lower and 450 miles further south.

2. It was four degrees warmer at Helena than at Chicago, and only three degrees colder than at Washington.

3. During February and March it was much warmer at Helena than at Philadelphia, Louisville, St. Louis, or Washington. During March it was nine degrees warmer at Helena than at Washington and Baltimore.

4. The average winter temperature at Kalama, Washington Territory, on the finished portion of the Northern Pacific Road (in latitude 46°) was several degrees warmer than at Louisville, Washington or Baltimore, in latitude 39°. The greatest cold of the past winter at Kalama was 14° above zero.

Letters from members of the Montana Territorial Government, dated March 6th, state that for three weeks previous to that time (beginning about the middle of February) the weather had been so mild that all signs of winter had disappeared; farmers had put in nearly all their spring grain crops, and new grass was three inches high in the valleys. The significance of this can be appreciated when it is remembered that in the Atlantic States, as late as March 6th, intensely cold weather and heavy snows prevailed; trains were blockaded on many Eastern roads, and up to the *2d of April* frost had not left the ground in Pennsylvania, and the grass had not shown the slightest tinge of green.

These **simple facts**, mainly derived from official sources, and easily verified, are the strongest possible corroboration of the statements hitherto made by the promoters of the Northern Pacific Railroad as to the climatic advantages of the valley route across the continent.—*Philadelphia Inquirer, April 6.*

SEMI-BUSINESS PARAGRAPHS.

On Everybody's Tongue.—Eulogiums of the great National Regenerator of Health, Plantation Bitters, are on everybody's tongue. This gratuitous *viva voce* advertising is better than all the paid-for puffing to which the owners of bogus bitters are obliged to resort. It has a spontaneous heartiness about it which carries conviction to the mind of the auditor.

Watch No. 12003, Stem Winder—bearing Trade Mark "United States Watch Co., Marion, N. J."—manufactured by the United States Watch Co., (Giles, Wales & Co.,) has been carried by me two months; its total variation from mean time being six seconds in the entire time. —W. S. Dunn, of H. B. Claflin & Co., New York.

Facts for the Ladies.—Mrs. John Bogert, Jersey City, N. J., bought a $55 Wheeler & Wilson Lock-Stitch Sewing Machine, and earned enough to pay for it in two weeks, stitching linen coats. See the new Improvements and Woods' Lock-Stitch Ripper.

It is not a little merit that an article for common use should be tastefully finished as well as thoroughly made. The Blanchard Churn is one of the *handsomest* things a farmer can have in his house.

A leisure moment is well employed by writing for Free Price List of our $75, Four-Ton Hay Scale. The Jones Scale Works, Binghamton, N. Y.

THE MARKETS.

MONEY AND TRADE AFFAIRS.

New York, Saturday, April 13, 1872.

In Wall street the pressure for Money from the Stock Exchange to support the current speculation in Railroad and other Stocks was intensified this week by a "lock-up" of Greenbacks from the use of the market by the old Erie Ring, (or what there is left of it,) through the Tenth National Bank belonging to this party. The Bank was taken to task by the Clearing House and a warning resolution adopted against any future breaches of good neighborhood and fair dealing. The officers of the Bank are also under investigation by the Banking and Currency Committee of Congress.

General trade is not much affected by the Money stringency, and business is pretty active in all departments. The Importations continue to run ahead of last season, and the bulk of them find a willing market. Everything connected with the Metals trade, Foreign and Domestic, is in demand, and Copper, Iron, Steel, and Iron and Steel rails are on the advance. It transpires that the wages of labor in Great Britain, connected with Coal mining and Iron making, have advanced so materially of late that speculation in metals, as well as the regular trade and export demand, has greatly excited prices. It is also said that the cost of mining coal has been increased by the effects now felt of the careless and improvident system of working the great coal veins for many years past. The discovery is, not that those deposits are actually giving out, but that it requires immensely increased labor to work the coal out.

No financial legislation has been matured in Congress, and it now seems doubtful whether a general revision of the Tariff will be gone into this session. The Tea and Coffee Duties are also in doubt.

The following are the comparative movements of the City Banks for the past fortnight:

	March 30.	April 6.
Capital	$87,155,500	$87,155,500
Loans	276,767,400	278,483,400
Gold and Greenbacks	63,034,100	58,459,300

* Ex. Dividend.

There has been a good deal of feverishness in the Railroad speculation since last report, but the ultimate quotations in the above table show only a slight difference against the market, as compared with the previous week. The Government Stocks are steady, and Gold ¾ per cent. higher on account of an advance of Interest by the Bank of England to 4 per cent. per annum, which tends to call home English balances from this side.

PRODUCE AND PROVISIONS.

New York, Friday, April 12, 1872.

Receipts.—The receipts of the principal kinds of produce since our last embrace 11,634 bales of cotton; dried fruits, 201 pkgs.; eggs, 11,795 bbls.; flour, 37,330 bbl.; wheat, 86,585 bush.; corn, 206,378 do.; oats, 218,872 do.; barley, 27,300 do.; grass seed, 2,153 bags; beans, 324 bbls.; corn meal, 2,282 do.; do., 2,818 bags; hops, 151 bales; pork, 5,588 pkgs.; beef, 283 do.; cut meats, 7,262 do.; lard, 6,524 do.; lard, ——— kegs; butter, 7,122 pkgs.; cheese, 4,219 do.; peanuts, 2,137 bush.; 926 hhds. tobacco; 7,426 boxes do.; 3,724 bbls. whisky, 471 bales wool.

Butter.—The market is not moving in a manner to suit sellers of new, and prices are very weak; while the increasing daily supply does not contain the desirable grade of quality that might attract more business. Old butter is safe enough, fine is scarcer than it was at this date last year, and the Southern demand, which avoids white, while yellow is accessible, will soon use up the remnant. Everything is against the manufacturer of new butter this year as far as quality is concerned. There has not been sufficient sprouting of pasture to give any of it the least tinge or flavor of what April churnings should present by this date in ordinary Spring, and buyers, consequently, are shy of loading up heavily with it. Besides, when old began to run out so rapidly many bought considerably ahead of which purchases they yet hold a surplus that must be retailed. Old is quoted as in recent late RURALS. New is quite unsettled, and though the shaded quotations may start more trade, that which has been held over during the period of dullness will have to sell cheap. There is very little difference in the quality of State Welsh or half tubs this season. Boston has sent some of its Canadian supply; the sale is moderate at 25c.@28c. About 400 firkins new California, or a shipment equal to that quantity, is due here by the 15th inst. We quote new State pails, choice, 35c.@36c.; do. half tubs, 34c.@35c.; do. Welsh do., 33c.; common State, 25c.@30c.; Western fine, including rolls, 27c.@29c.; do. other, 20c.@25c.

Beans and Peas.—The arrivals of beans continue small, and as reports are current that the stock in the interior has been pretty well bought up, holders are very cautious, and refuse other than full prices. Sales of prime Mediums at $3; good do., $2.85@2.90; fair do., $2.70@2.75; prime Marrowfats, $3.15@3.20; good do., $3@3.10; Kidney, $3.25@3.40; red do., $2.30@2.60. Peas, $3@3.25; Canada, $1.20@1.23; green, $1.50@2.

Beeswax—Is offered sparingly at 40c.

Cheese.—Business continues limited to actual wants of the home trade. Old prime factory is held at 19c., but this price is only obtained for small lots. The few lots of new received have not found buyers yet, and no prices can be quoted. Old fine State factory, 18½@19c.; fair, 17c.; common, 14c. State dairy, 16@18c. for good and prime; 12@14c. for common. Ohio factory, 17@17½c.; English dairy, 15@16½c.; Pine apple, 16@20c.

Cotton.—Is ruling lower, mainly owing to foreign reports. The demand is light.

	Uplands.	Alabama.	N. Orleans.	Texas.
Ordinary.....	20¼	20¾	20¾	21⅜
Good Ordinary...	22	22¼	22⅜	22⅝
Low Middling....	22¾	23⅛	23⅛	23¾
Middling.....	23½	23⅝	23⅝	23¾
Good Middling...	24¼	24⅜	24⅜	24¾

For forward delivery latest sales on the basis of low middling are at 22¾c. for April; 23¼c. for May; 22¾c. for June; 23⅛c. for July; 21¾c. for Sept.; 20¼c. for Oct.

Dried Fruits.—Speculation in apples is still rife, with buyers confident of a future profitable outlet. Peaches are quiet but not quotably changed. Small fruits dull with the advanced season.

Apples—Old State, qrs., 8@9c.; Western, new, 10@11c.; Southern, new, qrs., 8½@9¼c.; do. fine, sliced, 12½@13½c.; new State qrs., 10½@11½c.; do. sliced, fine, 13½@15c. Peaches, peeled, new N. C., 17c.@19c.; do. Geo., 15@16½c.; peeled E. Sh. Va., 15@16½c.; new unpeeled halves, 7½@8c.; do. quarters, 6c. Plums, 25@27c. Cherries, new, ₱ lb., 30@31c. Blackberries, 12½@13c. Raspberries 31@32c.

Eggs.—The arrivals are small and prices are higher and firm. Reports from the West speak of larger shipments, and present prices are not likely to be maintained. Sales at 22½@23c. for Westerns, 23@24c. for State, N. J. and Penn., 21@22c. for Southern; 30@35c. for duck, 55@60c. for geese.

Flour—Is decidedly higher. The arrivals are small and there is considerable call from exporters. The high grades show most improvement, as they are scarce.

The quotations are at $6.65@6.85 for superfine State; $6.35@7.10 for common extra do.; $7.15@7.25 for good to choice do.; $7.30@7.65 for fancy do.; $6.65@6.85 for superfine Michigan, Indiana, Ohio, Iowa, &c.; $6.95@7.20 for extra do.; $7.25@8.10 for choice extra do., including shipping brands of round hoop Ohio at $7.15@7.50, and trade brands of do. at $7.55@8.60; good to choice white wheat extras at $8.10@9.00; Minnesota, fair to very choice extra, at $7.75@7.90; St. Louis at $7.50@8.25 for common to fair extra, and $8.50@10.50 for good to choice. Southern at $7.80@8.50 for extras and $8.50@11.25 for good to choice. Rye at $4.10@5.05.

Fresh Fruits.—Cranberries are in small stock and held high. Prices of apples show no change. The offerings are mainly of Russets.

Apples, good, barrels, $4@4.50; do. selections, $5@5.50 do, poor, $2.75@3; cranberries, fine, bbl., $17.00; do. crates, fine, $5.50; do. do. common, $3@4; peanuts, Wilmington, bush., $2@2.25; Virginia, new, $2@2.20; do. common, $1.25@1.50; hickory nuts, $1.75@2; Pecan nuts, lb. 8@9c.

Grain.—In wheat, Winter grains have advanced with light supplies. Spring is lower. The business is moderate. No. 2 spring in store at $1.48@1.52; No. 1 in store at $1.55@1.58; winter red Western at $1.72@$1.76; amber Western at $1.78@$1.83; and white Western at $1.80@$2. Rye is lower, Western 88c. Oats are offered more freely at lower rates. Sales are 50c.@52c. for Western; 52c.@53½c. for white olive. Barley is quiet at $1.10@$1.12½ for Canada West. Corn is held firmly with a fair business for export and home use. Sales at 72½c.@73 for Western mixed; 71c. for do. in store; 72½c. for Southern yellow.

Hay and Straw.—The arrivals are light, and, with fair inquiry, prices are firm. Sales at $1.35 for shipping; $1.40@1.75 for retail qualities; 50@60c. for salt; 75@85c. for clover. Straw at $1.05 for long rye; 85@95c. for short rye; 75@85c. for oat; 50@70c. for wheat.

Hops.—There is a scarcity of prime stock and very full prices are ruling. Poor qualities are neglected. We quote prime at 60@65c.; common lots as low as 20c. Old at 10@15c.; English, 60@65c.

Poultry and Game.—The call is mainly for live poultry, the dressed stock arriving being in poor order. For desirable lots steady prices are paid.

We quote dressed Turkeys, good, at 24@26c. Fowls and Chickens—Western and State, 15@18c.; do. Bucks Co. and N. J., 25@26c.; capons, 35@36c. Live, State and N. J., 18@20c. do. Western, 17@18c.; roosters, 11@12c.; ducks, per pair, $1@1.12. Geese—Western, $1.75@2; do. Canada, $1.75@2; do. Jersey, $2.75@3.25; turkeys, 20@22c.

Game.—Canvas backs 62@85c., red head 40@60c., mallard 30@40c., widgeon and teal 20@30c.; black duck, 75c.; English snipe per doz., $2.75@3; wild geese each $1.; wild pigeons, per doz., $1.25@1.37, picked.

Provisions.—Mess pork is higher in sympathy with the feeling at the West, with a more active trade. Mess, $13.37 for spot, $13.37 for April, $13.75 for May, and $13.80 for July; extra prime, $10.75. Dressed hogs are steadily held at 6@6½c. for city; middles are held firmly, with a quiet market; short rib, 6⅞c.; long clear, 6¾c.; clear bellies, 7¼c. Cut meats are dull at 8¼@9¼c. for hams in pickle, 8¼@9c. for do. in salt, and 4½@5¼c. for shoulders. Smoked meats are quiet at 10@13c. for hams, 6¾@7c. for shoulders, and 7¾@8¼ for clear rib. Lard is held a trifle higher, with a fair sale.

Prime Western steam, 9c. for spot, 9¼c. for May, 9¼c. for June, and 9⅜c. for July. Stearine is quiet at 9¼@9⅜c. Beef is dull at $7 50@8 for plain Western mess, $10@12 for extra mess. Tierce beef at $15@17 for prime, $19@21 for India mess. Tallow is in good demand, and firm at 8½@9¼c. for common and prime.

Seed.—There is a very light receipt of clover, and there is sufficient home trade to keep prices firm. Sales at 9@9¼c. for Ohio and Indiana; Timothy is quiet at $3.25@3.50.

Tobacco.—There is an active trade in new seed-leaf, at full prices, mainly for shipment. Kentucky leaf is quiet and firm. We quote new crop Kentucky at 8@9¼c. for lugs, 9@10¼c. for common leaf, 11½@14c. for fine do. Old crop seedleaf, at 15@16c. for Conn. and Mass. fillers, 20@25c. for seconds, 25@40c. for wrappers; Penn. fillers, 12@15c.; 30@40c. for wrappers, 12@15c. for Ohio fillers, 30@40c. for wrappers. New crop, 8½@10c. for State running lots, 12@14c. for medium Penn., do., 17@21½c. for fine do., 10@14½c. for Ohio running lots, 8½@9c. for Wis. and Western.

Vegetables.—Increased inland communication tames all strong feeling in potatoes and prices favor the buyer. Fine seed varieties are firm. A few new Bermuda potatoes quoted at $10@12. A few green peas from Florida brought $10 per bushel.

Potatoes, Early Rose, bbl., for seed, $2.25@3.00; P. Blows, $2.25@2.50; Prince Albert, $1.75@2; Monitor and Goodrich, $1.25@1.50; Jackson, $1.50@1.75; Dyright, $1.50@2; sweet Del., $3.75@4.00. Onions, red and yellow, $2.25@2.50; Conn., 100 strings, $3. Garlic, per 100 bunches, $22@24. Turnips, Russia, bbl., $2. Cabbages, per 100, $6@8. Beets per 100, $1.25. Carrots per 100, $1.50.

Wool.—The features of the market for fleeces are the same. Light stocks enable holders to dictate much their own terms. Foreign sell better at full prices. We quote fleeces at 75@90c.; Texas at 48@52c., for unwashed good, 43@47c. for common; California, fall clip, 35@42c.; pulled at 75@78c. for extra, 80@82c. for super. Latest sales are at 46c. for nolls, 53½@57½c. for Montevideo, 46@47½c. for Cape, 70@75c. for Australian.

LIVE STOCK MARKETS.

NEW YORK, April 11, 1872.

THE depression noted last week continued up to to-day. Stock arrived in moderate quantities, but the current had got so set in a downhill course that it was very difficult to check it. The greatest glut and most disastrous trade was in calves. All kinds ruled low, however, rain and warm weather combining against the trade. Just now drovers are holding their stock back with the idea of forcing the rates up again, and there is some prospect of success.

The following are the receipts of live stock for the past week in comparison with former periods:

Beeves.—Following the close one week ago, the supply was quite free on Monday last, and prices ruled steady, scarcely anything selling above 13c., just a few of the first choice going at 13¼c. There were 162 car loads that day at Communipaw, 113 cars at One Hundredth street, and 8 cars at Weehawken, making 4,300 beeves on sale, but they were not all disposed of, the market dragging at the close. This determined drovers to hold back their shipments, so orders went West to take off stock at Harrisburgh and Pittsburgh, so that only 538 head arrived to-day, and owners began to advance upon the prices, first putting up ½c. and then ½c., selling their 6 cwt. Cherokees at rising 10c.; 7 cars fair, 7¼cwt., Ill., at 12c. The prospect is now favorable for higher prices, and they are needed, for shippers have lost heavily of late. The market has been overstocked with bulls, and prices very low. They have been selling at 6c.@4½c, with some holding, for which only 3c. was offered.

The following are the closing prices for the week in comparison with what cattle brought one week ago, for net weight of beef:

	This week. Cents.	Last week. Cents.
Choice beeves, ₱ lb	13 @ 13¼	13 @ 13¼
Good to prime	12½ @ 13	12 @ 12½
Ordinary to medium	11½ @ 12	11¼ @ 11¾
Lowest grade	10 @ 11	10¾ @ 11
Average sales	11¾ @ —	11½ @ 11¾

Hogs.—With slightly increased arrivals, the only change is ½c. advance on city dressed pigs. Live are worth 4¾@5c.; dressed 6@6¾c., closing somewhat firm.

Milch Cows.—While there is a fair demand for the limited number of good cows sent in, the great bulk are ordinary or very poor, and sell slowly at low rates, or $25@35 each. Fair are worth $45@55, with good to prime at $60@75. A few have been sold at $80, but they were extras. Low rates for both milk and cow beef work against good prices for fresh cows.

Veal Calves.—The number of live calves reported is not so very large, but dressed have been piled in much faster than they could be sold. The weather was warm and rainy, and these hog-dressed veals had to be sold at just what butchers chose to pay for them. We noticed one lot sold at 5c., and some went at 4c. The finest only bring 9½@10c. Live vary from 5@8c., a few prime reaching 8½c., as 25 Penn. of 200 lbs. A lot of 280 Bucks Co., 135 lbs., went at 8c. It is now too late in the season to send dressed calves with safety, unless they are killed near the city.

Sheep and Lambs.—These last are still scarce, and fat ones are worth 18c. ₱ lb. One lot of 45 lbs reached 19c., with 25 of 55 lbs, at $9.50, and some poor at $7.25. Common lambs sell slowly. Sheep were in fair supply up to yesterday when dealers began to practice the cattle dealers' game, and hold stock back. Now they are worth ½c. above last week's quotations, or 7½@10¼c. ₱ lb, one lot extras going at 10½c. Most of the stock sells at 8@9½c., as a car 95 lb. course Ill. at 8½c.; a car 95 lbs. fine wool, 9¾c.; a car 106 lbs. Mass. at 10½c. The prospects are much better this P.M. No sheared lots have been received as yet, but some are expected next week.

COUNTRY CHEESE MARKETS.

Little Falls, N. Y., April 13, 1872.

THE rain and thawing of the deep snow in the country roads has rendered them almost impassible in many places, and hence there has been a light delivery of cheese at the Little Falls market for the week ending April 13th.

The few farm dairies brought in have been mostly shipped to N. Y., to be sold on commission. Prices have ranged from 14@15c. for good to best winter made.

Butter is a little lower, the prices ranging from 30@33c., and extra fancy a little higher.

We have advices from abroad for the last week in March. Our London correspondent says that cheese sells well, American being quoted at 70@74s. for extra, and 63@70s. for good. In butter, the best descriptions are reported short, owing to cold weather. We give quotations as follows: Clonmells, 100@130s.; Corks, 128@132s.; Normandy extra, 140@146s.; Canadian, 70@90s. The corresponding prices for butter and cheese last year were, for Friesland butter, 140s.; American cheese, 76s.

The weather is now mild in Herkimer, and snow going off rapidly.—X. A. W.

SPECIAL NOTICES.

FOR MOTH PATCHES, FRECKLES

and TAN, use PERRY'S MOTH and FRECKLE LOTION. The well known and reliable remedy for Brown Discoloration of the Face. Prepared by Dr. B.C. PERRY, Dermatologist, 49 Bond street, New York. Sold by *Druggists.*

RUPTURE CAN BE CURED

without suffering. ELASTIC TRUSSES are superseding all others. Before buying Metal Trusses or Supporters, send for a descriptive circular to the ELASTIC TRUSS CO., No. 683 Broadway, New York.

Why not use *White Pine Compound*, when it is such a sure remedy for Coughs, Lung Complaints and Kidney troubles.

SAFE AND PROFITABLE!

THE

CANADA SOUTHERN

First Mortgage Sinking Fund

Thirty Years

7 Per Ct. Gold Bonds

AT

90 and Accrued Interest.

The Road runs from Buffalo to the Detroit River, and is the Eastern link in the new AIR LINE from BUFFALO to CHICAGO, and has been under construction for about two years past by railroad men who have seen the necessity for a STEEL RAIL, LOW GRADE SHORT ROUTE between the great railroad systems which diverge from Chicago, Toledo and Buffalo.

Among the builders of the road, by whose cash subscriptions 200 miles (out of 230) have already been graded, bridged and made ready for the superstructure, a large part of the steel rails bought, all of the materials for the stations and a part of the equipment purchased, are:

MILTON COURTRIGHT, JOHN F. TRACY, WM. L. SCOTT, DAVID DOWS, HENRY FARNHAM, R. A. FORSYTH, HENRY H. PORTER, JOHN M. BURKE, M. L. SYKES, Jr., B. F. ALLEN, all Directors either in the Chicago and Northwest or in the Chicago, Rock Island and Pacific; GEO. CRDYKE, of the Midland Road; JOHN B. ALLEN, SIDNEY DILLON, DANIEL DREW, J. S. CASEMENT, J. & J. CASEY, O. S. CHAPMAN, JOHN ROSS, DAVID STEWART and F. H. WINSTON.

THE ROAD will be

33 MILES SHORTER THAN ANY OTHER ROAD,

either BUILT or in contemplation, between Buffalo and Chicago, and will also shorten the distance between Toledo and Buffalo 23 miles.

THE MAXIMUM GRADE on the entire line does not exceed FIFTEEN FEET to the mile—and Ninety-six per cent. of the Road IS STRAIGHT.

The ROAD WILL BE COMPLETED and in running order on or before December 31 of this year.

The principal and interest of the bonds are payable either in New York, London or Frankfort.

We confidently recommend the bonds to all classes of investors.

LEONARD, SHELDON & FOSTER,

No. 10 WALL ST., NEW YORK.

THE UNIVERSAL

Twine & Thread Cutter

"I would not be without it."

SAVES

TIME, TWINE,

THREAD, FINGERS,

AND TEETH.

And is all combined in a convenient and neat little device, which is worn (like a badge) on the coat, vest, or lady's dress or work-basket. It is received with unbounded favor by all Merchants, Clerks and Salesmen in Dry Goods, Grocery, Hardware, Drug, Boot and Shoe, and all other business where thread or twine is used.

Its unprecedented sale is its best recommendation.

A CUTTER WILL BE MAILED TO ANY ADDRESS ON RECEIPT OF 25 CTS., AND IF NOT SATISFIED THE MONEY WILL BE RETURNED.

WEBSTER'S PATENT

BUTTON-HOLE WORKER.

Patented June 27, 1871.

One of the most important inventions of the age! The most perfect Button-Hole Worker ever invented! So simple that a child can work a more perfect button-hole with it than the most experienced hand can work without it. Every stitch is taken with the most perfect mechanical accuracy. Is used entirely independent of the sewing machine, and will last a life-time. Does away with pricking the fingers, straining the eyes, and with imperfect and irregular worked button-holes. They give universal satisfaction. Ladies who use them say that they are worth their weight in gold. Over 11,000 sold during the first week of their introduction. The most liberal inducements offered to the trade. Dry Goods and Fancy Goods Merchants find it an excellent selling article. Local and travelling agents wanted everywhere.

Samples and terms, with full directions for use, sent prepaid on receipt of 50 cents. Orders by mail receive prompt attention. Address

Paints, Oils, Blacking, &c.

ARE YOU GOING TO PAINT?

MORE THAN

100,000 HOUSES

HAVE BEEN PAINTED WITH THE

AVERILL CHEMICAL PAINT

IT IS THE BEST

In the world for exterior work upon Cottages, Villas or Buildings of any kind, whether built of brick, wood or iron. It is a liquid, *ready for use,* and requires no oil thinning or drier. Purest white, and any desired shade can be had in packages from one gallon upwards.

EXTRACTS FROM OUR LETTERS:

CHAS. HALLETT, Esq., of Riverhead, L. I.:—"Years ago I had your paint applied by the side of the best white lead. The lead requires repainting, but the Averill Chemical is yet looking well."

Gen. DAVID H. STROTHERS:—"Your Paint fulfills your representations."

Rev. S. C. ALEXANDER:—"Our Institute has saved $150 by using your Paint. It is splendid."

PETER HENDERSON, Esq.:—"I find the Chemical Paint retains the colors and gloss far superior to that done by the lead and oil at the same time."

Gen. JAS. NEGLEY, M. C.:—"I find it the cheapest and best."

SETH THOMAS, Esq.:—"It gives better satisfaction than any paint I ever used."

Sample card of beautiful colors, and recommendations from owners of the finest residences in the country, furnished free by the

AVERILL CHEMICAL PAINT CO., 32 Burling Slip, New York, or 118 Superior St., Cleveland, Ohio.

P. S.—The superiority of these Paints has already brought numerous *worthless* imitations in the market. We caution the public against using them.

The Season for Painting

HAS COME AGAIN.

If you propose to paint, first send stamp for a book called "Plain Talk with Practical Painters, with Samples of Colors." The book is worth a dollar, and costs nothing. JOHN W. MASURY, 111 Fulton St., New York. ☞ Specialty in Pure Paints and Colors. Masury's Ready-Made Colors are the only ones which stand the test of time. Do not be deceived.

631 Market St., Philadelphia, Pa.

CARHART'S

PATENT TWO-HORSE

Pulverizing Cultivator

Was Awarded the First Premium at State and County Fairs in 1870 and '71.

It is superior to the best Wheel Cultivator.
The price is only Twenty Dollars.
The draft is reduced nearly one-half.
The depth you wish it to run is regulated without the use of wheels.
It can be drawn close to a tree or plant without injuring it.
It is not disturbed by short undulations of earth, like the Wheel Cultivator, but pulverizes, levels and fits the ground for the Mowing Machine better than any Cultivator in use, and can be used for more purposes than any other implement on the farm.

FARMERS, DAIRYMEN AND BUTTER BUYERS!

PACK YOUR BUTTER

IN

WESTCOTT'S

RETURN BUTTER PAIL

Approved and recommended by the leading authorities of our country on dairying, and acknowledged by all butter dealers to be the very best package in use.
Butter packed in this Pail brings **5 to 10 cents more** a pound in the New York City market than the same quality in any other package.

READ THIS:

NEW YORK, Nov. 15, 1871.

We, the undersigned, Produce Commission Merchants of the City of New York, consider Westcott's Return Butter Pail, manufactured by Silsby Bros., Belmont, N. Y., *the best package in the market.* It is our experience that Butter packed in this Pail *sells more readily and commands a higher price* in this market than in any other package, and we heartily recommend its general use by the dealers, dairyman and butter buyers who ship to this city.

Respectfully,

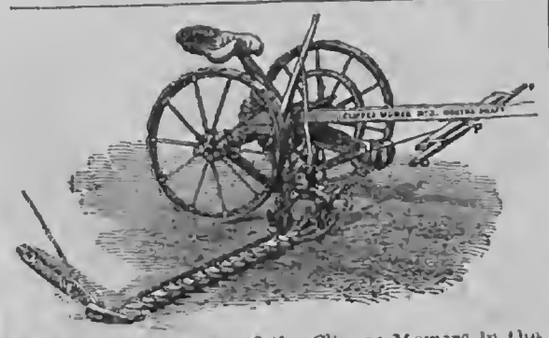
(Signed by 45 leading Commission Merchants.)

The Westcott Return Butter Pail meets my approval as a good butter package. It is one which I always feel safe in recommending.

X. A. WILLARD,
Dairy Editor Moore's Rural New-Yorker.

Dairymen, send for a Circular! Dealers, send for a Price List! We are the sole manufacturers of **Westcott's Return Butter Pail,** and also manufacture very extensively Butter Firkins, Half-Firkin Tubs, 25-pound Butter Pails, Well Buckets, &c., &c.

SILSBY BROS.,
Belmont, Allegany Co., N. Y.
Principal Warehouse, Binghamton, N. Y.



The *uniform success* of the Clipper Mowers in the field, the testimony of every farmer who has used them, that they are the *lightest in draft, the most durable* and the *most economical* machine for the farmer to buy, fully substantiates what the proprietors have always claimed—that the Clipper is the **Best Mower in the World.**

To the No. 4 size is attached the Dropper (cutting 5½ feet, with *separate Finger-Bar* for reaping), constructed with great improvements—in fact perfected; and in point of efficiency, strength, lightness of draft and symmetry of proportions, it is, as a Reaper, also unequaled. Farmers! see it before you buy. Pass your own judgment upon it. Look at its many improvements possessed by no other machine. Remember, it is fully warranted. Send for Pamphlet.

CHEAP CORN CULTURE.

THOMAS' SMOOTHING HARROW.

81 SLANTING TEETH OF TEMPERED STEEL. **$25**

LATE SPRING! CROWDED WORK!

This year a large amount of work must be done in a very short time. With our wide Harrow more than twice as much ground can daily be prepared for seed as without it, and all crops *cheaply cultivated* through the season in a *superior* manner.

ALLEN HIGLEY, Windsor, Ohio, says:—"I saved one-half month's labor in two days, getting a much better crop without using a hoe."

ANDREW RAESSLER, Shelbyville, Ill., says: I can harrow twice as much ground with it as with other Harrows."

EDWIN THORNE, Millbrook, N.Y., says:—"We can dispense with cultivating once each way, saving a vast amount of labor."

E. F. SMITH, Morning Sun, Iowa, says:—"It was much easier on the team, though one-third wider, doing more work."

L. R. AUSTIN, Coldwater, Mich., says:—"I have a 40 and a 30-tooth square drag, but with *your* Harrow can do twice the work in half the time."

IRA BEARD, Cahoka, Mo., says:—"I think it equal to three common Harrows."

F. PETITT, Salem, N. J.:—"My brother says his does the work of three old Harrows; mine I think saved me $5 in one and a-half hour's work."

BOYS RIDE AND DO ALL THE HARROWING.

HILL'S

"Archimedean" Lawn Mower

In placing this LAWN MOWER before the Public for the season of 1872, it needs no recommendation, as it has a world-wide celebrity. With the improvements recently added to this favorite Mower, we are fully warranted in saying it has no equal in the WORLD. And its immense sale for the last 30 days throughout the United States is sufficient proof of the above assertion and of its great superiority. This Lawn Mower is constructed upon truly scientific principles, and it is the only PERFECTLY BALANCED Lawn Mower ever made, operated by a ball and adjustable handle, points that are indispensible, securing ease of operating, and a perfect, beautiful and level cut.

The Hill's "Archimedean"

was the FIRST (and original) BALANCED LAWN MOWER invented in this country or any other, was patented in the United States and Great Britain, and its invention brought into general use a machine that is now a necessity, and almost an indispensible article. All others now made are copies of this machine, and the public are cautioned against them.

☞ For sale by all the leading Seedsmen and Agricultural Implement Dealers throughout the United States and Canada.

Illustrated Catalogues and Testimonials post free, upon application to us or any of our Agents.

GRAIN-SAVING, TIME-SAVING, MONEY-MAKING

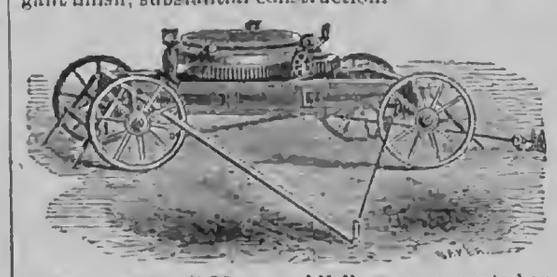
"VIBRATOR" THRESHERS

AND THEIR ELEGANT CONVERTIBLE

"Mounted" and "Down" Horse Powers.

Office and Factory at Battle Creek, Mich.

Recognized, in the trade and in the field, as the "leading thresher" of the period. **Fully established** through many years of successful use. **Endorsed** by more than sixty thousand farmers and grain raisers who have employed and used them. **In use** in eighteen States and four Territories, with largely increasing demand and growing popularity. **Universally commended** as embodying the only *true principle,* and pronounced the "coming machine." **Pre-eminent** for saving grain, saving time, fast work, perfection of cleaning, adaptation to varying conditions of grain, convenience, ease of draft, and ease of management. **Peculiarly adapted** to handle Flax, Timothy and other seeds, so difficult with others. **In demand** by grain raisers, at remunerative prices, while neighboring machines are idle. **Attractive** in simplicity of parts, having only four belts and one set of gears. **Specially noticeable** for making no "litter," and requiring no "cleaning up" process after it. **Ascertained by farmers** to save them the cost of their threshing bills, by the increased saving of grain, alone, over and above the best of others. **Obtaining** the "pick" of jobs and extra prices for its work. **Unrivaled** in durability, handiness, ease of management, ease of draft, elegant finish, substantial construction.



The elegant "Mounted" Power—mounted on four wheels, where it remains when in operation. **Attractive features:**—Securely fastened with two stakes; levers, tumbling rods, etc., carried with it; the "angling" line shaft, by which all short kinks are avoided in "coupling up;" all boxes, journals, shafts and gears independent of the wood frame; gears "clutch" on; only one key used; convertible to different speeds, at trifling cost, to match other machines; of the lightest draft, very durable, easily and cheaply repaired; sold separately, if desired, and specified to match other separators or machinery.

The Improved "Down" Power, similar in construction to the above, except it is not "mounted," but can afterwards be converted into "mounted," if desired.

All persons who think of buying a new Thresher and want the "leading machine," and all farmers who raise grain and want it threshed, saved and cleaned to the best advantage, are cordially invited to send us their address, and receive (*free*) our Illustrated Pamphlet and Circular, containing a full description of these superior machines, with other valuable information. Address

DO YOUR OWN PRINTING WITH A NOVELTY JOB PRINTING PRESS!

The Best Press ever Invented for the Purpose.

The most valuable addition to the **Business Office**; the most efficient instructor in **Schools**; the most fascinating and instructive amusement in the **Family**, and is unsurpassed for the use of **Amateur** and **REGULAR JOB PRINTERS.**

Send for Descriptive and Illustrated Pamphlet to **BENJ. O. WOODS,** MANUFACTURER, 351 Federal St., Boston; W. Y. EDWARDS, 543 Broadway, New York; KELLY, HOWELL & LUDWIG, 917 Market St., Philadelphia; J. F. EDWARDS, 130 North Sixth St., St. Louis; A. C. KELLOGG & Co., 172 West Washington St., Chicago, Manufacturer's Agents.

The many small teeth being round and sloping backward do not tear up the strongly-rooted corn, but effectually **Destroys the Young Weeds** on the surface, stirring the soil in as well as **around** the hill. A boy can take entire care of 100 acres of corn, and thus **obviate hand-hoeing entirely.** The number, shape and position of the round, shutting teeth render this Harrow the most **complete and rapid Pulverizer** ever used, cutting the lumps with a downward **draw-cut,** instead of pushing them aside; for the same reason it **draws very easily,** and covers a wide surface.

Wheat and all sown crops are benefited by cultivation as certainly as corn or cabbage, which can be profitably done with the Harrow.

Increasing the Yield 3 to 5 Bushels per Acre.

An agent writes us as follows:—"I offered a circular to John Gritman, (Springville, Iowa,) an influential Quaker. He said, 'I don't want that.' Said I, 'Read it; it will do you no harm.' He said, 'No, I have the thing itself; then must not think we are so far behind the times. I sent $100 for four Harrows last spring.' 'Well,' said I, 'as you have used them, tell me, will they do all the papers say?' He said, 'I tell thee, William, this Harrow will do all the papers say it will.'"

D. RANKIN, Biggsville, Ill., bought 19 Harrows last year, cultivating 3,000 acres corn. Says:—"I could have used twice as many if I had had them in time."

WM. E. BURNS, Monmouth, Ill., says:—I harrowed my corn and potatoes. One team will do 20 acres a day."

I. A. W. CAMPFIELD, Sullivan, Ill.;—"A boy 12 years old will do more corn in one day than 10 men the old way."

JAS. A. PINE, Omaha, Neb.:—"I cultivated my corn, and it worked like a charm."

R. FORD, Buda, Ill.:—"On my corn it did good work."

H. COMSTOCK, Liberty Mills, Ind.:—"My son, 12 years old, harrowed 100 acres in 5 days—wheat, oats and corn."

S. CLARK, Cambridge, Ill:—"It is excellent for corn."

Farmers' Club, New York City, says:—"In potato culture it is really excellent; saves half the expense."

24-page Catalogue; full particulars; prices of five sizes, delivered at depot, in 28 cities; 11 pages of farmers' experience.

"FAMILY FAVORITE!"

THE

WEED. **WEED**

The most perfect, reliable and generally useful machine in existence. For the family of the farmer or mechanic, where the work required of a sewing machine ranges from the heaviest garments of men's wear to the most delicate and ornamental fabrics for ladies and children, it has proved itself thoroughly efficient and entirely satisfactory. Of unequaled simplicity and compactness of construction, capable of being learned and operated with one-fourth the usual expenditure of time and labor, with a capacity for quantity, quality and variety of execution beyond its competitors, and a reputation for durability and reliability known and appreciated by thousands, it is offered to the people for the most critical inspection and comparison, with confidence that its obvious merits cannot fail to convince the careful examiner of its superiority. MICHIGAN AGRICULTURAL COLLEGE.

MICHIGAN was the first State in the Union to establish an Agricultural College to advance the interests of her farming population. The first steps taken for its permanent establishment were in 1850, in the form of a joint resolution by the Michigan Legislature requesting of Congress a donation of lands sufficient for its maintenance. From its first organization the opponents of the College were numerous and bitter, and none were more bitter than those whom the College was especially designed to aid, whose interests it was intended to further—the farmers themselves. Its connection with the State University was strongly advocated; such connection, it was believed, would cause a great saving, not only in the first outlay, but also in its subsequent support, and, moreover, that the University would afford superior instruction in the particular principles of scientific agriculture essential to the success of the practical farmer.

Admitting the full force of the two reasons first given, it was yet feared that if connected with the University, or constituted as a branch of any other public institution, a sufficiently thorough, technical, agricultural education would not be furnished, and that it would ultimately be absorbed by the more popular branches of education and cease to be a distinctive feature; a forethought, the wisdom of which has been abundantly proved by the experience of many in agricultural departments so connected.

As an institution distinct in its organization and operation, the University was its bitter opponent. However, in 1855, provision was made by the State for the establishment of just such a separate and distinct institution. On the 12th of February following the law was approved by Governor BINGHAM, and in June of the same year the present site of the College was selected, the selection approved by the Board of Education, and the grounds purchased. The site is a very pleasant one, being three and a one-half miles due east from Lansing, the capital of the State; is nearly 900 feet above the level of the sea, situated on both sides of Cedar River, and consists of 676 57-100 acres.

In 1856 there were erected upon the site two brick buildings, three stories high, besides a basement; one was used as a boarding-hall and dormitory; the other contained the College chapel, library, museum, and recitation rooms. The work of completing them went rapidly forward, and on the 13th of May, 1858, the Institution was dedicated, with appropriate services, by the State Board of Education, in the presence of the Governor, several State officials, and a large concourse of people from various parts of the State. The address was delivered by Hon. JOSEPH R. WILLIAMS, President of the Institution. J. C. HOLMES, Esq., CALVIN TRACY, ROBERT D. WEEKS, and Rev. L. R. FISK were elected Professors, and the school opened with the encouraging number of 61 students. At the opening of the second term, in December of the same year, the number was increased to 100, crowding the buildings to their utmost capacity. More applied, but owing to the lack of accommodation, admission was necessarily denied them.

MICHIGAN STATE AGRICULTURAL COLLEGE.

The buildings stand upon a slight eminence, among the forest trees which have been purposely retained. On the left, in the engraving, is the old boarding-hall and dormitory, erected in 1856, now used as dormitory only. On the right is the school building erected in 1856, containing also the museum and library. In the center is the new boarding-hall and dormitory, erected in 1868. The new laboratory, green-house, farm buildings, and Professors' dwelling houses are in the immediate vicinity, but not here represented. This view is taken from a northeast standpoint, the main front of the buildings being to the north.

In the beginning of this enterprise all was new; forest trees covered the land; school buildings, farm buildings, and dwellings for the Professors had to be erected. And the character of the school itself was new; it was an experiment with no precedents upon which to rely for guidance in prosecuting experiments, directing the studies to be pursued, or devising the best method for combining manual with mental labor; there existed throughout the State a general want of confidence in its ultimate success; it had no endowments, and was dependent for its annual support upon the varying ideas of successive Legislatures, rendering even its continued existence doubtful; the act of Congress donating lands for its benefit was not passed until several years after it was established; some of the work upon the College buildings had been insufficiently performed, and great additional expense was involved in repairing the deficiency. To add to these embarrassments, just before the opening of the school year in the spring of 1859, President WILLIAMS resigned, and for four years the College was without a presiding officer.

In 1861 the College was reorganized and a State Board of Agriculture established, to whom was transferred from the State Board of Education, who had held the supervision of them up to that time, all the finances and general control of the institution. The Board of Agriculture consists of eight members, the Governor of the State and the President of the College being members *ex officio*. At an adjourned autumn meeting of the Board in 1862, T. C. ABBOT, A. M., was elected President of the College. He entered upon the active duties of his office in the spring of 1863, and from that time to the present has ably and honorably discharged the obligations devolving upon him.

Two years was at first considered sufficient time for the acquirement of such a knowledge of agriculture as to enable one to undertake successfully the management of a farm, and, moreover, was regarded as all that students in this country would consent to spend in that kind of professional training. But it was thought that a longer period might be profitably spent in the study of the science and the practice of the arts of agriculture, and at the time of the College reorganization, in 1861, the course was lengthened to four years, besides a preparatory course of one year provided for students not ready to enter upon a full course.

In the same year, also, the College received power to confer upon its graduates the degree of Bachelor of Science, and the degree of Master of Science upon its graduates of three years' standing, who had during that period been engaged in scientific studies. Not until then had the College, in any degree, been prepared for efficient labor. With this new impetus it graduated its first class, of seven members, at the end of the same year.

But its continued existence was still uncertain, and it was not until the State Legislature, in 1868, made an appropriation for a new boarding hall, that the dangers of the College were regarded as passed, and its permanence and success secured. The Michigan State Agricultural College was the first successful institution of its kind established in this country. Its career has been an eventful one, and other States have received the benefit of its experience, though they have not always heeded its warnings.

Since 1868, it has as an institution of learning, been steadily advancing, until now it compares favorably, in its thoroughness of instruction, its rigid examinations, and in the perfection of its discipline, with any college in the West. It consists of three departments — an Experimental Farm, a Model or Practical Farm, and the School proper. With three hours per day of manual labor upon one or the other of the farms it is the testimony of the officers, who have had experience in other institutions, that the students learn as readily and make as great advancement as do students in other schools. The discipline is easier than in colleges generally, as the relaxation from study, and the physical demands for action, are here expended in useful labor. Manual labor has here always been held in high repute, and, as an organized system, has ever been in existence, regarded as an essential part of the Institution, an acquaintance with the practical duties of the farm being considered indispensable to one who intends to make agriculture a profession. Such a farm, model and experimental, where the practical as well as the scientific branches are taught, is a necessity to the agricultural population, and yet the farmers have been slow to recognize the fact that the aims and objects of this Institution have been to promote their interests.

Experiments in practical agriculture, stock breeding and fruit growing are carefully conducted, and being extended from year to year, arrive at results more general and practical, and of great value to the agricultural interests throughout the country, teaching the farmer, isolated and engrossed with labor, deprived of the advantage of constant discussion and contact with others, to think and observe for himself, to acquire a superior intelligence, and to provide for him economical methods whereby less labor and less time need be employed in manual toil to produce equal results.

The school year commences in February and continues until November, with a recess of about ten days in July. Admission to all students living within the State is free. Students from other States are admitted by paying an annual fee of $20. Last year there were students from Massachusetts, New York, New Jersey, Ohio, Indiana, Illinois and Colorado, on those terms. The

whole number of students last year was 142, with a graduating class of 12, thus showing, most conclusively, that the statements in a Pennsylvania report on the organization of Agricultural Colleges—in Governor ANDREW'S message to the Massachusetts Legislature, and in Appleton's New American Cyclopedia, that this institution, for some cause, is suspended and not in operation—are false and without foundation.

It has graduated sixty-eight students. Of these one is superintendent of the Model Farm in Japan; one is Professor of Botany in Cornell University; one is Professor of Agriculture and Analytical Chemistry in Wisconsin State University; one is Instructor of Botany and Superintendent of the Gardens in the Iowa State Agricultural College; one has been holding a like position in the Maine State Agricultural College; while the College itself retains four of its graduates as officers—one as Professor of Horticulture and Superintendent of the Gardens; one as Professor of Entomology and Zoology; one as Assistant Professor of Chemistry, and one as Secretary of the State Board of Agriculture. More than one-half of all the graduates are either farmers or horticulturists, and still others are engaged in pursuits supposed to be in keeping with the objects of the Institution.

The character of the students is different from those usually in attendance at colleges; they are mostly sons of farmers and largely dependent on their own efforts for the securing of an education.

The experiment of having lady students was made in 1870 and has worked well—so successfully indeed that there would be no hesitation in admitting them if there were ample accommodations for them.

The teaching force of the College consists of the President, Professors of Agriculture, Chemistry, English Literature, Entomology, Botany, and a Superintendent of the Horticultural Department. The College is under the control of no religious denomination or sectarian influence, yet it is, and always has been, in the hands of men who recognize the claims of a common Christianity, which they recommend by both precept and example.

The College buildings now on the grounds afford ample and convenient accommodations for nearly 150 students. The facilities for giving instruction, and the means for illustrating the branches taught, are excelled by no institution of its kind. It has a good library, commodious and well furnished reading rooms, and a large and valuable museum, including one of the largest herbariums in the West—a collection of about 20,000 specimens from all parts of the world. The facilities for affording instruction in chemistry are unsurpassed. The laboratory erected last year combines all the modern improvements, including the Bunn Self-Ventilating Evaporating Hoods, and is fitted up with work tables, embracing every convenience for 48 students in Analytical Chemistry, and 75 students in Elementary Chemistry, with accommodations for those who wish to make researches in High Chemistry.

Ample means for illustration are furnished by fine orchards or commodious green-house, botanical and vegetable gardens, philosophical apparatus, models of agricultural implements from the Patent Office, and a fine collection of stock. The grounds have been skillfully laid out and tastefully adorned by art.

The objects of the institution, briefly stated, are, 1st. To impart a knowledge of science, especially of those sciences which relate to Agriculture and kindred arts, and its application to the arts of life; 2d. To afford its students the benefits of manual labor, the benefits being educational, preservation of health, and the cultivation of a taste for the pursuit of Agriculture; 3d. To prosecute experiments for the promotion of Agriculture and Horticulture, for the benefit of practical farmers; and 4th, To afford the means of a general education to the farming class. All the departments of the College are arranged with the view of accomplishing these objects, with the intent of satisfying all the demands of the farmer. To this end the course is both scientific and practical, embracing thorough instruction in Mathematics, Physics, Metaphysics, and in all of the sciences pertaining to Agriculture and Horticulture.

The Michigan State Agricultural College, so far from being for *any* cause, "suspended, and not in operation," has been in continual operation since its first organization on the 13th of May, 1858, up to the present time, though for ten years its existence was precarious, and its continuance uncertain. But for the past four years it has gained continually in the good will of the farmers of this State. It is no longer an experiment—its permanence is established. While other colleges of its kind have abandoned the labor system entirely, or substituted boat-racing in its stead, and changed their course of study from an agricultural to a classical one, or made the study of agricultural sciences optional, this Institution has kept constantly in view, and carefully carried out, the original design of its founders—to make this pre-eminently an Agricultural School—and as such it is successfully accomplishing its mission.

Lansing, Mich. E. B. F.

Sheep Husbandry.

COMBING AND DELAINE WOOLS.

Letter from Hon. J. Wiley Edmands, President of National Association of Wool Manufacturers.

BOSTON, March 11, 1872.

DEAR SIR:—I acknowledged receipt of your letter soliciting information regarding certain wools, but I have not had the time at my command, before now, to attend to furnishing the samples.

You wish sent "prime and medium samples of the principal styles of delaine wools now in demand, naming the fabrics into which they respectively enter—specifying the indispensable and the desirable characteristics of each of those styles, in respect to length, fineness, luster, and in other particulars—stating what is understood to be the blood of the sheep which now furnish those styles of wool—also, the aggregate amount of these wools required for annual consumption, and relative amount required of each."

I have prepared and now send five samples, numbered 1 to 5, each representing different styles of wool. I have had no reference to clothing wools, as they are beyond your inquiry, nor have I confined myself to "delaine" wools in selection of samples. They include also the strictly combing wools, which, in length and character of staple differ from those wools formerly sought for in the manufacture of American delaines, and which were in limited demand before the recent extension of our worsted manufactures.

No. 1 is Canada combing fleece of Leicester and Cotswold breed of sheep. This sample represents a class of wool which is required in the manufacture of all hard worsteds, and may be considered the type for our farmers in producing long combing wool.

No. 2 is American combing wool grown in Ohio and Pennsylvania. It comes from a cross of our native sheep with Leicester or Cotswold rams from Canada.

No. 3 is Merino wool ¾ to ⅞ blood—grown in Ohio and Pennsylvania. It is from sheep crossed with Leicester and Southdown. This wool is in general use for worsted and delaine fabrics, hosiery, fringes for shawls, and for yarns.

No. 4 is the ½ blood or medium wools of Ohio and Pennsylvania. This wool is in demand for delaines, and for an extensive range of worsted goods up to the finer descriptions. It is also in demand for hosiery and shawls, and is highly estimated by our fancy Cassimere manufacturers, particularly for warps.

No. 5 is ¼ blood, Ohio and Pennsylvania, delaine wool. Our common native sheep crossed with a Leicester ram, produces this character and quality of wool. It is a most desirable description, and will find a ready demand at all times by the delaine manufacturers.

As regards Combing Wools, the more lustrous they are, the more valuable. The staple must be uniform throughout its length, and sound. It must not be harsh or brashy. Its staple must not be less than 5 inches in length, from 5 to 9 inches.

Delaine Wools should have a staple of 3 to 5 inches in length. It must be strong, sound, and mellow, which qualities are found only when the sheep are well cared for. Luster is not wanted, but the staple must be uniform in quality throughout its length, which is the desideratum in delaine wools. If weak in any part of the staple, the wool is fit only for the cards of the cloth manufacturer. A cross of ¾ merino with Southdown, would produce a good delaine wool, and would be in demand for other fabrics.

The blood of Canada combing wool sheep is Leicester, Lincoln, Bakewell, and Cotswold, and their crosses. Of these, the Leicester is the most desirable for crossing with our native sheep, as the wool is a little finer than most of the others, and it has the advantage of being a more hardy sheep, and, therefore, more profitable for our American farmers.

Our present consumption of Combing and Delaine wools is about fifteen millions for the year, and about one-half of this is long combing. The production of Combing may be stated at 2½ millions leaving about five millions to be imported from England and Canada, the greater part of which, about three millions, comes from Canada. The production of delaine wool in the United States is about six million pounds for the year.

If our farmers raised sheep for mutton, they would supply the manufacturer of Combing wool with all the good qualities that he desires—length, strength, luster, elasticity, and uniformity of staple—as their sheep then would be well fed and well cared for, without which we may not expect the best wool, or the best mutton.

Very truly Yours,
J. WILEY EDMANDS.

Hon. HENRY S. RANDALL.

WE have, during the past year, received a number of inquiries in regard to the kinds of wool known in market as Delaine Wools, and the blood of the sheep producing them. So great a change has occurred in both of these respects, within a comparatively recent period, that we have felt unwilling to attempt to give the desired information without some new examination of the subject. For this purpose we, for a time, contemplated a trip among some of the principal manufactories of Delaine Wools; but finding no opportunity and but a diminishing prospect of a future opportunity for accomplishing this, we at length determined to seek that information from some manufacturer whose extensive practical experience, and general knowledge of all the surroundings of the subject, would afford the strongest guaranty of the correctness of his opinions. All will concede that Mr. EDMANDS—the head of the great Pacific Mills—possesses those qualifications to a degree unexcelled, if not unequalled, in the United States.

The questions put by us to Mr. EDMANDS appear in his letter. Each of the samples of wool forwarded by him, weighs from three to four pounds, and consists of parts of three or more fleeces,—each such part adhering together and being in the same condition in other respects as when shorn from the sheep. This is, to our thinking, a much more satisfactory mode of exhibiting the general appearance and characteristics of a particular style or grade of wool, than by small detached samples, however numerous.

Mr. EDMANDS' samples were not intended, we take it, for a fancy collection, exhibiting exceptional excellence in all or any of the grades in each class—but rather as specimens of those grades of wool as they are found, and are ranked in the market. The two combing samples present nothing which is new to our long-wooled breeders, who have, by pretty widely extended importations from England and Canada, the same blood which produces "Canada combing" wool. The best specimens of the latter, however, are more valuable than most American wools of the same blood, because they exhibit more *luster*. Our breeders have generally paid more attention to carcass than fleece; and in respect to the latter have, until recently at least, rather sought weight than luster. The two Canadian specimens under consideration possess a beautiful luster, and are deeply curved, or, to use a Merino phrase, "crimped," throughout their entire length. They possess, at the same time, all the other desirable requisites of combing wools. The poorest specimen in same class is without luster, short, (four inches,) and about represents, we should say, the lowest grade of American full-blood combing wool.

"American Combing Wool," sample No. 2, must not be confounded with American full blood combing. The best specimens appear to be strong, mellow wool, but compared with best No. 1, are short (four to five inches) and lusterless, and are much less curved. The poorest specimen is but three inches long, and seems to us to indicate a South Down cross. It looks like belly wool. From what Mr. EDMANDS says of the proper length of combing wool, we think it is possible this specimen was included by mistake.

Delaine, sample No. 3. One of the specimens is bright, highly crimped, beautiful wool; "strong, sound and mellow," from four to five inches long, finer and softer than the best Canada combing, but in general style unmistakably betraying its relationship to the best quality of the latter. The next specimen is from three to three and a-half inches long; wool less curved, quite as fine, but a little less soft and bright; fiber even and sound. Third specimen not unlike preceding, but a trifle coarser and harsher.

Delaine, sample No. 4. The specimens exhibit about the usual range of wools found in ordinary farmers' grade Merino flocks, which have not been bred to yolky (greasy) fleeced rams; nor do they vary from the ordinary length of such wools, being barely from two to three inches long. Though conventionally known in the trade as half-blood, or medium wools, some of them are obviously of higher Merino grade. From the length and general appearance of the specimens, it is evident that the Merino cross was made on "native" stock. The wool, like all wool containing thus much of Merino blood, and grown under decent treatment, is strong and mellow.

Delaine, sample No. 5. From two to three inches long; very dry, loose, open wool; coarse, and most of it what *we* should term harsh, and the fleece must be very light in weight in proportion to carcass. The fiber, however, appears to be strong.

We have not attempted any elaborate description of above wools, because we have supposed it impossible in respect to many of the details, to make words supply the place of ocular inspection. For the latter purpose, we will send samples (as long as ours last) to those who ask them and assure us they intend to embark in a specified branch of Delaine production. But most of our wool growers have seen all the kinds of sheep whose crosses produce Delaine wool, and can, even when they have not seen them, pretty correctly estimate the effects of those crosses. Breeding Delaine sheep involves no secret and requires no special skill. In fact, there are few persons who are growing sheep of any cross between the Merino and coarse wooled breeds, having wool three inches long and *light* fleeces, that are not growing some class of Delaine wool. After a deliberate examination of the samples we are disposed to believe that *lightness*—freedom from yolk or grease—is one of the chief recommendations of all these wools, and this not because they are better or even as good materials for the fabrics to which many of them are applied, but because they will *lose much less in cleansing*, and are therefore cheaper material. Take, for example, "delaines" (the fabrics so designated) and "worsted goods *up to the finer descriptions*," mentioned in No. 4.

Every person acquainted with the subject must know that pure or high grade Merino wools, if long enough, are better materials for these goods than half-blood wools, because they are all finer, stronger, and will wear better. The same is true of these wools respectively for some carding purposes for "fancy cassimeres." Yet improved machinery to a considerable extent obliterates the distinction *to the eye*; and in some lines of goods, fashion actually gives preference to the coarser fabrics! Perhaps the wool grower is partly accountable for these results. During the last decade, he has gone into the opposite extreme and bred an unprecedented and wholly unnecessary amount of yolk in his wool, producing a "sogginess" but partly removed by his mode of washing; and then he has held on for the prices of well washed wool until he has found some buyer foolish enough to pay them. Or perhaps it would be more correct to say, as it has been customary until recently for buyers to pay the same price for the same *grade* of wools throughout a neighborhood, unless in grossly bad condition, these heavy wools have received more and cleaner ones less than their proportionate value, in order to make the average price satisfactory to the purchaser.

There are various considerations of interest to the wool grower connected with this subject of Delaine wools, but we have not space to discuss them on this occasion, and we will close with some brief practical views on embarking in the production of these wools. First, in view of the proportionable demand for their wool now and prospectively, and of the comparative weight of their fleeces to carcass (or consumption), we should consider it rank folly to cross full blood Merinos with any other breed of sheep whatever, for the purpose of converting them into Delaine wool sheep. Second, we should consider it expedient, as things now stand, and under favorable circumstances, to cross large numbers of our grade Merinos so as to produce the Delaine wools described by Mr. EDMANDS. No. 3 is produced by about two crosses of English long wool rams on Merino ewes. No. 4 is produced by one or two crosses of Merino rams on "native" ewes. No. 5 is produced by a single cross of long wool rams on "native" ewes.

The greatest difficulty in breeding these wools after they have attained their desired character, is to preserve that character. The continued use of the full blood rams would constantly and essentially change it. Mongrel rams of the same blood would be likely to "breed back," so as to cause a great want of uniformity. Perhaps, however, this would not prove very damaging. We have a strong suspicion that any American wool, sound and of proper length—and sufficiently *light*—will go into the category of Delaine wools!

Water for Sheep.—It is believed by some that water, as a drink, is wholly or quite unnecessary for sheep. No one could make a greater mistake than to believe the idea stated above. If sheep are allowed access to water, they will be as regular, in drinking, as other stock. A regular supply of water throughout the winter as well as summer, should be regarded as indispensable for the welfare of our flocks. Every flock master is aware of the difference there will be in the condition of sheep that have, and of those that have not been watered during a winter; although the latter may seem to be in fair condition, they are not in as good condition as they would have been, had they been watered daily. Sheep that are yarded during the winter, and fed on dry feed, need much less water than those that are allowed to range over a large pasture, or fed on roots and other moist feed.—A. A. H.

Field Crops.

CASTOR OIL BEAN CULTURE.

SEEING an inquiry in the RURAL NEW-YORKER of March 16th, about the Cultivation of Castor Oil Bean, I will give the manner of culture, harvesting, etc. Select good corn ground, as free from weed seed as possible; plow deep, and harrow; mark off four feet one way, and the other way, every fifth row, five feet for gathering; plant about the middle of April, dropping three to five beans in every hill, so as to get a good stand; cover about two inches deep. It takes from four to five weeks to come up. The after cultivation is the same as for corn, keeping free from all weeds; plow four or five times. After the second plowing, thin, if on strong land, to one stalk; if on thin, leave two, as far apart as convenient.

The time of harvesting commences about the middle of August, and continues till the last of September. The manner of harvesting is to take a sled, put on a large store box, driving your horse in the wide row, and gathering from each side, taking two rows on a side. When the bean is ready to gather, the hull of the bean cracks open. If there is one bean cracked on the pod, the pod is ready to cut, which is done with a knife. The lower pods ripen first. The pods are thrown in the box, and when the box is full, take to the bean yard, which is made by smoothing the ground off in a place well exposed to the sun; if on sod, lift the sod and pile up around the yard; or make a close plank fence around, about three feet high, to keep the beans from hopping out. Throw on to the depth of three or four inches. If the weather is good, they will be out in four days, ready to clean up for more. Clean through a fanning mill. The sun cracks the hull of the bean, and they fall out.

Gather your beans at least once a week, or you will lose a good many, as they will not wait till you get ready after they commence ripening. A good hand will gather six acres. The yield per acre will average twenty bushels, if well tended. The price is from $1.50 to $3 per bushel. The market is good. The oil is pressed in St. Louis.

The Castor Oil Bean is as good for the ground as a crop of clover. There are always a good many beans that fall off, and the large leaves seem to enrich the ground. Nothing will molest them but the cut worm. Chinch bugs, stock, nor anything else, will molest while growing. We consider them a good crop to raise. Our neighbor raised 10 acres the last year, which yielded him an average of 25 bushels per acre. Two hands and two boys gathered them in four weeks, going over them five times. They sold at depot, 4½ miles distant, for $1.90 per bushel.

Franklin Co., Kan. J. R. EDGEWORTH.

CARE OF CORN.

PLOWING corn before it is up was a new thing to us three or four years ago, and may be new to others; hence I talk about it. This article applies to those who have corn planters and raise from fifty to three hundred or more acres of corn, and of course cannot have time to hoe it or plow it more than five times; also where hired help is dear. Our plan, on fall plowing, is to go over the ground thoroughly with the seeder, then the harrow in the opposite direction, mark out and plant four feet each way. After the corn is sprouted well, go into it with the two-horse cultivator; and even if you cover the corn with an inch or two of fine, mellow dirt, it will be all the better, especially so if planted shallow. The object in so plowing is to have the corn start ahead of the weeds; and how can you unless it is plowed before it is up?

When corn is four or five inches high we are apt to plow so far away from the hill that there is a streak of weeds on each side of the row; and by the time we plow the second time they are so tall we cannot cover them; the result is two-thirds of a crop of corn and the ground well seeded with foxtail and other seeds for next year.

Another suggestion I would like to make for those who have large fields of corn to plant and cannot afford to buy a planter for a year or two, and that is cover the corn with a cultivator. Two men can cover twenty acres of corn in a day, which would take quite a number of persons with a hoe. One thing must not be omitted—that is, stepping on each hill as you walk after the plow. A neighbor tried each way; he said there was much more corn missing that was not stepped on.

We raise from 200 to 300 acres of corn and never put a hoe in it. Last year ('71) the corn went from 80 to 90 bushels per acre; 1870, 75 bushels per acre.

Davenport, Iowa. FRANK LINDLEY.

CORN CULTURE IN MISSOURI.

I WAS pleased with an article on corn raising in your issue of March 9th. It may be the best way for Indiana; but out here on the confines of barbarism we would look upon it as rather tedious. I also live in a corn country, and claim that I can raise more corn with the same value of land and same manual labor than he can. We usually follow corn with corn; dispose of the stalks with a "stalk cutter"—an open roller set with horizontal knives which revolves, chopping them into 15 inch lengths, which may be turned under with the "turning plow;" then harrow, and mark one way with two horses and a marker that makes three or four marks. We then plant with a horse planter which drops and covers two rows, across the marks, rowing it both ways. After this some roll with an eight feet roller; others harrow all over with a fine harrow; others wait until corn is up, then knock out a tooth from an A harrow, put handles to it, and straddle the row. But when corn is well up some use a riding plow. Most cultivators, however, use a walking-straddle-row-four-shovel-two-horse plow, which we claim does better work, and twice as fast as the double shovel.

With this "policy" one of my neighbors claims that with a little help before planting, he tilled clean, (and we have a weedy country,) fifty-eight (58) acres, and raised 3,200 bushels. Another man, now working for me, tilled sixty acres clean, and raised 2,400 bushels of corn. One had a single span of mules, the other a single span of horses. S. K. F.

Bolckow, Andrew Co., Mo.

SPRING RYE FOR SUMMER PASTURE.

T. P. L., Sedalia, Mo., desires to know if any of the friends of the RURAL NEW-YORKER have ever tried sowing rye, in spring, with Timothy and clover for summer pasture. I am a great friend to the RURAL, and have tried rye for pasture in summer. The RURAL always amounts to something, but rye sown for pasture never amounts to enough to pay for the seed, if the cattle are turned on it; for they tread it into the ground, and pull it up at such a rate that the first dry spell that comes there will be but very little rye left. Then, again, if he sows the Timothy and clover, the cattle will entirely spoil it; or, at least, he could not get a catch, as it is called, if the cattle run upon the field where the seed was sown. The best way is to sow the rye early in the spring (1½ or 2 bush. per acre,) also his grass seed; when the rye gets large enough to mow, or cradle, cut it and feed it to his cows. If the season is not dry, he can cut it two or three times and his grass will get a fine catch—become well rooted so that he can turn on to it in the fall and not injure it, if he does not feed it down too short, or too late in the fall. Such has been my experience. G. R. CRANDALL.

Ellsworth, N. Y.

FIELD NOTES AND QUERIES.

Alfalfa in New Jersey.—Will any of your readers tell me if they ever sowed Alfalfa in the latitude of New Jersey? and if it lived through the winter. The past winter has killed mine (sowed last spring) when the common red clover beside it looks well. I have more seed and will keep it until I hear from some one who has tried it.—H.

Tobacco Seed for Cayuga Co., N. Y.—W. R. LAIRD, Cayuga, Co., N. Y., asks where he can get the best tobacco seed for his climate. Soil, a rich, sandy loam, rather dark. We should prefer seed produced in Massachusetts or Connecticut; but we cannot say who has it for sale.

Plaster on Wheat.—A correspondent asks if it is profitable to sow plaster on wheat in the spring. We have found it to be so—especially on dry, loamy, or sandy soils. A bushel per acre is plenty. The earlier in spring it is applied the better.

Will Spring Wheat turn to Winter?—If I sow Spring wheat early, and after it comes up the ground freezes and remains so for several days before thawing, will it make Winter wheat of it?—W. A. D.

No.

Not too Many Grasses can be got into any soil designed for pasture, if they are nutritious and adapted to forage. This answers JOB STEARNS' question.

The Herdsman.

KILLING LICE ON CALVES.

A CORRESPONDENT inquires concerning the best means of killing lice on calves, and whether a decoction of tobacco for the purpose would be considered dangerous. We do not regard tobacco juice a safe application for killing lice. The poisonous principle of tobacco is absorbed by the skin, and passes into the circulation through the pores. Again, if the cattle are allowed to lick themselves after the application, serious injury will be liable to result. The only way in which tobacco may be used safely is to fire it in a fumigator, blowing the smoke into the hair of the animal.

Carbolic acid is a vermin destroyer, either on cattle or plants, is of late coming largely into use. Carbolic acid, when pure, is corrosive and dangerous; but when dissolved in water at the rate of an ounce of the acid to a gallon of water it is abundantly strong and safe for such purpose. Carbolic soap is often used for killing these parasites. It can be had at most of the shops, but may be made much cheaper by farmers than it can be purchased, and at very little trouble.

We give the receipt furnished by Secretary GOODALE of the Maine Board of Agriculture, which is as good as any we have seen, and is as follows:—"Dissolve a pound or two of bar soap in as little hot water as possible, and stir in an ounce of carbolic acid. When cold it can be cut into cakes and kept any length of time. The easiest way to apply it for lice is to wash the animal with this soap and water."

A woolen string smeared with mercurial ointment and tied around the neck of the animal often proves effectual in destroying the lice. X. A. WILLARD.

I HAVE frequently noticed inquiries in your paper for remedies to destroy lice on cattle. In this section our cattle are infested with large, blue lice. They increase on fat as well as poor cattle, and reduce either of them to skeletons if they have sufficient time. I have always watched for remedies, but I have never found any so good and so cheap as the one I have now, which I send for the benefit of those who are unfortunate enough to have lice on their stock:—For a cow, take nearly a half pail good soft soap; heat some rain water, and turn in enough to make it warm, and stir it well. If the soap is very thick, it may want a little cold water too; it must only be thin enough to work in the hair nicely. Tie the creature out of the wind, in the sun, and apply with a large paint brush; it will bite the animal as well as kill the lice; but it drys so quickly it does no injury to the hair nor the animal. Soap is good medicine for cattle, and if they lick it off, no harm is done. Repeat the application again after the nits have hatched. It takes about three applications for a very lousy animal, there are so many nits to hatch out.—HARRIET GARLOCK.

COWS ABORTING.

IN answer to questions asked me by "Farmer," of Mystic Bridge, Conn., in RURAL NEW YORKER of Feb. 10th, in regard to my two cows aborting, he says: "Permit me to ask two questions, the answering of which may suggest to my mind the cause of my misfortune. He asks, "has your cows been fighting?" I would say that I never knew of their fighting, on the contrary, they were very playful when let loose from the stable, frequently running and jumping with all of their might, and sometimes slipping, which I think would be equal to fighting.

The next question is, "Who has taken care of them?" I would say that I took care of them most of the time, myself, and am sure they never received any ill treatment from any one.

My friend "Farmer" says he is of the opinion that nothing a cow will eat, of her own accord, will cause abortion; but I am still of the opinion that the cause of my cows aborting was on account of their eating something yet unknown to me. I am quite inclined to think the pumpkins they ate had something to do with it. I have made some inquiry of dairymen and others in regard to cows aborting, and the cause. I find some are of the opinion that cows frequently or occasionally, eat something that will cause it. One tells me that his father had six or eight cows abort one Fall; he thinks some time the last of October, or the first of November, all within two weeks, they, the father and son, attributed it to their cows running in a field, part of which had a heavy crop of barley on it that season, and in harvesting the crop there was considerable of it shelled out on the ground. In consequence of it being a wet season, the barley sprouted and grew up like a meadow, the cows were turned in, and in less than two weeks' time, six or eight had lost their calves. In another instance, a dairyman tells me he had two cows lose their calves the forepart of the Winter. He attributed it to feeding June grass hay. H. R. C.

Dale, Wyoming Co., N. Y.

CARE OF A NEW MILKS COW

As many people do not understand managing a new milks cow, I will give some of our experience, which has been very successful for many years. A few weeks before coming in, besides the usual fodder, a feed of sound roots, such as carrots, turnips, beets or potatoes, ought to be fed each morning, before turning out for the day. All unsound parts of such roots ought to be cut off and placed beyond their reach, or they may do much injury.

They should have pure water to drink and access to salt daily; and when expected to calve should be placed loose by themselves, in comfortable quarters, where no animals can get to them or they can get to others. They need freedom to change their position at will, as this is often necessary during the process. They should not be disturbed or any forcing measures used; but if the labor is protracted a handful of salt may be offered her. If she eats it, it will relax the system. If the presentation is wrong, and she has her liberty and sufficient time is allowed her, nature will teach her to change her position so as to make all right, and she will do much better than if force was used.

After the process she should be allowed her own time to get up and lick the calf, but when she does so, a warm mess of wheat bran and water, with a little salt added, may be given her. H.

CALVES DYING.

THERE have been quite a number of calves and cows in this vicinity taken in the manner herein described, and some calves, from three to four months old, have died. I had one cow taken very suddenly the first day of March. I had watered my cattle between 11 and 12 o'clock, and put them back in the stables. On returning to the stables, about one o'clock, I found a two-year old heifer, which is coming in this spring, lying in great distress, and seemed to have great difficulty in breathing. The water was running out of her eyes, and you would have thought she was blind.

I examined her throat, but found nothing. She was slightly bloated, and her pulse was running very high. I did not know what to do, but I poured some camphor, black pepper, and hog's lard into her. She lay as above stated, without any change, for about half and hour, and then she began to sweat, and perspired profusely, so that the water stood in drops on her hair. After that she kept gradually improving, and, after 24 hours, I thought her as well as usual. If you will publish this, and give, or ask your readers to give, a remedy, you will greatly confer a favor on me.

Del. Co., N. Y. THOS. MILLER.

NOTES FOR HERDSMEN.

Spaying Heifers.—W. F. G. is informed that it is impossible to describe the process of spaying heifers, on paper. It is to be learned only by witnessing the practical operation at the hands of one skilled in it. It is a delicate process, and requires skill. A spayed heifer, three or four years old, well fatted, furnishes the very finest beef; and when there is no profitable demand for milch cows, spaying heifers for feeding is profitable.

Lice on Cattle will decamp if dry sand be applied to their whereabouts. They will apply it themselves, when let alone in the spring of the year, by goring the earth and flinging it over themselves. Kerosene oil is also good to remove them, and ticks from sheep, by sprinkling it over them and about the stables, &c.—T. L., *Scipioville, N. Y.*

A Cow Sucking Her Tongue.—I have a cow that will stand and suck her tongue sometimes when she is not eating; looks fine and healthy. Will some one tell the cause and a remedy?—DENTT.

Warts from Cow's Teats.—A correspondent asks our readers for the safest and surest way to remove warts from cow's teats. Apply caustic potash two or three times a week.

Entomological.

COLLECTING INSECTS.

How to Collect, Preserve, and Transport Insects.

[Continued from page 261.]

Where to Find Beetles and Bugs.—In summer, beetles and bugs are very abundant upon weeds and plants, and this is the season to use the sweep or drag net. Hundreds of small but interesting species lurk under the leaves of plants, or feed upon their flowers, and the net is the most rapid and sure means of bringing them from their hiding-place. Larger species may be found sunning themselves upon the bark of trees, logs, or upon the farm fence, while the little tiger beetles (*Cicindelas*) frequent sandy roads and barren fields. The ground beetles (*Carabidae*) are usually found under flat stones, on hill sides, and especially near brooks and rivers, while others are more abundant under old logs, or between the loose bark and wood; in fact there is no place, from the bald rock on the mountain, to the lowest depths of the most gloomy cavern, that is not the abode of some insect. Our rivers and stagnant ponds also furnish numerous species, from whence they may be taken with nets or by hand. As a rule, the more secluded the abode, the more rare the insect; for those living and feeding in exposed situations are the most likely to be well known. The same is true in regard to size; for all young and inexperienced collectors are sure to take all the large insects, and overlook the small ones; but the minute species are equally as valuable as the larger. Some of the most destructive insects to vegetation are among the smallest; therefore, collectors should not neglect to take the small as well as large.

Butterflies.—Butterflies, or what is usually termed *Diurnal* (day-flying) *Lepidopetera*, are readily distinguished from moths by their knobbed antennæ, although in some species this characteristic is not very conspicuous. Their bodies are small in proportion to the size of their wings, which are usually held erect when in repose. It requires far more care to collect butterflies and preserve them in a perfect condition than beetles or bugs, as their bodies are covered with very minute scales which are torn off by the slightest pressure. In capturing them the net should always be used, and the moment one passes within throw the bottom of the bag over the heap by a dexterous twist of the handle, and thereby secure the butterfly in a position where it cannot disfigure itself in its struggles to escape; then grasp it by the underside of the thorax, with the thumb and fore finger, pressing so firmly as to kill or benumb, until a drop of ether or chloroform can be applied with a camels' hair pencil. A small vial of chloroform can be carried in the vest pocket, to be used for this purpose whenever required. A slight crushing of the thorax, however, will usually be sufficient to kill any butterfly, and we prefer this method to wetting the body even with the most volatile liquid. If the butterflies are to be put immediately into a cabinet, they may be pinned as caught; but when collected to be sent away or preserved for some time before mounting, they should be carefully taken out of the net and placed in papers, as shown in figure 5.

Any smooth writing paper will answer the purpose, and before going out to collect, a quantity should be cut up into pieces a little longer than broad, and varying in size from two to four or five inches, and then folded as shown in Fig. 5, forming, when finished, a triangular shaped bag, into which the butterfly is dropped head downward. The antennæ (*a*), or feelers, should be folded back between the wings, or at least close to the front edge, in order to secure them against being broken after they have become dry and brittle. If a record is kept of captures, the date, locality, or number of specimens, may be written on the outside of the envelope, always using a soft lead pencil for this purpose. These little paper bags containing specimens of butterflies may be laid away in tight boxes, or sent to any part of the world by mail or through other channels of transit. It is better to have the envelopes a little too large than too small, because it is quite important that the wings should remain flat, and their edges not folded nor broken.

Moths.—Collecting moths is mainly night work, although many species can be captured during the day time or early in the morning and evening. The larger kinds should always be taken with a net, and the same care exercised in handling as with butterflies. Having large and heavy bodies they are not readily killed, and a slight pinching of the thorax, or even thrusting a pin through them will not answer.

Chloroform or ether, if applied to the surface will only stupefy for a few moments, and a more summary method is required for dispatching our large Sphinges or Hawk

FIGURE 6.

moths (Fig. 6); but smaller kinds as shown in Fig. 7 are more delicate, and killed almost instantaneously by placing in a box or under an inverted glass, containing a drop of any of the various substances we have named. To kill the larger species while in the net, we have found no better way that to puncture the body or thorax with a sharpened quill or sliver of wood, and then dip it into moistened Cyanide of Potassium, and again thrust the poisoned implement into the wound. It requires very little of this poison to produce almost instant death. Chloroform, ether or benzine, may be used instead, or the moth may be pinned in a tight box and killed with the fumes of sulphur, tobacco, creosote or other noxious and poisonous substances. When the moths are killed their wings and antennæ should be folded in the same manner as described for butterflies, and then placed in the paper bags. Very small moths, such as are caught about the lamp at night, may be laid carefully between layers of soft paper, their wings remaining in a natural position. The cocoons and chrysalids of insects may also be collected and allowed to finish their transformation in boxes, where the perfect insect or imago can readily be captured.

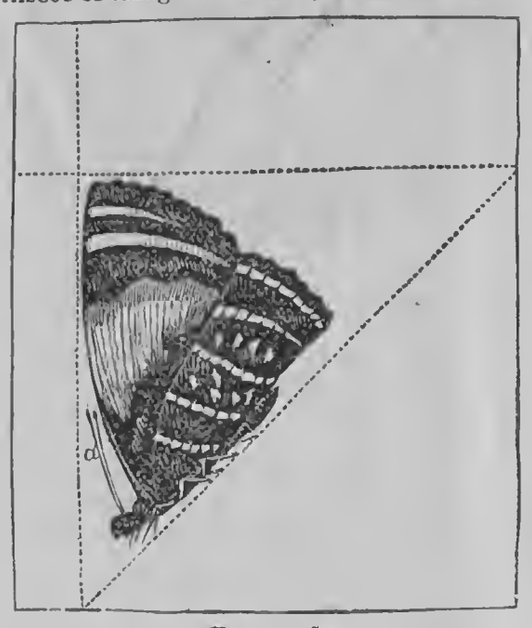

FIGURE 5.

Insects of Other Orders.—Flies, Wasps, Grasshoppers, Crickets, Bees, Dragon-flies and Ants, may all be taken and killed in the dry collecting bottles already described, and, if to be sent a long distance, packed in small vials with very little fine sawdust, and the whole moistened with a few drops of ether. Every collector should carry a few small pill or common wooden match boxes in his pocket, for the purpose of keeping specimens of insects belonging to different orders, separate, as well as to avoid the necessity of putting too many of one kind of the tender species together. Neither should those who are collecting

FIGURE 7.

specimens to be sent to a distant part of the world or our own country, be fearful of obtaining too many of one species, because entomologists not only derive much pleasure from distributing rare insects among their friends, but it is highly important that every cabinet, both public and private, should be as complete and contain as many species as possible. The heads of families should not overlook the fact that even their children who chase the butterflies, play kite with the bumble bee, or harness the lazy beetle to a stick, may do something towards aiding science and placing scientific men under obligations to them for favors. It is far better to teach children how to be useful assistants to learned men in various parts of the world, than to remain in ignorance of their names or abode. The farther away from the centers of civilization a family may reside, the more interesting will their surroundings be to the naturalist, and the more valuable the specimens collected.

Diary of a Ruralist.

DAILY RURAL LIFE.

FROM THE DIARY OF A GENTLEMAN NEAR NEW YORK CITY.

Planting Peas.—*April* 8.—One of the first things to be done in the vegetable garden in Spring, is to sow a few rows of peas. New and highly extolled varieties are so abundant that one is almost at a loss to know what to choose. For early I have sown McLean's Advancer, and, at the same time put in a few of that old, but never to be excelled, Champion of England, which comes in a few days later. Of course there are earlier sorts such as Dan O'Rourke and Tom Thumb, but these are for the market gardeners and not for those who grow peas for their own table. Few persons, in sowing peas, cover them deep enough to produce the best results. The soil should be worked deep and then plant the seed about four inches deep. By covering deep I find that the plants are not so liable to be affected by drouth, and the yield is largely increased. For a succession sow a few every week as long as the weather will permit.

Early and Late Potatoes.—*April* 9.—Having tried nearly all the new and old varieties of potatoes in cultivation in this country, I have brought my list down to the "rule of three," viz: Early Rose for early and the Peerless and Peach Blow for late. There may be better sorts but not for my soil and locality. The Early Rose has always been satisfactory both in yield and quality, and by keeping them in a cool cellar, they answer just as well for late as early, and I do not think I would care much even if no other sort could be obtained. Of course, soil and climate have a powerful influence over the production, as well as quality and variety, and what is good in one locality may be very poor in another. A cool, moist soil, but not a wet one, is best suited to the potato, and to secure this in localities subject to drouths, mulching is quite important. By covering the surface of the ground with any coarse mulch, a large yield of good-sized tubers is almost certain anywhere in the Middle States, while without it, a crop is uncertain, especially in light soils. Whether the mulch will cost more than the increase in crop is worth, depends upon circumstances.

Planting Cuttings.—*April* 10.—All ripe wood cuttings of such plants as Currants, Gooseberries, Grapes and Shrubbery, should be planted as early in spring as possible after the ground is in a suitable condition. A week's delay will often result in a total failure; and as roots are produced in a lower temperature than leaves, it is well to give them a chance to become formed before called upon to support the new growth of stem and branches. It is really surprising to see how few persons supply themselves with the most common of the small fruits as well as ornamental shrubs, while they are so readily and rapidly multiplied. In the Western States not more than one-half of the people are supplied even with such a common fruit as the Currant, and all through neglect of planting a few cuttings. The cost of such things is really too trifling to be taken into account; it therefore cannot be considered as an excuse. While a dozen cuttings of the largest and best Currant known can be purchased for fifty cents, and sent post-paid to any part of the United States and Territories, no one need be without this wholesome fruit. Scores of other small fruit plants can be purchased equally as cheap; and still, while traveling through the country, we seldom find good fruits upon the farmer's table, and his children grow up in ignorance of the fact that such things exist.

Preparing Flower-Beds.—*April 13th.*—Flower-beds should be dug up early in the season, even if not used until late. I have found that if the soil was turned up to the sun and rains, and enriching materials added several weeks before seeds were sown, or plants set out, that it gave better results than if these operations were delayed until the time of planting. If manure is to be applied, it should be done in time to have it become thoroughly incorporated with the soil before planting. I have been spading up and manuring some beds to day which are to be occupied with bedding-plants a month hence. Those who never look ahead are very likely to stumble, whether it be in travelling a stony road or making a garden. I know some people who never go beyond making grand resolves of what they are going to do next week, or next month—periods of time that never arrive. Planting cannot be done in this way; but it requires action, and that, too, which means neither more nor less than *work*.

The Garden.

TO GROW WATERMELONS.

CHOOSE a sandy piece of ground, and after having plowed it, mark it out 9 by 9 feet; then with a hoe dig holes at the crossings of the marks about as large in circumference as a common corn basket and seven or eight inches deep; into these holes throw a good sized forkful of coarse manure and directly on this a large shovel of fine manure; then make the hills by drawing the soil from the four corners directly on the manure, being careful that the hill, when finished, shall be four inches higher than the general surface; have the hills slant to the southeast. This protects them somewhat from northerly winds.

It takes watermelon seed a long time to germinate, especially when planted in early spring; and many times, if the weather proves cold and wet after planting, very few of the seeds will germinate at all. Therefore it is a good plan to plant the seed on one side of the hill, and in about ten days go over and plant again. If the first seed planted fails to come, the last will be almost sure to grow; yet we have known cases where they had to be replanted three times.

Cultivate thoroughly and plow once or twice during the growing season, being careful not to let the cultivator or plow run deep enough, when passing the hills, to interfere with the roots. If the roots are disturbed, it will seriously affect the crop.

In planting, eight or ten seeds are usually put in each hill at each planting. After the plants get well started, all but one or two of the strongest should be removed. The most successful melon grower that we are acquainted with allows but one plant to remain in each hill. * *

THE TROPHY TOMATO.

I NOTICE a few statements concerning the above-named tomato, as the experience of some few correspondents. I will give mine. I purchased a package of the Trophy seeds from J. J. H. GREGORY, early in the spring. I planted about one-half of the seeds in one corner of my hot-bed, beside seeds of the Grant tomato. They all came up very nice, and any one could tell the difference in the plants by the color, and the thickness of the stems was much thicker than that of the Grant. When the proper time came for transplanting, I planted the Grants and Trophy at the same time and in the same kind of soil; gave the same attention to both; staked them up and trimmed them the same. The Trophy took the lead of any tomato that I ever raised; ripened early and regularly all over. They were praised by all that saw them. According to my views the Trophy is the tomato to cultivate, as it grows so large, smooth and solid.

East Fairfield, O. J. J. T.

Chinese Yams.—Mrs. E. L. S.—It will not pay you, either in profit or pleasure, to attempt the culture of Chinese yams.

Domestic Economy.

RAG CARPETS.

Most housekeepers seem to think it the hight of economy and good management to convert their worn-out and cast-off clothing into good substantial carpeting. Sometimes it is; but we have known some of these gaily striped rag carpets to be very expensive affairs. Frequently, articles are cut into carpet rags which could be worn much longer, or made over for the little ones. For instance, Madam, this old pair of pantaloons patched in the seat, and worn through at the knees, if turned, will be found to look like new on the wrong side; and a skirt for your little six years old girl can be made of it. You will find the gored breadths can be cut nicely from it. Trim with bands of blue or scarlet flannel, pinked on both edges and stitched on with the machine, and it will be prettier, warmer and more durable than the felt skirts, costing from $1.50 to $2.

It is almost always the case that after the carpet is fairly off to the weaver's, and the good housewife is resting from her labors, that more of some particular color or stripe must be had to finish it. Then various articles now in use must be sacrificed, and the "gude man" is compelled to sleep with his last pair of unmentionables under his pillow for fear he will awaken in the morning and find that that insatiable rag carpet has absorbed even them. Sometimes the good housewife, in her ambitious attempts to make a carpet whose brilliant hues shall out-rival all her neighbors, buys yards of gay calico and flannel to tear into carpet rags. In such cases the actual cost of the carpet is about the same as English body Brussels.

Persons with any tendency to pulmonary difficulties should never work at tearing carpet rags. A dear friend of ours, after breathing the poisonous dust arising from the tearing of colored rags, died of quick consumption. A very expensive carpet, that, to her husband and little children.

But where the rags could not be better employed, it is far preferable to have rag carpets than the bare, desolate-looking floors we find in so many farmers' houses, and which cause so many weary hours of mopping and scrubbing to keep clean. And when your new carpet is tacked down, don't forget, from the balls that are left, to crochet rugs to lay over the parts most liable to wear, thus making the carpet last much longer. G. R. B.

ODDS AND ENDS.

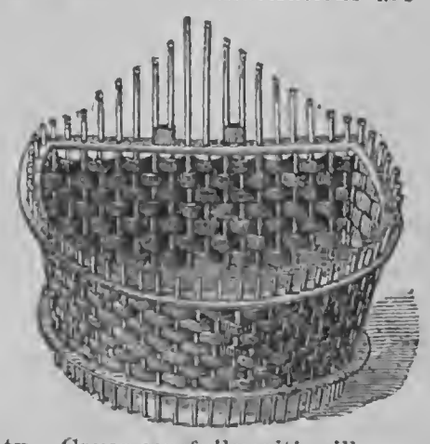
Stair Rods.—To L. A. C.—Having seen your inquiry in the RURAL NEW-YORKER respecting the best kind of stair rods, allow me to say I think you will find that stair rods are all made very much upon the same plan; but a new kind of fastening has been invented which is in many respects superior to the old, being made in a circular form, and fastened to the stair in the usual way; but *not* to the rod, however. It slips inside the goove on the under side of the stair rod—one at each end. Such, I think, will meet the approbation of the most fastidious.—MRS. FARMINGTON, *Cottage Glen, N. Y.*

Boston Brown Bread.—I give a synopsis from "The Young Housekeepor's Friend," by Mrs. CORNELIUS, of the Boston Brown Bread:—Three pints of rye meal, and the same of Indian or corn meal; a pint or so of wheat flowor is an addition. If the Indian meal is sweet and fresh, do not scald it. Half a teacup of molasses, a teaspoonful of salt, one of soda or saleratus, and half a teacup or more of yeast. If superior yeast is used, it will rise ready for baking in from three to four hours. Make it as stiff as can conveniently be stirred with a spoon. It requires longer baking than wheat flour bread.—N. P. C.

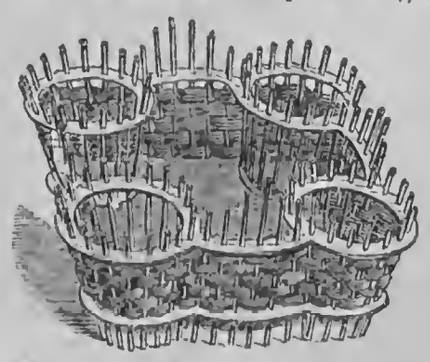
Grape Vinegar.—Last fall, we had an early frost that killed our grapes before they were ripe. They were turned black, but not ripe enough to be sweet; and by way of experiment, we washed some and put them in a jug, and put in some cider. The jug was put in the cellar, and now, April 2d, it is sharp vinegar. We shall try again next fall.—A. WILSON.

White Linen Table Cloths (in answer to "A Subscriber") are always fashionable for the breakfast and dinner table; and so far as attractiveness is concerned, they ought to be fashionable for the tea table, but they are not.

Work Basket and Wall Pocket.—Select perfect straws of uniform length. For the foundation cut a piece of pasteboard, any shape to suit the fancy. Those represented in our illustrations are very



pretty. Cover carefully with silk or satin which must be neatly sewed at the edge. Perforate this with holes the size of the straws, one-half inch from the edge and equal distances apart. After firmly fixing the straws in these holes, take narrow taffeta ribbon (the shaded is preferable) and



twine alternately "in and out" among the straws. Finish the top with a rim of pasteboard—which must be covered the same as the foundation—and pierced with corresponding holes to receive the straws.

Rural Architecture.

ASBESTOS ROOFING.

THE marvellous power which Asbestos possesses of resisting heat was well known to the Romans, and in modern times incombustible cloth has been made of it in limited quantities. In France this cloth has been used to make dresses for firemen. This resisting power of Asbestos many years ago attracted the attention of Mr. H. W. JOHNS of 78 William St., New York, who had chosen the perfecting of roofing material as his life work. The defects existing in roofing compositions then, and even now, in many cases were—the material was not perfectly water-proof at any time; the volatile properties of the coal tar used speedily evaporating, heat soon carbonized what was left, and the wind soon blew it away, leaving only rotted paper, or a more slowly but not less certainly rotting felt. Besides, the composition was very inflammable and so unsafe.

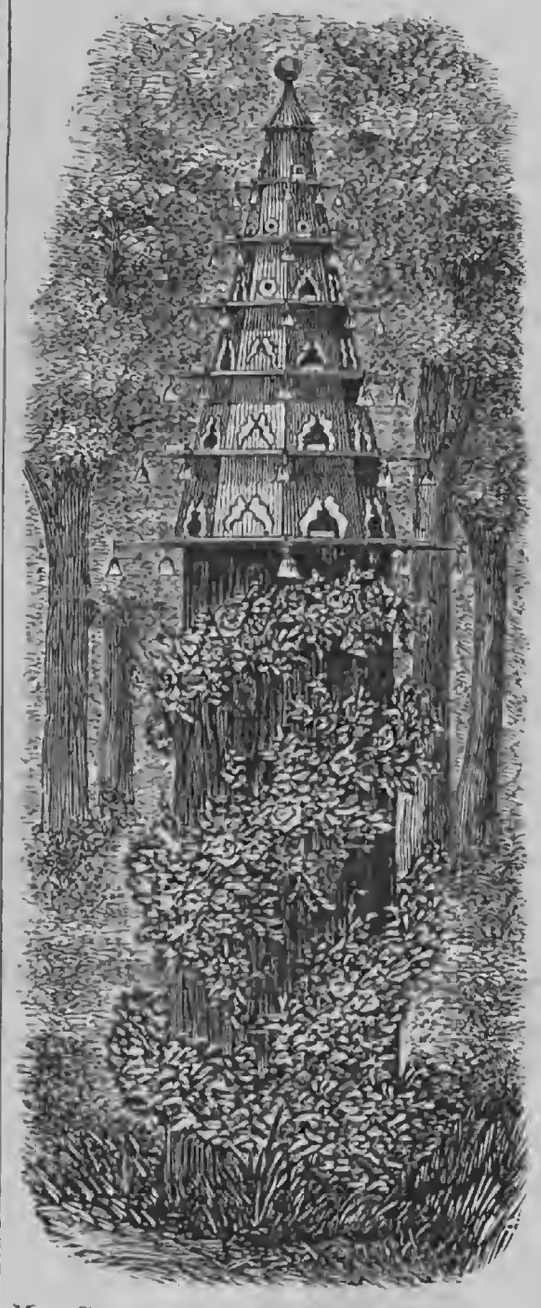
Mr. JOHNS set resolutely to work to change all this, and calling to his assistance rare chemical knowledge, the best mechanical skill to be had, sufficient capital and intelligent liberality in its use, succeeded in producing the Asbestos Roofing which is so identified with his name, and of which he is justly proud.

The Asbestos Roofing, as now made, consists of a lining or back of strong Manilla paper, made especially for this purpose, then a water-proof composition, of many ingredients, that *is* water-proof, then fine woven canvas, then more water-proof composition; the whole completed by a layer of Asbestos felt. The complete roofing is about one-tenth of an inch in thickness, and is clean to handle, light, cheap, perfectly water-proof, of low combustibility, and so strong to resist rending and abrading forces that we wonder it has not been applied to other uses than roofing, for which it is obviously adapted.

Somewhere near fifty thousand feet per day are made with present facilities, which must, however, soon be largely increased, for the demand is enormous. Beside his full share of the roofing for the many millions of buildings annually covered in the United States, Mr. JOHNS makes large shipments to South and Central America, to Europe, and even to Joppa and Beyrout, in Syria. The application of Asbestos to steam boilers and pipes in the form of a cement, which seems, for whiteness and lightness equal to meerschaum, and the large sales of the various resins and gums, soluble glass, coal tar, silica, paraffine, mineral paint, &c., (all needed for or in some way connected with the manufacture of Asbestos Roofing,) help to swell his income and keep him about as busy as any one man needs to be. He has worked hard and conscientiously at the task he set himself, and we rejoice in his success.

A UNIQUE BIRD HOUSE.

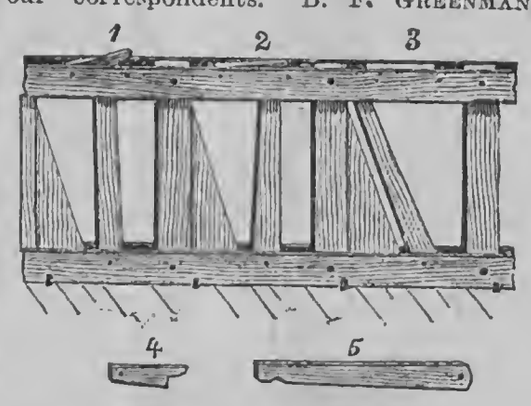
MRS. C. H. CRISWELL of Sycamore Villa, near Brooklyn, L. I., sends us a sketch of a very unique wood bird house, which is represented in the accompanying illustration. It is placed upon the trunk of an old cherry tree, which was cut off about twelve feet from the ground for the purpose. The superstructure is about six feet in hight, shaped like a Chinese pagoda, octagonal, with little bells at every corner, which ring out merrily when the wind blows high, making the air musical with their echo. Every story—there are five—is divided into four compartments, with a platform all around; at the corners of the platforms, bells are hung—about forty all together.



Mrs. C. writes:—"This fancy affair, as you may suppose, attracts a good deal of notice from passers-by, whose remarks concerning it are often quite amusing. Birds are not scarce, either, in this vicinity, and one may hear them sing to one's heart's content, if that one happens to have an ear for bird-music." It will be seen that the trunk of the cherry-tree, which is the foundation for the superstructure, is clad with climbers.

NOTES FOR BUILDERS.

Stanchions for Cattle.—We continue to receive inquiries for the best modes of fastening cattle. In our last volume we gave several illustrations of stanchions from our correspondents. B. F. GREENMAN



sends us the following, which he regards as "the best and most economical." He says: "The materials for the frame are two-inch plank, eight inches wide, pine or hemlock, put together with seasoned oak pins. If the long planks at top and bottom are put in green, the structure will be all the more substantial when they have seasoned. The posts are six feet long, and should be set so as to allow us much as three feet to each cow. The latch, when closed, should stand seven inches from the post. The latch and button are a little thinner than the post, so as to move easily between the planks. The whole thing when put together, and set up in the stable, may be fastened at the bottom with pins in the floor and at the top, in any way most convenient.

"A piece of plank or board may be fitted in between the latch and the next post as represented in the sketch, to prevent the hay from being scattered out under the feet of the cattle. Fig. 1 represents the stanchion open, ready to receive the cow; 2, closed as when the cow is fastened; 3 shows the position of the button just before it falls, and when the stanchion is nearly closed. 4 and 5 represent the button and latch respectively, separate from the whole structure. A person can fasten cattle with this as fast as he can walk from one to another, and when they are fast, they must stay so, for the self-acting button will not get out of its place without human aid."—*East Hebron, Potter Co., Pa.*

Building a Conservatory.—Mrs. I. L. M. "wishes for information in regard to building a conservatory to open into a sitting room in a brick house. This room is always kept warm; would the heat from this room be sufficient to keep a small conservatory warm without any arrangement for fires in it? How should such a conservatory, say four by six feet be built, and at about what cost? I hope the readers of the RURAL NEW-YORKER will give their experience.

The Swine-Yard.

SWINE BREEDERS' CONVENTION.

NEW YORK, March, 1872.

To the Breeders of Well-bred Swine of the United States and Canada:

GENTLEMEN:—By means of a circular letter, dated January, 1872, and sent to the most prominent swine breeders, and published also in the agricultural papers (for which courtesy the editors receive our thanks), the public has been informed of a movement, originating in the Farmers' Club of the American Institute of New York, to learn the views of breeders in regard to establishing a standard of characteristics and "scale of points" applicable to each of the recognized breeds of swine.

We have received numerous responses to the questions proposed in that circular, showing that the great majority of the different breeders who have written think the establishment of such a "scale of points" important; that their views as to what should constitute perfection vary; and that it would be very desirable to have a convention as therein proposed.

Not one in ten of those responding intimated a dissent from the first and third propositions. Therefore we consider ourselves abundantly warranted in assuming the responsibility of calling a convention of the swine breeders of North America, and invite all persons practically engaged in breeding pigs of the well-bred varieties to meet in the City of New York on Tuesday, the 14th of May next, at 3 o'clock P. M., in Room 24—where the meetings of the Farmers' Club are held—in the Cooper Union Building, on 8th street, between 3d and 4th avenues. We propose that the convention be organized immediately after the adjournment of the meeting of the Farmers' Club upon that day, and, after settling upon an order of business and appointing committees, adjourn until the evening or following day. We are confident that a full meeting of the most prominent breeders may be expected, and believe it will be productive of lasting benefit. Aside from the announced objects of the convention, we shall be more than compensated for the day or two given to the object by making each other's personal acquaintance and freely interchanging opinions.

Breeders intending to be present will favor the chairman by announcing the fact to him at an early date, addressing him at the Grand Central Hotel, New York.

FRANK D. CURTIS,
L. A. CHASE,
M. C. WELD, } Com.

Kidney Worms.—Mr. E. W. LIBBEY asks for information in regard to a disease affecting his swine, which, by the symptoms he gives, doubtless is kidney worms. Having had a number of hogs affected in nearly the same way as he describes, I have never failed in curing them by using the following simple remedy:—Take copperas, about the size of a hickory nut; give once a day, in a small quantity of swill, two or three days. I have had hogs that got entirely off of their legs, having but little use of them, restored by this remedy. Charcoal and sulphur should be fed occasionally to swine to keep them in a healthy condition; but one should be careful about giving sulphur to sows suckling litter of pigs; given lightly it will do no injury.—F. J. WIGGINS, *Erie Co., O.*

Dairy Husbandry.

MILK AERATION.

I would like your advice in regard to using a cold water and ice milk-cooler, or an aerater and cooler, by means of blowing cold air through it. A friend uses a milk-cooler made of two half cylindrical vessels, lying on their sides, made of zinc, so arranged that the milk is between two surfaces of zinc, ¼ an inch thick, with ice-water on each side of it. I do not remember the maker of it. My friend recommends it. I kept twenty cows last year; cooled my milk in narrow pails; found it slow, and am desirous of improving the process, and am sure that you can tell me what cooler to use.
Wayne Co., N. Y. A. J. Rice.

That milk, warm from the cow, is improved by having its particles exposed to the air, is now very generally admitted. We were the first to insist upon this principle, which was for a time questioned by dairymen, and the opposite taught, or attempted to be taught, by several distinguished speakers at the American Dairymen's Convention of 1869. Investigation and experiment have confirmed the principle announced by us years ago, that aeration in cooling the milk is an important element in securing good flavor and keeping qualities, and nearly all the late coolers try in some way to have the milk more or less aerated. One of the recent inventions for this purpose consists of bellows and pipe, for forcing air into the milk after it is deposited in the can. There is an arrangement by which pounded ice may be used in a box, through which the air must pass before it enters the bellows, thereby reducing it to a lower temperature than the surrounding atmosphere, as it is pumped into the milk. A pipe leads from the bellows to the bottom of the can, and through this pipe the air is forced, and thus is constantly passing through the milk while the machine is in operation.

In regard to the effect produced by forcing air through the milk as above described Dr. L. L. Wight, a factoryman of long experience and deservedly high reputation, states, in his address at the Dairymen's Convention of 1872, as follows:—"I have lately found that the forcing of atmospheric air into and through milk, thoroughly, has a wonderful purifying and preservative influence. Should every dairyman, besides thoroughly taking all the usual precautions which every one advocates, aerate his milk well before taking it to the factory, it would increase both the quantity and quality of his cheese, at least *one-tenth*, during the warm weather, and thus add one-fifth to his income. Were all the patrons sending milk to a factory to conform rigidly to these rules, a forty cow dairy thus conducted would produce as large an income as that of a fifty cow dairy managed as they ordinarily are. This, at an average allowance of forty dollars per cow, increases his income four hundred dollars during the season."

This statement we presume Dr. Wight is prepared to substantiate from his experiments, as he is a gentleman who is not in the habit of making statements which he is not well able to back up with proof.

The question of aerating milk we deem an important one, and the machines invented for the purpose appear simple and are cheap. Very likely they may be improved, but we can assure our correspondent that the principle of aeration of milk, both by forcing air through it in the way described, and by the use of the Arnold ventilator attached to the carrying can is well founded and may be relied upon as advantageous.

As to the various coolers before the public several can be recommended, but their merits we presume can be found described in our advertising columns.

AMERICAN DAIRYMEN'S ASSOCIATION REPORT.

The progress in knowledge respecting the dairy, during the last twelve years, has been most remarkable. Twelve years ago the dairymen of the country knew but little, comparatively, in regard to the nature of milk and the causes affecting its healthfulness or condition for manufacture into the best product. The whole dairy business, then, may be said to have been conducted after an arbitrary set of rules, and with little regard as to whether they were founded upon correct principles or not. The consequence, as might be expected, was that the dairy products of the country, and indeed of individual dairies, were not uniform, and the reason for faulty cheese or butter remained often a mystery to the manufacturer. We have a different state of things now. Manufacturers are not satisfied to adopt any system of manufacture or manipulation of milk without knowing the reason; and this faculty has been of late so educated and developed in regard to the specialty under consideration that false theories are pretty readily detected. For this improvement in dairy manipulation we owe much to the various dairy organizations throughout the country, and especially to the *American*, the parent organization—which from its discussions and reports has occupied a prominent position as an educator in this branch of dairy economy.

Perhaps the most marked step taken toward progress for any single year is that embodied in the last report of the Association recently issued by Mr. Weeks, the Secretary. The leading addresses before the Association at its late meeting were made by Prof. Caldwell on "The Practical Value of Chemical Analysis of the Dairymen's Raw Materials and the Products of his Manufacture;" by X. A. Willard, on "The Manufacture of Condensed Milk;" by L. B. Arnold, on "Poison Cheese," and by H. Cooley Green, on "Butter Manufacture." All these addresses are illustrated by cuts, which give a much clearer view of the subject matter discussed than any printed description in mere words.

The Secretary seems to have performed his duties in an able and satisfactory manner, arranging the material at his command so as to give a very full and clear idea of the various topics under discussion at the late meeting.

If there is any fault in the report, it is in the lack of statistics from the cheese and butter factories showing their operations during the year. From the condensed reports of 31 cheese factories, it appears that 9 85-100 pounds of milk were required to make one pound of cheese, and the average price at which the cheese sold was 11 73-100c. per pound. From this it will be seen that dairymen receive, on an average, after paying the cost of manufacture and furnishing, about 9¾c. per pound for their cheese.

From the eight reports of butter factories, a trifle over 23 pounds of milk were required for a pound of butter, and the average price received per pound was 30 29-100c.

The Apiarian.

"BEE HIVES."

In reply to Mr. Burch's article in Rural New-Yorker of April 6th, I will submit the following facts: 1st. The quotation referred to was taken just as found in his article which reads, "We have neither tested," &c., and commented upon, according to the meaning therin expressed. Now we are informed of a typographical error, which, corrected, puts altogether a different meaning to the quotation, and friend Burch must give me credit for the correction.

2d In his article of Feb. 10th, no reference is made to any other hive than the one described; but by referring back to his article of Dec. 16th, I find he speaks of a new hive which has not been thoroughly tested and which he believes will be the very *best*, &c., so that I shall look forward with "great expectations" for a description of the *original*, or hive of his own invention, as he says in his last article he has one. *Query—Whose invention is the one described Dec. 16th?*

3d. I said we had the "double story" Langstroth hive in use some twelve or fifteen years ago, and by referring back find it was in the spring of '60 or '61. If this is not satisfactory I can give him the names of two or more witnesses, who will be qualified as to the truth of the statement. But as a *clincher*, and to show Mr. Burch that the "double story" Langstroth hive was in use as long as *thirteen* years ago, I would refer him to Langstroth on the "Hive and Honey Bee," published in 1859, on page 379, following a description of hive, he will find these concluding remarks:—"Two such hives, having one cover, and placed *one on the top of the other*, the *upper one* being designed to receive surplus honey, either in boxes placed over the holes in the bottom board, or on frames."

4th. I repeat it, and challenge his proof to the contrary, that his description given, is that of a Langstroth hive, and my assertion is corroborated by Mr. Baldridge, who, referring to Burch's description, writes the following in Rural of Jan. 13th:—"A hive made according to those directions would be a damage to the beginner. It would not harm the expert, for he would, or should, know how to make a better hive. A better hive does not necessarily mean a more expensive one, but one that would work better, and give better satisfaction when full of bees and combs." Added, Mr. Baldridge calls attention to the fact that a genuine Langstroth hive is described. I would invite Mr. Burch's particular attention to paragraphs 3 and 4 above, as they may enable him to exercise at least a grain of common sense about jumping too hastily to conclusions, and practice what he preaches about keeping within the bounds of truth and propriety.

5th. I did not say the hive described was claimed by him to be the best one in use, as he will find by again reading my article. Of course Mr. Burch is entitled to his own opinions and preferences, and I have no objection to his using a *four*-story hive with cupola on top. But when he comes before the public with the description of a hive in use *years ago*, I claim the right to express my opinion upon it. In conclusion I would say to the reader (and especially to our correspondents) having read the articles on both sides bearing on this subject, *examine for yourselves*, instead of troubling either of us with questions as to the truthfulness of our assertions. J. E. Moore.
Rochester, Pa., April 5th, 1872.

ARTIFICIAL SWARMING.

For several reasons, to increase the number of colonies, it is best and safest to resort to artificial swarming; in this I am sustained by scientific and experienced apiarians. It is so simple in its execution, that any person of the least knowledge of bees can safely practice it. My process is this:—After placing the hive upon the summer stand, in March, they are fed more or less, as may be necessary, feeding near sundown, and especially in stormy weather. As soon as flowers become plenty, or near the last of April, the hive being filled with bees and with brood ready to hatch, place an empty section just like the one in which they were wintered, under the full one, and they will at once commence making comb and honey in the lower section, and brood will also be placed in the new comb, as it is the queen's almost uniform habit to go down for that purpose.

In from ten to twenty days, according to the weather, when the frames are half or two-thirds filled, in the lower section, then proceed to divide your swarm. To do this, put dried corn husks into a fumigator, set them on fire and blow the smoke into the entrance of the hive; after waiting a few minutes for the bees to fill themselves, remove the upper or old part, twelve or fifteen feet, placing it upon a new bottom-board, and placing another cover upon the part left. If this is done in the middle of the day, the returning bees will enter the new part and make a strong swarm at once.

Both parts are now ready to have the boxes placed upon them, if box honey is desired, or a section with empty frames, for the mel-extractor, which should be taken away as fast as they are filled. By this process I never lose a swarm by their going off. I also obtain new swarms from two to four weeks earlier than by the old way, and no time is wasted in waiting and watching for fear they will come out and go off, while one is at church or in the hay field, as the bees are swarmed and hived before they are hatched. M. C.

BEE NOTES AND QUERIES.

Ants About Bee Hives.—A correspondent inquires "if ants do any damage to bees, and what is an effectual remedy against them?" We do not think ants will do any great damage to bees, if stocks are in good condition. A colony almost totally depopulated might be overrun with them and destroyed, or a community of ants might locate under or even in the top of a hive, not so much for the purpose of destroying the bees as for securing comfortable quarters. They would, no doubt, become very troublesome to the bees, and destroy numbers. In such instances the communities should be broken up and destroyed, or stocks may be removed to other stands, by moving a little each day. Large numbers of ants are often caught in a sponge which has been well saturated in thin sirup, then by dipping the sponge in boiling water they are destroyed.—*Canada Farmer.*

Bee Ranches.—The foothills from San Bernardino, around the base of the mountain range to San Fernando and beyond, are lined with bee ranches. The honey produced in that region is said to be whiter, clearer and of a finer flavor than any other brought to this market, and commands a higher price.

Bees in Marcellus, N. Y.—Bees have wintered very well here, except in a few instances, where the queens died and the colony dwindled away till they left only a teacup full of dead bees in the hives, and a plenty of honey. I suppose they overswarmed last summer.—A. Wilson.

The Poultry-Yard.

WHAT AILS THE CHICKENS?

The people throughout this part of the county have had serious losses by diseases in their poultry. Within a radius of a few miles, in a thickly settled district, they have died by hundreds. The disease appears to be very contagious, and undoubtedly spreads through the air, as every poultry-yard has its victims and no remedy has yet been found. The chickens do not last over two or three days after first attacked; and frequently they appear well in the evening and in the morning they are dead under their perch. Those that droop a few days stand around with the head and neck drawn back against the body. They eat but little food. The head and face become quite pale, and the droppings look like a yellowish-green matter. Scarcely one out of fifty recovers. All kinds of remedies have been tried, such as alum, soot, asafœtida, pepper, etc., but its of no avail. The disease still continues. Can you tell what is the matter and give a remedy?—C. E. S., *Chester Co., Penn.*

What ails my chickens? Can any of the readers of your valuable paper tell me what is the matter with them, and what will cure them? Last fall, in October, they died very rapidly, some ten or twelve per day. Their droppings were thin and frequent, of a greenish-yellow color; the liver and gall enlarged and of a greenish-dark color. They sit drooping about from three to five days, then die. I lost about one hundred and fifty chickens—all I had, except ten. Two of them had the disease and got well. I lost twenty turkeys, with the same symptoms. This spring I bought hens, cleaned out my hen-house well, cleaned all my watering troughs (I use iron vessels for troughs), used carbolic acid in their water, sulphur and cayenne pepper in their feed, and yet two of them have died this spring with the same disease. One of them was of the old stock and the other was one that I bought this spring. Any information in regard to the disease, or cure for it, will be thankfully received.—Chris. Crawford, *Sedalia, Mo.*

POULTRY NOTES AND QUERIES.

Remedy for Diseased Fowls.—In the Rural New-Yorker of March 30th, I noticed an article headed "Diseased Fowls." From the symptoms given, I am sure I've had the same disease among my game fowls; but I am pleased to state from the use of the following remedy I've never failed, in a single instance, to cure. The first thing is to open the affected parts with a sharp knife, and cleanse thoroughly with warm castile soapsuds. After the above has been accomplished, make the following solution: Carbolic acid, twenty-five drops; water, one ounce; mix; shake well, and apply either with a feather or a camel's hair pencil. Give a teaspoonful castor oil, and confine the fowl or fowls to comfortable quarters and feed moderately. The above must be repeated twice or three times a week, or as often as the case may require. It seldom requires more than two applications.—J. C. Cook, Jr., *Columbus, Ga.*

Fowl Treatment.—Mr. Geo. H. Warner of N. Y. Mills says:—"I have come to the conclusion that all diseases of fowls may be treated with as good success as any way with the same remedies that would be given to persons with a similar disease, in the proportions of 1-6 to 1-8 at a time. The best of care, cleanliness, pure air, &c., are essential requisites. My fowls have never done as well as they have this winter.

Another contributor has used Homeopathic remedies with excellent succes in curing the diseases of fowls and we shall look with interest to the final result, as he thinks he can master the roup.

Peacock's Feathers.—The best time for pulling out the feathers of the peacock is when he begins to drop them, which generally happens in July; never later than August. We used to pull out one to see if it was ripe. If it was soft and bloody at the end we let him alone; if hard and dry, all right. One person would hold him by the legs and another would pluck out the feathers carefully, one by one.—C. H. C., *Sycamore Villa.*

Hogs' Hair is recommended by a farmer for hens' nests, because cattle will not disturb the nest, since they dislike the smell of swine, and because hens sitting on such nests will not become infested with lice. The last reason is the best—cattle ought not to have access to hens' nests.

Hygienic Information.

SICK HEADACHE.

THOSE who have ever had this distressing complaint need no description of it. Its attacks are often so sudden and severe as to make one helpless for awhile. If possible, put the feet in a warm bath (coming well up the limbs) to which two tablespoonfuls of clean wood ashes have been added. But this cannot always be done, as the person may be away from home at the time of the attack, or have no one to wait upon him or her, and be too sick to wait on themselves. But a remedy may be kept on hand, that has always eased me when I have tried it; it may be carried in the pocket, so that if attacked from home, as one often is, by taking it, one may soon be relieved. This remedy is boneset blossoms, and I take them in this way:—Take what would make, when pressed together, a bunch as large as a chestnut; put it in the mouth and chew, swallowing the juice; as the bile begins to circulate in the stomach a sort of chill is often felt, and the excess of blood circulates from the head to other parts of the system.

I suppose I need not give a description of this plant, as it is so generally known, though often called by different names. Boneset, or Thoroughwort, is called *Eupatorium perfoliatum*. The whole plant is medicinal, though for headache I use only the blossoms, which appear in August; and I prefer them before they fully blossom, as they are not so easily rubbed off and wasted. It grows in wet pastures, and should be gathered when well budded for blooming, or about the first of August. It may be tied in bunches and hung up out of the way, where it will keep clean and dry.

HATTIE HOPEFUL.

DOGS AND HYDROPHOPIA.

SCARCELY a week passes but that we see reported in the daily papers one or more deaths from that horrible disease, hydrophobia. Dogs are a gigantic and alarming nuisance to the nation's community. Why, I ask, in the name of humanity, are so many worse-than-useless dogs kept? There ought to be a national dog law, fixing the tax on dog owners at $25 per year for each and every dog. This would be the most efficacious remedy for hydrophobia. "An ounce of prevention is worth an hundred pounds of cure," as far as this dreadful disease is concerned. Any one who has ever witnessed the death of a person from hydrophobia will desire to never again behold so distressing a scene. Children at play in the street; a mad dog, foaming at the month, rushes through the street, biting six or eight children. In the course of two or three weeks, or, perhaps, not for months, one or more of these children are attacked with the awful symptoms, and no medical aid can save them. Imagine the anxiety of the parents of the other childen who were bitten by the same dog. Editors of newspapers, and other writers, ought to make war upon dogs, and agitate the question until laws are made that will put nine-tenths of these dangerous and useless curs out of existence.

A. J.

HYGIENIC NOTES AND QUERIES.

Remedy for Hoarseness.—I cured my child, who had hoarseness for three months, in this way:—Took four ounces fresh grated horseradish, put one pint of vinegar on it, let it stand twelve hours; then put it on the fire, covered tightly, to prevent the strength going off with the steam; strained, and added a teacup full of honey. It was then ready for use. Bottled tight. I think it an excellent remedy for all kinds of coughs.—MRS. AARON C. TICE.

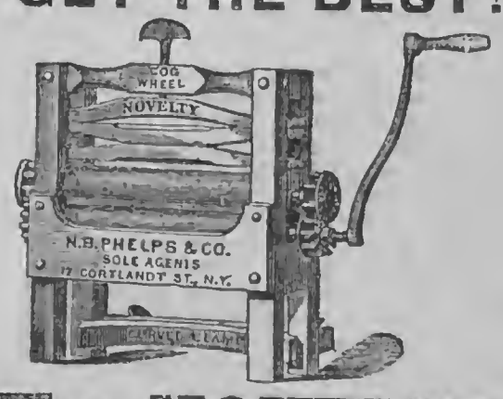
Remedy for Chilblains.—P. L. SANFORD sends a remedy which he says he has given to hundreds, and never knew it to fail in a single instance:—"Take a six-ounce phial to the drug store; put in it one ounce nitric acid, one-half ounce muriatic acid, and four ounces of rain water. Make a little swab, and use it night and morning, wetting the part affected."

Scarlet Fever.—Rub all over, often, with bacon rind. Soak a piece in white lye, and put around the neck; let the patient drink freely of cold water, and keep from the cold air, but give fresh air. Wash often with saleratus water, and let the patient drink it. This treatment has been very successful.—C. E. C.

A Remedy for Catarrh is wanted by "New subscriber,"—for nasal catarrh.

Implements, Machinery, &c.

HOUSEKEEPERS
GET THE BEST!



The NOVELTY
HAS THE
PATENT FLANGE COG WHEELS
on both ends of the Rolls.

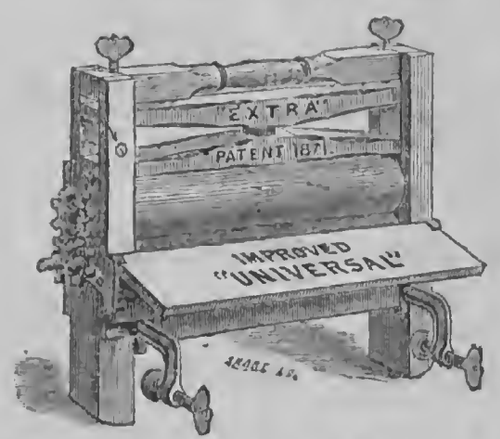
THE NOVELTY Rolls separate freely at either end.
THE NOVELTY Has the Patent Curved Clamp.
THE NOVELTY Is the easiest working Wringer.
THE NOVELTY Is the strongest Wringer.
THE NOVELTY Is the most durable Wringer.

These with other advantages make it more desirable than any other.

No Practical Housekeeper
Can afford to buy a Wringer until she has examined the NOVELTY.

Try it and satisfy yourself that it is the BEST. Sold everywhere.

Bailey Washing & Wringing Machine Co.,
102 Chambers St., New York.



Why the Universal is Superior to all other Wringers.

It has ROWELL'S PATENT DOUBLE COGS, with longer teeth, which play apart further without disconnecting, never crowd together so as to bind, and turn easier than any other cogs.

It has the PATENT STOP, which keeps the Cogs from disconnecting, yet allows the rolls to play apart far enough to wring the largest article easily.

It has the MALLEABLE IRON FOLDING CLAMP, which cannot be broken, and fastens securely to tubs of any curve, and fits washing machines or stationary tubs of fully two inches in thickness.

It has the FOLDING APRON or Guide, to conduct the clothes safely over the side of the tub, free from contact with the clamp or screws.

It has the peculiar advantage of TWO PRESSURE SCREWS, so arranged that each screw presses on both ends of the roll alike, the same as if it was in the center, while the two together *give double the capacity for pressure.*

The RUBBER between the springs makes the machine turn easier, and saves the rolls from strain.

The IRON parts are WROUGHT or MALLEABLE, not liable to break, and well galvanized.

It is very LIGHT and PORTABLE, yet built so substantially it cannot be broken.

WITH ALL THESE ADVANTAGES, its price is no greater than that of any wringer with cogs.

☞ *Sold by the House Furnishing and Hardware Trade generally.*

SATURDAY, APRIL 27, 1872.

REASONS FOR CIVIL SERVICE REFORM.

EVERY man who has the good of the Country at heart, and who desires the honest, faithful and intelligent administration of public affairs, will rejoice at all indications of Civil Service Reform for the following reasons:

1. Because it means greater economy, and fower burthens upon tax payers. It secures responsible positions to men only who are every way qualified to fill them, and during good behavior. With this prospect of a permanent vocation, men will seek such places because they feel themselves competent to fill them, and not because of the partisan service they may have performed, and the dirty work they have done. Political bummers will not seek such positions, because they are rarely qualified to discharge the duties involved. Hence the derangement of public business, and the loss to the Treasury involved by putting in places of trust inexperienced and unscrupulous men, who seek them for venal purposes alone, will cease, and money will be saved. The best men will devise the best and simplest modes of executing the public will. Red tape delays, and the consequent vexations will cease. The public will gain in both time and money.

2. Because it destroys a vicious and dangerous element in our quadrennial elections. It paralyzes corrupt influences, purifies the ballot box, and circumscribes executive power and influence in such elections. Administrations will have to stand or fall upon their merits. Power will not be gained by Government patronage, but by the honest expression of the popular will. Political jobbery will diminish, and purity and ability in high places be found the most direct means of obtaining and retaining power. The only way for the outs to get in will be by meriting, permanently, the confidence of the people. Those who are in will not fear the outs so long as they discharge their duties ably and faithfully, and will not, therefore, be tempted to use the public funds, the people's time, and the influence and prestige of official position in favor nor against any class or party.

3. Because it will abolish one of the most disgraceful and humiliating spectacles a proud, independent and intelligent people can witness—the quadrennial, nay, perpetual, pilgrimage to Washington of the least qualified men for office in the country, to seek appointments at the hands of those who may have the appointing power. It will thus destroy the temptation now constantly before our young men to make place-seeking a profession. It will drive them, *per force*, into honest efforts to be useful—to earn their own living, and remove forever the vicious hope that they can leech the nation of their livelihood. Adding thus to the army of producers, it will add to our material wealth and power by diminishing the number of non-producers, increasing the number of tax payers, and thus reduce the ratio of taxation per head. It will disintegrate and dissipate an immense army of idlers, given to vicious practices, living with unworthy motives, demoralizing community by their indolence and intolerance of justice and equity, and supply their places with thoughtful, stable, upright, dignified and worthy men.

4. Because it will centralize the power of the people and make us stronger as a nation, and compel greater respect for us from foreign governments. It will add to the stability of our policy, prevent sudden and radical fluctuations, unwise changes in our revenue system, which are now, too often, the result of political manipulation for partisan purposes. In this way it will diminish speculation, increase permanent investments, stimulate productive industry, quicken the development of our national resources, and give a broader and surer foundation upon which to build a superstructure of the highest and best civilization.

RURAL NOTES AND QUERIES.

Patrons of Husbandry in Iowa. — A correspondent at Grinnell, Iowa, writes:—"The first Granges were organized here about four months since, and make some stir. A few of us are suspicious of all secret orders, and would like to know if the heads of the Ordor are representative farmers. There are many men whose names alone would be a tower of strength, and would secure the co-operation of the whole farming population." The name of the gentleman at the head of this Order in the United States, is WILLIAM SAUNDERS, Superintendent of the Experimental Garden at Washington. We herewith give the names of the officers of the State Grange of Iowa. Our Iowa friend can judge as well as we whether they are "representative farmers"—perhaps better, as far as his State is concerned:

Master—D W. Adams, Waukon, Allamakee Co.
Lecturer—J. C. Abbott, Clarksville, Butler Co.
Overseer—A. B. Smedley, Cresco, Howard Co.
Steward—Peter Melendy, Cedar Falls, Black Hawk Co.
Asst. Steward—C. D. Beeman, Waukon.
Chaplain—G. W. Livingston, Colo, Story Co.
Treasurer—M. L. Devlin, Des Moines, Polk Co.
Secretary—W. D. Wilson, Des Moines, Polk Co.
Gate Keeper—D. A. Hayward, Haven, Tama Co.
Ceres—Mrs. A. B. Smedley, Cresco, Howard Co.
Pomona—Mrs. D. W. Adams, Waukon.
Flora—Mrs. Col. Hamblin, Atlantic, Cass Co.
Lady Asst. Steward—Mrs. Wm. Duane Wilson, Des Moines.
Executive Committee.—E. R. Shankland, Chairman, Dubuque; A. B. Smedley, Cresco; J. D. Whitman, Dallas Center; Samuel Simpson, Rural, Linn Co; E. J. Ohr, Woodburn, Clarke Co; M. Farrington, Denver, Bremer Co.

National Agricultural Congress at St. Louis.—We have heretofore announced that a convention of delegates from the different Agricultural organizations of the country is to meet at St. Louis, May 27th. What specific object this congress has, other than a general discussion of agricultural interests, we are not advised. Doubtless, good will come of such a gathering of Agriculturists as is proposed. The location is favorable to such an union from all parts of the country—South, East, North, and West. We hope the politicians will be kept in straight-jackets; but if any statesmanship can be developed in this "Congress," we shall hope it may hereafter find opportunity to reveal itself in that other Congress toward which all tongues people tend.

Death of a Centenarian.—Mr. G. R. CRANDALL of Ellsworth, St. Lawrence Co., N. Y., writes us that FREDERICK STROBECK of Parishville, in that county, died on the 21st ultimo, at the advanced age of 106 years and 11 months, and adds:—"At the first election for President, in 1788, he being 22 years old, Mr. STROBECK voted for WASHINGTON, and has voted at every Presidential election since—twenty-one times—closing the record by voting for GRANT, November, 1868. At the time of the Revolutionary War, he lived in the Mohawk Valley, and witnessed many Indian outrages. The STRONECK family are noted as long livers. The great-grandfather of deceased was 113 at the time of his death, his grandfather 105, his father 101, and himself almost 107. I have known deceased for a long time, he being a resident of Parishville, just over the town line from me."

Agricultural College Funds.—Mr. MAYNARD'S bill, now before Congress, directs the Secretary of the Interior to report annually to Congress the entire transactions of the Government with the several States connected with the issue of land scrip to Agricultural Colleges, what has been done with the proceeds, and how they are invested. Change of investment, except with the approval of the Secretary, is prohibited, and embezzlement or misappropriation of the funds is made a penal offense, incurring five years' imprisonment and $5,000 fine. The object of this law is to secure this fund for the objects for which it was originally granted, and fasten the power of the law upon those who embezzle or squander the fund.

Capacity of Telegraphs Doubled.—Improvements have been made in telegraphy, and are now being applied, by which two messages are transmitted simultaneously in opposite directions by means of one wire, while the electrical current is always moving in one circuit in the usual manner. That is, an operator at New York can transmit a message to Boston, while the operator in Boston is, at the same instant, transmitting a message by means of the same wire to New York—one set of signals being transmitted by that portion of the current which passes over the wire, and the other set of signals being transmitted by that portion of the current which returns through the earth. These improvements are the invention of JOSEPH B. STEARNS, an eminent Boston electrician, and are regarded as most important by telegraphers.

The Birds are Coming!—Now boys, study birds and their habits this season. See how many species of birds visit the farm, and record the names and date of their arrival; also where they make their nests, the kind of nest they build, when and how many eggs they lay, the time of hatching, what they (young and old) feed upon, when they depart, and all other facts you can gather concerning them. This will prove entertaining, and you will learn how much you do not know, that by proper habits of observation you might have known. Besides, you will not think the farm so dull a place, after all.

New York Silver Medals in Great Britain.—We find the following item of news in the Scottish Farmer:

"The New York State Agricultural Society has presented a silver medal to Mr. JEMMETT, Murrell Hill Farm, Binfield, Berks, for his system of Agricultural book-keeping. In intimating the bestowal of the medal, the Secretary of the Society writes to Mr. JEMMETT:—Your system of farm accounts, as exemplified in the assumed accounts for a year, prepared and submitted upon the form of account book devised by you, having been examined by a committee, the silver medal of the Society was, upon their report, awarded to you by the Executive Committee thereof."

Milk Condensing Factories and Fixtures.—Every week brings us inquiries as to the cost and kind of machinery required for condensing milk. We have already answered these questions so far as practicable. A milk condensing factory will cost from $10,000 to $50,000, so that dairymen will perceive that it is impracticable to have one on every farm, and would be unprofitable to have one in every neighborhood.

Tough Job!—An Iowa correspondent of the RURAL NEW-YORKER writes us:—"I have lost a part of the 1870 papers, and could not have them bound, so I concluded to cut out the *good* pieces; but I gave up in despair. It seemed as though they were *all* good. I cut for three hours, and then gave up." Our correspondent can get the two volumes for 1870, handsomely bound, by remitting $5 to this office.

THE SEASON, CROPS, PRICES, ETC.

East Hebron, Pa.—April 8.—It has been a very hard Winter. Hay, $20 per ton; oats, 50c. per bushel. Money very scarce.—J. B. C.

Lamont, Ottawa Co., Mich., April 10.—Spring cold and backward. River just open. Lack of water to run logs. Hay, $18@20; oats, 40c.; corn, 50c.; potatoes, $1.—L. D. S.

Brenham City, Washington Co., Texas, April 8.—Cotton and corn are up, and looking very fine. Wheat is nearly heading. I am delighted with the appearance of Texas.—G. K. L.

Grinnell, Poweshiek Co., Iowa, April 6th.—Spring cold and backward. Stock wintering well. Everything farmers have to sell is low. Wells mostly dry. But little wheat sown yet. I finished sowing sixty acres of wheat one year ago yesterday.—W. A.

Milton Co., Ga., April 8.—Last season had short crops, and have had an unusually severe winter. To-day, at cotton planting time, we have at least a month's work to do before we can put in our crops. The lateness of the season of planting is going to affect seriously our cotton crop.—E. I. C.

Berkley Co., West Va., April 11.—Winter commenced in the Shenandoah Valley Dec. 15, and ended March 20. Farmers have generally finished sowing oats and are preparing land for corn. Wheat, owing to long severe drought, is not looking well. Wheat is worth, at the county seat, Martinsburg, $1.70; oats, 75c.; corn, 80@90c.; hay, $20@25 per ton; potatoes, $1.25 per bu.; butter, 35@40c. per lb.; eggs, 25c. per doz.; land, $20@70 per acre.—J. A. G.

East Jaffray, N. H., April 15.—Have had a long, cold winter—26 snow-storms and 85 inches of snow—light for this locality; not two inches of rain from Nov. 10 to April 8. Season three to four weeks late; but little maple sugar made; fruit-buds look well; ground dry, and grass-roots very thin. Good hay is worth $30 per ton, and light supply; grain cheap. Much sickness—typhoid pneumonia; persons die suddenly, and cattle and horses are suffering from the same disease.—L. L. P.

Kingston, DeKalb Co., Ill., April 15.—We are having a very backward spring for this country. Plowing and sowing have just commenced, and farmers feel gloomy about the coming crops. A snow-storm to-day; grass starts very slow; there will be a small quantity of wheat sown this spring, but more than an average of corn and oats in this vicinity; prices low for all kinds of grain. Wheat, $1.10; oats, 29@30c.; corn, 30@32c.; barley, 50@60c.; Peach Blow potatoes, $1.50; Early Rose, $3.40; cows, $25@40; yearling steers, $26; horses, $100@200, according to quality.—D. G.

Hickory, Denton Co., Miss., April 9.—We have had the latest and coldest Spring I ever saw. The season is from three to four weeks later than last year. It has rained so much here few farmers have planted any corn, and no cotton. We had a very short crop of corn and cotton last year, and we must certainly have a short crop of cotton this year, as the season is advancing for planting. Our fruit crop is late, but bids fair to be an average one. Our gardens are late and vegetables scarce. We have radishes, lettuce, etc., but no green peas yet. Young pears and peaches are as large as buckshot. Apples are beginning to drop their bloom. Chinese Quinces are three-quarters of an inch long, but the other kinds are just dropping their flower leaves. Corn is worth here $1.25; oats, $1; bacon, 8c. to 10c. Land is worth from $2 to $10 per acre. Many of our cattle are dying from the effects of the cold, long, and wet winter. I have lost about fifty head, principally from the want of good attention. I am trying to introduce some good early Spring grasses, such as Orchard Grass, Red Top, and Yellow Clover.—W. N. R.

Sharon Centre, N. Y., April 16.—To-day it is snowing and blowing, and has the appearance of February more than April. We have had very few warm days and very little maple sugar has been made. Hay is getting scarce. The late rains have brought a plenty of water which was much needed. Many, in some sections of the country, had to melt snow to get water for their stock. This is a great Hop growing region. There is much speculation as to what the Winter has done to hop yards. The general impression is, that on account of the vines being injured last year, they must have been weak, and consequently, the Winter being severe must have hurt them. Those that were set last year had a very poor growth, and cannot amount to much this year. I speak of this to encourage growers to attend them well this year, for they will be wanted. There is nothing left worth mentioning anywhere in this region. The country has not been so drained out of hops for years, as now. I fear, however, that too many will be again set out, as I hear of many who expect to set this Spring.—A. P.

— For other Season Reports see page 288.

RURAL BREVITIES.

WE cannot tell B. H. WARRINER "where he can get malleable iron cast."

THE Iowa Legislature has passed a Canada thistle law, making the Supervisors commissioners to see it is enforced.

WE notice in the Western Rural that some one has stolen 38 American Merino sheep from DAVID KELLY, one of the best shepherds in Illinois.

A STOCK COMPANY, with a capital of $100,000, has been organized at Leavenworth, Kansas, for the purpose of fruit growing and wine making. *Pres.*—Dr. W. B. CARPENTER. *Treas.*—Maj. O. J. HOPKINS. *Sec.*—H. C. HOLLISTER.

The Publisher's Desk.

NEW QUARTER—SUBSCRIBE NOW!

ALL OUR READERS interested in the success of the RURAL NEW-YORKER will please bear in mind that a New Quarter commenced on the 6th of April. Now, therefore, is a good time to subscribe, and we trust Agents and others will govern themselves accordingly—notifying non-subscribers of the fact and inviting them to join the Rural Brigade. Those forming new clubs, or making additions to old ones, will be entitled to the same Premiums offered in January—so that all aiding the RURAL will not only have the consciousness of doing good to others, but be liberally rewarded therefor.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or more. A host of people are subscribing for papers about these days, and we hope our Agent-Friends will give everybody an opportunity to subscribe for the best.

Show Bills, Specimen Numbers, Etc., of the RURAL NEW-YORKER sent free.

BUSINESS NOTICES.

THE CHESAPEAKE AND OHIO RAILROAD

FIRST MORTGAGE SIX PER CENT. GOLD BONDS are among the most substantial and satisfactory Securities which we can recommend for investment. The Iron and Coal Interests along the line of the road are attracting the attention and capital of practical workers in these minerals in this country and Great Britain, and are found to be more valuable and important than those of any other section of the country.

The IRON, COAL, SALT, TIMBER and AGRICULTURAL RESOURCES of the region which it traverses, together with the through traffic which it will command as a *short, low-grade, economical East-and-West Trunk Line*, assure an immense and profitable business.

Price of the Bonds, 94 and accrued interest from Nov. 1. Principal and interest payable in gold in New York City.

Full information furnished on application.

We buy and sell GOVERNMENT and CENTRAL PACIFIC BONDS, and receive them in exchange for Chesapeake and Ohio Bonds at their current prices.

HARVEY FISK, FISK & HATCH.
A. S. HATCH.

HOW TO OBTAIN A "COLLINS"

Solid *Cast* Cast-Steel Plow for $5. For particulars, address COLLINS & CO., 212 Water St., N. Y.

THE WAKEFIELD EARTH CLOSET.

Get Descriptive Pamphlet at 36 Dey St., New York.

Attend to the First Symptoms of Consumption, and that the disease may be checked in its incipiency, use at once Dr. Jayne's Expectorant, a safe remedy for all affections of the Lungs and Bronchia.

"Burnett's reputation is a guaranty of the excellence of his preparations."—*Boston Journal.*

Various Topics.

MICROSCOPES FOR PRACTICAL PURPOSES.

MICROSCOPES may be obtained of an almost innumerable variety of styles, powers, and prices, but for some purposes a cheap microscope answers nearly as well as a very expensive one—that is, provided the purchaser knows how to select and use the cheap one. The simplest form of microscope consists of a simple lens, which may be mounted in a frame or not, according to the wishes of the owner. Simple lenses may be obtained that will magnify from four to twenty-five diameters, and give really satisfactory results. A lens magnifying four diameters should be about three-quarters of an inch in diameter, and about two inches focus, while a lens magnifying twenty-five diameters should be about half an inch in diameter, and from a quarter to a third of an inch focus. Single lenses magnifying more than this are neither convenient to use nor satisfactory in their results, though they have been made and sold in enormous quantities, having a magnifying power of one hundred diameters. These lenses are not ground, however, but are merely little bits of glass fused into globules. They, consequently, rarely give such an image of the object as will enable us to see clearly its real form and structure.

It is upon this plan that the Craig Microscope is constructed, and also those microscopes which have been extensively advertised at prices ranging from twenty-five to fifty cents, and which consist of one of these fused globules fastened into a hole in a plate of lead and ground flat on one side. A lens magnifying twenty-five diameters is exceedingly useful. We may realize somewhat of the increase which it gives to our powers of distant vision by reflecting upon the vast change which an increase to twenty-five times our present muscular strength would give in an ability to lift or move objects. And such a lens does this for our powers of vision. A magnifying power of twenty-five diameters gives us very fair views of the form and structure of minute crystals and minerals; it is all that is required for examining the parts of plants which determine the class to which a given plant belongs, and it will show small insects very clearly. It will also show the numerous eyes of the fly and the feathers, or rather scales, which form the dust that is rubbed from the butterfly's wing. A lens of this focus should be plano-convex, as it is called—that is, one side should be perfectly flat and the other convex. When in use, the flat side is turned towards the object. Such a microscope may be had of any respectable optician for about a dollar.

When we desire to go beyond twenty-five diameters, and yet to keep among the cheap microscopes, we can do very well by getting one of the five dollar American microscopes. Formerly, all cheap compound microscopes were imported from France, and poor things they were. But of late years our American manufacturers began to make cheap compound microscopes, and they have succeeded in producing an instrument which is really serviceable—a thing that cannot be said of the little upright microscopes of the French. These microscopes possess magnifying powers which may be varied from twenty to one hundred and twenty diameters, thus giving a wide range, and their performance when worked up to their highest powers is very satisfactory, though of course it cannot be compared with the work that may be done by a really fine achromatic microscope.

These five dollar microscopes will, of course, do everything that can be done by a single lens, but far more perfectly. They will show globules of blood and various objects that are beyond the reach of single lenses, and they give really fair views of many of the more common objects. From the fact that they are so portable and so easily managed, they are frequently used by microscopists who possess better instruments. The writer owns a large microscope of very fair quality, and yet he frequently employs one of these cheap instruments for common work.

The next step leads us to the fine achromatic instruments whose prices range all the way from fifteen dollars to two thousand dollars. But when a student proposes to select one of these microscopes for his own use, he must either place himself in personal communication with some microscopist that he can trust, or he must procure some first-class work, such as that of CARPENTER, and study the subject fully for himself.

A PRACTICAL MICROSCOPIST.

ABOUT SEA-HORSES.

THE accompanying engraving represents a group of those curious and strange looking fishes known as Sea-Horses. The family to which this fish belongs is the *Syngnathidæ*, of which there are several varieties, such as the pipe fishes, the sea-horses, and the winged sea horses. This particular sea horse is called the short nosed, or *Hippocampus Brevirostris*, and a specimen is now to be seen in the gardens of the Zoological Society, Regent's Park, London. They are rarely found on the coast of Great Britain, but are often caught in the Hudson River. A few years ago, Mr. Barnum had quite a collection of them in his museum on Broadway. The animal is small, being but a few inches in length, and of a light brown color. It is technically described as follows:—Head and body compressed; snout narrow, tubular; mouth, terminal; dorsal fin, single; caudal fin, wanting. The habits of this little animal are very singular. When swimming, it maintains a vertical position, but the tail is ready to grasp whatever meets it in the water. It quickly entwines it in any direction round weeds or other objects, and when fixed, the animal intently watches surrounding objects, and darts at its prey with great dexterity. When two are in company they often twist their tails together. The eyes, which appear large for so small an animal, move independently of each other, as in the chameleon.

AMERICAN WONDERS.

SILVER SPRING, Fla., is one of the greatest curiosities in the South. It bursts forth in the midst of the most fertile country in the State. It bubbles up in a basin near one hundred feet deep and about an acre in extent, and sending from it a deep stream sixty to one hundred feet wide, and extending six to eight miles to Ocklawaha river. In the spring itself fifty boats may lie at anchor—quite a fleet. The spring thus forms a natural inland port to which three steamers now run regularly from St. John's, making close connections with the ocean steamers at Palatka. The clearness of the water is truly wonderful. It seems even more transparent than air; you see the bottom, eighty feet below the bottom of your boat, the exact form of the smallest pebble, the outline color of the leaf that has sunk, and all the prismatic colors of the rainbow are reflected. Large fish swim in it, every scale visible, and every movement distinctly seen. If you go over the spring in a boat you will see the fissure in the rocks from which the river pours up like an inverted cataract.

Another wonder is that "Stone Mountain," of Georgia, which was rendered famous during the late war, has not been more written about, talked about, and traveled about, is unaccountable, and indicates a want of admiration for the wonders of Southland. Were it across the waters, it would be in song, in sermon, and in lecture, and travelers by scores would go as they now go to the pyramids:

"These the work of man,
That the work of an Almighty hand."

Imagine a mountain of solid granite towering two thousand feet, with scarcely a shrub on its defiant bald face. In its solitude it is alone; no kindred nigh! Not even the faint outline of a mountain is discernible in the distance; and as we turn our gaze upward to its perpendicular height, the classic Palisades seem tame and we can but wonder if it be a boulder from some distant sphere, suddenly, by some freak of nature, ejected to our planet; or may it not have been that during the great primeval ocean, which once overspread the earth, matter attracted matter, until the mighty pile arose, and will stand until the final consummation of all things here?

THE OVERWORKED CLERGYMEN.

GEO. W. CURTIS writes as follows of a clergyman's functions:—"He is, in fact, the town-pound, to which everybody may commit the truant fancies that nobody else will tolerate upon the pastures and lawns of his attention. He is the town-pump, at which everybody may fill himself with advice. He is the town-bell, to summon everybody to every common enterprise. He is the town-beast of burden to carry everybody's pack. With all this, he must have a neat and a pretty house, and a comely and attractive wife, who must be always ready and well dressed in the parlor although she cannot afford to hire "help." And the good man's children must be well behaved and properly clad, and his house be a kind of hotel for the traveling brethren. Of course, he must be a scholar and familiar with current literature, and he may justly be expected to fit half a-dozen boys, for college every year. These are but illustrations of the functions he is to fulfill, and always without murmuring; and for all he is to be glad to get a pittance upon which he can barely bring the ends of the year together, and to know that, if he should suddenly die of overwork, as he probably will, his wife and children would be beggars."

NOTHING on earth can smile but human beings. Gems may flash reflected light, but what is a diamond flash compared with an eye flash and a mirth flash? A face that cannot smile is like a bud that cannot blossom, and dries up at the stalk. Laughter is day, and sobriety is night, and a smile is the twilight that hovers gently between both, and more bewitching than either.

THE road ambition travels is too narrow for friendship, too crooked for love, too rugged for honesty, and too dark for conscience.

NATURE'S JEWELS.

THE orchard lands are all aglow with gems,
Rich perfumed gems, from Nature's casket strewn—
Pearls on the pear, on apple opals pink,
Rich rubies on the quince, and amethysts
Upon the peach and almond: fairer gems
Than light the scepter of the proudest throne.

The scarlet blush sits on the queenly blooms
Of the pomegranate, and the whitening buds
Of April snow-showers flake the jargonelle;
Here the pink blossoms of the glorious peach,
Superb sultana, mingle with the flowers
Of the retiring tender apricot;
And there the quince her fragrant petals hides
Beneath the shadow of the damascene.

Showed ever iris in prismatic bow
More gorgeous mingling of a thousand hues
Than show the orchards, while the trellised wall
Glows 'neath the stars of yellow jessamine
In natural topaz, and the sapphire gleams
In heaven's unclouded ceiling purely blue?

Jewels, rich jewels, fair and sweet and rare,
Renewed from year to year: jewels all sweet,
That cost nor toiling days nor sleepless nights
For gold to purchase them; jewels on which
The humblest eye may gaze, the poor and rich
May both alike have share; gems which when dead
Leave a rich legacy of fruits to earth,
And with the spring reviving bloom again!

Our Story-Teller.

MISS THORNE'S FORTUNE TOLD.

AN ENGLISH STORY.

CISSY THORNE was sitting at her toilet-table, skipping a novel while her maid Emma brushed her long, thick, silky hair. Some people said it was false, because there was so much of it; others were certain it must be dyed, seeing that it had that particular bright, golden tint which is so often due to art; but Emma knew better. That exemplary girl took the same sort of pride in her mistress's hair that a good groom does in the coats of his master's horses, and was never tired of currying—I mean brushing it. Fortunately, the young lady took an equal pleasure in her passive part of the performance, and so both were satisfied.

When the spoiled beauty did not know what else to do, she went up to her room, took off her dress, and had her hair brushed; it was a ladylike substitute for a smoking-pipe. I wonder that Darwin has not instanced the pleasure we feel in being stroked the right way, in favor of his theory. I believe that Cissy was very often near purring, especially in thundery weather, when her hair crackled like an experiment.

"Well, Emma, did you go to the fair?" asked the brushee, laying down her book.

"Yes, miss, I did."

"And what did you see?"

"I saw a horsemanship, where they rode standing, and jumped through hoops; wonderful."

"And did you go on one of the roundabouts that are worked by a steam-engine, which plays an organ?"

"No, miss?" replied Emma with an emphasis.

"Do you know, Emma, I should like to, if no one saw?"

"Lor, miss! they are crowded with such a low lot, they are."

"Low lots, as you call them, seem to have all the fun," said Cissy, with a half sigh. "And what else did you see?"

"I went to a—fortune-teller."

"No! In a tent?"

"There were little tents about, but it was a little yellow cart I went into; not in the fair exactly, but in the camp, before you come to it. She's wonderful!"

"Is she, though? What did she say? Tell me," cried the excited Cissy, who was troubled with yearnings after the supernatural.

"She told me all sorts of things, which she could not have known natural:—a mole on my back; how long I have been in service——"

"Yes, yes, but the future; did she say anything about that?"

"She did more—she showed it to me."

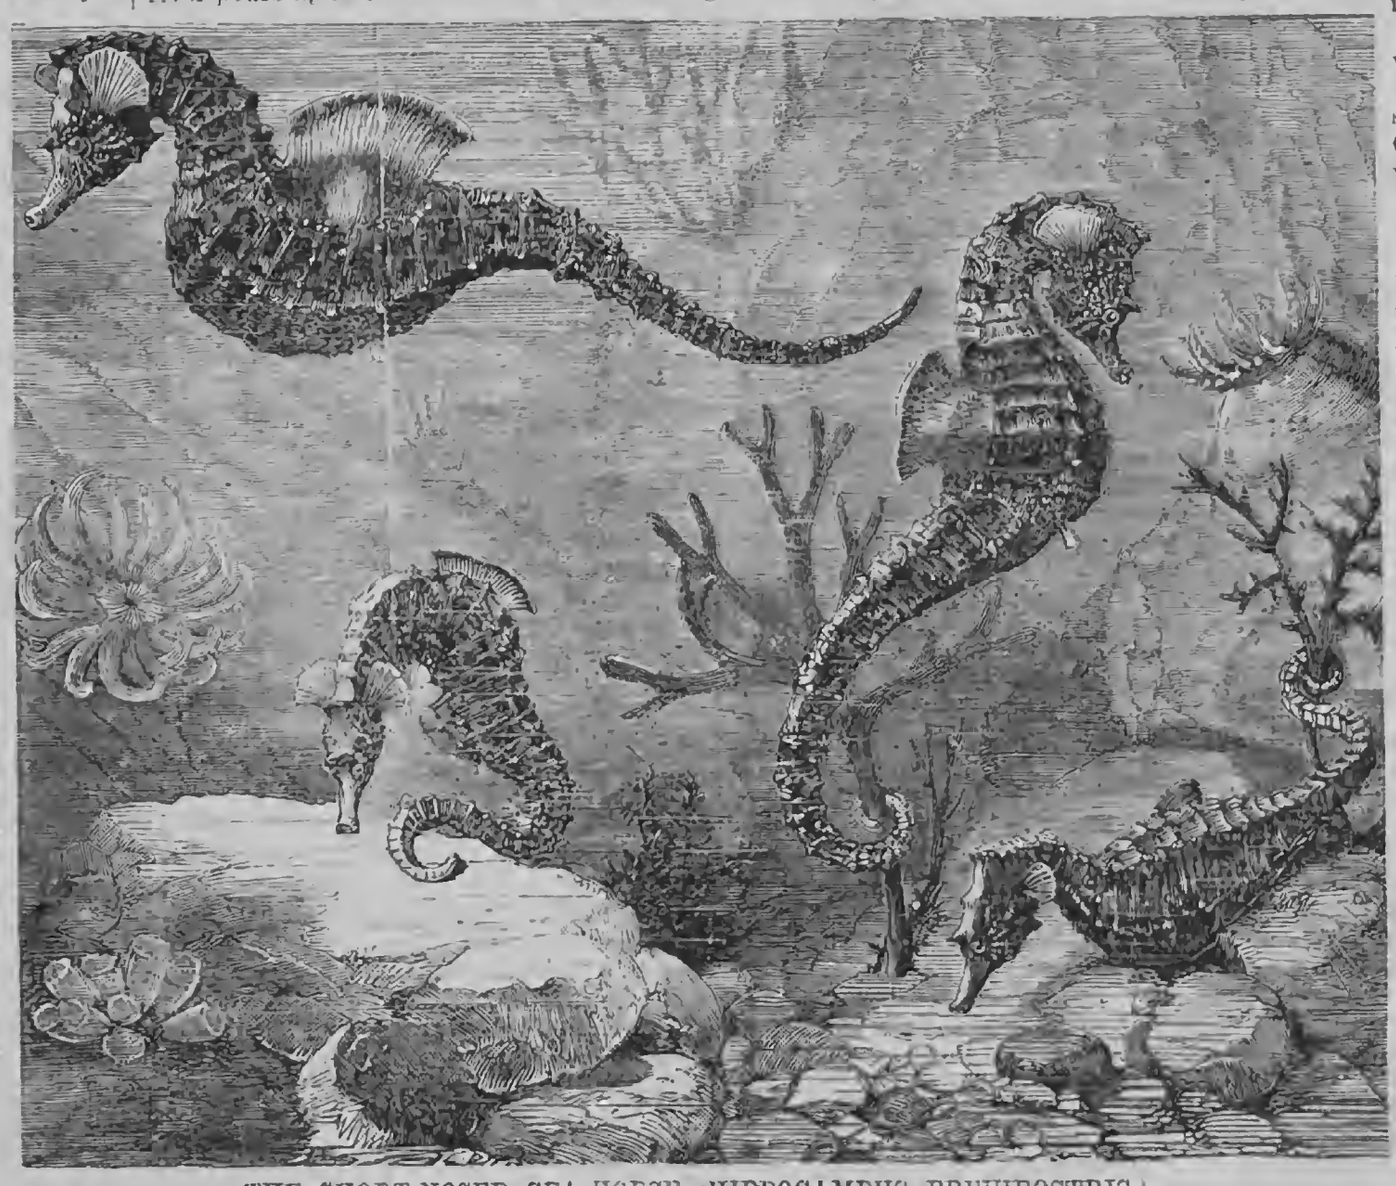
"No!"

"In a round glass; as true as I'm standing here, I saw him plain."

"Your future husband?"

"As is to be, yes, miss."

The two girls had been playmates when very little, and there was much more familiarity between them than is customary with mistress and maid. So Emma had to enter into all the mysterious details of the cabalistic ceremony.



THE SHORT-NOSED SEA-HORSE (HIPPOCAMPUS BREVIROSTRIS.)

"What fun!" cried Cissy. "I should so like to go; I *will* go! The fortune-teller's caravan is not actually in the fair, you say; and that there will not be many people about if we start early."

"Lor, miss! what will your pa and ma say?"

"I don't know; I'll do it first, and ask them afterward, for fear they might object. We will go to-morrow morning, directly after breakfast, mind."

Mr. Thorne was a steward; I do not mean an official attached to a steam-packet, in charge of a china shop full of white basins, but a manager of large estates in the country; a well-to-do-man, who had a small property of his own, which he farmed in the most intelligent and neatest style, on the outskirts of the market town of Mittelun. Mrs. Thorne was plump, good-natured, and lazy, yet somewhat proud and sensitive; she fancied the county families were patronizing, and she would not be patronized.

Cissy was their only child, and they thought much of her, honestly believing that there never was such another baby—child—maiden. Of course the paragon was never sent to school, and her governesses selected principally with reference to their power of appreciating her merits.

Nevertheless she was very charming, and had two lovers—I do not mean mere admirers, but two men who were ready to marry her, if she would but choose one of them. But she could not quite make up her mind which of the brace to select.

"If this gipsy would only show me which I am to take, it would save me a world of trouble," she said, to herself, with a smile; "but of course that is all nonsense. Yet if she did, I vow I would be guided by it."

One aspirant was Pendil Frogmore, a landed proprietor in the neighborhood, very poor; (for though his rent-roll was a fair one, his debts were enormous;) but very handsome, and well set up. Indeed, he had been in the Blues—I don't mean in bad spirits, but a man in armor, commanding men in armor, and his wife would be undoubtedly *county*.

Charles Wilson was the name of the other; he was a young London solicitor, who had just been taken into a good firm, and was now on a visit to his mother, an Indian colonel's widow, who resided at Mittelun. Mrs. Wilson and Mrs. Thorn were good friends, so all was smooth there. Mrs. Wilson had murmured indeed, when she first saw her son's inclination:

"Would she be a fit companion for you, Charles?—would she be able to take an interest in the same things you did?"

"No, mother; and that is just what I want. I should hate a wife who was as clever as myself. But how can you fail to see her merits? She is such a very nice little party!"

"Par*tie*, Charley, par*tic*; how dreadfully bad your French accent is! I grant that she would not be a bad match for you from a worldly point of view."

Frogmore was the more handsome, Wilson the more pleasant. Really, if fate would settle the matter for her, it would save Cissy Thorne a world of trouble.

So the pretty bone of contention thought, as she started with her maid, Emma, for Mittelun Hurst at nine A. M.; for Mr. Thorne breakfasted early, and his daughter presided, Mrs. Thorne being a sluggard. Not a drum was heard, not a pandean note, as they stepped briskly along; the gingerbread husbands were covered up from the dust; the merry-go-rounds were still; the clown was darning his dress; the donkeys breakfasted frugally on each other's manes; the fire-eater was trying a diet of bacon, bread and garlic, for a change. Business never commenced in the fair before the afternoon. But Miss Thorne's visit was not to the fair; to the right, some five hundred yards from the common, there was a clump of sparse trees, and sheltered beneath them stood one of those yellow huts on wheels which act so vividly upon the imagination of village children. This was the abode of the sibyl, and the adventuresses turned aside towards it.

Emma went first up the steps, and tapped with the light brass knocker; the door opened immediately, and a woman of the mystic race appeared—young, handsome as a Spaniard, though her splendid black hair was rather coarse, if you came to examine it too closely. Emma drew back, to let her mistress enter first.

"Walk in, my pretty lady," said the gypsy; "don't be afraid; I am quite alone here."

Although the fun of the fair did not commence till late in the day, it was evident that custom came betimes to the sibyl, for all traces of night disorder had disappeared from the miniature interior, which was spick and span, neat and clean; obviously prepared for visitors. The small apartment was still farther reduced by a curtain, which ran on brass rings along a rod, enclosing a portion of the space.

The gypsy examined Cissy's hand, and began making shots—centers though, most; bull's-eyes, some.

"You are an only child, and your father and mother would give you gold to eat if you wanted it; you had a bad illness four or five years ago; when a child you were in great peril from a dog." A lot more to the same effect, couched in vague language, but very correct, Cissy began to be sorry that she had come. "There's two gentlemen as is very sweet upon you, my pretty lady," continued the unpoetic sibyl; "if you marry one you will be unhappy all your life, but if you take the other you will be lucky, and live to be eighty, and ride in your carriage and pair all the time."

The idea of this very protracted drive rather amused Cissy, and that revived her courage. After all, the woman might have made inquiries about her on the chance of her coming.

"And how am I to know which of these gentlemen to choose?" she asked in a bantering tone.

"Ah, that I cannot tell, my lady; but you can look in the Magic Glass for yourself, and see if it shows you right."

"Let me see it, then," said Cissy, bravely, though the feeling of uneasiness began to return.

The gipsy said that Emma should leave the caravan; but Cissy would not have that, so a compromise was effected; the maid was blind-folded. The gipsy drew slides across the little windows on either side, producing deep twilight. Then the curtain at the farther end slowly parted, revealing a wall of black cloth, tightly stretched, in the center of which was fixed a circular mirror, about two feet in diameter, and this gradually became luminous. Cissy's nervousness returned with an increased force, and she grasped the hand of her blind-folded maid.

A table separated the girls from the mirror; and whether it was owing to the magical quality of the glass, or the angle at which it was placed, it did not reflect the figures standing opposite it. Indeed, it was more like ground-glass than an ordinary mirror—ground-glass with a feeble light behind it. Presently the surface became covered with ill-defined shadows, which gathered so as to obscure the whole of it; and then it gradually cleared, and a head and shoulders grew upon it; it cleared a little more, and revealed—the undoubted face of Charles Wilson. Cissy stood aghast in awe-struck terror before this supernatural intimation; when suddenly, as she gazed, this face before her became convulsed with an expression of terrible agony. She uttered a little scream, and fainted.

Fresh air and cold water soon brought her to; she fee'd the gipsy, and started homeward.

"You see'd him, miss?" inquired Emma.

"Yes; and I'll never marry any one else, if I die an old maid. But, oh! what can that dreadful expression on his face foretell? I fear that some awful calamity will happen some day."

A not improbable dread. There was one consolation; fate and Cissy's secret wishes had hit it off nicely. Girls are queer things, and she had hardly known she preferred Charley Wilson as much as she did.

In due time, he offered, and was accepted; and they were married, and went for their honeymoon to the Lake of Como.

One evening, Charles Wilson rowed his bride out in a clumsy tub.

"How serious you are, Cissus," he said, finding her less chatty than usual. "Did that brave-looking beggar frighten you? Because his frowzy head shall be punched if he did!"

"Oh, no; oh, don't offend him!" cried the young wife. "I am sure he has got what the Italian call an Evil Eye!"

"Has he? Well, never mind; the Americans have invented a potion which counteracts the effect."

"Really?"

"Yes; when we return I will get that gentleman from New York, stopping at the hotel, to concoct us an eye-opener; that will make it all right."

"Oh, do!" cried Mrs. Wilson; and her husband paddled on.

"I say, Cissums," he said, presently, resting on his oars, "don't think that I am finding fault because you have not got any faults, so that would be absurd; but are you not rather superstitious?"

"And if I am, I have a right to be," said she

"Ah! any particular experience?" And he wormed out of her the whole story.

"I am sorry I told you," she cried, when he burst out laughing; "you don't believe it! You had better call me a story teller at once."

"Believe it, my dear! I am ready to swear to it. You did not see my ghost, though; you were looking at *me*. I was in a dreadfully confined position, and that rogue of a gipsy was so long about her preliminaries, that I got a horrid cramp in my right calf, and made a face which I thought would betray me."

The bride burst out crying.

"And you bribed my maid; and laid a plot with a common gipsy to deceive me; and nearly frightened me to death; and were laughing at me all the time—oh," she sobbed.

"All's fair in love," said Wilson, sheepishly.

"It was unworthy of you?" she continued; you have married me on false pretences. I shall never feel the same towards you; I will never forgive you—never!"

"But she did.

"HIGHLAND MARY'S" GRAVE.

Rev. J. W. Todd, writing of his travels in Scotland, thus describes Greenock-on-the Clyde, where lie buried the remains of Jean Adams, a poet, and Mary Campbell, who inspired a poet:

Time and space admit not of a sketch of Greenock's rise and progress or present state and trade; but among its memories and glories are two names that the world will not let die—Jean Adams, who had often seen sad departures for the wild ocean, and warm welcomes of mariners to their homes, and whose genius wove into song the thrilling and true-souled affection which she witnessed, if she did not herself experience it, when she sang "Nae luck aboot the hoose, when our guid man's awa:"

"Is this a time to think o' wark,
When Collin's at the door?
Rax (reach) me my cloak, I'll to the quay,
And see him come ashore."

A song of which Burns says:—"This is one of the most beautiful in the Scots, or any other language." Yet, little more than a century since, this child of poetry ended a life of poverty in the Glasgow poor-house.

Vastly different was the fate of James Watt, who also sprang from the same spot, wove hard material into engine power, and evolved from water and fire a force that, next to God's own Word, is mighty in "turning the world upside down."

The one of these Greenock bairns pursued "the profitless art of poem-making"—the other that of invention, which lifted him to wealth, and gave him world-wide fame. But the scene of their birth is still more sacred, made so by the remains of one who entered it to die and be interred there.

The body of Highland Mary—the early and lingering light of Burns' heart—moulders in the corner of Greenock churchyard; and whatever shadows gather around his memory and stain his "fair name," her's is without spot, and the delicious joys which she enkindled in his soul seem to have been of the purest and loftiest order—lingering there like the reflection of a glorious sunset when the darkness has set in and closed him round about. For it was far off in the days of his brief life that he tuned his lyre and sang;—

"Wi' many a vow and locked embrace,
Our parting was fu' tender,
And pledging aft to meet again,
We tore ourselves asunder;
But O, fell death's untimely frost
That nipt my flower so early!
Now green's the sod and cauld's the clay
That wraps my Highland Mary."

The path to her grave is trodden into hardness by the feet of pilgrims from all lands; and on the slab that covers her narrow bed is inscribed the unadorned name, MARY, with these lines from the poet's pen:

"O Mary, dear, departed shade,
Where is thy place of blissful rest?"

All this is less imposing than the Watt memorial, of the purest marble, and with its chaste sentence, coined by the genius of Lord Jeffrey; but it is more touching, suggestive, stirring. The one has the mark of art upon it, the other is full of nature.

THE Strength of a Nation is in the intelligence and purity of its people, and that intelligence and purity are best secured by the circulation among them of the elements which contribute to the health of body and mind; and this circulation is brought about by their protection in the enjoyment of personal security, the advantages of education, and wages adequate to their proper maintenance.

Sabbath Reading.

DOUBTING.

THE very saddest thought of all,
Is that my heart is full of sin,
That when I strive to climb, I fall,
And all grows dark and blind within:

The good I *would*, I never do,
The sin I *shun*, I'm doing oft,
A loving work, I *meant* so true,
Is oftener heartless, and is lost.

I try to trust my Father's care,
And pray that He will lead me right,
My faith is dim, the world's a snare,
That leads me further from the light.

Where shall I turn, oh whither flee?
I'm weary, tossed and desolate,
LORD where can I go, but unto Thee?
Thou wilt receive and ne'er forsake.

I go, dear SAVIOUR, straight to Thee,
I give thee all, yes all my heart.
Accept it, though so mean I be,
And let me from Thee ne'er depart. S.

THE BIBLE GROWS WITH ONE.

SPURGEON says:—If you come to the Holy Scripture with growth in grace and with aspirations for yet higher attainments, the book grows with you. It is ever beyond you, and cheerily cries, "Higher yet; Excelsior!" Many books in my library are now behind and beneath me; I read them years ago with considerable pleasure; I have read them since with disappointment; I shall never read them again, for they are of no service to me. They were good in their way once, and so were the clothes I wore when I was ten years old; but I have outgrown them—I know more than these books know, and I know wherein they are faulty. Nobody ever outgrows Scripture; the book widens and deepens with our years. It is true, it can not really grow, for it is perfect; but it does so to our apprehension. The deeper you dig into Scripture, the more you find that it is a great abyss of truth. The beginner learns four or five points of orthodoxy, and says, "I understand the Gospel, I have grasped all of the Bible." Wait a bit, and when his soul grows and knows more of Christ, he will confess: Thy commandment is exceedingly broad—I have only begun to understand it.

A CURIOUS FACT.

IT is singular that the name of God should be spelled with four letters in almost every known language. It is in Latin, Deus; in Greek, Zeus; Hebrew, Adon; Syrian, Adad; Arabian, Alla; Persian, Syra; Tartarian, Igda; Egyptian, Aumn or Zent; East Indian, Esgi or Zeul; Japanese, Zain; Turkish, Addi; Scandinavian, Odin; Wallachian, Zene; Croatian, Doga; Dalmatian, Rogt; Tyrrhenian, Eher; Etrurian, Chur; Margarian, Oese; Swedish, Codd; Irish, Dich; German, Gott; French, Dieu; Spanish, Dios, and Peruvian, Lian. The name of God in the Anglo-Saxon language means good, and the signification affords singular testimony of the Anglo-Saxon conception of the essence of the Divine Being. He is goodness itself, and the Author of all goodness. Yet the idea of denoting the Deity by a term equivalent to abstract and absolute perfection, striking as it may appear, is perhaps less remarkable than the fact that the word man, used to designate a human being, formerly signified wickedness.

COSTLY CHURCH MUSIC.—Mr. Spurgeon and Bishop Littlejohn think alike about the extravagant sums paid by Protestant churches for music. The bishop stated recently that one church in his diocese paid more money for music last year than all the churches combined paid for missions. And Spurgeon, in the course of a recent sermon, "came down" on those fashionable congregations who leave the praise of God to four or five high-priced professional vocalists.

THE heart is ready enough at feigning excuses for all that it does or imagines of wrong; but ask it to give a reason for any of its beautiful and divine emotions, and it can only look upward and be dumb. When we are in the right we can never reason, but only assert.—*J. R. Lowell.*

BY friendship you mean the greatest love, the greatest usefulness, and the most open communication, and the noblest sufferings, and the severest truth, and the heartiest counsel, and the greatest union of minds, of which brave men and women are capable. —*Jeremy Taylor.*

TRUTH is immortal: the sword cannot pierce it, fire cannot consume it, prisons cannot incarcerate it, and famine cannot starve it.

Ladies' Port-Folio.

"AFTER A DAY LIKE THIS."

ONE of the sweetest blessings,
After a day like this,
Is the loving and caressings,
The welcome home and kiss—

The rest and quiet I long for—
Rest and refuge and Home,
When worn and wasted and weary,
Unto my home I come.

One of the sweetest blessings
Is love that blossoms through
The loving and caressings
From hearts I know are true.

The evening lies soft around them;
Their faith is simply to be
In the thought of him who loves them
And give sweet welcome to me!

One of the sweetest blessings
Is to know that life is mine—
That loving and caressings
Are all born of love Divine—

That the tender touch of fingers,
The sweet kisses on my lips,
And the loving look that lingers
Are but Angels' finger-tips

Wooing me toward Home and Heaven,
Soothing all ache and pain,
Beck'ning me, from morn 'till even,
Back unto my Home again. C. D. B.

ENGLISH AND AMERICAN GIRLS.

THE following remarks by an Englishman, contrasting the industrious habits of English and American girls and women, are worthy the attentive consideration of parents and daughters. How few American mothers, especially in cities and villages, compare favorably with the wealthy, titled ladies mentioned, in activity and industry!

"I can assure you that, having lived in different castles and manor-houses of Great Britain, and being accustomed to the industrious habits of duchesses and countesses, I was utterly astonished at the idleness of American ladies. No Englishwoman of rank (with the exception of a few *parvenues*), from the queen downward, would remain for one-half hour unemployed, or sit in a rocking-chair, unless seriously ill. They almost all (with hardly an exception) copy the business-letters of their husbands, fathers, or brothers; attend minutely to the wants of the poor around them, and then take part in their amusements, and sympathize with their sorrows; visit and superintend the schools, work in their own gardens; see to their household concerns; think about their visitors; look over the weekly accounts, not only of domestic expenses, but often those of the farm and estate; manage penny-clubs in conjunction with the working-classes, to help them to keep themselves; and with all these occupations, by early hours, they keep up their acquaintance with the literature and politics of the day, and cultivate the accomplishments of music and drawing, and often acquire, besides, some knowledge of scientific pursuits.

The late Marchioness of Landsdowne was so well acquainted with her cottagers in her neighborhood that she used to visit and look at the corpses of the dead, because she found that her doing so soothed and comforted the bereaved. I have known her to shut herself up with a mad woman in her poor dwelling, who used to lock the door, and could not be induced to admit any one else. Lady Landsdowne's only daughter used one hundred guineas (given her by her father-in-law, Lord Suffolk, to buy a bracelet) to build pig-styes, with his permission, at her husband's little country residence. She educates her own children without assistance, teaching the boys Latin, and the girls all the usual branches of education. The late Duchess of Bedford, I accidentally discovered, when on a visit to Woburn, had, for thirty years of her married life, risen at six o'clock Summer and Winter, lit her own fire, made some tea for the duke and herself and then, as he wrote his own letters of business, she copied them, and they came down to a large party of guests at ten o'clock, to dispense breakfast, without saying one word of their matutinary avocations; so that you might have been a visitor in the house without finding out that the duke or duchess had transacted the necessary business of the day, before, perhaps, you had risen! I rather mention those that are gone to their reward than write of women still among us; but you may believe me when I say that I am constantly among those who live such lives of energy and usefulness, but they so employ themselves without ostentation or an idea that they are doing more than their simple duty."

SOME reserve is a debt to prudence, as freedom and simplicity of conversation is a debt to good-nature.—*Shenstone.*

IN DEFENCE OF MOTHERS-IN-LAW.

As a great deal is said and written against mothers-in-law, it is refreshing to find one man who can say something in their defence. This singular character belongs to Fort Wayne, Ind: "I am not a mother-in-law myself, but my wife's mother is, and for her sake I want to say something in behalf of that much-abused class of relatives. Since it is become fashionable to rail at mothers-in-law in the public press and in private life, the great American people, with that keen sense of humor peculiar to themselves—and for the possession of which a good many of them ought to be hanged—consider it intensely funny as well as fashionable. I don't. I recognize the fact that my children's grandmother, who is one of their dearest and truest friends on earth, has a claim upon my affections too. There are doubtless exceptions to this rule, as there are to most rules under the sun, but in the main mothers-in-law are entitled to all the respect they receive and a good deal more of the same sort. Generally the man who speaks insultingly of his mother-in-law would not be averse to whipping his wife when occasion offered, or is mean enough to accept his mother-in-law's kindly offices when the children are down with the measles and give her the cold shoulder afterward. At least it will be safe to say that the man who insults his mother-in-law by word or deed will bear watching."

UNCONSCIOUS INFLUENCE.

IT is not they alone who are trying purposely to convert or corrupt others, who exert an influence. The doors of your soul are open on others, and theirs on you. You inhabit a house that is well-nigh transparent, and what you are within you are ever showing yourself to be without, by signs that have no ambiguous expression. If you had the seeds of a pestilence in your body, you would not have a more active contagion than you have in your tempers, tastes and principles. Simply to be in this world, whatever you are, is to exert an influence,—an influence compared to which mere language and persuasion are feeble. Is your example harmless? Is it ever on the side of God and duty? You cannot doubt that others are continually receiving impressions from your character. As little can you doubt that you must answer for these impressions. If the influence you exert is unconsciously exerted, then it is only the most sincere, the truest expression of your character. Do not deceive yourself in the thought that you are, at least, doing no injury, and are therefore living without responsibility. By a mere look or glance, not unlikely, you are conveying the influence that shall turn the scale of some one's immortality. Dismiss, therefore, the thought that you are living without responsibility; that is impossible. The true philosophy of doing good is, first of all and principally, to *be* good—to have a character that will of itself communicate good. There must and will be active effort where there is goodness of principle; but the latter we should hold to be the principal thing, the root and life of all.—*Horace Bushnell.*

A STRING OF PEARLS.

OUR own heart, and not other men's opinions, forms our true honor.

PEOPLE seldom improve when they have no other model but themselves to copy after. —*Goldsmith.*

AN industrious and virtuous education of children is a better inheritance for them than a great estate.—*Addison.*

MANLINESS.—It is a higher exhibition of Christian manliness to be able to bear trouble than to get rid of it.—*Beecher.*

LET no one count the number of his friends till they have been bolted in the sieve of his own adversity, for there is much bran in prosperous friendship.

A DEAF and dumb person being asked to give his idea of forgiveness, took a pencil and wrote, "It is the sweetness which flowers yield when trampled upon."

FONTENELLE thus faintly compliments the sex when he compares women and clocks —the latter serve to point out the hours, the former to make us forget them.

WE make the greater part of the evil circumstances in which we are placed; and then we fit ourselves for those circumstances by a process of degradation.—*Southey.*

HIDE A FRIEND'S FAULTS.—It is a noble and great thing to cover the blemishes and to excuse the failings of a friend; to draw a curtain before his stains, and to display his perfections; to bury his weaknesses in silence, but to proclaim his virtues upon the housetop.

Reading for the Young.

THE FIRST PANTALOONS.

BY FLEDA.

MUST I put them on him?
I hardly think I can,
'Twill make the darling look
So very like a man.
And must I put away
Those dainty little dresses,
And take the cruel shears,
To golden, straggling tresses?

I've tried so hard to keep him
In these little clothes;
Saying every day I'll wait
'Till he older grows.
For I know I'll sadly miss
His winsome, baby ways,
And look back with regret,
To his sunny, baby days.

Only see these little shoes
With the pink toes peeping through!
I remember well the day
When they were bright and new,
And how I coaxed and petted
And sang a gleesome song,
To make him sit quite still,
While I should "try them on."

I'll put them with the treasures
I've garnered from the past,
In remembrance of a childhood
All too bright to last:
Of a galeless, happy babyhood
That disappeared, as soon
As he stepped from little dresses
Into pantaloon.

I know that he must take
This first step, up the hill;
And may he ever seek the good,
And shun the ill.
The way is filled with tears
As well as joy,—
May the blessing of a mother prove
A talisman for her boy.

Indus-Wild, Warren Co., Ill.

LETTERS TO YOUNG RURALISTS.—V.

FROM COUSIN JOHNNIE.

I WAS very much interested in WILLIE C. B. P.'s letter about his squirrel. The story was well and simply told—without any affectation of a style above his ability. I trust as he succeeded in saving even his little pet at the time of the "great fire," that he has not had to mourn the loss of any of his dear ones. Perhaps he will tell us, the next time, how they succeeded in escaping.

MATTIE W.'s letter was really quite an elegantly written epistle. She must be somewhat older than the other little Ruralists, or have had many more advantages, if she composed it entirely without assistance. Her instructions with regard to taking impressions of ferns and grasses were so explicit that none of us, I think, will find any difficulty in following them.

LYDIA O. says:—"We are not very fancy folks; we all work." I am glad she seems so fond of work, as it is undoubtedly her duty to assist her parents, who keep no servants. But LYDIA seems to forget that those who keep no servants, and have to wash, iron and milk, are not the only workers in the world. Many of those whom she calls "fancy folks," have mental labor to perform, harder than anything she has an idea of. There is work for everybody in the world, the rich as well as the poor; nay, the rich because they have ten talents have the most work given to them, though unfortunately they do not always do it. If LYDIA is only able to attend school part of the time she must make good use of that part. *Her work*, while at school, should be to improve every opportunity for study.

I have learned something from HOMER S. I had never heard before that a pear cion could be grafted upon a mountain ash; but on inquiry I found that such was the case, as the two trees belong to the same family.

We have not heard anything for some time from either WILD ROSE or TRIXIE. Where are they?

IMPROVED SOAP BUBBLES.

WE find in an exchange a paragraph which teaches the art of blowing soap bubbles that will show the changing colors of the rainbow, and may be of special interest to some of our juvenile readers. The directions are as follows:

Take three-quarters of a pint of water that has been boiled and become cold, and put into it a quarter of an ounce of Castile soap, cut up fine. Put this into a pint bottle, and set it in a saucepan on the fire; there let it remain an hour or so, now and then giving it a good shaking, till the soap is dissolved. Let the fluid stand quiet for the impurities and coloring matter of the soap to settle; then pour off the fluid and add to it four ounces of glycerine and your soap bubble solution is ready. In an ordinary way you may blow the bubbles easily with a tobacco pipe, but if you wish to attain scientific perfection, a glass pipe can be employed with better success. By adding a larger quantity of glycerine, you may make these bubbles so strong that you can play battledore with them.

TO BOYS AND YOUNG MEN.

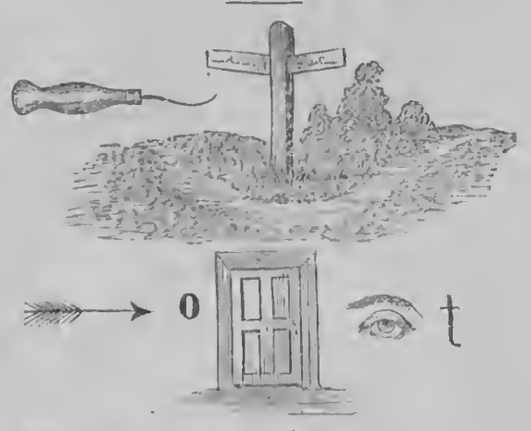
BOYS and young men, you are the architects of your own fortunes. Rely upon your own strength of body and soul. Take for your star, self-reliance, faith, honesty and industry. Inscribe on your banner, "Luck is a fool, Pluck is a hero." Don't take too much advice; keep at your helm and steer your own ship, and remember that the great art of commanding is to take a fair share of the work. Don't practice too much humility. Think well of yourself. Strike out. Assume your own position. Rise above the envious and jealous. Fire above the mark you intend to hit. Energy, invincible determination, with a right motive, are the levers that move the world. Don't drink. Don't chew. Don't smoke. Don't swear. Don't deceive. Don't marry until you can support a wife. Be in earnest. Be self-reliant. Be generous. Be civil. Read the papers. Make money and do good with it. Love truth and virtue. Love your country and obey its laws. If this advice be implicitly followed by the young men of the country, the millenium is near at hand. —*Selected.*

ADVICE TO BOYS.—You are made to be kind, generous and magnanimous, says Horace Mann. If there is a boy in school who has a club-foot, don't let him know you ever saw it. If there is a boy with ragged clothes, don't talk about rags in his hearing. If there is a lame boy, assign him some part in the play which does not require much running. If there is a dull one, help him to get his lesson.

YOUTH is the time in which modesty and enterprise ought chiefly to be found; modesty suits well with inexperience, and enterprise with health and vigor and an extensive prospect of life.—*Johnson.*

The Puzzler.

ILLUSTRATED REBUS.—No. 17.



☞ Answer in two weeks.

DOUBLE ACROSTIC.—No. 1.

1. A FABULOUS monster.
2. Small flowers in a head.
3. A color.
4. An alkali.
5. An offering.
6. Honey cup of a flower.

The *initials* form the name of a river; the *finals* a city on its banks. M. HUNT.

BIBLICAL ENIGMA.—No. 2.

I AM composed of 48 letters:
My 8, 40, 29, 10, 17, 11, 16, 45 was a king of the Medes.
My 15, 20, 4, 9, 24, 23, 14 was the mother of Cyrus.
My 39, 41, 10, 46, 37 was Belshazzar's grandmother.
My 38, 44, 22, 12, 26, 42, 3 was Peninnah's husband.
My 2, 6, 48, 9 was David's grandfather.
My 1, 16, 45, 3, 27, 7, 35, 26 is a poetical name of Israel.
My 21, 30, 18, 11, 25, 36, 27, 40 was the first Gentile convert.
My 33, 38, 19, 31 was Drusilla's husband.
My 18, 12, 29, 10, 23, 32, 26 a celebrated city on the Euphrates.
My 23, 14, 8, 13, 46, 4, 11 is the art by which the high priest's tunic was made.
My 47, 36, 5, 3 is a city of Judah near which David lay hid.
My 31, 27, 17, 7, 37, 35, 45 was a citizen of Corinth.
My whole is a sentence containing all the letters of the English alphabet. YANKEE JAKE.

☞ Answer in two weeks, when we will publish the names of those who shall have sent us correct answers.

SENATOR HARDENBERGH is thought to be dying....Rev. Dr. George B. Ide of Springfield, Mass., died on the 16th, aged 66.

FOREIGN NEWS.

From Great Britain.

On the 11th there was a long discussion in Parliament on the Alabama question. England will submit a counter case, but will reserve the right to withdraw from the arbitration if the difference on the subject of indirect damages is not settled....The Internationals have been denounced and defended in the House of Commons....The Tichborne claimant succeeded in getting bail in the sum of $25,000, but the judge would not accept it.....The Alabama question still engrosses attention in England. The press unites in the position that claims for indirect damages must not be allowed. ...The note presented by the Geneva Arbitration, has been made public. The indirect losses are not allowed. It is thought in Geneva that this will prevent a settlement of the dispute... The statement first made in the London *Telegraph* that the relations between France and Germany were critical, is believed to be a sensation designed to aid some speculation.....The Government has been defeated by one majority....A shoemaker in London named Nichols, killed his four children and then committed suicide. ....The Marquis of Bute married Lord Howard's daughter on the 16th. A great crowd of distinguished people were present. The Pope sent a present of cameo brooches....The English counter case has been given to the public. It gives a description of neutrals as a result of the doctrine presented in the American case, and comes to the conclusion that it is intolerable ... Charles Reade is about to prosecute five journals for libel....The Government has sustained another defeat on the local taxation question, by 100 majority. A Spanish steamer has boarded and searched an English vessel, finding arms and powder.

From France.

BLANQUI is to have a new trial....A French squadron will bombard Tamatar, on the east coast of Madagascar....The relations with Germany are said to be critical again....The order abolishing the passport system has gone into operation.... The Committee to examine into the surrender of cities has reported in relation to Metz, but the conclusion is kept a secret.... Communist trials still continue at Versailles, and men are frequently sentenced to death.

THE SEASON, CROPS, ETC.

[Continued from page 284.]

Clarence, Erie Co., N. Y., April 15.—We have had a severe, cold winter, and are having a late, backward spring; prevailing winds from the north and west; wheat is looking middling well; some spots killed by ice. Last spring, the plows were started the 7th of March; this spring, the 8th of this month; planted potatoes one year ago to-day; this morning the ground was frozen hard enough to carry a horse and wagon, and this afternoon there is a heavy snow storm from the east. Markets are as follows:—Wheat, $1.50; corn, 65c.; oats, 45c.; barley, 75@80c.; potatoes, 50@75c.; hay, $18@20 per ton.—A. T.

South Logan, Oakland Co., Mich., April 15.—No spring weather yet. Work two weeks behind; no rain to speak of for nearly a year; not more than two-thirds the actual amount of wheat sown last fall; what was sown is small and badly spotted up with ice. Land brings $50@75 per acre; wheat, $1.35, not as much in first hands as last year; corn, 55c.; oats, 40c.; beans, $2. Hay fed up close; butter, 20c.; eggs, 16c.; sheep at fancy prices; they begin to talk 75c. for wool. Hogs not as plenty as last year; both store and beef cattle in good demand.—A. B.

Madison, Wis., April 15.—Heavy snow storm here last night and to-day; wind northeast. A great disappointment to farmers, as most all were intending to commence sowing wheat to-day. The ground was in very good order for working Friday and Saturday, but a very high wind prevailed Thursday, Friday and Saturday of last week, so as to make it uncomfortable to work out. It must be some days yet before the ground will be in condition for seeding. This weather will use up all the fodder, and a rise in price will be the result. Coarse grains are plenty and the price low. Wheat, $1.20; barley, 60c.; corn, 40c.; oats, 30@35c.; flour, $3.50@3.75; bran, 90c. per cwt.; pork, $4@4.25; potatoes, 50@75c.; hay, $8@10 per ton; wood, $5@6.—M. A. H.

Stevensburg, Culpepper Co., Va., April 9.—Notwithstanding we have had twenty different snows—more than many portions of New York—still we have been able to plow nearly every month in the year, and will have comparatively an early spring. Most farmers are nearly through plowing for corn. Oats are all seeded, and we will commence planting soon. It has been very dry and cool here during the spring, in consequence of the mountains being covered with snow. Am happy to say the weather has changed; had a fine shower, and the prospect for a fine crop of wheat is very flattering. We have a fine country here, lying on Rapidan River, and all that is needed to make it very productive is more population.—W. B.

Caledonia, Livingston Co., N. Y., April 17.—The Winter just past has been very severe. There was but little snow in this vicinity, and a greater part of the time not any. This was severe on wheat, with the temperature near zero, the wind blowing a gale, often three days in a week, it is not surprising that wheat had a dead, parched appearance, without one green blade to rest a hope upon. But from the 12th to the 15th inst. it was warm and showery. Wheat started rapidly, growing in four days about two inches. On level land wheat will be some spotty; the water from showers, and the little snow, which melted from time to time, settled into the basins which are found in many fields, and with three feet of frost there was no escape but by evaporation; this froze and remained for several weeks. On the 16th inst. we had a strong gale, scattering straw stacks, fences, boards, shingles, prostrating telegraph poles, chimnies, and removing several roofs in various parts of the town. I have seen or heard of but little plowing being done up to this date. Wells and springs are very low. The wood of the various kinds of grapes and raspberries has wintered well; strawberries also. Wheat, $1.55@1.65; corn, 60c.; barley, two rowed, 55@60.; hay, $12 to $18 per ton; sheep, store, fair to good, $5 to $7; cows in calf, $35 to $50; extra, $60@65; two and three-year old heifers, fair to good, $30@40. Hired help:—Men, $20 to $26; boys, from 14 years to 17, get from $12 to $17 per month. Girls, per week, $2 to $4—per day, washing and house cleaning, 75c. to $1; farm hands per day, $1.25@1.50.—D. L.

SEMI-BUSINESS PARAGRAPHS.

The Novelty Clothes Wringer has that great improvement—cog wheels—on *both ends* of the rolls. Every housewife should have one.

Facts for the Ladies.—Mrs. E. A. Mac Rae, Shoe Heel, N. C., has used her Wheeler & Wilson Lock-Stitch Sewing Machine since 1857 with perfect success in every respect, stitching the clothing for thirty colored servants and a large family of whites, and army clothing and hospital bedding during the war, without the slightest repair. It is now as good as when bought. See the new Improvements and Woods' Lock-Stitch Ripper.

Dead or Dying.—Where the hair is unnaturally dry, you may be sure that it is dying; and unless artificially vitalized, it will soon be as dead as leaves in November. Feed the withering fibers and stimulate the torpid scalp with Lyon's Kathairon, and the evil, which must otherwise culminate in baldness, will be speedily remedied.

Watch No. 1006, Stem Winder—bearing Trade Mark "Frederic Atherton & Co., Marion, N. J."—manufactured by the United States Watch Co., (Giles, Wales & Co.,) has been carried by me three and one-half months; total variation thirty seconds.—GEO. G. ROCKWOOD, 845 Broadway.

Messrs. P. Blanchard's Sons give due credit for their large sales to a very liberal use of printers' ink. We agree with them, but must add that even printers' ink will not make a permanent success of a poor thing. They make "the best" Churn.

Henry Clay once remarked to Daniel Webster that potatoes—our $75, Four-Ton Hay Scale. The Jones Scale Works, Binghamton, N. Y.

THE MARKETS.

MONEY AND TRADE AFFAIRS.

NEW YORK, Saturday, April 20, 1872.

THE City Bank Banks return for the past week shows a reduction of nearly $8,000,000 in deposits and a reduction of over $4,000,000 in loans and discounts. Of the deposits about $2,000,000 appears to have been withdrawn in Greenbacks. The whole movement was disturbed by the "lock-up" of the previous week of $5,000,000 Greenbacks, through the old Erie Ring Bank, the Tenth National Bank—an exceptional transaction now being investigated by the Banking Committee of Congress.

It is not surprising, in view of the heavy Bank liquidation, that Money should be dear and scarce in Wall street, but the belief is that the succeeding weekly returns will show an improvement, and confirmatory of this opinion, we notice less pressure for Money on the street in the last day or two. The merchants are wanting more discounts at bank, but their applications are not of a pressing nature. General trade is active and mostly at satisfactory profits. The possible danger in the future is a gradual extension of the credits upon which goods are being sold to the South and West.

The Spring jobbing business is heavier than last year, and the total importations of Foreign merchandise since July last, the beginning of the current fiscal year, are 17½ per cent. ahead of the previous year. The exports of our domestic products show no corresponding increase, and while we have no record of the sums of American stocks going abroad in settlement of this large apparent trade difference against the country, it seems reasonably certain that the total is running up very rapidly.

On the Stock Exchange there is a renewal in the last few days, of the upward speculation in the Railroads and in Telegraph and Pacific Mail, while the Government stocks have also advanced about one per cent., and Gold ½ per cent. The Treasury bought $2,000,000 U. S. 5-20's for the Sinking Fund this week, and sold $1,000,000 Gold.

A Tariff and Tax revision bill has been reported from the Ways and Means Committee to the House of Representatives, but in a shape not likely to meet the views of the majority of the House, so that a present reference to its provisions, would be practically useless.

The following are the comparative movements of the City Banks for the past fortnight:

	April 6.	April 13.
Capital	$87,155,500	$87,155,500
Loans	278,483,400	274,351,300
Gold and Greenbacks	58,459,300	56,210,700
Deposits	201,165,500	193,287,100
Circulation	28,011,700	27,987,000

PRICE OF STOCKS AND BONDS.

American Gold	111	N. Y. Central Scrip	93
U. S. 5-20's of 1867	113¾	Rock Island	113
U. S. 6s of 1881	116	N. West	82½
U. S. 10-40s, 5 ⅌ cts	109¾	Do. Preferred	85¾
U. S. New Loan	111½	St. Paul	52¾
N. Y. Bounty Loan	108	Do. Preferred	81½
Tennessees	67½	Lake Shore	97
Virginias, new	55	Ohio and Mississippi	49¼
Missouri Bonds	95¾	Toledo & Wabash	79¾
U. S. Currency 6s	115¾	Erie	62¾
Central Pacific	103½	Union Pacific Stock	39
Union do	91⅞	Adams Express	98
Western Telegraph	76¾	American Express	74
Pacific Mail	68¼	United States Exp's	75
N. Y. Central Stock	99	Bills on London	109¼

The advance on the Railroads is about 1 per cent.; on Telegraph 3 per cent., and on Pacific Mail 5 per cent. The Pacific Mortgage Bonds are 1 per cent. higher. The Southern State Bonds are dull.

PRODUCE AND PROVISIONS.

NEW YORK, Friday, April 19, 1872.

Receipts.—The receipts of the principal kinds of produce since our last embrace 13,173 bales of cotton; dried fruits, 196 pkgs.; eggs, 13,083 bbls.; flour, 43,006 bbl.; wheat, 91,210 bush.; corn, 305,559 do.; oats, 234,147 do.; barley, 20,182 do.; grass seed, 1,181 bags; beans, 812 bbls.; corn meal, 2,850 do.; do., 2,251 bags; hops, 170 bales; pork, 2,895 pkgs.; beef, 281 do.; cut meats, 8,196 do.; lard, 5,357 do.; lard, kegs 272; butter, 7,214 pkgs.; cheese, 4,817 do.; peanuts, — bush.; 1,129 hhds. tobacco; 6,689 boxes do.; 3,591 bbls. whisky; 634 bales wool.

Butter.—New butter still occupies a weak position. Singularly so, as our's is out of its way. While new stock is always attended with a sort of peddling demand, and with the near approach to grass weather, buyers are increasingly cautious in venturing for any considerable overstock. Prices for new are about the same as in our last. Old butter is no longer publicly quotable. The California consignment arrived during the week, consisting of about one ton of the yellow butter, quite equal in quality to our June make, and in the offering, presented a delicious contrast with the white goods that have proved our chief supply this backward season. It arrived in casks and cases, in rolls of two pounds each, carefully rolled in thin muslin. Only a few years ago the California market called its supply from the East, and the demand had quite a bearing upon shaping prices here at times. Now, it is promised that our Spring trade will have to cope with the Pacific dairies, and if what they propose to send, holds out in quality to this week's samples, the consumer will have no occasion to regret this instance of the reversed state of commerce between the Golden State and Atlantic cities. We quote new State pails, choice, 36@38c.; do. half tubs, 34@35c.; do. Welsh do., 33c.; common State, 25@30c.; Western fine, including rolls, 27@29c.; do. other, 20@25c.

Beans.—With the stock of mediums well under control, a further advance in prices has been established. With the close approach to the prices of marrowfats, it looks as though the demand would turn somewhat on the latter description. The reports from the interior mention light shipments, and there is a confident feeling at the close. Sales of prime mediums at $3.10; good lots at $2.95@3.05; prime marrowfats, $3.15@3.20; good lots at $3@3.10; kidney, $3.25@3.40; red do., $2.35@2.75.

Beeswax—Is higher. Sales at 41c.

Cheese.—The market is depressed. It looks as though some of the old stock will be carried lower than desired. With the present outlook prices must be materially reduced to clear the market. It is impossible to sell at over 15c. for a full lot, but holders refuse to meet that price. A few small lots are being put out in the home trade at 13½@13c. It is understood that a lot of about 500 boxes is being returned from England, and some interest is felt as to whether this is only the opening of further shipments from that quarter. Old fine State factory, 18@18½c.; fair, 17c.; common, 14c; State dairy, 16@17c. for good and prime; 12@14c. for common. Ohio factory, 15@17½c.; English dairy, 15@16½c.; Pine apple, 16@20c.

Cotton.—There has been very little business, and bids are low. Contracts have been held at steady prices. The foreign market is steady.

	Uplands.	Alabama.	N. Orleans.	Texas.
Ordinary	20¾	20¾	20¾	20¾
Good Ordinary	22¾	22¾	22¾	22¾
Low Middling	22¾	23	23¼	23⅜
Middling	23¾	23¾	24	24⅛
Good Middling	24¾	24½	24¾	24⅞

For forward delivery latest sales on the basis of low middling are at 23¼c. for May; 22¾c. for June; 24c. for July; 23 15-16c. for Aug.; 22 5-16c. for Sept.; 20¾c. for Oct.

Dried Fruits.—Apples are firm with a light local trade. There would be more speculation but the last

buyers in this way will not release stock. Peaches are dull; unpeeled lower. Small fruits steady.

Apples—Old State, qrs., 7@8c.. Western, new, 10@10c¼.; Southern, new, qrs., 8@9c.; do. fine, sliced, —@—c.; new State qrs., 11@11½c.; do. sliced, fine, 13@13½c.; Peaches, peeled, new N. C., 11c.@13½c.; do. Geo., 15@16½c.; peeled E. Sh. Va., 15@16½c.; new unpeeled halves, 7½.; do. quarters, 5½@6c. Plums, 25@27c. Cherries, new, ₩ lb., 30@32c. Blackberries, 12½@13c. Raspberries 30@32c.

Eggs.—The arrivals are very large at the close and prices have declined, closing weak. Sales at 20@20½c. for Western, 21c. for State, New Jersey and Long Island, and 18@19½c. for Southern.

Flour.—Medium and good grades of State and Western are wanted at better prices. The low grades are coming in more freely, and prices are rather weak. The quotations are at $6.25@6.75 for superfine State; $6.85@7.10 for common extra do.; $7.05@7.15 for good to choice do.; $7.30@7.80 for fancy do.; $6.25@6.75 for superfine Michigan, Indiana, Ohio, Iowa, &c.; $6.80@7.00 for extra do.; $7.15@8.00 for choice extra do., including shipping brands of round hoop Ohio at $7.00@7.10, and trade brands of do. at $7.15@8.75; good to choice white wheat extras at $8.10@9.10; Minnesota, fair to very choice extra, at $7.00@9.00; St. Louis at $7.50@8.25 for common to fair extra, and $8.30@10.50 for good to choice. Southern at $7.80@8.75 for extras and $7.80@11.50 for good to choice. Rye at $4.10@5.

Fresh Fruits.—Apples are in fair demand but the trade shows only moderately upon the stock of Russets. Charleston strawberries are arriving regularly. The season is backward there as here; last year we had a good offering of berries the last week in March. Cranberries firm. Low grade peanuts lower; choice Wilmington $2.40.

Apples, good, barrels, $4@4.50; do. selections, $5@5.50; do. poor, $2.50@3; cranberries, fine, bbl., $17.00; do. crates, fine, $5.50; do. do. common, $3@4; peanuts, Wilmington, bush., $2@3.25; Virginia, new, $1.80@2.10; do. common, $1.25@1.50; hickory nuts, $1.75@2; Pecan nuts, ₩ lb., 8@9c.

Grain.—Prices of wheat have advanced one to two cents, with light arrivals and more inquiry; a feature of the market being considerable call from the millers of the South. No. 2 spring, in store, $1.50@1.52; No. 1 do., $1.57@1.57; winter red Western, $1.70@1.76; amber Western, $1.78@1.85. Rye is quiet at about 87½c. for Western. Oats are steadily held, with a fair home trade; Western, 50½@51½c.; Ohio, 51½@53½c. Barley is quiet at 72@74c. for two-rowed State. Corn is in fair demand, both for export and from the home trade, with prices in the seller's favor; sales at 71@72c. for Western mixed afloat; 72c. for Western yellow; 75c. for white Southern.

Hay and Straw.—The arrivals are not more than sufficient to meet wants of the trade, and prices are firm. Sales at $1.35 for shipping; $1.40@1.75 for retail qualities; 50@60c. for salt; 75@85c. for clover. Straw at $1.15 for long rye; 85@90c. for short rye; 75@85c. for oat; 30@70c. for wheat.

Hops.—Full rates are insisted upon for desirable stock. The demand is entirely from brewers. Sales at 60@65c. for prime, and common stock as low as 25c. Yearlings, 10@50c.; English, 60@65c.; Bavarians, 65@75c.

Maple Sugar.—Vermont, 22c.; State, 20c.; sirup, $1.25 per gal. in wood and $1.50@1.60 in tin.

Peas are offered at $1.28@1.30 for Canada, and $1.95@2 for green.

Poultry and Game.—The call is mainly for live poultry at full prices. We quote:

Live, State and N. J., 18@20c.; do. Western, 17@18c.; roosters, 11@12c.; ducks, per pair, $1@1.12. Geese—Western, $1.75@2; do. Canada, $1.75@2, do. Jersey, $2.75@3.25; turkeys, 20@22c.

GAME.—Canvas backs $1@—, red head 40@50c., mallard 30@40c., widgeon and teal 20@30c.; black duck, 75c.; English snipe per doz., $2@2.25; wild geese each $1.; wild pigeons, per doz., $1.25@1.37, picked.

Provisions.—For mess pork the market is quiet with prices firm. Mess, $13.30 for spot, $13.35 for April, $13.37 for May, $13.90 for June. Dressed hogs are weak at 6@6½c. Middles are active and strong, with a light stock comparatively of desirable meat; long clear, 7¼c.; short rib, 7¾c.; short clear, 7½c.; bellies, 7¾@7¾c. Cut meats are held firmly at 8¾@9¾c. for hams in pickle; 8¾@9 for do. in salt; 4¾@5¼c. for shoulders. Smoked meats are quiet at 11@13c. for hams; 6¾@7c. for shoulders, and 7¾@8¾c. for clear rib. Lard is quiet and closed rather in the buyer's favor. Western steam, 9¾c. Kettle, 9¾c. For forward delivery, sales at 9¾c. for April, 9¾c. for May, 9¾c. for July. Stearine, 9¾@10c. Beef is in small demand for dealers' use, at $7.50@9.50 for plain Western mess, $10@12 for extra mess. Beef hams are scarce at $23@27. Tierce beef at $15@17 for prime mess, and $19@21 for India mess. Tallow is held at full prices; prime, 9¼c.

Seed.—For clover, the market is quiet, the sales in small lots to the home trade. We quote at 9¾@10c. for Ohio and prime Indiana. Timothy is in moderate request at $2.75@3.37½

Tobacco.—Large lines of seedleaf have been sold, and the market is in the seller's favor. Kentucky leaf attracts more attention, at steady prices. The quotations for Kentucky are 8@9¾c. for lugs, 9@10¾c. for common to medium leaf, and fine at 11¾@14c. New crop seedleaf at 8¾@10c. for State running lots, 12¾@14c. for medium Penn., 17@21½c. for fine do., 10@11½c. for Ohio running lots, 8¾@9c. for Wisconsin and Western.

Vegetables.—The market is pleasantly variegated with some fresh Southern garden stuff, and Bermuda is sending her produce quite regularly. Old potatoes must be choice to bring extreme prices. Bermuda onions sold at $6 per crate.

Potatoes, Early Rose, bbl., for seed, $2.25@3.00; P. Blows, $2.25@2.50; Prince Albert, $1.75@2; Moultor and Goodrich, $1.25@1.50; Jackson, $1.50@1.75; Dyright, $1.50@2; sweet Del., $3.75@4.00. Onions, red mid yellow, $2.25@2.50; Conn., 100 strings, $3. Garlic, per 100 bunches, $22@24. Turnips, Russia, bbl., $2. Cabbages, per 100, $5@8. Beets per 100, $1.25. Carrots per 100, $1.50.

Wool.—Business is very light. Foreign stock is held higher. The reports from the London sale are of an encouraging nature. Sales are limited to small lots, to meet wants of manufacturers. Latest sales are of fine fleeces at 65@70c.; Cape at 47½c.; Mestiza, 38c.

Whisky—is quiet, and steadily held at 88½c. for Western.

COUNTRY CHEESE MARKETS.

Little Falls, N. Y., April 20, 1872.

About 200 farm dairy cheese were delivered at the Little Falls market for the week ending April 20, and prices ranged from 11½ to 12¾c.

A few factories were also in market, and sold at 12¾c. to 13¼c., the latter figure having been paid for the Canonville.

A good delivery of butter this week which was sold at 33c., and extra fancy, in a few instances, bringing a little higher price.

There is considerable snow on the Herkimer hills, and the weather is full of cold, raw, March winds.—X. A. W.

LIVE STOCK MARKETS.

NEW YORK, April 18, 1872.

ALTHOUGH stock has been coming forward more freely, there is not enough to turn the strong tide of the previous week. It is checked in some of the departments. The most noticeable feature is the very high price of mutton, and the first arrivals of sheared sheep. There is also a cry raised against selling bruised and diseased beef, which rather injures the trade.

Beeves.—Receipts for the past week, 8,247, against 6,611 for the previous week. But for the light supply then we should expect a hard market now; instead of which, prices have advanced ½@¾c, ₩ lb., but close less firm than they were yesterday. All have been sold, however. There were 4,259 head offered last Monday—146 car loads at Communipaw, 26 at 100th St., and 22 at Weehawken. The market was a very quick one, and stock went off in a few hours, at high prices. This stimulated drovers, and they ordered stock forward with all possible dispatch, so that 3,457 head have been received since then—147 car loads to-day. The opening prices were very good this morning, but toned down somewhat before the close. Still prices ruled high, the poorest Texans selling at 11@11½c.; fat Cherokees and thin fit., at 12@12½c.; good cattle, 13c.; and extras at 13½@13¾c., a few reaching 14c. Seven cars Cherokees, 6½ cwt., went at 11½@12c.; 13 cars 11., 6¾ cwt., 12@13½c.; 4 cars fat Texans, 6½ cwt. 12¾c.—57 lbs. per cwt.; 4 cars Ohio still-fed cattle, 7½ cwt., $91 each; a car good 11., 8¾ cwt., $115.

The following are the closing prices for the week in comparison with what cattle brought one week ago, for net weight of beef:

	This week. Cents.	Last week. Cents.
Choice breves, ₩ lb.	13¼ @ 13¾	13 @ 13¼
Good to prime	12¾ @ 13¾	12¾ @ 13
Ordinary to medium	12 @ 12¾	11¾ @ 12
Lowest grade	11 @ 11¾	10 @ 11
Average sales	12¾ @ —	11¾ @ —

Milch Cows.—Good cows, and especially those of large size, sell rather better, but ordinary are not improved in the least. The lowest prices yet reported were obtained for a car of the poorest cows we have seen. What the owner was thinking of when he sent cows here that would only sell for $15 each, we cannot imagine. Other poor cows sold at $25@30; 20 head just medium, averaging $57 per head, and a few good going at $65@75. When selected, the very best sell at $90 each. There were 81 fresh cows last week.

Veal Calves.—Receipts, 2,887 against 2,181 the previous week. We shall have a much larger number to report for the next week. There is no change from the 5@8c. ₩ lb. for live, and 8@11c. for dressed, reported in our last. The market is glutted to-day, and stock cannot be sold. Good weather has rather favored the trade in dressed, but the risks are great. Even now, with rain threatening, holders are ready to accept almost any offers for dressed calves. A car of the best, 140 lbs., Jersey calves sold at 8c., weighed alive, with 26 of 117 lbs., at 5¾c., and a lot of 110 lbs. at 5½c.

Sheep and Lambs.—Receipts 12,374 against 11,024 for the previous week. It is seldom that we have been called upon to report such a market as that of to-day, with only about 1,000 head on sale, and the prices here given are no guide for the future. Butchers had to have a few sheep, and holders took advantage of their necessities, charging 11¾c. for fat, fine wool, O., sheep of 45 lbs. Four stock sold at 9@9¾c. Sheared sheep begin to arrive, sales were made at 7¾c. yesterday, while a car 204 lb., fat O., sold at 8¾c. Lambs are still very scarce, and are worth 18@20c. per lb. just now. They generally sell at $8@9 each, a few of the best at $9.50, and some very thin, at $6@7 per head. A lot of 319 very fine, 95 lb. O. Wool sheep sold at 11¾c.; a car 97 lb. Ill., 10c., with 200 O. sheared 101 lbs., at 8¾c.

Hogs.—Receipts 23,359 against 21,156 for the previous week. They advanced ¼c. after last report, live reaching 5¾c., and dressed pigs touching 7½. Now, with free arrivals—5,121 to-day—they are easier again. Live are quoted at 5c., and dressed at 5¾@6¾c., those of 160 and 200 lbs. selling at 6¾@6¾c., the lightest bring the most money. The weather is unfavorable.

SPECIAL NOTICES.

FOR MOTH PATCHES, FRECKLES

and TAN, use PERRY'S MOTH and FRECKLE LOTION. The well known and reliable remedy for Brown Discoloration of the Face. Prepared by Dr. B.C. PERRY, Dermatologist, 49 Bond street, New York. Sold by *Druggists.*

RUPTURE CAN BE CURED

If you do not find it at the news stands, send to HURD & HOUGHTON, New York, 15 cents for the May number of Dr. Hall's JOURNAL OF HEALTH, the popular and sensible magazine, with timely articles on Biliousness, Turkish Baths, Cancer Cure, Marriage Lengthens Life, etc.

A BOOK FOR EVERY FARMER!

PRACTICAL

DAIRY HUSBANDRY:

By X. A. WILLARD, A. M.,

Editor Dairy Husbandry Department of Moore's Rural New-Yorker, and Lecturer in Cornell University, Maine Agricultural College, Etc., Etc.

Fully and Handsomely Illustrated.

546 LARGE OCTAVO PAGES.

Published by D. D. T. MOORE, Rural New-Yorker Office, 5 Beekman St., New York. Price $3.

THIS work comprises a complete Treatise on Milk and its Products, including Dairy Farms and Farming; Grasses and Cattle Foods; Dairy Stock, Breeding, Selection and Management; Milk, Composition, Character, etc.; Early History of Cheese and Butter Factories, and Mode of Organization; European and American Dairy Systems Compared; Minute Directions for the Manufacture and Care of Butter and Cheese, both at Farm Dairies and Factories, embracing the Latest Improvements, etc.

In this work Mr. WILLARD has given the results of many years' observation and practice in the Best Dairy Regions of New York and other States, and the results of extensive personal observation in Europe, whither he was sent by special arrangement of the American Dairymen's Association, in the year 1866.

HOW THE WORK IS SOLD.

PRACTICAL DAIRY HUSBANDRY is sold by Subscription, and liberal inducements are offered for active and competent Agents to canvass by Counties throughout the United States and Canada—especially in all Dairy regions. To any person residing where there is no Agent, or who cannot wait for one, the Publisher will send a copy of the work, post-paid, on receipt of the price, $3—(or for $5 the book and RURAL NEW-YORKER one year.) For Agencies in Ohio, and States to the West and South of Ohio, address Col. S. D. HARRIS, Cleveland, Ohio, who is the General Western Agent. For all other States, Canada, &c., address the Publisher at this Office.

SAFE AND PROFITABLE!

THE

CANADA SOUTHERN

First Mortgage Sinking Fund

Thirty Years

7 Per Ct. Gold Bonds

AT

90 and Accrued Interest.

The Road runs from Buffalo to the Detroit River, and is the Eastern link in the new AIR LINE from BUFFALO to CHICAGO, and has been under construction for about two years past by railroad men who have seen the necessity for a STEEL RAIL, LOW GRADE SHORT ROUTE between the great railroad systems which diverge from Chicago, Toledo and Buffalo.

Among the builders of the road, by whose cash subscriptions 200 miles (out of 200) have already been graded, bridged and made ready for the superstructure, a large part of the steel rails bought, all of the materials for the stations and a part of the equipment purchased, are:

MILTON COURTRIGHT, JOHN F. TRACY, WM. L. SCOTT, DAVID DOWS, HENRY FARNHAM, R. A. FORSYTH, HENRY H. PORTER, JOHN M. BURKE, M. L. SYKES, JR., B. F. ALLEN, all Directors either in the Chicago and Northwest or in the Chicago, Rock Island and Pacific; GEO. OPDYKE, of the Midland Road; JOHN E. ALLEN, SIDNEY DILLON, DANIEL DREW, J. S. CASEMENT, J. & J. CASEY, O. S. CHAPMAN, JOHN ROSS, DAVID STEWART and F. H. WINSTON.

THE ROAD will be

33 MILES SHORTER THAN ANY OTHER ROAD,

either BUILT or in contemplation, between Buffalo and Chicago, and will also shorten the distance between Toledo and Buffalo 23 miles.

THE MAXIMUM GRADE on the entire line does not exceed FIFTEEN FEET to the mile—and Ninety-six per cent. of the Road IS STRAIGHT.

The ROAD WILL BE COMPLETED and in running order on or before December 31 of this year.

The principal and interest of the bonds are payable either in New York, London or Frankfort.

We confidently recommend the bonds to all classes of investors.

LEONARD, SHELDON & FOSTER,

No. 10 WALL ST., NEW YORK.

THE MOST POPULAR of ALL! is HAPPY HOURS, an Illustrated Monthly Magazine for all classes. Contains something of interest to everybody. Each number contains 16 large pages, filled with Choice Tales, Sketches, Poetry, Wit and Humor, Articles on Natural History and Popular Science, Tricks in Magic, Chemical Experiments, Etc., Etc. WEBSTER'S PATENT

BUTTON-HOLE WORKER.

Patented June 27, 1871.

One of the most important inventions of the age! The most perfect Button-Hole Worker ever invented!

So simple that a child can work a more perfect button-hole with it than the most experienced hand can work without it. Every stitch is taken with the most perfect mechanical accuracy. Is used entirely independent of the sewing machine, and will last a life-time. Does away with pricking the fingers, straining the eyes, and with imperfect and irregular worked button-holes. They give universal satisfaction. Ladies who use them say that they are worth their weight in gold. Over 11,000 sold during the first week of their introduction. The most liberal inducements offered to the trade. Dry Goods and Fancy Goods Merchants find it an excellent selling article. Local and travelling agents wanted everywhere.

Samples and terms, with full directions for use, sent prepaid on receipt of 50 cents. Orders by mail receive prompt attention. Address

GEO. DAVIS, Successor to
A. W. Webster & Co., 599 Broadway, N. Y.

CARHART'S
PATENT TWO-HORSE
Pulverizing Cultivator

Was Awarded the First Premium at State and County Fairs in 1870 and '71.

It is superior to the best Wheel Cultivator.
The price is only Twenty Dollars.
The draft is reduced nearly one-half.
The depth you wish it to run is regulated without the use of wheels.
It can be drawn close to a tree or plant without injuring it.
It is not disturbed by short undulations of earth, like the Wheel Cultivator, but pulverizes, levels and fits the ground for the Mowing Machine better than any Cultivator in use, and can be used for more purposes than any other implement on the farm.

ANDERSON'S AGRICULTURAL STEAMER, for *Steaming* FEED FOR STOCK Heating Cheese Vats; Tannery Vats, Conservatories, &c. This Steamer is made of Wrought Iron, thoroughly riveted and finished in good style. It has a reliable Automatic or Self-regulating Water Feeder, Safety Valve, Vacuum Valve, Water Gauge Cocks, Whistle, &c., all complete. The boiler is peculiar in construction, being ONE COMPLETE DOUBLE BOILER WITHIN ANOTHER, the two communicating one with the other. It has an extraordinary amount of fire space for the size of the boiler; No. 3, a medium size, having 3,833 square inches of fire surface; consequently, it requires but little fuel to run it. Either wood or coal may be used for fuel.

It will cook more feed, or heat more water, in a given time, than any other Steamer of the same size or cost. It is more durable than any other, for the reason that the fire-box is made of wrought iron, and is *entirely surrounded with water.* We are also manufacturing:

Anderson's Low Pressure Steam Heater, for Heating *Private Dwellings, Stores, Churches, Conservatories, &c.* We manufacture for all the territory east of Illinois.

"FAMILY FAVORITE!"
THE
WEED. WEED

The most perfect, reliable and generally useful machine in existence. For the family of the farmer or mechanic, where the work required of a sewing machine ranges from the heaviest garments of men's wear to the most delicate and ornamental fabrics for ladies and children, it has proved itself thoroughly efficient and entirely satisfactory. Of unequaled simplicity and compactness of construction, capable of being learned and operated with one-fourth the usual expenditure of time and labor, with a capacity for quantity, quality and variety of execution beyond its competitors, and a reputation for durability and reliability known and appreciated by thousands, it is offered to the people for the most critical inspection and comparison, with confidence that its obvious merits cannot fail to convince the careful examiner of its superiority. Manufactured by the

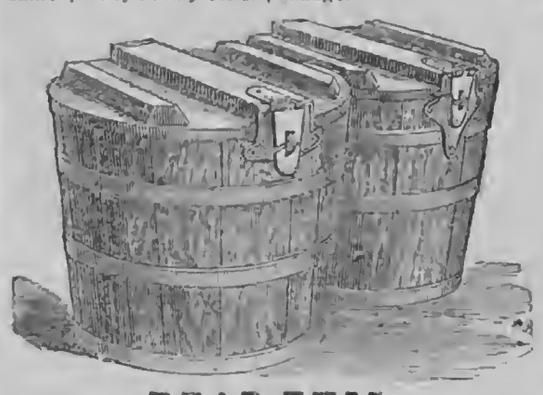
FARMERS, DAIRYMEN AND BUTTER BUYERS!
PACK YOUR BUTTER
IN
WESTCOTT'S
RETURN BUTTER PAIL

Approved and recommended by the leading authorities of our country on dairying, and acknowledged by all butter dealers to be the very best package in use.
Butter packed in this Pail brings 5 to 10 cents more a pound in the New York City market than the same quality in any other package.



READ THIS:

NEW YORK, Nov. 15, 1871.

We, the undersigned, Produce Commission Merchants of the City of New York, consider Westcott's Return Butter Pail, manufactured by Silsby Bros., Belmont, N. Y., *the best package in the market.* It is our experience that Butter packed in this Pail *sells more readily and commands a higher price* in this market than in any other package, and we heartily recommends its general use by the dealers, dairymen and butter buyers who ship to this city.

Respectfully,

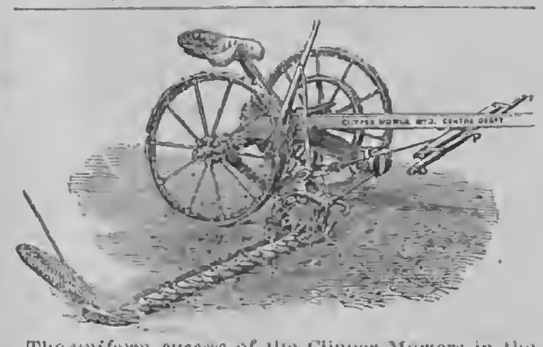
(Signed by 45 leading Commission Merchants.)

The Westcott Return Butter Pail meets my approval as a good butter package. It is one which I always feel safe in recommending.

N. A. WILLARD,
Dairy Editor Moore's Rural New-Yorker.

Dairymen, send for a Circular! Dealers, send for a Price List! We are the sole manufacturers of **Westcott's Return Butter Pail,** and also manufacture very extensively Butter Firkins, Half-Firkin Tubs, 25-pound Butter Pails, Well Buckets, &c., &c.

SILSBY BROS.,
Belmont, Allegany Co., N. Y.
Principal Warehouse, Binghamton, N. Y.



The *uniform success* of the Clipper Mowers in the field, the testimony of every farmer who has used them, that they are the *lightest in draft,* the *most durable* and the *most economical* machine for the farmer to buy, fully substantiates what the proprietors have always claimed—that the Clipper is the **Best Mower in the World.**

To the No. 4 size is attached the Dropper (cutting 5½ feet, with *separate Finger-Bar* for reaping), constructed with great improvements—in fact perfected; and in point of efficiency, strength, lightness of draft and symmetry of proportions, it is, as a Reaper, also unequaled. Farmers! see it before you buy. Pass your own judgment upon it. Look at its many improvements possessed by no other machine. Remember, it is fully warranted. Send for Pamphlet.

THOMAS' SMOOTHING HARROW.
81 SLANTING TEETH OF TEMPERED STEEL. $25

LATE SPRING! CROWDED WORK!

This year a large amount of work must be done in a very short time. With our wide Harrow more than twice as much ground can daily be prepared for seed as without it, and all crops *cheaply cultivated* through the season in a *superior* manner.

ALLEN HIGLEY, Windsor, Ohio, says:—"I saved one-half month's labor in two days, getting a much better crop without using a hoe."

ANDREW RAESSLER, Shelbyville, Ill., says: I can harrow twice as much ground with it as with other Harrows."

EDWIN THORNE, Millbrook, N.Y., says:—"We can dispense with cultivating once each way, saving a vast amount of labor."

E. F. SMITH, Morning Sun, Iowa, says:—"It was much easier on the team, though one-third wider, doing more work."

L. R. AUSTIN, Coldwater, Mich., says:—"I have a 40 and a 30-tooth square drag, but with *your* Harrow can do twice the work in half the time."

IRA BEARD, Caloka, Mo., says:—"I think it equal to three common Harrows."

F. PETITT, Salem, N. J.:—"My brother says his does the work of three old Harrows; mine I think saved me $5 in one and a-half hour's work."

BOYS RIDE AND DO ALL THE HARROWING.

ARE YOU GOING TO PAINT?

MORE THAN

100,000 HOUSES

HAVE BEEN PAINTED WITH THE

AVERILL CHEMICAL PAINT

IT IS THE BEST

In the world for exterior work upon Cottages, Villas or Buildings of any kind, whether built of brick, wood or iron. It is a liquid, *ready for use*, and requires no oil thinning or drier. Purest white, and any desired shade can be had in packages from one gallon upwards.

EXTRACTS FROM OUR LETTERS:

CHAS. HALLETT, Esq., of Riverhead, L. I.:—"Years ago I had your paint applied by the side of the best white lead. The lead requires repainting, but the Averill Chemical is yet looking well."

Gen. DAVID H. STROTHERS:—"Your Paint fulfils your representations."

Rev. S. C. ALEXANDER:—"Our Institute has saved $150 by using your Paint. It is splendid."

PETER HENDERSON, Esq.:—"I find the Chemical Paint retains the colors and gloss far superior to that done by the lead and oil at the same time."

Gen. JAS. NEGLEY, M. C.:—"I find it the cheapest and best."

SETH THOMAS, Esq.:—"It gives better satisfaction than any paint I ever used."

Sample card of beautiful colors, and recommendations from owners of the finest residences in the country, furnished free by the AVERILL CHEMICAL PAINT CO., 32 Burling Slip, New York, or 118 Superior St., Cleveland, Ohio.

P. S.—The superiority of these Paints has already brought numerous *worthless* imitations in the market. We caution the public against using them.

The Season for Painting

HAS COME AGAIN.

If you propose to paint, first send stamp for a book called "Plain Talk with Practical Painters, with Samples of Colors." The book is worth a dollar, and costs nothing. JOHN W. MASURY, 111 Fulton St., New York. ☞ Specialty in Pure Paints and Colors. Masury's Ready-Made Colors are the only ones which stand the test of time. Do not be deceived.

We will send a handsome Prospectus of our *New Illustrated Family Bible*, containing over 150 fine Scripture Illustrations, to any Book Agent, free of charge. Address NATIONAL PUB. CO., Phila., Pa.

WANTED.

50 RELIABLE, ENERGETIC MEN,

To introduce our Publications. Our books are first-class, by popular Authors, and are selling *very rapidly*. With the right men *liberal arrangements* will be made, either on *salary or commission*. For full particulars, address VIRTUE & YORSTON, 12 Dey St., New York.

GIVEN AWAY TO ANY BOOK AGENT,

A $5 GREENBACK

AND A SPECIMEN OF THE

GREAT INDUSTRIES

OF THE UNITED STATES.

1300 PAGES AND 500 ENGRAVINGS.

PRINTED IN ENGLISH AND GERMAN.

Written by 20 Eminent Authors, including Horace Greeley and John B. Gough.

We want Agents in every town to solicit orders for this work, on liberal terms. It sells to all classes, and no library should be without it. It is a complete history of all branches of industry, processes of manufactures, etc. No like work ever before published. One agent sold 28 in eight days, another 125 in one week, another 263 in two weeks. An early application will secure a choice in territory. Full particulars and terms will be sent free, with a specimen of this Great Work, and a $5 Greenback.

J. B. BURR & HYDE, Hartford, Conn., Chicago, Ill., or Cincinnati, Ohio.

JOHN RALSTON & CO.,

General Selling Agents, 170 Front St., N. Y.

Wholesale and Retail Dealers in Pure Ground Bones and Dust, Guano, Plaster, &c., of high grade only.

TO FARMERS.—DOUBLE REFINED POUDRETTE of the "LODI MANUFACTURING CO," for sale in lots to suit customers. This article is sold for *half the price* of other fertilizers, and is cheaper for tobacco, cotton, corn and vegetables than any other in market. It is made entirely from the night soil, offal, &c., of New York city. Price, delivered on board in New York city, Twenty-five Dollars per ton. I ask attention to the following Testimonials:

ONEIDA Co., N. Y., Oct. 12th, 1871. —*Dear Sir:* For two years past I have used the Double Refined Poudrette for corn, potatoes and garden Vegetables, and I have realized on the first crop 100 per cent for all the money invested. Yours truly, T. B. ALLANSON.

WINDHAM CO., Vt., Dec. 4th, 1871. *Dear Sir:* I think the Lodi Company's Double Refined Poudrette the best manure I can find for tobacco, corn and potatoes. I shall order a number of tons another season. Yours respectfully. E. S. HOUTON.

JESSE VAUGDN of Lancaster, N. Y., under date of September 20th, says:—I applied the Double Refined Poudrette, last Spring, on corn and potatoes, and I believe I have the best corn in town, and my potatoes are an excellent crop. I have used your Double Refined Poudrette several times before, and always with good results, but this year the effect has been more perceptible than ever before.

A pamphlet giving full directions, &c., sent on application to JAMES T. FOSTER, 63 Cortlandt St., N. Y.

INVESTING MONEY.

BANKING HOUSE OF JAY COOKE & CO.

To all seeking investment combining large profit with abundant security, we offer and recommend the First Mortgage 7-30 Gold Bonds of the Northern Pacific Railroad Company.

The high character of these Bonds is permanently established, and holders are fully protected, not only by the ample security afforded in the mortgage, but by a most careful and economical administration of the affairs of the Company.

Capitalists, and all who require a pre-eminently safe security, should investigate the claims of the Northern Pacific First Mortgage Bonds. They have thirty years to run, and bear interest at the rate of 7 3-10 per cent. in gold.

Many holders of 5-20s are exchanging them for Northern Pacifics, and thereby INCREASING THEIR ANNUAL INCOME NEARLY ONE-THIRD.

The highest current rate will be paid for all marketable securities received in exchange.

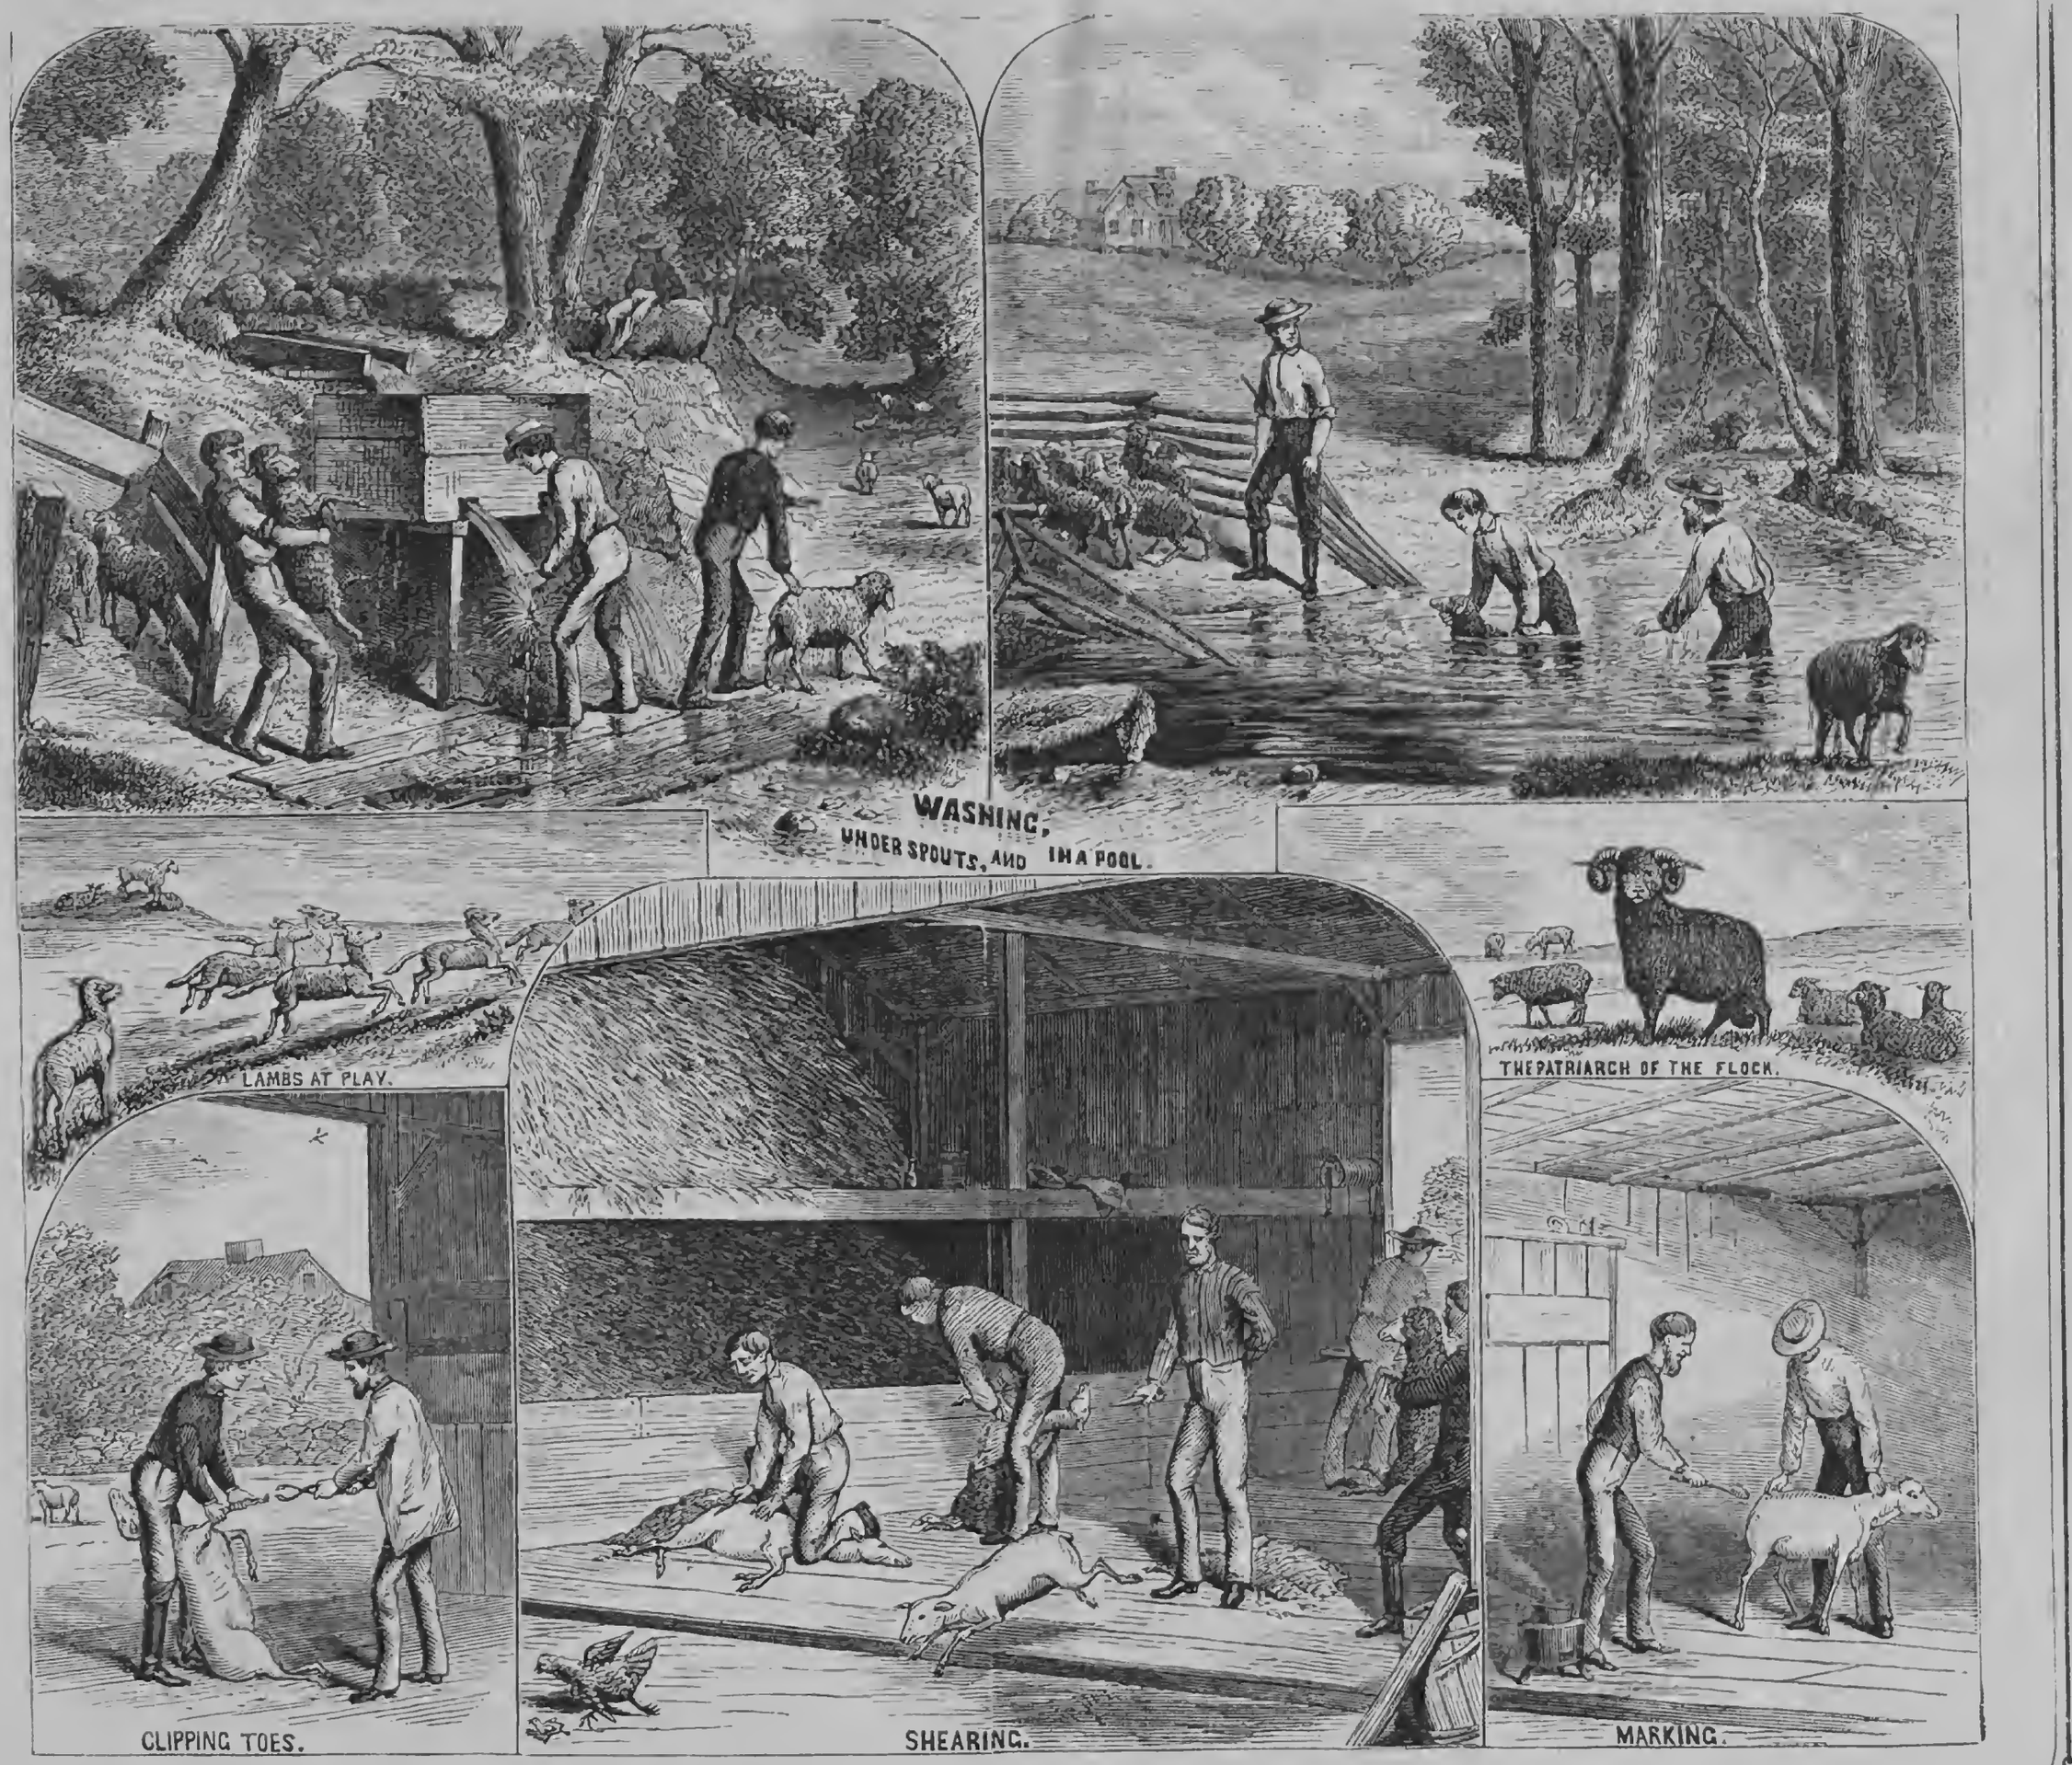
Sheep Husbandry.

SHEEP WASHING AND SHEARING.

ONE of our artists has sent us the accompanying sketch, illustrating washing, shearing, clipping, and branding sheep. It is simply suggestive and illustrative of work that is soon to be done among shepherds. So far as washing is concerned, the writer (who is not Mr. RANDALL) would not practice it, nor recommend it. Not because we think it harmful to sheep, when properly done, in water of the right temperature; but we see no advantage in it whatever. Much that is called and sold as washed wool, has never been properly cleansed; and all, whether "washed" on the sheep's back or not, must be scoured by the manufacturer before it is used. Some of the best flock-masters in the country have abandoned washing, and shear earlier than they otherwise would, believing that the increased growth of wool is of more utility to the sheep in the fall and winter than the delay in shearing in spring compensates. If early shearing is practiced, washing is impracticable. Dr. RANDALL has discussed this subject exhaustively in his Practical Shepherd. Two modes of washing are herewith illustrated. Other modes are practiced.

Shearing must be done. Our observation and experience have taught us there are comparatively few good shearers. Dr. RANDALL says the wool should be clipped off evenly and smoothly, without breaking the fleece and without cutting the wool twice in two, or cutting the skin. Difficult as this is in the case of Merinos, with their corrugated surfaces, it should be insisted upon. The udders and teats of ewes, especially, should not be cut. Dr. R. says:—"The shearer who holds his sheep in the easiest manner for itself, who keeps it confined for the least period in one, and especially in an uncomfortable, position, and who makes use of least violence in case it attempts to escape, accomplishes more work, performs it better, and incurs far less labor and fatigue." He adds:—"Wool should be cut off reasonably close, but not close enough to have the skin show naked and red—so as to expose it to sunburn, or to have the sheep suffer severely from a moderate degree of cold."

Our artist presents a picture of the process of clipping—a process deemed essential among good flock-masters, especially where there is any danger of hoof-rot. We advise our readers to see the details of this process and the reasons therefor, in the Practical Shepherd.



SEASONABLE SCENES ON A SHEEP FARM.

The Herdsman.

POLLED CATTLE.

Please allow me to make an explanation in regard to your article in the Rural New-Yorker, April 20th, on Polled Cattle, as the Improved Polled Norfolk Reds there are unfortunately mixed up in the description with the old horned and other sorts of that county of last century. I saw some of these Polled cattle on my first visit to England, in 1841, and found them even then of high value.

As now improved, they fatten as kindly, and mature about as early, as short horns; and those families which are bred for the dairy are as good milkers as the best Ayrshires. Added to this, they are very hardy, and the most docile of all British cattle. These are great merits, and it is no wonder that they are not only spreading rapidly now in England, but that they are also exporting them in considerable numbers into foreign countries. Among all other British races which we have latterly been importing into the United States, it is a matter of surprise that our countrymen have entirely overlooked the highly meritorious Norfolk Polled. But this is about to be remedied by a company of gentlemen recently formed here for the express purpose of importing some of them.

A cross of the Improved Norfolk bull would be the very best possible to make on the wild, long-horned, Texas cows. The offspring of such a cross would generally come without horns in the second generation, would fatten much more kindly than the pure Texan, would mature at least two years earlier, and their beef would be worth from 25 to 50 per cent. more per pound in the Eastern markets. Then, it would be so much easier to herd and handle these docile animals on the ranch than the wild, semi-savage cattle of the great plains; and, in the absence of horns, scarce ever an accident or injury would occur among them; and the cost of transportation to market would be considerably lessened. Thus, the gain of breeding Polled over Horned cattle would be millions of dollars annually to the ranchmen of the West, if they could be induced generally to adopt them. What is the use of horns among cattle, except to gore and rip each other up, and make them dangerous to everything around?

Since the introduction of Mr. Fulcher's article in the London Field, with illustrations of Polled Norfolk, copied into the Rural, page 257, he has written a friend in this country that these portraits were taken of specimens of the ragged, unimproved old breed, and even of these they are caricatures in some respects. Who ever saw cattle with such disproportionately large legs, and feet which would outmeasure even those of an elephant?

The Improved Norfolk Reds must not be confounded with those of a neighboring county, usually called Suffolks, as the latter are greatly inferior to the former in high breeding, and are also of different colors, varying, as in the United States, from a dull yellow to a dun, brown, brindle, and also a mingling of these colors with more or less white. These animals, although scraggy in appearance, are hardy, and the cows usually good milkers. Many enterprising breeders in Suffolk and other counties bordering on Norfolk, are getting rid of the old sort of ragged beasts above, and substituting the Improved Reds.

In addition to the encomiums published in the Rural, of the 20th inst., allow me to add those of my brother, the late Mr. Richard L. Allen, when traveling in England, in 1869. He was a great admirer of fine animals of all kinds, and an excellent judge of their merits. In writing home about the great Show of the Royal Agricultural Society of that year, he says:—"I also noticed the Norfolk Reds. If they had horns, there would have been nothing to distinguish them from Devons. I have never seen such beautiful animals. If I were breeding choice stock in America, I would build up a herd of Polled Norfolk at once, if they could be found here in sufficient numbers approximating in merit to those I saw."

To this we will add, that in consequence of the Improved Norfolks so closely resembling the fine, high-bred Devons, they are now often called "Polled Devons." Whether they have a stolen cross of this race in them I cannot say. It is generally believed, however, that they have not, but that the great improvement in them of late years, comes from a careful selection from the best of the old native breed.

New York, April 22d, 1872. A. B. Allen.

LICE ON CATTLE.

In the earlier days of my farming I was frequently troubled with lice on my stock, and tried most of the remedies recommended. I found oil (lamp the best) spread over the surface, of a warm day, by carding, would destroy them; but this is a tedious job in a dairy. Some farmers expect, as a natural consequence, to have lice on their stock, especially their calves, they being kept in the same close stables. Where this is the case, calves get infected in the spring, soon after being dropped, and the lice are there when cold weather approaches, and will prosper, unless defeated by the remedy given below, which is the most effectual I ever found:—I buy sulphur and saltpeter by the pound, pulverize the saltpeter in a mortar, and during the mild weather in winter give to my stock in proportions of one tablespoonful of sulphur to one teaspoonful of saltpeter, for a full grown animal; about the same for two calves, given with dry feed or meal. The above given to calves in summer, will prevent the appearance of lice in winter. I give the above to my stock in winter as often as once in two or three weeks, if the weather is warm, with good results. Wm. N. Garrott.

Broome Co., N. Y.

ABORTION REMEDY.

My experience fully accords with "Farmer," Mystic, Conn. Strains, slips, and stocky boots have destroyed many a calf, and yet there are times when there appears to be an epidemic among the cows. I remember when I was a very little boy, one of our neighbors came in and said, speaking of another near neighbor, that several of his cows had lost their calves. When questioned as to how he had fared in that particular, he replied that one of his best heifers had looked as if she was about to do so—that, many years before, he had been told that if such a case should ever come under his observation, he should give the animal a herring dipped in tar. He had done so, expecting to have considerable difficulty in getting her to take it; but she appeared to like it, and took it without any trouble. It is a very simple remedy, if remedy it is, and at least possesses the negative advantage of being perfectly harmless, if it can do no good. These herrings were dried fish, salted till they seemed to be all salt. I presume with salt and tar, the fish might possibly be dispensed with.—G.

NOTES FOR HERDSMEN.

Gad-Fly.—One correspondent writes: "Why are young cattle troubled more with grubs than old? What is the cause and cure?" Another says:—"Is there any cure or preventive for the grub that appears in cattle's backs in the spring. What causes it?" The cause of this grub is that the species of Gad-Fly known as *De bovis*, attacks and pierces the skin of the animal and deposits its egg there, which becomes the grub or larva. It is true that young and healthy animals seem to be preferred for such deposits; and when the fly makes them it almost sets the animal wild. An English writer recommends the application of a mixture of two ounces of tar and four ounces of hog's lard, melted together and applied to the bitten parts, as an immediate relief to the animal after it is bitten. One means of preventing the deposit of eggs and the development of the larvæ is to squeeze these grubs out of the animals this spring, and destroy them—else they will escape themselves and become transformed into flies to again sting your animals.

How to Pick Out a Yoke of Steer Calves.—J. R. asks:—"Will you or some of your readers tell me how to pick out a yoke of steer calves, so as to mate them well? What should be their build?" It is not easy to select steer calves that will prove well matched when grown. We should hesitate to attempt it for ourselves. We have had some experience in doing so, but have found that it is not so satisfactory as when animals are two or three years old. However, if one can get calves of about the same weight, general build, size of bone, of similar temperament, and whose parents are similar in size and build, better teams can be made by early breaking, accustoming them to work together.

Oil Meal for Milch Cows.—Will some one who has used it tell me if oil cake is good food for milch cows, and how much to feed at a time with corn meal?—D. M. H.

Feeding Calves.—A correspondent asks if a calf can have all he can eat while growing. We reply, no; but he should be liberally fed—not stuffed. The calf should not be fattened, but kept growing.

The Horseman.

TO CURE A BALKY HORSE.

My way is to hitch him by the side of a gentle horse, then take a stout clothes line or head-cord, tie one end to the end of the wagon tongue, pass it around under his tail, and tie the other end to the hame-ring on the opposite side. When you start him, speak some word or sentence that you are not in the habit of speaking to your horses, so that if he ever balks again, you repeat the same word or sentence, and he will be reminded of the rope persuasion without its application.—Balky, *Bloomingdale, Ill.*

The following mode of curing a balky horse has never been known to fail wherever it has been applied. Procure a finely tempered butcher knife, and bring it to the keenest edge; take your ax in your right hand and your butcher knife in your left. Now let a competent assistant lead the horse to a convenient place. Take your position on the near side of the horse on a direct line with his head and about the length of your helve distant. Now spit in the palm of your right hand, and, seizing your ax by the crook of the helve, deal him an unearthly crack right between the eyes. If the blow has been properly delivered, he is now in a position and condition for further operation. Lay aside the ax, take your knife, and, while the assistant holds up each leg successively, insert the point in the skin near the fetlock and pass it down the inside of each and across the body, cutting clear through the skin. In the same manner pass the knife along the abdomen and chest and upon the lower side of the neck to the lip of the lower jaw. If you are an expert skinner, a few moments will suffice to flay the animal. Now carefully roll up the skin and lay it in a safe place. With your ax and knife divide the carcass into pieces of convenient size, and bury them in the middle of your compost heap. In the fall draw it out upon your meadow, and you will find it a most excellent top-dressing for your land. The hide should be sold to your nearest tanner for the best price you can get.—G. H., *Rome, N. Y.*

NOTES FOR HORSEMEN.

To Remove a Callus.—A correspondent asks:—"What will remove a callus of long standing from a horse which was caused by interfering?" We have just received from T. L., Scipioville, N. Y., the following:—"To remove a lump or callus, swelling, etc., apply, a time or two, butter of antimony, followed immediately by sulphuric acid, having first greased outside of the bunch to prevent the application from extending the sore it makes. A neighbor told me of this recipe,—that he had noticed in the Rural New-Yorker years ago; and had frequently used it to remove bunches, tumors, etc., with entire success. I applied it last summer to a lump of a year and a half standing, on a horse's nose, and it soon broke and passed away."

Lame Mules.—In reply to T. T. S., allow me to say that all diseases of the feet affect the shoulders. Canker, contraction, founder, gravel, prick from a nail, are affections of the feet only. Many say "there is a horse chest-foundered." I will admit that the horse perishes in the chest. This is caused by the horse standing with his feet stretched forward. For instance, if a man were to stand or sit with his arms stretched forward, would he not perish or diminish in his chest? Contraction is not so much a disease, as the result of bad management on the part of the blacksmith in shoeing, etc. It may be said to be an alteration of the structure of the posterior or back part of the hoof—a winding in of the heels.—E. G.

To Cure a Horse of Pulling at the Halter.—A correspondent of the Country Gentleman cured a horse of this habit by fastening a surcingle around the animal just back of the shoulders. To this a rope was fastened and passed between the fore legs, through the ring of the halter and tied to the post. Laying back for the usual pull the animal found he was pulling on his own body instead of the post, and soon gave up the practice entirely.

Poll Evil.—I send you my cure. As soon as your horse's head is found to be stationary, and you are satisfied that the cause is poll evil, wash two or three times a day with arnica, until relieved. Do not postpone until the sore is opened. I cured a valuable work horse with the above medicine, and worked him every day. I could not use the common headstall or bridle on him. I used the Rockwell bit on him, as that did not interfere with his sore head.—W. D. F., *Hamilton Co., N. Y.*

Cribbing Colt.—"Subscriber," Fredericksburg, O., asks how to break a colt of cribbing. One of our correspondents recommends nailing a sheepskin, wool side up, wherever there is a chance for the horse to bite, as an effectual remedy.

Bunch on a Mare's Bag.—"Silex," Birmingham, O., has a mare with a bunch growing on her bag. It is as large as a man's fist and is getting larger, and seems to stiffen her. What shall he do?

Abortive Mares.—Will some one tell me the preventive for abortion in mares? I have one in foal, and feel anxious to save her colt.—T. M. W., *Oneida, N. Y.*

Hygienic Information.

HYGIENIC NOTES AND QUERIES.

To Cure Ringworms.—Take the best Cuba cigars; smoke one a sufficient length of time to accumulate one-fourth or one-half inch of ashes upon the end of the cigar. Now wet the whole surface of the sore with the saliva from the mouth; then rub the ashes from the end of the cigar thoroughly into and all over the sore. Do this three times a day, and inside of a week all will be smooth and well.—Frank Kelly.

Another.—Twenty grains of carbolic acid to one ounce of soft water was ordered by a physician for my wife; but we increased the acid until we used 50 grains of acid to an ounce of water. The application is powerful, but the cure is sure.—A. S. B., *Russell, Iowa.*

To Remove Warts.—Take good indigo, such as is used by the laundress; soak it in water; with a knife pare away the surface of the warts so as to cause the blood to flow. Wipe off the blood and drop the indigo water upon them. Very large ones may require a second application. The indigo produces no pain whatever. I have used and recommended this cure to many persons, and have never known it to fail but once.

Ringworm Remedy.—Let "Old Subscriber" apply to the ringworm the juice of the shuck of a black walnut which is nearly ripe, four or five times in half a day. He need not be afraid of the stain; it will go away of itself, as it does from our fingers. The bark of the root of the black walnut, pounded up, is nearly as good.—Henry S. Ely.

For Chilblains, apply salt. It is better wet, but will effect a cure if put in the sock dry and worn for a week. In case of a freeze that has blistered and become a sore, apply honey thickened with flour. The honey and flour will remove fungus (proud flesh) from any sore, and keep it clear from it.—G. W. Tripp.

To Purify the Blood.—A well known physician says that he considers the following prescription for purifying the blood as the best he has ever used. One ounce yellow dock, one half ounce horseradish, one quart hard cider. Dose, one wine-glass full four times a day.

Excessive Perspiration.—"An old subscriber" asks if any of our readers "can recommend anything to prevent the disagreeable odor arising from excessive perspiration?" Frequent bathing in tepid water is what we should do.

To Keep the Feet Warm Cold Nights.—Take a soft and pliable sheepskin, or a piece of a buffalo robe as large; put it on top of the lower sheet that covers the feet; pack the rest of the sheets or blanket top of the skin, and then tell others how to do it.—M. R. B.

Remedy for Rheumatism.—Tincture of gum Guaiacum, ten to fifteen drops, three times a day. I have never known it to fail making a cure, except in cases of long standing, when it will afford great relief.—W. I. Bishop.

Warts on the Hands.—To remove these, I simply apply strong alum water as many times per day as I find it convenient and the warts do not remain long.—H. N. W., *Coventryville, N. Y.*

Pomological.

PEARS, NEW AND OLD.

Among twelve hundred varieties of Pears, cultivated in this country and Europe, there are not more than twelve varieties esteemed for general cultivation. These twelve are the subjects of much complaint in some localities. Even "Beurre de Anjou," the *ner plus meuris* of the French, the "par excellence" of pears in this country, is now arraigned for some defect. Is it not possible to find in that large collection some varieties equal in quality and superior otherwise to those commonly grown?

One reason why we have not a more extensive list of select new fruits suitable for general cultivation, is because so few men are willing to use time and money to test them in various localities; and until this is done we shall remain ignorant of the value of many now before the fruit grower. There are among the new Pears a few that certainly deserve an extensive trial. From their healthy growth and rugged appearance, as well as choice fruit, I am inclined to believe they will succeed over a large extent of our country, especially in those regions north of us, where hardiness is needed.

The Mt. Vernon, Goodale and Souvenir du Congress are, in respect to growth and wood, as "tough as a Burr Oak."

Perhaps no pear has so many good qualities as the Mt. Vernon. We are certainly fortunate in having this added to the list. It is a fine grower, is beautiful in foliage and wood; fruit really delicious, and comes in at a time when good pears are scarce.

The Goodale is an abundant bearer, fruit uniform in size; quality good. Mr. Goodale informs me that with him in Maine it produces more fruit than any variety he has. It is a healthful grower, forming symmetrical heads, and reminds me in appearance of the Tetofsky apple. It retains its foliage till winter.

Of all the foreign pears imported the Souverin du Congress promises most. It is not so free a grower as the last two named; yet it is very superior in fruit, being larger and of a much finer quality. As to its productiveness, I am yet unable to determine.

Among the older kinds of new pears, Clapps's Favorite stands high, although it has one defect—of rotting at the core when over ripe. "Clapp's Sarah" and "Star of Bethlehem" are two promising candidates before the fruit-growing public.

Now, Mr. Editor, just suggest that some one, at least, in every State, give them a fair trial, and not let their good qualities be lost through this neglect, which is culpable.

Neither of these varieties has ever shown any signs of blight. In conclusion, permit me to give some observations in regard to this dreadful pest to our pear trees. Trees planted in well-drained soil seldom are attacked, while those in wet, undrained soil, suffer much. Those planted in soil liable to drouth are frequently blighted. Blight is more common in hot, dry seasons than in wet; and trees planted deep do not suffer as those planted shallow. On clay soil, well drained, blight is seldom seen. Trees on north hillsides are free from it, while trees facing south are frequently lost.

From these observations I have formed an opinion that blight is the result of drouth and heat, and that if we avoid these, we shall be comparatively free from it.

Delphi, Ind. J. H. Haynes.

POMOLOGICAL GOSSIP.

"Black Republican" Cherry from Oregon.—On page 36, Rural New-Yorker, January 13, we gave an illustration of a cluster of Oregon cherries, which was called "Royal Anne." In relation thereto Philip Ritz, Walla Walla, W. T., writes: "You have the names of two cherries confounded in one. The cherry exhibited by Mr. Ferry was the Black Republican, as we have no other cherry on this coast that will measure three and a-half inches in circumference. The Black Republican is an accidental Oregon seedling, originated by Smith Snelling, near Portland, Oregon, and is, without doubt, the largest cherry *known* in the United States, or in the world. It is as large as a good sized crab-apple, very solid, dark red to the seed, and cuts more like an apple than a cherry. It is quite late, ripening after all other cherries are about gone. It is an excellent cherry for shipping. They grow in such perfection in this valley that we expect to ship them to Minnesota when our North Pacific Railroad is completed. This cherry is supposed to be a cross of the Black Tartarian and the Royal Anne, as it partakes of the character of both. The Royal Anne of this coast is the Napoleon Bigareau of your section."

Pomological Queries.—1. What is the best time to trim bearing apple trees?

2. What are the best kinds of dwarf and of standard pears for the cold winters and short seasons of this country?—C. F. Tyler, *Allegany Co., N. Y.*

1. Early spring, before the buds swell, or just after the trees have commenced to grow, in summer.

2. For six varieties of standard pears we would select for your locality Seckle, Bartlet, Belle Lucrative, Sheldon, Lawrence, Beurre d'Anjou. For Dwarfs, Louise Bonne de Jersey, Duchesse de Angouleme, Beurre d'Anjou, and Urbaniste.

Red Jacket Strawberry.—A. B. Mason, Waterloo, Iowa, tells of a new strawberry—a chance seedling, on the place of C. H. Hunt—which, he says, "is probably a hybrid of Wilson's Albany and Russell's Prolific." Color, bright crimson-scarlet; very fine flavor; hermaphrodite; strong-growing, hardy plant; very productive; fruit averaging larger than Wilson; flesh firm, and of a rich, sub-acid flavor; form conical.

Stump Apple.—Chas. S. Wilson writes us that the Stump Apple is one of the very best for market, commanding a good price, and sells readily. Downing says it is of medium size, oblate, yellowish, shaded with light red nearly over the whole surface. Flesh whitish, rather firm, crisp, juicy, tender, sprightly sub-acid. Good. Season, September and October. Supposed to have originated in Delaware.

Rockwood Apple, originated by Rufus Rockwood, Pittsboro, Me., is described by the Maine Farmer as "good-sized, oblong, with a deep cavity and basin. Color, red and yellow, red predominating, dotted; texture fine and granular; flavor, neutral, but mild and decidedly pleasant."

Black's Early Peach.—Dr. Stayman of Kansas speaks of Black's Early Peach as earlier than Hale's Early. Can you tell me where I can get it?—Thomas J. Turner, *Hampden, Va.*

We cannot.

The Garden.

MUSHROOM SPAWN.

R. Guthrie asks where mushroom spawn can be obtained, price, etc, also if it can be kept from year to year. Mushroom spawn can be obtained of any first-class seedsman. Our New York seedsmen keep it (see advertising columns for names), and we presume others do. The English spawn sells here at fifteen cents per pound, or eight pounds for a dollar. The French spawn comes in two pound boxes which are sold at 75 cents each.

Henderson, in his "Gardening for Profit," tells how to make spawn as follows:—"Take equal portions of horse droppings, cow dung or fresh loam, mix the whole thoroughly together as you would make mortar, then form it into cakes about the size of large bricks; place these on edge, under cover, until they become dry; then insert into each a piece of spawn, half an inch or so square; let the bricks remain until they are quite dry; then spread about eight inches of horse dung over the floor of a shed, on which build the bricks in a pile three feet wide by three feet high, keeping the side in which the spawn has been put, uppermost; then cover them over with sufficient stable manure, so as to give a gentle heat throughout the whole. In two or three weeks, the spawn will have spread itself through the whole mass of each brick; they are then removed to a dry place and will retain their vital properties for many years."

GARDENERS' NOTES.

The Earliest Tomato.—Four of our correspondents ask us to name a half dozen sorts of the very earliest tomatoes in the order of their ripening. There are several sorts of tomatoes which differ little in time of ripening, on the same soil with the same exposure and treatment; and yet, in different localities, they differ greatly. A gentleman who has tried them, tells us that the Early Smooth Red, Early York, and Keye's Early Prolific, differ little, and are the earliest varieties known. Orangefield Dwarf Prolific is an excellent early variety. Gen. Grant and the Trophy are also early in locations if treated properly, and are excellent varieties according to all the testimony we can obtain.

The Vineyard.

MILDEW ON GRAPE VINES.

The following interesting communication in regard to mildew on grape vines, from Dr. William F. Channing, was read at the regular meeting of the Rhode Island Horticultural Society, on Wednesday evening, the 27th ultimo:

Washington, D. C., Feb. 26, 1872.

Charles H. Smith, Esq., Secretary of the Rhode Island Horticultural Society:

Dear Sir—I observe that the grape vine will be under discussion at the February meeting of the Horticultural Society.

I wish to bring to the notice of the Society some very important results in relation to the mildew of the vine, both American and European, obtained recently by Mr. Thomas Taylor, who is conducting the microscopic investigation into the fungoid diseases of plants at the Department of Agriculture.

Mr. Taylor has traced the variety of *erysiphe*, which constitutes the European mildew, through all its stages (*oidium* inclusive) on the European grape vines in the conservatory of the Department, and he has found the ripened conceptacle or fruit on all parts of last year's growth. If a piece of last year's cane is brought into a warm atmosphere, the *erysiphe* begins to develop from the seeds or spores. No matter, therefore, how closely a vine is trimmed, enough wood is left upon it to carry the seeds of the mildew over to another year. As a consequence of this discovery, the stems and branches of all the foreign grape vines in the conservatory of the Department have been washed over this winter with a carbolic preparation.

All of our friends who have cold graperies may be interested in trying the same experiment. A solution of sulphuret of lime (as it is popularly called) or of carbolic soap, would undoubtedly destroy these spores on the wood. I would propose whitewashing for the same purpose. Mr. Taylor suggests that the same precaution would destroy the eggs of thrips on the bark.

Another observation of interest in relation to the European mildew is the following:—Mr. Taylor found that mildew on leaves pressed in a dry book rapidly spread and grew. On the suggestion of Mr. Saunders, the experiment of keeping the grapery of the Department very dry for a few days was essayed. This resulted in so rapid a development of the European mildew (*Erysiphe Tuckeri*) that he obtained for the first time, either in Europe or America, the perfectly ripened conceptacles, or fruit, of that variety. It follows that the European mildew is developed by *dry* heat, while the American mildew (another fungus) requires moist heat. Our cultivators of cold graperies may take a hint from this.

But Mr. Taylor's observations cover, also, the history of the American mildew, which is chiefly the *botrytis vitticola*. On the wood of last year's growth he finds the *mycelium* or cobweb-like branches of this pest capable of resuming active growth when subjected to warmth and moisture. Here again, whitewashing or solutions of sulphurets or carbolic acid, applied to the wood in winter, will destroy the buds of the mildew, which are awaiting only the heat of another summer to spread over the new canes and leaves.

There is also an American variety of *erysiphe* which appears so late on the vines as hardly to affect the fruit. But this may probably injure the buds of the following year. Mr. Taylor has found the conceptacles of this mildew on the wood of American vines, under the same conditions as the European. These, also, can be destroyed by washes applied to the vines in winter.

Accepting this view of the annual propagation of mildew, there is one other precaution which may be taken by grape-growers. This is to carry off and destroy the last year's leaves and trimmings, which may be regarded as storehouses of latent mildew.

Yours truly, William F. Channing.

VINEYARD NOTES.

The Best Fruit Buds.—the *Pacific Rural Press* contains the following as the result of its own observations and experiences: "That the third fruit bud from the base of the past year's cane throws out larger and better developed bunches of grapes than either the first or second. The grapes from these buds seem also better flavored, and generally superior to those on the first and second. In accordance with this hint we have adopted the plan of cutting the cane at such lengths as to leave the third bud, generally, and sometimes the fourth, when a good strong one, and then rubbing off the first and second buds, and leaving the third and fourth for fruit. The number of fruit buds left on the vine must depend on the age and strength of the vine. If the vines are strong and vigorous, at three years, from two to three bunches of grapes may be allowed to mature on each, without injury."

The Naturalist.

FISH CULTURE IN NEW YORK.

The Commissioners of Fisheries for the State of New York are now delivering fish and spawn for the stocking of public waters within the State, and the following particulars and directions concerning their method of operations may be of general interest to our readers. Mr. Seth Green, the State Superintendent, Rochester, N. Y., says:

The impregnated spawn of salmon trout and white fish can be sent in October, to such places as have conveniences for hatching it.

Young white fish are in condition to transport from the 1st to the 10th of February; salmon trout, from the 10th to the 20th. Oswego bass, strawberry bass, white bass, rock bass, and a limited number of black bass, pike perch or wall-eyed pike and bull heads can be delivered at Rochester at any time during the winter.

Milk cans are used for carrying white fish and salmon trout; and milk cans and pounding barrels, or other clean barrels, are suitable for carrying other kinds of fish. A five gallon milk can will hold two thousand white fish, or one thousand salmon trout; or from twenty to one hundred of the other fish above named, according to their size.

The wall-eyed pike, rock bass, white bass, black bass, white fish and salmon trout are suited to clear waters with rocky bottoms, where the crawfish is to be found, and Oswego bass, perch, strawberry bass, and bull heads will only live on muddy bottoms with flags and pond lilies.

It is almost useless to stock rivers which overflow their banks and flood much extent of country, as the fish are stranded by the receding waters, and get into pond holes, where they perish in dry weather.

All fish should be deposited as near the head of the lake as possible, so they will not go into the outlet before they become familiar with the waters. The fish should be deposited during the night, when most large fish do not feed, and will find hiding places before morning.

HOW RATTLESNAKES POISON.

I have noticed a number of articles in the Rural New-Yorker in regard to the rattlesnake and his mode of poisoning. During the summer of 1870, while engaged in building an oil rig for the purpose of drilling an oil-well at Pit Hole, Penn., there was a large rattlesnake killed within a few rods of my work. I took some of my carpenter's tools and cut out the fangs, of which I have made a sketch, and enclose to you. There were four—two on each side. The front ones were the largest. I have never seen more than two in any other snake.

The fangs were attached to a cup-shaped bone, or cap, that covered the front of the poison-sack. The fangs being attached to this bone, or cap, forms a good foundation; also makes its aim sure, for its course is not easily changed. The cavity through the fang is shown by a dotted line coming out about one eighth of an inch from the point on the upper side. There was a small groove extending from the opening nearly to the point, so that when the fangs were thrown into any fleshy substance, they forced the cap, or bone, back against the sack, forcing the poison through the orifice into the wound. Also, after the blow has been given, and as the snake recoils, in so doing it would open the wound, giving the poison a chance to flow freely to the point of the fang before it is withdrawn from the wound.

Fredonia, N. Y. H. N. Tennant.

NOTES FOR NATURALISTS.

Taming Moose.—In answer to P. R. S., Jeff. Co., N. Y., we may state that, in the opinion of those familiar with the habits and nature of the moose, they can be tamed and rendered useful if taken before they are two months old. It is doubted if they can be rendered docile after they are six months old.

Floricultural.

DAHLIAS, OLD AND NEW.

It is supposed that the Dahlia was introduced into Spain from Mexico in 1789; but it seems to have been lost and re-introduced in 1804, some French gardener receiving a quantity of seed. About ten years later it began to appear in English gardens, and we mention these dates because the rapid improvements that followed are unparalleled in the history of any plant with which we are acquainted. We herewith give illustrations of two of the first Dahlias raised from seed obtained in Mexico. One (the larger one in Figure 1), was a dark red or crimson variety, and known to the older botanists as *Dahlia pinnata*, and the other (the smaller one in Figure 1), was a small yellow variety called *D. crocata*.

The ingenuity and perseverance of European florists was never more conspicuous than in their handling of this wild Mexican plant. For, although, as we have stated, Dahlias were scarcely known in English gardens until 1814, still so rapid had been the improvements that ten years later (1824) over two hundred varieties of Double Dahlias were offered by English nurserymen. For the next twenty-five years there was scarcely any abatement in "Dahlia fever," and every gardener, from the humblest day laborer up to the very highest and most extensive cultivator of rare plants, seemed to vie with each other to see who should produce the best new sort. The result we all know and have seen in those models of symmetry so often exhibited at our Fairs. The rage formerly was to see who should produce the largest as well as the most perfect flower; but the finishing stroke seems to have been put upon some of the sorts raised several years ago, and it was necessary to go in some other direction to insure progress—hence we find the new pompone or Liliput Dahlias coming into fashion, ten or more years ago. At first the varieties were not very perfect in form, but they soon improved and equaled, if not excelled, the older and larger sorts in symmetry of form and in color. Our illustration represents one of the most perfect of the new sorts, showing the flower natural size.

The Dahlia has long been popular on account of its stately growth and gaudy-colored flowers, but being destitute of fragrance, it is one of those plants which one feels like admiring at a distance, saving our best affections for the roses and pinks, which permit of a closer and more intimate acquaintance.

SICKLY GERANIUMS.

PLEASE tell me through the RURAL NEW-YORKER what is the matter of the inclosed geranium leaves. The little leaflets against the stem turn yellow and die before they are half grown, and the common leaves turn, as these are that I inclose, and dry up and the stalk is speckled like the leaves. Is there any remedy? What is the difference between Geraniums and Pelargoniums?—ELLA C. HOWE, *Marshall, Mich.*

WE conclude from the appearance of the leaves received that your geraniums are suffering from want of light, and probably the soil in the pots is soured and should be changed. Repot them and give good soil, and place where they will receive the direct rays of the sun for at least six hours each day.

The difference between geraniums and pelargoniums is more marked in the plants than in the scientific descriptions given in botanical works. The species and varieties in cultivation have become so mixed up that it would be difficult to again separate them and determine which should be called by either name. Dr. GRAY, in his latest work, places all our wild species, such as the Cranesbill, *G. maculations*, and *C. Caroliniannm*, under the head of Geraniums, and the cultivated species and varieties, such as the Oak-Leaved, Horse Shoe, Penny Royal, Ivy-Leaved, etc., etc., all as *Pelargoniums*. Our gardeners and florists have a different classification and place the Zonal and Tricolored sorts, which are of the old Horse Shoe type, under the head of Geraniums; and the large flowering kinds which usually bloom in winter and spring are called Pelargoniums. You need not fear of getting very far out of the way by calling them by either name.

FLORICULTURAL NOTES.

Geraniums from Seed.—A correspondent says she has been trying to get a Geranium ever since she has been in Washington Territory, but has not yet succeeded, and asks if they will grow from seed. They will grow readily from seed, and the seed may be obtained of any seedsman. Send for the catalogues of those advertising in the RURAL NEW-YORKER.

Dictamnus Fraxinella.—In the RURAL NEW-YORKER, Aug. 5, 1871, there is an engraving of this flower. Though said to be very old, it is new to me. Will you tell me where I can get the seed, what they will cost, and if they will do well in Washington Territory?—E. L. S.

CAN be obtained of any seedsman, at about ten cents a package. It is slow in propagating. It is as well to plant it in the fall, and it will start next spring. If planted this spring, possibly it may not start till next spring.

FIG. 2.—LILIPUT OR BOUQUET DAHLIA.

Wistarias Not Blooming.—IDA H. M. says that she has had a Wistaria two years, but it has not bloomed. The Wistaria does not usually bloom until it is well established or of considerable size. Some of the varieties are very free bloomers and others are quite tardy. The best way to propagate the Wisteria is to layer the vines in spring, making quite a sharp bend at the point covered with earth. To hasten the production of roots, the vine may be cut about half way through before covering.

The Red Beet is being urged for planting on English grounds, as a decorative plant, because it is both hardy, beautiful and useful. There are some who object to planting it in rank with other decorative plants because it is useful; but that ought not to cause it to be tabooed when a mass or lines of a dark purple color are desirable; for it can be grown with less labor and expense than most plants.

Arboricultural.

SAVE THE FORESTS—PLANT TREES.

A PROPOSITION is made to remove the duties on lumber for the purpose of saving American forests. No! If American forests are of any value in the market, let them be cut down and sold. Because wheat is scarce should we let it lie in the bins unmarketed? The way to protect forests is to plant new ones. If timber is to be scarce and valuable, the greater should be the incentive for planting. In proportion to its scarcity is the profit of planting. Thousands of acres of lands are good for nothing else but to grow valuable timber. Let every farmer plant trees where trees alone can grow profitably; and of varieties that are most used in the economic industries of the country. We need not be alarmed at the denudation of our lands of trees provided we plant one or two trees for every one cut down. If the same policy is pursued in planting trees that obtains in the cultivation of other crops, there will be no cause for complaint or alarm.

ARBORICULTURAL NOTES.

Orchard Items from Maine.—A very remarkable case was stated by Elder DUNHAM (at the late meeting of the Maine Board of Agriculture), of an apple tree which in ten years had grown to be two feet in diameter, and on the tenth year yielded ten bushels of apples. It was planted on soil which had been removed from a neighboring bank which was made by successive layers of very different soils. This mixed soil, which was about eighteen inches thick, was deposited upon a muck bed which rested on a coarse, gravelly foundation.

It was stated that the best mode of planting orchards in Maine was to put seventy trees to the acre, or about thirty more than is found useful in other States.

A southwest wind, blowing for two days, will as effectually kill all the blossoms on the apple trees as though fire had passed over them; but if the orchard is surrounded by a belt of pine trees, no such effect follows.—M.

Osage Orange Hedges.—Will you answer:—1. Does Osage Orange require a rich soil? 2. What time elapses before it can be depended upon as an effectual barrier? 3. How thickly should the plants be set, and how set, and how many to the rod. 4. Should you enclose a farm with it entirely?—WM. PERRY, *Cool Spring, Del.*

1. No; but it will grow more rapidly in a rich soil than in a poor one.

2. Three to six years.

3. One of the best plans for making a thick and substantial hedge is to set in double rows; that is, rows one foot apart and the plants one foot in the rows, placed alternately thus ·.·.·.·.·.·.

4. We do not know of any good reason why a farm should not be entirely enclosed, except beside the roadways, with a hedge.

Pear Trees on Mountain Ash Stock.—ROBERT DOUGLASS writes in the Pomologist in favor of the Mountain Ash as preferable to the Quince for grafting pear stock for the West. "The quince root is not adapted to the West, and will frequently be found dead in the spring when the pear tree above the ground is uninjured. ROBERT HASSEL of Alderly, Wisconsin, wrote me that he has trees on pear stock, also on American Ash stock, *var* Flemish Beauty, and that those on Mountain Ash were the healthiest and fruited best. He also says that the American Mountain Ash stock is a better stock than the European."

Cutting Out Young Raspberry Canes.—L. H. O. writes that he has a quantity of raspberries which will bear fruit this season, after which they are to be destroyed. He proposes to cut out all the young canes as soon as they appear this spring, believing that the crop of fruit will be very much increased by adopting this plan. We do not know but his expectations will be fully realized, but advise leaving the young canes on alternate rows, and fully testing this system, and then let us know the result.

Pears on a Western Slope.—SUBSCRIBER, Easton, Washington Co., N. Y., is informed that pears can be successfully cultivated on a Western slope—that a stiff, clayey loam is best adapted to pears, and that the protection of a belt of deciduous trees, with a few evergreens, is of advantage in windy situations, in order to prevent premature falling of fruit—and chiefly for that purpose. Close planting is one way of protection much in vogue in windy countries.

The Poultry-Yard.

LADY GWYDR'S POULTRY YARDS.

On page 229, RURAL NEW-YORKER April 6, we gave an illustration of Lady GWYDR'S Show Yard. We this week give an illustration of the interior of the egg-room, which we copy from the Journal of Horticulture. Around three sides of the working yard nearly thirty runs and houses of various shapes and sizes have been made, some with a grass plat in front, others with only a small sandy run. Here many of the chickens are kept as they get troublesome and quarrelsome, also some of the crack birds during the breeding season, and for exhibition. The range of open sheds, previously used to shelter the cattle, allows of a great many of these runs being nearly half covered from the weather so as to protect the birds' plumage from the sun and wet, two things always to be remembered in breeding or keeping fowls for exhibition.

Amongst the many other houses and runs to be found built around the working yard, one of the largest and most useful is the chicken nursery, a large, lofty, very light and airy building, about 70 feet long and 25 feet wide. Skylights are let into the roof, and windows round the sides, for the purpose of allowing the warm rays of the sun to enter the interior. The entrance is at one end through two large doors, which when shut nearly close the whole of that end of the building. Sand several inches deep covers the bottom, the walls are frequently limewashed; the whole place is kept scrupulously clean. Here the chickens are confined when the weather is severe or very wet, sects, and when cold or tired can get under the hen. As the day advances and becomes warmer and the dew is off the grass the coops are removed, and away go the hen and her young brood for an hour or two's ramble.

EGG-ROOM OF STOKE PARK.

The houses used for sitting hens have large wooden troughs running round the sides, which are put on the ground, and divided into compartments only large enough to admit of a single hen. In one of these places to give room for more hens we noticed a trough fixed against the wall about 3 feet from the ground, and the manager told us he found the eggs hatch as well there as in those on the ground. Accommodation is provided at one time for between forty and fifty hens while sitting. As the eggs hatch, the young chicks are taken away until all are out, when they are given to the hen, who is kept a day or two in a place near at hand; after this they are sent (weather permitting) to one of the above-mentioned tin-roofed houses, where they are regularly fed at certain hours during the day, not too frequently, but at such times as they become hungry. Their first meal consists of ground oats, barleymeal, and middlings mixed together with boiled water; corn is given to them the rest of the day. At night they are all housed, and between nine and ten they get another meal before finally going to rest.

The egg-room, of the interior of which we give a view, is a very curious sight. A counter is fixed round two sides of it, which is divided into compartments, each labelled, as may be seen, for the eggs of as many different varieties of fowls as are kept. When the eggs are collected and brought into this room they are placed in their proper division in sand, the thin end downwards, just deep enough to keep them erect, and very odd it looks to see several hundreds of eggs of various shades of color and sizes, each distinctly described as coming from such and such a yard, and all systematically arranged. Models of birds are seen in different places, while on the walls are nailed some of the prize cards, stating the honors won by birds at exhibitions where they have competed; these are very numerous. The floor is made of tessellated tiles, and the exterior of the windows is protected from the sun by perforated zinc shades, which keep the inside very cool and well ventilated. Under the oval window is the basket used in collecting the eggs, and this is likewise made in several divisions, so as to keep each variety, or those from any particular birds, distinct.

"A POOR STOCK BIRD."

SINCE this epithet has obtained considerable notoriety by being applied to a cock which won the second honor at the Connecticut show last November, it may not be uninteresting to the readers of the RURAL NEW-YORKER to understand the real meaning of such an appellation.

All breeders of poultry who understand their business would say at once that such a fowl must be so deficient in good points, and so incapacitated, physically, by reason of age and maturity, as to make him wholly useless for any purpose, and, instead of being placed on exhibition to insult people of taste and discernment, he should have his neck wrung.

A *perfect* bird is rather difficult to find. So a perfect gentleman. The moral weakness of the one, as well as the physical weakness of the other, may betray him. A fowl may be deficient in a number of points and yet may prove to be a good stock bird, since the predominance of his good may counterbalance his bad qualities—his efficiency not falling below his deficiency. Our aim is perfection; but since we cannot reach that, we must endeavor to get as near it as possible. A fowl may have humble feet; he may have lost his comb by frost; may have had his leg broken or his eye pecked out in a fight—since they are just as jealous and pugnacious as their owners—and yet all these accidents may not detract in the least from his qualities as a stock bird, since they are not inherent or constitutional defects. They are not inheritable, and will not revert to the offspring. I may safely say that if a man has had his proboscis broken, his children are not likely to inherit a broken nasal organ. But such qualities as prevarication, loquacity and gullibility are inheritable qualities, and have shown themselves most decidedly in some of the fraternity.

Now, if a bird meets all the requisites of the standard, with the only exception that he "*showed too much yellow on hackle and saddle*," he has carried all the points but one, in being a perfect bird, and I think that this would "*warrant his being a good stock bird.*" Again, if such a brilliant plumaged bird should be matched with hens of a very dark hue, or grouse-colored hens, I will "warrant him" to throw very splendid chickens. Mr. WRIGHT says there is more probability of breeding good chickens from a dark penciled hen and second-rate cock. "If a hen is long in legs, the cock should be particularly short in shanks," etc., etc. In breeding Seabrights, with a finely marked hen should be mated an indifferently marked cock, and *vice versa*. This compensatory law is not as well understood as it should be. Proper mating is the science of good breeding.

Greenville, N. J. ISAAC VAN WINKLE.

CORRECTION—CLEANLINESS.

IN the article which I wrote, published page 241 of RURAL, April 13, on "Too Much Feed" for hens, I find a mistake which, unless corrected, cannot be understood, viz.—the word *rattling* should be *rotting*.

While correcting the above, I will say here what I should have said in the previous article on the hen question—that is, the greatest care should be taken to keep the house where hens roost at night *perfectly clean*. Every dropping should be cleaned out every day just as regular, and with as much care, as a good stable-keeper would sweep his stalls for his horses; unless this is done, no man can have healthy hens; and I now find, after a more careful investigation into the cause of the diarrhea among my hens, that my man has not been particular in keeping my hens clean, which, with too much feed, has caused me to lose from fifteen to twenty choice Brahmas. For the last week I have been giving the matter my personal attention, and I am now satisfied that I shall not lose any more from either cause.

Westchester Co., N. Y. N. W. RIKER.

Poultry Inquiries.—D. M. H. asks our readers who have tried them to say if Buff Cochins are good winter layers, and why they are never recommended for profit.

Diary of a Ruralist.

DAILY RURAL LIFE.

FROM THE DIARY OF A GENTLEMAN NEAR NEW YORK CITY.

Sowing Clover Seed.—*April* 15.—A light fall of snow last night afforded us a fine opportunity for sowing some clover seed upon a field that we had just finished putting into oats. Timothy seed had already been sown at the time of the last harrowing; but my man JOHN wanted to add a little red clover because that was the way farmers in this vicinity had always seeded down their meadows. Then, the clover seed should be sown on a sap snow in spring to make it take well, and as all things seem to have combined, even to the snow storm, to aid me in seeding down a few acres of meadow, of course my success will be great indeed. Now, I do not believe in any of this old-time nonsense of sowing grass seed or clover with oats, rye or wheat, just because somebody has said it was the best way. If a man wants a field seeded with Timothy, sow that and nothing else; and the same with any other kind of grass, or even clover, for any of them will grow far better alone than when crowded, shaded, or the soil about the roots robbed of its moisture by some coarse, rank-growing grain. Of course on rich moist soils, a man may seed down with grain and thereby save one season; but it is poor policy to follow this system on old, nearly wornout soils, even if our fathers and grandfathers "always done so." Then, again, it is folly to mix clover and Timothy together in the same field, for they are never both in proper condition for cutting at the same time, and a little musty, over-ripe clover, mixed in with the hay, adds nothing to its value. By keeping both separate each can be cut when in the best condition for hay, and this rule will hold good with all kinds of forage plants.

Silver Maple in Bloom.—*April* 16.—The silver and red maples are in full bloom, although the leaf-buds on the trees have scarcely begun to swell. The seeds of these maples will be ripe in about a month, and those who wish to raise seedlings must be on the alert, or the season will pass for raising the trees before they are aware that it has come. If the seed are sown as soon as ripe, trees, two to three feet high, can be produced by the first of next October. The cost of raising silver and scarlet maple seedlings is so trifling that the settlers on the Western prairies can purchase them for two or three dollars per thousand; therefore, they have no reasonable excuse for being long without timber, either for shelter, ornament, or fuel. If I was in the trade, I should like no better business than to furnish a million or two of the different species of maple trees, at one year old, for one dollar per thousand; and there are plenty of nurserymen who would do the same thing if the pioneers at the West would take the trees when grown. But if nurserymen are obliged to spend thousands of dollars annually in advertising their business, besides sending out scores of agents to solicit orders, they must ask enough more for their trees to pay their expenses. The silver maple, in particular, is a splendid tree for the Western plains, and those who want a stock next fall or spring should contract for them now, instead of waiting a year hence.

Transplanting Evergreens.—*April* 17.—Why writers on horticultural topics should, with almost one accord, advise planting evergreens later in the season than deciduous trees, is something that I cannot understand. The frost is barely out of the ground, but I have begun to transplant evergreens; this has been my practice during the past twenty years, and I do not believe any advocate of late planting was ever more successful. Trees put into the earth in time to receive the benefit of heavy spring rains in settling the soil about their roots, are more likely to live than if the operation is delayed until later in the season, all the fine theories to the contrary notwithstanding.

The Hickory Clytus.—*April* 18.—In examining some hickory trees cut down about a year since, I found that beautiful beetle, *Clytus pictus*, DRURY, just ready to spread its wings for a raid upon any hickory timber or cordwood that happened to be near. The larva or grub of this beetle is commonly known in this vicinity as the hickory borer, and it makes quick work of any recently felled trees; but, so far as I have noticed, never attacks a growing tree. I found scores of the males just emerging from their holes to-day, but not a female yet in sight; by cutting into the logs, however, they were found in great numbers.

My observations to-day extended only to a couple of trees lying side by side. One was about sixteen inches in diameter at the base and covered with a very thick bark. The other was only about six inches in diameter at the base, and gradually tapering to the top, both being of the same species, namely, the common, thick-shell hickory. (*Carya tomentosa.*) The smaller of the two trees was perforated in all directions with the borer, some of them having penetrated even into the heart-wood. But in the larger tree few had even gone through the sap wood, and many had not entered the wood at all, merely feeding along on the surface, just under the bark. Upon stripping off the bark I found dozens of the pupæ and beetles lying in the shallow surface-furrows, made by them while in the grub or larva state. And further, I noticed that the beetles on the large tree were, on an average, much smaller than in the other, showing that the coarse-grained, large timber is not quite as acceptable food for these borers as the small.

Cabbage Butterflies.—*April* 19.—Two of the white cabbage butterflies (*Pieris rapæ*) made their appearance to-day. This is certainly a great improvement on last year, for they were then to be seen by hundreds, and at least three weeks earlier than now. But their numbers appear to grow gradually less, either in consequence of uncongenial climate, or because natural enemies have been imported. One thing is certain, and that is our cabbages and cauliflowers were injured less by the green worm, which is the larva of this butterfly, last year than the one previous.

Dairy Husbandry.

CONCERNING CONDENSING MILK.

MYSELF and others have been not a little interested in the report you made at the Dairymen's Association at Utica, on condensed milk, and particularly of Mr. BORDEN'S plan and success. Your estimates show an inviting margin of profits; yet there are some things (if your time will allow) you will please to inform us about:

1. Is the milk delivered night and morning?

2. At what hour of day does the heating commence—or how many hours a day does the condensing process require?

3. How is condensed milk sold, by commission houses or marketed by agents?

4. What, in your judgment, would be the demand for a good article of condensed milk, if sold one-quarter less than present market rates?

5. Are there many parties who will probably engage in the manufacture of condensed milk at an early day? or will the market in the next five years be overstocked?

6. Will our distance from market be a serious objection against engaging in the condensation of milk? We are four miles from Utica and Black River Railroad.

7. What are the keeping properties of condensed milk, if well manufactured from good milk, and properly packed or canned?

8. In the estimates by Prof. CHASE, a building 16 by 20 feet (so says the Tribune), at $2,500, seems very extravagant; if all the estimates by CHASE are as extravagant as this little building, the margin must be a very large one in which to reduce the cost.

9. Is condensed milk a dry solid, or of a creamy, buttery form?

10. Would Mr. BORDEN be willing to have parties visit his factory for the purpose of gaining information with an idea of engaging in the business?

11. Do you think the manufacture of condensed milk is more vexatious or requires more judgment and attention than to make and take care of a first-class cheese factory?

12. Could not some of the fixtures—vats, for instance, of a cheese factory—be utilized in a condensing establishment? I have a building 27 by 96 feet, 16 feet posts, boarded and battened; would this answer for a building?

13. Is the odor of a condensing establishment offensive—would a factory be a nuisance in a village?

By giving us what information you can in relation to condensed milk, you will confer a favor, for which we shall feel much obliged.—NATHAN CLARK, *Copenhagen, N. Y.*

WE have quite a number of letters asking questions similar to the above, and will briefly answer:

1. At the BORDEN factories milk is delivered once a day; at some factories twice a day.

2. The heating commences after the milk is delivered in the morning, say about 8 or 9 o'clock A. M., and from 1,500 to 2,000 quarts of crude milk are condensed per hour if suitable vacuum pan and boilers are provided.

3. The sugared condensed milk, put up in tin cans, is sold at the Company's office in New York, and by agents in the different cities. The plain condensed milk is sold by the N. Y. Condensing Co., delivered to customers by the teams and hands in employ of the Company.

4. We are not prepared to give an opinion on the question of markets, as that will be regulated by supply and demand?

5. It is impossible for us to tell how many parties will engage in the condensing business during the next five years. We should advise those proposing to enter upon the business to fix upon a market for their product, by selecting certain inland cities or villages and making an effort to introduce their goods to consumers, rather than throwing their product upon the market in New York City.

6. The location named is no serious objection for the manufacturer of sugared condensed milk; still, there would be great advantages in being located on the line of the railroad, and such a location would be important if plain condensed milk were to be manufactured, as it should be got to market at the earliest moment and at the least expense.

7. The sugared or canned condensed milk, made from good milk and properly put up, will keep months and years without deterioration.

8. Some estimate the expenses of condensing at a larger figure than that given in our address.

9. Condensed milk is not a dry solid, but is about the consistency of honey.

10. We do not know. Probably parties engaged in the business would not care to be pestered with persons who come to pry into the business. Business men generally have no time to throw away in giving information to parties who propose to enter into competition with them.

11. The manufacture of condensed milk, we should say, is more vexatious and requires more skill and attention to details than at a first-class cheese factory.

12. The fixtures of a condensing factory are entirely different from those of a cheese factory. If cheese was to be made in connection with the condensing business, the vats and apparatus could, of course, be utilized.

13. The odor of a condensing factory, so far as we have seen, is not so offensive as at the cheese factories. There is great necessity for cleanliness, and where the condensing factories have been located in villages, we hear of no complaint against them as nuisances.

CHURNS, BUTTER PRINTS, Etc.

ESTEEMED FRIEND:—I have a prospect of starting a butter factory, and I feel at a loss to know about a suitable churn. I have thy work on "Dairy Husbandry." The dash churn, barrel-and-a-half size, is recommended. I would like to know if there is any kind found to be better; or would thee advise its use yet? I have heard of a churn with large slats fastened to the inside of the churn to serve as dashers, and the churn itself revolves in a horizontal position. Dairying is in its infancy in this country, and but few dairy utensils are manufactured in this locality. I want to make arrangements to make butter from about 100 cows at present. Please give me names of some reliable parties who manufacture the best varieties of churns, and probable price of the size I will need.

What price is usually charged for making butter, where everything is furnished by the owner of the factory? I propose to make the butter for the patrons, and print it, in half pound prints, and ship to Washington, distant 45 miles; railroad 3½ miles from my premises. The milk, after being skimmed, to be fed to hogs here, belonging to the patrons. I have been sending butter to Washington for some time in half pound prints—printed by hand—one at a time; but I think I can make an arrangement for printing four or five pounds at a time and thus lighten the job. I have a print, oblong, about 2¼ by 3½ inches; I think either 4½ or 6 lbs. can be printed by having several separate impressions made on the same block or large print; enclose the print in a box, and press the butter down with a follower; after the butter hardens a little the half pounds can be sliced apart with a thin bladed knife. I propose to use a spring-house, and set milk in vessels 20 inches high, and 8 or 8½ in diameter. We have a cheese factory in the county that was put in operation last year. Cheese net us about 10⅛ cts. per lb., which I suppose was much better than most of your dairymen did last season. During the month of June and July the cheese only net us about 8 cts. It was a new thing for this county, and the proprietor of the factory, (J. K. TAYLOR,) taking advantage of the seeming demand, started the cheese at 20 cts., but it soon declined.—EDWARD J. SMITH, *Loudon Co., Va.*

WE know of nothing better than the dash churn for making butter at factories. It is in general use at nearly all the butter factories in New York. In Vermont, among the farm dairies, the box churn (revolving) is quite popular, while in some other sections the barrel churn (revolving) is very much liked. The only objection against the dash churn is that it requires considerable power in its operation. This is not of much account at factories where the churn is driven by steam or water power. The Blanchard is a good, reliable churn, and is operated with much less power than the dash. We cannot give prices or location of manufacturers of dairy implements, as these questions are fully answered in the advertising columns of the RURAL NEW-YORKER. If the dash churn is used we should say that the barrel-and-a-half size could be advantageously used for 100 cows.

We do not see why the idea of stamping several prints of butter at once, as suggested by our correspondent, may not be carried out successfully in practice. It is a suggestion worthy the attention of butter-makers; and when our correspondent gets his stamping machine in operation we should be glad to hear of the result, together with a full description of the machine, if it prove successful.

The price charged for making butter varies in different localities from 4c. to 5c. per pound.

Putting up Dairy Goods.—H. COOLEY GREENE gives the following sensible advice: "Let producers be governed by a principle of strict honor in this matter, using fancy packages only for a strictly fancy product, and ordinary packages for all goods of second grade, assorting carefully, and marketing each quality separately, making for it no false claim, but allowing it to go upon its intrinsic merits, and they will realize more for their products than they do under the present unsystematic and impolitic practice of straining up the price of inferior goods by offering them in connection with a better article, thus losing more upon the good than is gained upon the bad, while the principle of just discrimination is not recognized, and the reputation of the brand suffers a still greater prospective loss."

Modes and Manners.

MINTWOOD'S CONVERSAZIONE.

A THREE month's absence from the city and the RURAL office will explain the apparent neglect of MINTWOOD in regard to numerous letters pertaining to this department. Being at her post again, promptness and attention may be expected.

Velvet Sacques.—Miss S. H., St. Lawrence. The season is too late for velvet sacques, except such as are very light. A short, close-fitting basque, without sleeves, is most fashionable.

Dress Materials.—Mrs. F. J. F., Salem, Va. Black silk first of all; silks in the seven cameo shades, sage-green mignonette; black grenadine, with stripes of silk and satin, for polonaises to be worn over black silk; alpaca, poplin, challie, etc. Style of dresses: for walking dresses, skirt to clear the ground, trimmed with deep flounces, or several rows of narrow ones, reaching as high as the knee. Overskirts continue to be worn; rather short in front and looped from the sides to the back. Some styles of dresses are flounced or ruffled at the back quite to the waist, the overskirt consisting of only an apron. Polonaises and basques are about equally worn. Half-fitting sacques with slashed bottom and open sleeves, and the round cape, with or without hood, are fashionable as wraps.

"The Best Style to Make a Lady's Dress for the Street," is to give it the same neatness and style as if the material were silk or cashmere, fashioning the trimming of course with the laundry in view. A figured or Dolly Varden polonaise, with a striped, dotted, or checked underskirt, and a simple straw or shirred lawn hat, makes a captivating costume, if one is still on the sunny side of forty.

Ladies' Bonnets.—"The style, material and color of ladies' hats and bonnets for the spring and summer season," are legion. At present, white straws are mostly worn. In hats, the turban; a flat crown with a slightly turned up brim; the always fashionable flat, now caught up at the back and sides, and called a "Dolly Varden;" the "Maud Muller" is a small size in coarse Mackinaw straw, and a dozen other indescribable shapes, including the past winter's style of the high-crowned, rolling brim shape, are each and all worn and trimmed to suit the style of the wearer. In bonnets, the Orleans, or pompadour shape, fitting closely to the head, with a light coronet in front, is most fashionable, although not becoming to everybody. The trimming is massed or gathered at the back, insuring a long spray of flowers, of lace, ribbon, etc., to fall over the hair. Jet is as much used on bonnets as on dresses. Crape trimming, and bonnets of crape, will be worn a little later; it is the real English crape, in colors, something quite new, very dainty and pretty, but not so serviceable as ribbon. The color of the hat must harmonize with that of the dress.

Coiffure, Etc.—BESSIE GRAY.—Wear your hair in "natural curls," looping the front curls to the back of your head, with a hair pin or ribbon. Girls of your age (fifteen years) have their dresses button at the front or back. They look better fastened at the back, but unless you have a maid, or some one to help you dress, it is better to have them fasten in front. Make of your black silk, if you have enough, a polonaise. Trim with the same, or with fringe. Place bows down the front, and at the back when looped.

White Swiss Dress.—GRACE L. A.—"White Swiss dress" should only be worn in the house, and is never suitable for walking or church costume. The effect of it should be light, airy, and, in the present fashionable parlance, "fluffy." The underskirt, and long overskirt, that may be fully draped, should be flounced and ruffled with straight widths. A pretty flounce for the bottom, is somewhat deep, with a ruffle on the bottom of it, and two or three, or one double, ruffle at the top. The waist may be laid in plaits, or, what is better, cut basque, the same as if of thicker material, but made free from the lining. The old-fashioned fichu, with cape at the back, and tab fronts crossing and meeting at the back, are growing in favor, and are "lovely" in Swiss, or other thin goods. The gloves worn with a white suit should be chosen in conjunction with the ribbons worn—if lavender, gloves of the same shade; if blue, straw color or salmon gloves; if pink, flesh tint or pearl gray gloves. For "light calico," read reply to Mrs. F. J. F.

Polonaise.—ALICE D., Utica, Ohio.—It requires ten yards of goods of the ordinary width to make a self-trimmed polonaise. As you are not tall, make your moire antique with a deep basque and single skirt. Trim the goods with folds of crape or lusterless black silk.

Neckties.—HESTER asks of the "newest style of necktie, collar, and sleeves." also "the prettiest for a young lady of limited means to wear on dress occasions." A standing quilled ruffle at the neck, edged with footing, or valenciennes edging, with a bow, jabot, or brooch at the front, is now generally worn, dispensing with a necktie passing around the neck. The ruffle is basted in the neck of the dress. Three-quarters of a yard usually makes two ruffles. Similar frills are worn in the bottom of the sleeves. A "jabot" is a tab of foundation, or blonde, frilled crosswise with lace or ruffling, and worn in place of a bow, or at the throat, or with a very small one. For dress occasions, collars and sleeves of very fine French embroidery are worn. White overdresses, with fichus of the same, are still worn for evening.

Dressing the Hair.—The "prevailing style of dressing the hair" is the coronet braid and Greek coiffure at the back. The new Parisian chignon, however, consists of the hair made into large horizontal crimps, hanging loosely in a net and low down on the neck—becoming for the tall girls. Gloves are not requisite, except for full dress, for an evening, unless, indeed, one chooses to wear them.

Dress for Two-year-old Boy.—A. O. T., North Urbana, N. Y.—A "dress up" suit for your two-year-old boy, for the summer, may be made of linen, pique, or some other light, plain fabric. The Gabrielle dress, with jacket, or the plain waist, with jacket and kilt plaited skirt, are the only styles for boys under three years of age.

Aprons for School Girls.—ANNIE S. LYONS.—Pretty aprons for school girls are made of white, buff, or gray linen, with bib front, or bretelles, with pockets or without; and for trimming, bound scallops, flat braids, gimps, ruffles, etc., ornament them tastefully. Ribbon sashes are less fashionable than formerly, but still worn.

Re-Modeling a Sacque.—C. G., Pa.—Your light cloth spring sacque may be remodeled by cutting it shorter, making it half-fitting, with seams at the back and sides, which leave open to the waist; place broad cuffs on the sleeves, and collar at the throat. Finish the edge with a binding of braid, or, at a slight expense, with a bias band of silk, velvet or cloth one or two shades darker than the goods, with buttons on the cuffs and in front to match.

Wedding Invitations.—"Without Address."—The latest style of wedding invitations consist of four cards enclosed in an envelope five or six inches long, and two in width, bearing the initial or monogram in silver. On the largest card, following the shape of the envelope, is printed the invitation to the reception following the wedding. The card next in size bears the name of the groom; a smaller one, that of the bride; and a still smaller one for admission to the wedding, if solemnized in a church. It reads, "Ceremony," giving name of the church and time of the service. Announcement-cards, of the same shape, are sometimes ordered for friends at a distance, proclaiming the fact that Mr. JOHN SMITH and Miss MARY BROWN were married by Rev. So-and-So, at such given time and place. Unless you desire the attendance of an entire family at a wedding, you should send cards to the individual members whom you desire to attend. In any event, it is better to do so. You can obtain the price of, and order, cards through your nearest stationer. We cannot give New York addresses gratis. Empress cloth, Cashmere, poplin, or ladies' cloth, are each and all fashionable fabrics for men's dressing gowns. "Habits of Good Society" is a popular book on etiquette—price $1.75; also "Hand-Book of Society," in three volumes, $3. For these, as well as for wedding cards, apply to Mr. H. D. T. MOORE, at this (RURAL) office, through whose agency any purchases may be made..

Essentials in Dressmaking.—E. A. S., Coffey Ville, Kan.—Read answers to the foregoing for styles in dresses. MINTWOOD receives all letters addressed to this office. The essential points in dressmaking are to insure a good fit, and application of trimming that becomes the figure. A dress needs to be broad across the bust, the darts low, and the dress comfortable in every place. A tight dress is not only vulgar, but ruins the complexion and spoils the looks of the hands.

Scientific and Useful.

SIPHONS.—USEFUL HINTS.

In the RURAL for April 13, "AN OLD SUBSCRIBER" relates his difficulties with a siphon used for conveying water from his well to his barnyard. It is difficult to determine, from his account, precisely where the trouble lies, but I suspect the cause of his recent failure is to be attributed to leaks in the pipe. A leak which would be imperceptible when subjected to the pressure of a column of water five feet high, might increase so as to destroy the efficiency of the siphon when the column was increased to ten feet. It makes no difference how the pipe is filled, so long as the air is perfectly removed, and unless there is some leak, there ought to be no difficulty, if the hight to which the water is raised is only ten feet. But I suspect, from certain expressions in the letter, that the hight to which the water is raised is more nearly thirty feet. If this be the case, it is evident that he has approached so nearly to the limit (thirty-four feet) to which water can be raised by atmospheric pressure that it will require very excellent workmanship, and very careful management, to make the siphon work well. That the siphon depends upon atmospheric pressure for the support of the column of water is well understood, and must be obvious to any one that will reflect upon the subject. The admission, therefore, of a small quantity of air into the tube, either by a leak or otherwise, would destroy the efficiency of the siphon. Such air might even find its way into a perfectly sound tube in several ways. If the water contained a good deal of gas, and all well-water contains gas, this gas would escape when the water passed into the tube, and was removed of atmospheric pressure, and might fill the upper part of the tube sufficiently to prevent all action. Or if either ends of the tube happened to approach the surface of the water, air might enter. But further conjecture is useless, and we merely throw out these surmises as hints toward a true solution of the difficulty, and aids in remedying it.

New York, April 15th, 1872. ENGINEER.

CEMENT FOR AN AQUARIUM.

ONE of the correspondents of the RURAL NEW-YORKER inquired recently concerning a cement for an aquarium, and is advised to use red lead putty. There is, however, a cement which is known as "aquarium cement," and which we have used for years with the very best results. It adheres so firmly to glass and iron that there is no possibility of breaking it off; it forms a perfectly water-tight joint, and it does not taint the water as many lead cements are apt to do. To prepare it take equal measures of fine sharp sand, plaster of Paris and litharge; mix them well together and make them into a stiff putty with boiled linseed oil. Apply in the same manner as you would any other putty, and allow two or three days to dry. As regards the materials we may add that any clean, fine and sharp sand will answer; we used the white Rockaway sand, which may be procured from any marble worker. The plaster of Paris is the white, calcined plaster used for cementing tops to lamps: common plaster, such as is used for agricultural purposes, will not answer. The litharge may be obtained from any paint or drug store.

Cement prepared as above is exceedingly useful for more purposes than making aquaria. For stopping leaks around chimneys, and for many other uses that will readily suggest themselves, it is invaluable. X.

New York, April 12th.

USEFUL AND SCIENTIFIC NOTES.

The Length of Whiffletree for a Wagon, STEPHEN AMES is informed, should be about thirty-four inches; if for a farm wagon it should be from 1⅜ to 1¼ inches thick, the same width at the ends—say five-eighths of a foot, increasing to a foot in width in the center, and ironed without boring any holes in it. Such is our judgment.

Strength of Tobacco.—R. M. S., Milton, Wis., is informed that tobacco is stronger when grown in cold climates than that produced in a mild one. The same is said to be true of celery.

Effect of Changes of the Moon.—I wish to know what effect changes of the moon have upon animal and vegetable life; and if it has any, what they are and what produces them.—L. W. L.

New Publications.

Musical Instruments.

DUNHAM & SONS,
(ESTABLISHED IN 1834),
Manufacturers of
PIANO-FORTES.

MOORE'S RURAL NEW-YORKER of November 18, 1871, says:

"Having used one of their instruments in our family for twenty years, we can confidently commend them to our readers as being first-class in every respect. Both professional and amateur players on the piano pronounce our DUNHAM very superior in tone. An instrument that has retained its brilliancy and sweetness of tone for a score of years needs no further commendation."

FASHIONS FOR SUMMER.

943.

DOLLY VARDEN Polonaise is the charming novelty of the season, and becomes the decided favorite of all who see it, when Dolly Varden goods—much in vogue—or any kind of wash material is used. By unbuttoning the lapels at the side and back, and by loosening the belt, it becomes a plain pelisse without plait or gather; by readjusting again it is transformed into an elegant, tight-fitting polonaise. As this change can be made in less than THREE MINUTES, and as it requires only six yards of yard-wide goods, it is easy to see why it is so highly honored. All sizes. Price of pattern, including a CLOTH MODEL, which shows exactly how to make and put it together, and how it will look when finished, $1.

SPECIAL OFFER.—To any person who will cut this advertisement out, and inclose it with $1 to us before the first day of June next, we will mail to them this pattern, with the cloth model, and will send them SMITH'S ILLUSTRATED PATTERN BAZAAR FOR ONE YEAR FREE! NOW is the time to subscribe for the BEST FASHION MAGAZINE IN THE WORLD, AND THE ONLY FASHION PUBLICATION that imports styles and furnishes patterns of them. We give a CLOTH MODEL with every pattern. Our regular subscription price is ONE DOLLAR A YEAR. We give every subscriber patterns of their own selection FREE to the value of HALF A DOLLAR.

Single Copy mailed for 25 cents. If you wish for something RARE in Summer style, send stamp for "SMITH'S ILLUSTRATED SPECIAL." Address
A. BURDETTE SMITH,
914 Broadway, New York.

WEBSTER'S PATENT
BUTTON-HOLE WORKER.
Patented June 27, 1871.

One of the most important inventions of the age! The most perfect Button-Hole Worker ever invented! So simple that a child can work a more perfect button-hole with it than the most experienced hand can work without it. Every stitch is taken with the most perfect mechanical accuracy. Is used entirely independent of the sewing machine, and will last a life-time. Does away with pricking the fingers, straining the eyes, and with imperfect and irregular worked button-holes. They give universal satisfaction. Ladies who use them say that they are worth their weight in gold. Over 11,000 sold during the first week of their introduction. The most liberal inducements offered to the trade. Dry Goods and Fancy Goods Merchants find it an excellent selling article. Local and traveling agents wanted everywhere.

Samples and terms, with full directions for use, sent prepaid on receipt of 50 cents. Orders by mail receive prompt attention. Address

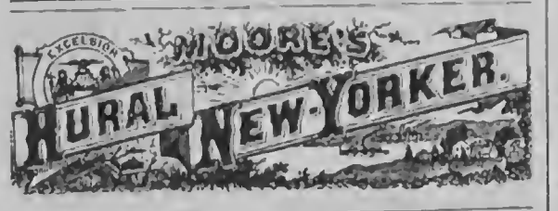
☞ No advertisement inserted for less than $3.



SATURDAY, MAY 4, 1872.

THE TWO CAMPAIGNS OF 1872.

Two campaigns are already formally opened in this country, in which every agriculturist must, to a greater or less extent, take a part. One is a campaign of Production and Peace; the other of Waste and War. One replenishes the wealth of the country; the other diminishes it. One demands the best resources of the man, physically, mentally and morally; the other, too often, prostitutes them all. One adds to the aggregate wealth of the country, and thereby diminishes the burthens of taxation and increases the comforts of the people; the other takes from the productive power of the people and improvidently and unnecessarily wastes their time and money, thereby increasing the burthens of taxation and diminishing their comforts.

The campaign of Production and Peace must be prosecuted. It demands and compensates the exercise of our best energies. It means Addition, not Subtraction. It makes grass grow where none grew before. It causes buds to burst and bloom where they otherwise would not. It provides against barren fig trees. It insures a golden harvest—plenty, peace and comfort. It secures a joyful Harvest Home. This is the campaign we are bound to promote. We want it successful. Every man is expected to do his duty in it. The rewards and honors are sure. There are no disappointments to men who work. They do not depend upon any common crib for sustenance. They sit under their own vines and are not afraid. No political or other combination can drive them from their position. Each man is "in" and there are no "outs." There are no places unfilled and no one is without a place. Each makes his own place and fills it.

The campaign of Waste and War is one of Revolution. It is political. It absorbs the best energies of men and does not compensate. It means Subtraction, not Addition. It does not make an additional blade of grass grow. It stimulates no blossoming nor does it increase the income of the husbandman. It does not increase the joys of the Harvest Home. The honors of the warfare are not sure, nor is the compensation adequate. There are disappointments. There is a common crib at which all must feed. Only the strongest get the food. It is a wrangle of the "ins" and the "outs." The worst passions are developed. Honesty, and honor and manhood are assailed and broken. Idleness, dishonesty, corruption and intolerance are fostered. Money is wasted that ought to be made productive. Time is squandered that ought to be usefully employed. False issues are made because no real issues exist. Battles of bunkum are fought, and the time and money of the people wasted in watching and contributing to the fight; and not one particle of profit results, except to the few place-seekers who live by wheedling the people.

Has the reader ever carefully calculated the cost of one quadrennial political campaign to the production of the country? If so, does he not know that the burthens it imposes upon the producer are more onerous than those of our war debt? Calculate the cost of time spent by those who occupy public offices, and the duties of which they neglect in order to pull political wires, make political speeches, and continue in their own hands the power which place gives them. Estimate the amount of money they spend in the prosecution of this work, which *must* come out of the pockets of the people whom they seek to influence and upon whom they depend for place. Calculate the cost of banners, torchlights, music, campaign documents, speakers, reporters, liquors, cigars, boardbills, and then the time and expenses of the hundreds of thousands of benighted people who gather to be interested and "instructed" by these political pyrotechnics and panegyrics!

All for what? That the country may be saved from perdition! That scallawags may "save" it! That its life-blood may be sucked out of it by political leeches who have neither thought nor care for any one but their respective corporate selves! That the people may be impressed with the power which they, the people, often with great stupidity, place in their hands!

We urge the discharge of the duties of citizenship. We believe it to be the highest duty to select good public servants and to instruct them to pursue a policy calculated to secure a stable, equable and economical, though liberal, administration of public affairs. But these duties can be discharged without such waste of time and money—without such exhaustion of the vitality and resources of the people—without such a confession of weakness and ignorance as the following of political mountebanks and shouting to their beating of drums, kettles and the air, involves. Let us do a little sober thinking for ourselves, Men and Brethren, select such servants as will perform public duty best and diminish by all possible means the enormous tax the politicians are about to impose upon an intelligent and thinking people.

RURAL NOTES AND QUERIES.

The English Agricultural Laborers' Strike.—In some districts of England there has been a concerted strike among the Agricultural laborers for better wages and fewer hours. In Cambridgeshire the laborers demand 2s. 4d. per day, with a half-holiday on Saturday. In Warwickshire they demand that the working hours of the men, from March 25 to Oct. 12, shall be from six in the morning until 5 at night, including an hour and a-half for meals; all other time to be overtime. During the balance of the year the hours demanded are from seven to five, with an hour for dinner. The standard of wages is fixed at 16s. weekly. We notice that some of the English papers charge these strikes upon political agitators, who are operating through the agency of Trades and Workingmen's Unions. The strike began in Warwickshire, and is extending, or has extended, to the counties of York, Oxford, Hereford, Leicester, Somerset, Cambridge, Northampton, Norfolk, Essex and Worcester, and promises serious consequences to the employers, unless they recognize the union of the laborers and its demands. It will be interesting to watch the result.

How to Make Money off a Farm.—A correspondent who has a little place of ten acres, asks how he can make it profitable. He lives near a village of three thousand inhabitants. This seems to us a strange question. The first thing that we should try to ascertain is what do the three thousand inhabitants consume most of that can be produced easiest on the ten acres. Is it milk? If so, ten acres in soiling crops, good, clean stables, and a little extra feed in the shape of shorts or middlings, will keep at least five good milch cows well and leave liberal space for a good vegetable and fruit garden for family and market products. As a rule this, if intelligently managed, will furnish a good income for a family. Of course it involves labor; but so does every kind of business out of which money is made. There are ways enough to make ten acres, near a large town, pay a handsome income. We hope to give some examples showing how men have done it, hereafter. Who will volunteer a statement?

Barry's Fruit Garden: By P. Barry.—A host of our readers will be pleased to learn that Orange Judd & Co. have just issued a new edition of this valuable work, which first appeared twenty years ago. It has been revised, enlarged, newly electrotyped, is handsomely illustrated, and now makes a neat and compact volume of 491 pages. The work is adapted to the great changes and improvements which have been made since its first publication. In his preface the author says:—"The most important part of the revision has been the lists of varieties of fruits, which are now made to conform to recent experience. Several other parts, however, have been re-written, and others altered and corrected." No man in America is better qualified than Mr. Barry to prepare a standard authority on fruit culture, and we commend his work to every owner of a Fruit Garden.

—We will send the above work to any address, post-paid, on receipt of the price, $2.50.

An Ornithological Response.—"In the Rural New-Yorker, April 27, I notice your paragraph 'The Birds are Coming.' I am glad you said that. I wish some of the ornithological readers of your paper would say more about American Birds. We young men in the country know precious little about them; and many of us have not the means with which to purchase the costly ornithological works. Let us hear from the friends of the birds." So writes Stephen Ashton. We second his motion, and will give all the space we can spare to Ornithological Notes throughout the season. Let them come in condensed, compact form—full of facts.

Buy Books Relating to Your Business.—The Live Stock Journal concludes a highly commendatory notice of Willard's "Practical Dairy Husbandry" with some truthful remarks about farmers purchasing books and papers relating to their business. It says:

"This work brings together in a proper shape for reference the practice of the most successful dairymen of this country and Europe. Nearly every question that may arise will be found discussed in this book, with simple, plain suggestions of practice. It should be in the hands of every dairyman. Sometimes a proper direction on some small point will save the butter maker more than the price of this book. Farmers are too stingy in their purchase of books and papers relating to their business. It sometimes happens that stock men will pay from $100 to $500 for a calf and yet neglect to buy a book costing less than a fiftieth part of this sum, that would give them a thorough knowledge of the several breeds; and a dairyman will pay $20 on a cow for fancy, and yet refuse to buy a book that will instruct him how to make the most of the product of all his cows."

Agricultural and Mechanical College of Alabama.—A correspondent asks if Alabama has an Agricultural College. We answer, yes. One is soon to go into operation (if it has not already) at Auburn, Ala., the East Alabama College buildings located there having been presented to and accepted by the State for this purpose. The President of the Board of Directors is Hon. W. H. Barnes; Secretary, F. M. Rose. The President of the College is Rev. I. T. Tichenor, D. D. There are seven other professorships filled.

The Patrons of Husbandry of Indiana are having a fight with certain manufacturers of agricultural implements, who refuse to sell the Patrons machinery, except through the local agents of the manufacturers. And the State Grange has resolved to use all its influence to prevent the Patrons from purchasing of parties who refuse to recognize the right of their (the Patrons') agents, to purchase directly from the manufacturers and thus dispense with middle men.

Agencies for Importing Chinese Servants.—D. B. Benty, Chester Co., Pa., asks if there is an agency for importing Chinese servants in this country; if so, the address of the agent. We do not know of any, unless there are such in California. We know that Chinese have been imported through native agents, sent to procure them for manufacturing and railway corporations; but that is the limit of our knowledge.

An Elastic-Roller Cotton Gin has been invented by a Bostonian, which is said, by experts, to far excel any gin yet introduced. It gins all kinds of cotton in the most perfect manner, without the least injury to the fiber. If this be true there is a fortune in the invention.

The Kansas Farmer, published at Leavenworth, has been changed from a monthly at $1, to a semi-monthly at only $1.50, and is doing better than ever—as we learn from its editor, Col. Geo. T. Anthony, whose pleasant presence appeared in our sanctum recently.

Cheap Preparatory School.—A correspondent asks: "Can you inform me of the cheapest school that will afford the best advantages for a preparatory and collegiate course?" We cannot.

THE SEASON, CROPS, PRICES, ETC.

Waukesha Co., Wis., April 19.—On the 15th over a foot of snow fell in this section; very little grain sown yet, and no prospect of the ground being ready again before next week.—T. L.

Perry, Jefferson Co., Kansas, April 15.—The spring is backward and dry; there is no grass on the prairies hereabouts, yet, to do much good. Oats are in. Corn plowing commenced. Fall wheat will be almost a failure. Wheat, $1.50; oats for seed, 35c.; corn, 25c.; potatoes, $1; prairie hay, $5 per ton.—John Jones.

Jamestown, Fulton Co., N. Y.—We have had a very hard winter, but the snow is all gone at last, and the frost is mostly out of the ground. We shall commence to plow this week. Grass starting. A very large proportion of the farms here are mostly in grass. Hay is very scarce now; worth $30@35 per ton; stock, of all kinds, low. Butter, 30@35c.—Reform.

Augusta, Ga., April 16.—Spring has fairly opened, though one month later than last year. The trees are green with foliage. Peach trees dropped their bloom some time since; the young fruit is now as large as buck shot. Early garden vegetables are in market. Corn all planted and coming up. Cotton now being planted. Provisions plenty; corn, 90c.; oats, 75c.; flour $6@10 per bbl.; bulk meat and bacon, 5½@8c.—D. J.

Lincoln, Sussex Co., Del., April 22.—Weather cool, with frequent showers; prevailing winds west and south. Fruit trees in blossom; peaches mostly killed by severity of winter. Wheat upon fertilized land looking very fine. Money very scarce, and prices range as follows: Land, $50 to $75 per acre, according to location and improvements; sales are frequent, and many Northerners who settled here are leaving. Stock fodder scarce, and from three to five cents per bundle. Corn, 60c.; wheat, $1.60; oats, 45c.; sweet potatoes, $1.25; Irish, $2.00; eggs, 18c.; butter, 40c.; dried peaches unpeeled, 6c.; peeled, 12c. per pound; cheese, 20 and 25c.—W. B.

Douglass, Hanlson Co., Iowa, April 21.—We are having a very wet, backward spring. Sowing about half done in this county. The first sowed wheat is up. The winter was dry and cold; steady weather, with little wind for this region. Our seeding has to be hurried to be on time with our corn. Day before yesterday the thermometer stood at 70°, the hottest day so far; four days in March of last year it stood at 72°. Wheat is $1; oats, 20c.; corn, 18c.; barley, 30c.; potatoes, 35c.; butter, 20c.; eggs, 10c.; hay, $2 per ton, and plenty. No price for sheep, for there are none for sale. Hired help, $18 per month; land, $3@10 per acre, and room for ten thousand earnest workers to get farms, if they only want a good living. Tell the poor, starved, over-worked city people to come where work and food are plenty, and they will not regret it. —R. B. R.

BUSINESS INFORMATION.

The Right Weigh.—Not only is strict Justice, but good Morals are involved in weights and measures; for hath not the Book said, "A false balance is an abomination unto the Lord, but a just weight is his delight?" And this is what makes Edw'd F. Jones of Binghamton, N. Y., such a promoter of good morals—"Four-Ton" morals, too, just the capacity of his popular Scales. With one of Jones' Scales the farmer can assure himself of the exact weight of anything he has to sell, from a cheese or a pig to a load of hay, and in like manner, of anything he has to buy, so there is no guess-work about it. The reputation of these Scales is well established, and their reliability is fully attested by men of unquestionable character and experience.—S. D. H.

The Texan Liebig's Extract of Meat is an article of great utility, convenience and economy in preparing beef tea, soup, gravy, etc. For invalids and all persons requiring nourishment, it must be especially beneficial, being the very essence of strength. The Texan is the pioneer and only genuine American article we have so far; and having used the same, we do not hesitate to recommend this extract. Mr. Adolphus Glanz, as Sole Agent, represents that great improvements have lately been effected, and the shipments reach him in 20 days from the Texan factory. Also, that one of the distinguishing characteristics of this extract is its freshness, strength and superior nutritive value. There is no doubt but that since this domestic enterprise was started by Messers. Harra & Shrade, Liebig's Extract of Meat can be had at half of its former cost, and that the Texan is still the lowest in price.

The Tin-Lined Lead Pipe, so often advertised in this paper by the Colwells, Shaw & Willard Manufacturing Co., ought to be remembered at this season, when so many people are building, or making improvements in their dwellings, out-houses, etc. Its use secures pure water, an indispensable article for the health of every household. As "an ounce of prevention is worth a pound of cure," it is the safe course to get the best water pipe obtainable, and therefore we again commend the Tin-Lined to all, in both city and country, who have occasion to convey water through metal pipes for domestic purposes.

PUBLISHER'S SPECIAL NOTICES.

The Rural New-Yorker is electrotyped, and hence Back Numbers can always be supplied. Copies for sale by all News Dealers; price Six Cents.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or more. A host of people are subscribing for papers about these days, and we hope our Agent-Friends will give everybody an opportunity to subscribe for the best.

Show Bills, Specimen Numbers, Etc., of the Rural New-Yorker sent free.

Solid *Cast* Cast-Steel Plow for $5. For particulars, address COLLINS & CO., 212 Water St., N. Y.

THE WAKEFIELD EARTH CLOSET.
Get Descriptive Pamphlet at 35 Dey St., New York.

It is well to get clear of a Bad Cough or Cold the first week, but it is safer to rid yourself of it the first forty-eight hours—the proper remedy for the purpose being Dr. Jayne's Expectorant.

Burnett's Kalliston will impart a *clear, soft* and *beautiful* hue to the skin.

Various Topics.

EVERY-DAY LIFE.

BY LEAD PENCIL, ESQ.

DEATH! Has it terrors? Dr. MARVIN told us at the Liberal Club, the other night, that we are constantly dying while we live—that the cells which form our bodies are every day and every minute ceasing their functions, and new cells are forming. Death is simply a change of condition physically—the senses, one after another, cease to act; and yet even then the body is not dead. And he asserts that to die is not to suffer pain: it is simply going to sleep. It is an exquisite sense of rest which comes to us—painlessly, in the abstract. The martyrs who were burned at the stake, after the first few moments of suffering, seemed to have become transformed, and their sufferings ended in an ecstacy of joy. This, he thought, might be a purely physical result. Men and women who moan in their unconsciousness, when ill, often moan without suffering. The sympathy they awaken in their attendants cause the latter more pain than the sick ones endure.

We are constantly dying, yet do not die, in the sense in which we use the term, until the machine wears out or is stopped by the removal of an essential part of the machinery. Then the functions of the body cease to act. The force which has moved the machinery cannot operate it. But the force exists, and the machine resolves into its normal elements, to become transformed by the laws of nature into other forms of life. We live; we, individually, die. And yet we do not cease to exist—no part of us. Death is change. What kind of a change? Who knows the unknowable? We *can* follow matter. Can we follow spirit in its transformations?

WE are but pendulums at best. On the Staten Island Ferry, to-day, came a poor mendicant with his begging paper in his hand—a most abject object. By my side sat a brilliant, talented young fellow, not unknown to fame, more abject than he—more to be pitied than he, because he was dying of "nothing to do"! Not brave? Yes he was! And if I could report what he said to me, the reader would know that he had been and is brave.

"This false, false world!" he exclaimed.

"But this world is *not* false," I retorted. "There is a limit to the swing of the pendulum, that is all. Every man must move in some direction, if he moves at all, in the arc of the circle. If he is not going up he is going down. And when he reaches the lowest point he ascends—he must. If the pendulum stands still of itself, when it is moved it ascends. It must. Sometimes the clockwork of events is out of order. There is no power operating to move the pendulum. Sometimes, although the clock is wound up, the pendulum must be started to move the machinery. If the pendulum is lifted to the highest point without the aid of the machinery, it must swing to and pass the lowest, and will surely reach an equal elevation. But we must never forget that there is always a limit to its ascension. And so it is with human life. The man who starts as high as he can get, must go as low. I never knew it to fail. There are different planes to the arc of each life. They are differently graduated. The longer the pendulum the more gradual the descent and ascent, just as some men seem to travel a uniform grade in life."

I left my friend thinking about it, and went to look at another phase of life.

"What is the difference between happiness in good clothes and happiness in humble garb?" Here is a beautiful child, clad in softest silks, wrapped in softest and warmest wraps, her feet shod with the softest sandals civilization has devised. She is happy, and she has a happy mother, clad with equal taste, care and comfort. From what point in the arc is this pendulum swinging? Perhaps up; perhaps down; at any rate swinging in a higher plane—probably the pendulum is shorter—than this other little rosy-faced fellow with copper-toed shoes, a well-worn cap, plainest cassimere clothing made from father's cast-offs, probably. And this mother seems equally happy with the first. There is content in the face. Each seems to enjoy all that passes, and nothing that can give joy seems to escape the eyes and ears.

What is the difference in the quality of the happiness of each? Is there any? Or in the degree? Is vanity, or pride, a ministerer to happiness? It may be to some. I sometimes think so. But how? Not unless we know it costs some one a twinge of envy, is it? Let us think about it, and if it is the better happiness.

ARCHERY PRACTICE.

THE illustration given herewith represents the popular out-of-door game of Archery, which is yearly growing in favor in this country. If one visits Central Park,

ARCHERY PRACTICE.

in New York, or the grounds of many of the fine residences which line the Hudson, parties of young folks will be discovered engaged in this healthy and delightful amusement. A striking characteristic of our English cousins is their love for open air exercise, and in the pursuit of this will be found the secret of their ruddy cheeks and robust constitutions, which in many instances contrast so favorably with those of American women. The turf, the water, and the lawn have about equal sporting attractions, and while our brothers may be fond of horses and yachts, the women and children can have amusements at home which are nearly as interesting. Croquet has a certain charm, but ladies, like men, love changes, and the practice of Archery is found to be a most agreeable one. During pleasant weather parties congregate among the trees in Central and Prospect Parks, for trials of skill, sight, patience and nerve. Lawn parties having the same object in view promise to be popular this season at the springs, the sea and mountain side. All amusements of this harmless and healthy nature should be encouraged.

A HINT FOR FLEDGELINGS.

It is by no means so easy to get a manuscript printed as some unsophisticated authors fancy, for it has to run the gauntlet of those terrible persons known as "readers." All great publishers, like the Harpers, the Appletons, etc., have several regular readers, besides others, eminent in their various professions, whom they consult in relation to works of their several specialties. Their function is to give full consideration to, and their best advice upon, all matters submitted to them. For this they receive a salary; and it would be considered on both sides a breach of trust if they accepted any compensation whatever from the author for their work. In fact, unless there are special reasons to the contrary, the conscientious "reader" prefers never to see the author in relation to the book while the question is pending. When he has read the manuscript he writes an opinion, which he returns to the firm, sometimes expressed in a few words, sometimes in an elaborate analysis and criticism. But in any case he never recommends a book except after careful consideration. These opinions are carefully copied into a book and preserved for reference. If the first reader's verdict is favorable, the manuscript is then sent to another reader, who knows nothing of what his predecessor has said. Usually, and in all cases of any possible doubt, the work is sent to a third reader. With three opinions, by three different persons, the firm consider that they have materials sufficient for decision in the case.—*Springfield Republican.*

A WONDERFUL CLOCK.

DROZ, a mechanic of Geneva, produced a clock which excelled all others in ingenuity. On it were seated a negro, a shephard and a dog. When the clock struck, the shepherd played six tunes on his flute, and the dog approached and fawned upon him. This wonderful machine was exhibited to the King of Spain, who was greatly delighted with it. "The gentleness of my dog," said Droz, "is his least merit. If your majesty touch one of the apples which you see in the shepherd's basket, you will admire the animals fidelity." The King took an apple, and the dog flew at his hand, barking so loud that the King's dog, which was in the room, began to bark also. At this the courtiers, not doubting that it was an affair of witchcraft, hastily left the room, crossing themselves as they departed. Having desired the minister of Marine (the only one who ventured to remain) to ask the negro what o'clock it was, the Minister did so, but obtained no reply. Droz then observed that the negro had not yet learned Spanish, upon which the question was repeated in French, when the black immediately answered him. At this prodigy the firmness of the Minister also forsook him, and he retreated precipitately, declaring that it must be the work of a supernatural being.

Our Story-Teller.

THE LOST LETTER.

A STORY OF TRUSTING AND WAITING.

BY J. C. RETLAS.

THEY were leaning over the gate, looking back at the quiet gray house, where the harvest moon threw strange, shifting shadows from the bare branches, longing to call it "home," now, as they said their last words to each other.

"Good-by, RUTH, good-by. How long it will be GOD only knows; but when I come back, we shall never be alone again."

FRANZ DUNBAR needed no answering assurance from the pale, quivering lips. That was not a face to lightly break troth; she would be faithful to him through good and evil, though weary years should pass ere his return. He trusted her completely, and so went away to the war.

It was the fall of 1863—after the fearful slaughter of Gettysburg—when the heart of the country was heavy with its great woe, despondent in the midst of the struggle, and looking with sad, uncertain gaze into the dim future, not daring to prophesy the end. The call for help was loud; and among many others in Norton who put aside their present gladness—their home loves and comforts, for a deep, unselfish devotion to the country—was FRANZ DUNBAR. The rich old Squire, his father, opposed it with all the strength of his will.

"They're plenty of them, plenty of them, FRANZ, glad to go for a bounty, let alone what I would give them besides, if you will stay. 'Twould be a mercy to rid the land of them; but you, my boy, don't go. I cannot spare you. One more would make little difference, and those rebel sharp-shooters are sure to pick out the only men whom the world is better for. You will break that little girl's heart, at farmer KING'S, unless you heed my words."

Day after day the arguments were renewed between father and son, the strong tugging of inclination making FRANZ more unyielding on the other side. The great contest could not be waged successfully if the flower of the land held back in idle waiting and sent the off-scouring to fight in their stead. There must be brains to rule and lead, as well as hands to wield the weapons; so when at last a reluctant consent was given, young DUNBAR left to join MEADE'S Division, with a blessing wrung out from the father's heart, and a half-uttered curse on the cause that claimed him.

He was a man to win golden opinions from all who knew him. Brave as a lion, dauntless and daring as the knights of old on the battle-field; stern and unflinching in punishing crime, yet merciful to weaker men's infirmities; with a royal calm and patience in days of defeat and darkness; self-sacrificing as PHILIP SIDNEY, when he refused the cup of cold water his very soul craved; tender and gentle as a woman to the wounded and dying—no wonder the soldiers looked upon him with an enthusiasm that could dare and endure all things when "the Captain" led them on.

Among the many deserving of high honor, his name was seen again and again; and as flattering reports sped home to the village from comrades who went out with him, and half a year had gone, and still no great harm had happened to "the boy," his father trusted that he bore a charmed life, and would soon come back to them, "bearing his blushing honors thick upon him." "The Captain says the war will be over in six months," he told, with confident triumph, among many other of the Captain's sayings that passed for sure decrees with the villagers; and they looked forward to the New Year, at the latest, for a grand day of rejoicing, when they should greet their returning soldiers.

And RUTH told not the curious people that she had most right to be glad, but, in her secret, joyful heart, conned over the long letters that had come to her from all parts of the country, wondering how FRANZ could write, under so many tribulations, as often as he did; what it would be like to have only a drum's head to put your paper on, and to trace the words by the light of a camp-fire; or, worse still, the stock of a gun, with the wind continually blowing the precious sheet, and threatening to take strong possession of it. FRANZ had remembered her always, and the tears slowly dropped over the pages torn from his note-book, just on the eve of some terrible engagement, when his love and dread were all for her; or when, after the battle, he would not keep her a moment in suspense,

but, weary and dispirited as he was, wrote his word of cheer to reach her far-off home; or on some gloomy march, in the midst of privation and distress, when he forgot himself, to tell her of the poor fellows so much worse off. She grieved for his hardships more than if they were her's, yet counted them as nothing as she thought of her thanksgiving, when the wound that she magnified into a death-stroke ended only in a two weeks' confinement.

One afternoon in March, RUTH was going home from the office, with a pleased, merry look in her face, as if some bright thought were bearing her so far away that she did not mind the bleak, blustering wind that swept down the street, quickening her slow pace. In truth, she had sent a sweet surprise to her soldier, and was enjoying his wonderment, as he found no scrap of a letter with it. That was to go on to-morrow, but to-day, the envelope only held the picture he had begged for so often—a face half-sad, half-joyful, with a far-off, expectant look in the great gray eyes, and a wealth of dark-brown curls his hands had touched. On the back was written:—"*Mein Liebling* FRANZ.—R. K."

Her father stood waiting for her at the gate. There was something in the face that broke in upon her absorbing dream with a shock that made the present moment an eternity to her. It was that of a man who had been through a great conflict—haggard and worn, as if all courage had left him—who had nerved himself to tell the grief, and yet could not hide his dread and shrinking.

"What is it, father? Is there any news—FRANZ?" she said slowly, as if the words were forced from her.

An expression of impatience changed the fixed outline of his mouth as Mr. KING said quickly: "DUNBAR is well enough, I suppose. Do you think there is nothing else in the world but your lover, child? I do not mean that, RUTHIE; bear with your poor father, for a great misfortune has come to us."

Then he told her briefly that the company in which he had put all his wealth had failed—one of those sudden swamps as disastrous to large as to small holders—so little saved from the wreck that it was as nothing—even his broad lands and old homestead gone; for he had counted so entirely on success that these were mortgaged to one who would drive his claim to the very last dollar.

"I was wild to do it," he added. "Mr. DUNBAR advised me not. Yet it was for you, too, little girl—I thought 'twould be grand to give you such a dowry on your wedding day—and now we may not spend another New Year's here."

RUTH, knowing the worst, did not think this the greatest sorrow that might have fallen to them—did not realize how hard it was for a man who had come to the place of rest after the long labor of his youth, to be once more cast adrift upon the tide without the strength and energy and hope that had buoyed him up at first. So she and her mother told of brighter days to come—that they could do much—and that surely a way would be made for them so that they need not leave the dear old home.

A few weeks went by, and RUTH shook her head gaily as her father hinted that FRANZ's affection would grow cold when he thought he might have the whole family to take care of, when he came back from the war. She had written him all about the trouble, and that instantly a place had opened for her, and she was teaching, while her father had turned farmer in very deed; and with the rich crop they would have this year, and all the work they did, they would soon own the homestead again and not feel their other losses. She did not even hint at his loving her less, as people did in all the novels she had ever read. She would not wrong him by the ungenerous words.

Yet as the accustomed letter did not come, she was grieved, anxious; any other feeling, of suspicion or distrust, she would not cherish, spite of her father's worldly-wise maxims, and her mother's would-be consolatory looks. It could not be possible—she could not be mistaken—she told over and over to herself. The letter may be lost, going through so many hands, before it reaches him, now when dispatches are intercepted so often, railways destroyed and mails robbed. What can be trusted in time of war? Yet why this particular one, when every other has gone right? He may be wounded or a prisoner; and then how cruel he would think me not to write again! Yet, if he was, his father would tell it, and we should know. FRANZ does not wait for me and I ought to get *his* letter even if mine is lost.

RUTH went over her weary course of reasoning every day, and waited in vain for some word. Three months had gone; her first term at school was finished; she had worked with a will if not with her heart, and was very proud of the hundred dollars earned by herself alone. She laid it in her mother's hand that night with a little sigh that he to whom she might have told it so exultantly would know nothing now of all her brave efforts. Then she spoke her sudden resolution boldly:

"Mother, I must write to FRANZ again. I know the letter did not reach him. Something is the matter. There are so many miserable misunderstandings from lost letters—if you knew how he loved me, you could not doubt him."

"RUTH," exclaimed her father, "I forbid it. If he cared for you as you think, he would write again. He is not worthy of you, child. Something is wrong, I know; but 'tis nothing that he wishes to remedy. The Squire used to be very friendly with us, and at first he offered me any aid in his power, even to take the mortgage into his own hands, so that I need not hurry about it; but when he thought I might claim some of his offers, he suddenly grew cold—and it is 'like father like son.' He means to show us that he no longer covets alliance with our fallen house. The poor hath few friends, RUTH. Promise me, dear, you will not write. It is for yourself. I know best."

"If that is your wish, I will not, father," said RUTH, in a low tone, and the subject dropped.

Summer passed into autumn, and autumn wore to winter, and still RUTH taught her school, grew pale and heavy-eyed over her close confinement, while her father toiled early and late, and tried to think out some better way to clear the house of debt. It was a dark prospect for the KINGS. And all this time where was DUNBAR?

Now advanced to the rank of Colonel, following GRANT in his steady, onward march to triumph; always in the thickest of the danger; honored and beloved, but more desperate and reckless than of old, as if it was all one to him that he should rush headlong into the jaws of death. His comrades saw the change, and on the long march, sorely missed the bright, cheerful spirit that was wont to raise their drooping courage in the dullest time, by glad words and prophecies of good. He had grown so silent and gloomy, that they seldom knew that he was near them now; and it all dated from one miserable day in March, when he lost faith in what was holiest on earth to him.

He was on duty of inspection through the quarters, and in passing his friend FRANK MAYNE'S tent stepped in to speak with him. There was no one there, but as FRANZ turned away his eye lighted on a picture that lay on the open page of "Our Mutual Friend." He carelessly bent down to see the face and started as if stung; as RUTH smiled back at him with the same tender look he had watched so often. Mechanically he lifted the card, and read on the back, in her delicate, unmistakable hand, "*Mein Liebling* FRANZ.—R. K;" then replacing it, found his way back to his tent in a sort of maze.

What did it mean? How could it be? She should have told him she knew FRANK, if he was so dear a friend, when *he* had again and again written of his brother officer in such high terms. DUNBAR was a proud man, and as the thought came that her devotion to him was all a farce, and for reason, she loved the other, and kept it from him, his mouth closed with a bitter vow that from henceforth she should be nothing to him, unless the mystery was solved.

By and by he grew more patient, and said to himself, "her next letter will tell me, dear little RUTH. It will all be right." Then he read over her last well-worn sheet, and thought, "I could sooner doubt an angel. I will wait." But it was in vain. That long letter full of the sad changes at farmer KING'S, and all RUTH was doing and hoped to do, and her merry mischief over the picture, by some strange turn of fate never reached Col. DUNBAR'S hands; and so he gave her credit for some consciencious scruples that would not let her carry on the double treachery longer. He avoided his friend for weeks, and when at last he gathered resolution to ask him something about RUTH, he found he had gone to another regiment without one word of farewell.

One sentence in a letter Squire DUNBAR received about this time from his son, was a puzzle to him, but he did as it said, "Never mention my name to the KINGS, nor RUTH'S to me," and so the breach widened.

It was the night before New Year's, and the train from Washington was, as usual, crowded with Government officials, disabled soldiers, officers on furlough, anxious-faced women—all hurrying North. At the last station, a tall, fine-looking man, in Captain's uniform, limped in on his crutch, almost falling over in his eagerness to greet a brother officer whose eye he caught as he entered.

"Why, DUNBAR, old fellow, you on the list of halt and lame?" he exclaimed, as he wrung his hand. "We are friends in woe then."

"Yes, FRANK," replied our Colonel, "my last charge was too much for me. It is rather hard, when I hoped to serve Uncle Sam to the end. I am pronounced unfit for service for some time."

"Well, it's a good thing to go home to your 'ladye love' with some horrible scars; there's a consolation," said FRANK gaily.

"For you, may be; not for me," was the grave answer.

"I? No indeed, DUNBAR; I cannot plead guilty to the soft impeachment. The only love I am devoted to is a pictured one, that I have carried with me through so many dangers. I am now building quite a romance upon it."

DUNBAR visibly started. "Don't you know the original? Let me see the face, will you?"

"I? No," said the other, fumbling in his waist-coat. "It was very odd how I found it. I was going to tell you at the time, but I remember you were so deuced cool to me all of a sudden that I went off to my new command without seeing you. Here it is."

DUNBAR held the card in his hand, looking dimly at it, as he said:—"Tell me now."

"Oh, well it was only this: I found it one day in camp, near the sutler's wagon, in an open envelope—the outside one was gone. I suppose it was lost from the mail, and I thought 'twas a pity some unappreciative soul should get it, so I quietly put it in my pocket. The name was 'FRANZ,' on the back, but there were so many among the recruits who bore that honored cognomen, I knew 'twas no use to ask; so I added a proper quirl to make my 'k,' and it was all right. I knew a second could come from the same place."

"But it did not, FRANK. I would give worlds, if I had them, to undo your work," was the low, quick reply.

Captain MAYNE looked into his friend's face in utter bewilderment a moment; then the truth came to him.

"My dear fellow," he stammered, "I didn't know it. How stupid of me! Your list always went in 'F. DUNBAR.' I never once thought of you. What can I say?"

His heartfelt regret was too genuine for FRANZ to speak the reproaches that rose to his lips. He forgave entirely, as he hoped to be forgiven.

It was a glad welcoming home at the Squire's, spite of the sling which held the Colonel's right arm; and when the KINGS' misfortune and Captain MAYNE'S story were all told, the mutual troubles made the father so uneasy he could not rest till he had sent his soldier-boy right away to the farm.

"Give that to Mr. KING," he said, handing FRANZ a paper. "'Twill give them lighter hearts."

It proved to be a transfer of the mortgage to Mr. DUNBAR, cancelled by him, in Mr. KING'S name.

The house was all their own once more; and they who had mutually doubted each other, forgot the past ere the long explanation came.

RUTH had always waited, trusting that all would be right some day, and so her faith was crowned; and with it came charity that cherishes no remembrance of wrong. She only said:—"Ah, FRANZ! who would have thought one little letter could make so much sorrow for us?"

"It is all over now, dear," he whispered. "We are beginning anew."

SANDS OF GOLD.

Pleasure is precarious, but virtue is immortal.

Fair dealing is the bond and cement of society.

Hard words have never taught wisdom, nor does truth require them.

A passionate man scourgeth himself with his own scorpions.

Good company and good conversation are the sinews of virtue

The virtue of prosperity is temperance; the virtue of adversity is fortitude.

We should not retain the memory of faults we once have forgiven.

Slander is the revenge of a coward, and dissimulation his defense.

MY FIRST LION HUNT.

A WRITER in a London magazine thus graphically describes his first adventure in hunting lions:

On coming in sight of the natives, who had been left to watch the animal, I at once saw that it would be a case of close quarters, as the men only made signs and would not speak; and on our quietly asking where our expected foe was hanging out, they pointed to a large tree, certainly not more than forty yards distant from us. Taking a good look at the caps of my rifle, and feeling with the rod that both balls were close down, I took up a position in front of the tree just in the line of road the natives said the beast was in the habit of taking when going abroad, and placed a native with my second gun close behind me; the rest of our party and the native hunters distributing themselves in a circle round the tree, so as to be ready for whichever side she broke cover. All being ready, a signal was made to a number of natives stationed in the adjacent trees, and they began to shout at the top of their voices; and in an instant we heard a noise like the growling of a mastiff, increasing in sound and intensity. My readers must not fancy that the noise they hear from the kingly beast in captivity is anything like that which he makes when in his native walks. Placing his mouth near the ground, the monster gives a prolonged growl, which reverberates around in a volume of sound which can be heard for miles, striking every living thing with terror.

Such was the sound which now broke the stillness of the air. The native behind me pressed my arm, and told me she was very angry. Immediately after this she got up, and we saw her for the first time as she began walking up and down under the tree, as you see the animals in the Zoo do in their cages, lashing her sides with her tail and sometimes throwing it right over her back. All at once she saw me, rather stooped the fore part of her body, put back her ears, opened her mouth, gave three or four heavy growls, and showed the whitest teeth I ever saw in my life. At that moment I fired my right-hand barrel direct at the dent between her eyes, and no sooner had I done so than, with a frightful roar of agony and rage, down she came full upon me.

Thank God, I am steady and cool, and let her have the second barrel full in the chest; but it failed to stop her. I had just time to seize my second gun from the native, who, fortunately, stood like a rock; and not being able to get it to my shoulder, I fired both barrels from hip straight into her chest; but that did not stop the infuriated beast, for with a plunge she threw me flat on my back and lay on me, with one paw on each side of my chest. She then put her head down with that kind of growling noise with which a bull terrier worries any kind of varmint, right over my throat and chest. To attempt to describe the horrors of the situation I was in would be simply an impossibility. My friends and the natives were transfixed with fear, utterly unable to render me the slightest assistance.

But one little accidental circumstance saved my life. In being thrown down, I had providentially kept hold of my second gun, and on the brute stopping to worry me I thrust it up in involuntary self-defence. Laying hold of it in her massive teeth she took it out of my hands like a straw, and for some moments contented herself with venting her rage upon it, and broke it all to pieces. During all this time my friends, though but a few yards from me, feared to fire upon her lest their shots should strike me. Presently she seized me by the shoulder and shook me as a puppy does a ball of cotton, fearfully mangling and crushing the arm; and then for a time lay perfectly still, keeping her teeth in my shoulder. Suddenly she let go, rose slowly to her feet, staggered away a few yards, and fell dead. My friends, on coming to lift up what they fully believed to be my dead body, could hardly credit their senses at finding me still alive, and, with the exception of a badly mangled shoulder and arm, comparatively unhurt, the more so as I was perfectly drenched with the animal's blood.

It had long been the wish of my heart to have a hand-to-hand encounter with the "lord of the forest," and I certainly had it gratified with a vengeance. I have shot others since, but have never had so near a shave; and frequently, when I wrap myself up in her skin, now doing duty as a rug, I think to myself, with a shudder, how near death I was in obtaining it.

A ST. LOUIS woman, over six feet in hight, recently married a man who is but four feet nine. When she wishes to kiss him she has to stand him on a chair.

Ladies' Port-Folio.

ON BROADWAY.

THERE was gentle pride in her face
And a subtle grace in her pose;
She belonged to a high-born race
And her life was *couleur de rose.*

I touched the hem of her dress:
I inhaled its odor of flowers:
She stooped with sweet grace to caress
A darling some one called "ours."

The gold of her hair was as bright
As the eagles fresh from the mint;
The glance of her eye shed a light
That to my scared heart gave a tint.—

Her voice was like babble of brook,—
Fresh and sweet and musical too;
It swept in and out of each nook
The dead of my life to renew.

I remember the picture she made:
I remember the musical tone:
I forget not the light and the shade
Nor the tropical warmth of her zone.

I cherish the glimpse of her heart
As a memory, precious to me;
Henceforth of my little, a part
For others shall ever be free.

For the little we have is not ours;
'Tis loaned and we surely must pay.
Like the beauty and fragrance of flowers,
We are born and are gone in a day.

The sunshine of life, and the shade,
Are the joy and the grief that we give;
The debts that we owe must be paid;
We must labor to live and let live. C. D. B.

THOUGHTS ON BEAUTY.

BY C. H. C.

IT is my belief that the plainest face may be made to grow beautiful, if, indeed, it possesses no positive deformity. I have seen faces without one regular feature—faces which in repose were undeniably ugly—render themselves, by a smile or an expression of the eye, irresistibly fascinating. This miraculous change of countenance was, of course, produced by the beautiful soul enshrined within, true beauty proceeding altogether from the soul—a beauty that never fades, never dies. How often do we see the most regular and statuesque features, combined with delicacy of complexion, wanting entirely that peculiar and irresistible charm, a lovely expression. There is no fair face so charming as that which is unconscious of its own beauty. I am sorry to say such a face is a *rara avis*, for almost every handsome man or woman is perfectly well aware of his or her attractiveness, and the simple consciousness of it gives to the countenance an expression of vanity and self-conceit.

I believe that it lies within the power of every human being to become, in a greater or lesser degree, the possessor of a soul-beauty which will remain even in the countenance of age. It is simply to cultivate those graces and beauties of mind and disposition that are most calculated to give pleasure and happiness to others, as well as contentment and serenity to one's self. Meekness, modesty, innocence and singleness of heart, truthfulness and purity of soul, benevolence and above all, piety—each yields its own peculiar charm to the expression which glows in every feature, and especially in the eyes. A face of perfect beauty, like that I have in my "mind's eye," not only smiles with the lips, but the lovely soul shines out through every lineament, and actually sheds a halo around. Once or twice in my lifetime I have seen such a countenance.

I once knew a young girl, tall, fair and fragile as a lily, whose expression was the most angelic I ever beheld. It must have been one of the purest and loveliest of souls that animated that delicate form. Modesty and goodness beamed in her gentle smile, innocence and holiness dwelt in her sweet eyes of heaven's own blue. She walked through the world like a being from a higher sphere—all reverenced, all worshiped her. Her beauty was not of earth; so she took her departure to the courts above, just like the melting of a snow-flake—aye, just as silently and as yieldingly as a snow-flake melts in the dark waters of the sea. For years consumption, like a "worm in the bud," had, almost unknown to herself, preyed secretly, but with a grasp, alas! too fatal, upon her delicate constitution; and, although neither herself nor her family appeared to observe it, strangers remarked, with pain, her gradual decline, and whispered their regret that one "so young and beautiful should perish with the flowers."

An angel *was* she—pure, confiding—
An angel *now*—more bright!
Too pure for earth—she's now abiding
In regions of delight.

FACTS AND FANCIES.

"A perfect woman! nobly planned,
To warn, to comfort, to *command.*"

IN looking over the RURAL of April 20th, I find the above lines quoted, and followed by an article, in which the writer declares herself not in unison with the last sentiment—"to command." My first impression was, that some Turk, having heard of the Mormons in this country, had come here to establish himself (?)—but, upon further perusal, concluded it must be a voice from the Middle Ages, still sounding down through human lips.

So then, we are to dress, read, sing, play, smile, etc., etc., besides doing an indefinite amount of labor—such as cooking, washing, scrubbing—simply to please this being, who is, after all, only a HUMAN being (and sometimes a poor specimen at that)—making it the *ne plus ultra* of our lives to cater, entirely, to his fancy and taste. But now (just supposing the case, of course) what if this commander returns home, ruled oftentimes, not by his own spirit, but by that of the demon Drink, and, being "monarch of all he surveys," maltreats the servants and children, destroys the furniture, and, perhaps, sooner or later, robs his family of shelter and food, to cancel the account made at the poison-monger's bar! This man must, I suppose, be "warned" and "comforted" and obeyed? Again: he may be deficient in all the qualifications necessary to make a successful business man, and through miscalculation, or stupidity, become involved, and lose all. But it would never do for the partner of his joys and sorrows, gains and losses, to take the chart and compass and help steer through the business fogs that blind him. That would be *commanding*, and we are only to "warn" and "comfort."

The very circumstance of ADAM being placed in Eden "first and foremost," argues quite strongly in favor of woman helping, at least, to command. It is quite possible that the ALMIGHTY, having created ADAM, gave EVE, afterward, as a sign that with her counsels and commands ADAM'S "dominion over the earth" would be more acceptable.

It is said that the progress of a nation's civilization can be estimated by the deference paid to its women. But if woman does't "trundle" out into the world, and by her worth and dignity *command* respect and admiration, all the deference that would be awarded her would not be likely to turn her head. That there are yet some happy homes, I, also, am truly thankful. That there might be many more, I firmly believe, if Mormon women (and some that are not, perhaps) would rise *en masse* and "*command*" the miserable wretches (who have so long deluded them) to the stake. Thank GOD, the light of the Nineteenth Century is fast dispelling the lingering shades of ignorence, and *man* has been declared "fallible." FRIENDLY HAND.

Broadalbin, Fulton Co., N. Y.

THE GARDEN FOR WOMEN.

THERE is nothing better for wives and daughters, physically, than to have the care of a garden; a flower-pot if nothing more. What is pleasanter than to spend a portion of every passing day in working among plants and watching the growth of shrubs, and trees, and plants, and to observe the opening of flowers, from week to week, as the season advances? Then how much it adds to the enjoyment to know that your own hands have planted and tilled them and have pruned and trained them—this is a pleasure that requires neither great riches nor profound knowledge. The wife or daughter who loves home, and would seek ever to make it the best place for husband and brother, is willing to forego some gossiping morning calls for the sake of having leisure for the cultivation of plants, shrubs and flowers. The advantages which women personally derive from stirring the soil and snuffing the morning air are freshness and beauty of cheek and brightness of eye, cheerfulness of temper, vigor of mind, and purity of heart. Consequently she is more cheerful and lovely as a daughter, more dignified and womanly as a sister, and more attractive and confiding as a wife.

FLATTERY is an ensnaring quality, and leaves a very dangerous impression. It swells a man's imagination, entertains his vanity, and drives him to doting upon his own person.

CALUMNY MADE USEFUL.—I am beholden to calumny, that she hath so endeavored and taken pains to belie me. It shall make me set a surer guard on myself, and keep a better watch upon my actions.—*Ben Jonson*

Reading for the Young.

JUPITER AND THE ANIMALS.

FROM THE FRENCH OF LA FONTAINE.

JUPITER, the king of gods and men,
Declared one day,
That all that breathed should then
Appear before him,
And each might say
Without dismay,
If in his body, or his brains,
There was anything he'd like to change.

All came. The god complaisant, nodded, smiled,
And turning to the monkey, said, "Begin, my child,
Compare yourself with these, your friends,
And tell me if you think that one transcends
Yourself in beauty."

"I," said the monkey, "have four feet;
And every one declares my portrait's sweet.
I'm satisfied. Why not?
But I should not be fair,
If I failed to mention to you, Mr. Bear.
No artist could ever paint his face;
His ugliness is by us all felt as a deep disgrace."
Here Mr. Monkey took his seat,
And Mr. Bear rose quickly to his feet.
Deep distress, and loud complaint,
Was by every one expected;
But to his beauties, nor his faults,
The bear's attention was directed.
"My form," he said, "is very fine;
And on the whole, I do not whine
For more attractions.
For my friend, the Elephant,
I'm feeling very sad;
For from his ears you might take much,
And to his tail might add."
Mr. Elephant politely replied to Mr. Bear,
That he thanked him for his courtesy,
And all his friendly care;
But, for himself, he liked big ears,
And preferred a little tail;
And all he wished to say that day,
Was for his friend, Miss Whale.
Of her wisdom, and her goodness,
He had not any doubt;
But for elegance, and beauty,
Her form was much too stout.

Jupiter asked all the beasts;
'Twas the same with all the others,
Bats, to the faults they had themselves,
And lynxes toward their brothers.

Each looked at self with different eyes
From those he looked upon his neighbor;
To him, he nothing could forgive,
To self, he showed much favor.

Although this happened long ago,
'Tis much the same to-day,
For in the pockets of our friends
We all our faults do lay.

Harrisburg, Pa., 1872. E. C. P.

OUR LETTERS FROM BOYS AND GIRLS.

A Good Letter is this from SARAH VIRGINIA W., a friend and pupil of "COUSIN JOHNNIE:"—I thought I would write to you, as I see a great many of the girls and boys do. Pa takes your paper, so I read all the letters, and think it very nice. I think you must have a great many friends, to get so many letters. I live in the village of Matawan, N. J., and think it a very pleasant place. We are getting along nicely in the way of improvements in our streets, and hope some day to have a city. I go to school at the Matawan Institute, and take music lessons of "COUSIN JOHNNIE," the very same one that your readers are so well acquainted with. I have two brothers and one sister. We all go to school, except my sister, and she will soon be old enough to go too; her name is ADA. We had a party at "COUSIN JOHNNIE'S" this Winter, and everything passed off very pleasantly. We had music and dancing and a nice tea. I have tried FANNIE'S recipe for sponge cake, and think it very nice. If this letter is worth publishing, please put it in the RURAL. Perhaps it is too long. I do not know, as it is my first.

A Pony, a Watch, and a Dog.—DELLA P. M. B. has lots of presents. She says: I am a little girl eleven years old, and live in a pleasant country town called North Camden. I cultivate lots of flowers each side of a brick wall. Under the tall evergreens I have a set of croquet. I hang a lantern on a tree summer evenings, when I have company, and we have lots of fun. When I was six years old my brother sent me a pony on the cars, that I could ride or drive; a nice little fellow, I assure you. His name was "Billy." Last fall I sold him for $100, and sent the money to brother, and Christmas I found a nice gold watch and chain on the tree for me from him. Last Fourth of July I had sent me, in a little box, from another brother, three hundred miles away, a little black dog with his ears trimmed and his eyes as black as a button, and a silver collar on his neck, with my name engraved on it. I loved him dearly, but he died, and is buried in the orchard.

The Daughter of a Light-House Keeper, (B. MAY C.,) writes:—"I am a girl twelve years old. My father is the keeper of the Tibbitts Point Light-House, Cape Vincent, and has been for six years. It is a very pleasant place in the summer time. We have a great many visitors to see the light-house. They say it is a very pleasant place, and they should like to live here in the summer, but not in the winter. We have a large yard and a nice swing; there are nice places to go in bathing, too. We have a horse, and father takes me to school in the summer; it is three miles to the school house. I am a great lover of flowers, and so is my mother, and we have a great many. We do not keep a boat; I wish we did, for there is nothing I like better than a boat ride by moonlight.

"Wild Rose," the Indian Girl, writes us another letter in which our young friends will be interested. She says:—"As some of the girls would like to hear from Wild Rose again, I will pick up courage to write. I am still going to school, and I have become almost civilized. I am going to try to form a Club for the RURAL. It would be so nice if I could get one of those presents to take home with me. I am going home to spend vacation. My home is a long way off, in Cherokee. MATTIE, if you wish to correspond with me you can do so by addressing Box 68, Fort Smith, Ark. Will some one tell me how to bleach a white straw hat?—WILD ROSE.

A Trout Pond.—ALICE W. V., of Oswego Co., N. Y., writes about her father's fishes:—My father is a tanner; he has a nice pond of water; it is never dry. He has a small trout pond, with a nice lot of trout in it. In the winter he cuts holes in the ice, and they come and eat meat out of his hand.

SQUARE-WORD ENIGMA.—No. 2.

1. A MOP.
2. To engage in.
3. A disease.
4. What an ox becomes when killed.

☞ Answer in two weeks. S. A. R. DEAN.

RIDDLE.—No. 3.

As came to Bo-Peep,
His unhunted sheep,
Their tails behind them swinging,
So come to a king
Now o'er the Nan-ling,
Each one a message bringing.
Proud agents of state,
From distances great,
With tails *ad capita* clinging.

But that which is strange
Is, these tails' polite change
From behind to before, when, work ended,
Their owners desire
From the king to retire,
And wish not to leave him offended.
If now you have guessed
What's so poorly expressed,
Let's hear, for my riddle is ended.

Wells is engineering the Cincinnati Convention in Boston....Virginia Liberals propose to support Judge Davis and Horace Greeley at Cincinnati....Col. Forney says Pennsylvania will go solid for Grant....Iowa has abolished the death penalty....Secretary Robeson has again been before the Naval Investigating Committee; he made some startling statements about expensive engines without ships, and good ships with worthless engines; he demanded a complete vindication from the charges made against him by the Sun....It is thought Gov. Hoffman will veto the new charter for the City of New York.... The Liberal movement is making progress in New Orleans....The Republicans of West Jersey have held a Liberal meeting at Camden....A Liberal call has been issued in Indiana....The Exposition Hall is to be used in Cincinnati for the Liberal Republicans....A copy of the American counter case has been given to the public. ....Mr. Elihu Burritt has written a letter to Congressman Peters, pleading for a withdrawal of the claims for consequential damages....The Senate has refused to admit Ablett of North Carolina ...The Beach Pneumatic Tunnel bill for New York city has passed at Albany; also several other bills for quick transit railways.... Gov. Palmer of Illinois has made a speech, "defining his position;" he thinks it time to break party ranks....Charles Francis Adams has written a letter, in which he says he is not averse to a proper nomination from Cincinnati....An Irish league has presented the name of Horace Greeley for Cincinnati....The Liberal movement has reached Connecticut, and a call has been issued....Hon. Geo. W. Julian goes back on Grant....The Missouri delegation to Cincinnati will number 1,000....The Germans of Cleveland have issued a Liberal call....Maryland and Nebraska are going to Cincinnati....Maryland Republicans have been instructed to vote for Grant. ....The President has been called upon by the House of Representatives to demand the release of Dr. Hounrd....The Brooklyn Ring is being investigated... Gen. Geo. J. Stannard, Collector of Customs at Burlington, Vt., turns out to be a defaulter in the sum of $36,000.

Crimes.

Geo. W. Robinson shot John Scarborough, in a saloon, in Wheeling, Va., on April 19th, killing him instantly....James C. Laughton, aged 15, committed suicide in Boston on April 19th.... Henry H. Faxon of Quincy, Mass., a member of the Legislature, has been assaulted by one Odiorne....Nellie Jewett of Claremont, N. H., drowned herself on the the 16th ...Wm. Hindell, the absconding banker of Girard, Ill., has been arrested in California.....In the trial of Mrs. Fanny Hyde for the murder of Geo. W. Watson, in Brooklyn, the jury failed to agree....There has been a terrible fight between the U. S. Marshalls and desperadoes, at Barren Fork, Cherokee Nation: ten men were killed, three of whom were marshals; in consequence of this fight, Gen. Sheridan has sent two companies of infantry to Fort Gibson....A large number of drunken stabbing affrays have recently occurred in New York city and Brooklyn; as many as 8 and 10 cases are reported in one day....A man named Clark shot his wife, and cut his own throat, in Indianapolis, on the 23d.

Obituaries.

Judge Sturgis, of Sturgis, Mich., on the 17th, aged 84 .. Eliza Couldock, the actress, at Salt Lake, on the 19th....Geo. Heyer, editor of the Oshkosh Democrat, on the 20th....Augustus Bishop, son of Madam Anna Bishop, on the 22d, in New York ... Chief of the Pottowotamies, aged 100, died on the 23d. He paddled the first Chicago family across the lake, in 1818.

SEMI-BUSINESS PARAGRAPHS.

Beauty's Best Auxiliary.—Ask the belle of the season what appointment of her toilet-table holds the highest place in her esteem, and she will reply, without a moment's reflection, Hagan's Magnolia Balm. Nothing, she is thoroughly aware, contributes so powerfully to enhance her charms and render her irresistible as that most delightful and healthful auxiliary of Beauty.

Gov. Merrill on the Marion Watches.—Messrs. Giles Bros. & Co., Chicago, Ill.: I take pleasure in saying that the watch I bought of you, being 21,767, "Fayette Stratton, Marion, New Jersey," made by the United States Watch Co., (Giles, Wales & Co.,) has given perfect satisfaction; its variation from mean time since regulated being scarcely perceptible.—Samuel Merrill, Gov. of Iowa.

Facts for the Ladies.—Louisa Kelley, Ackworth, Ga., has, with the general use of a Wheeler & Wilson Lock-Stitch Sewing Machine, for three years supported a family of four adults and two children, built and paid for a house, and has $100 cash on hand. See the new Improvements and Woods' Lock-Stitch Ripper.

It is no joke, but a fact, that the Blanchard Churn is literally *an Automatic Butter Maker*. Try it for yourself. Send to any dealer in first-class farm machinery for a circular,—or a churn.

THE MARKETS.

MONEY AND TRADE AFFAIRS.

New York, Saturday, April 27, 1872.

A rise of 2 per cent in gold since our last report is an incident to continued heavy importations, with only moderate exports of domestic produce. The Treasury is now paying out the May gold interest, but as this barely equals the current receipts of gold for customs, the open market is higher on the prospect of considerable gold shipments. The Government (gold-paying) stocks go up in correspondence with the dearer price of gold, and most of these have become scarce in the market.

General trade continues active, and the imports of foreign goods are running ahead of last spring so considerably as to excite attention to the accumulating trade balance against the country. The Treasury holds an unprecedented sum of gold, about $130,000,000, against which, the outstanding gold notes on the Treasury are only $26,000,000. But the Secretary pursues the stubborn policy of very small sales from his surplus. He did the same thing last spring and summer, and gold, of course, advanced on the export demand. The prevailing sentiment of the business public is much against the course of the Treasury, as there is no question that the Treasurer might as safely put out $15,000,000 gold notes, as to restrict his circulation to less than 30 per cent of his enormous gold balance. It may be that he is influenced by the unsettled nature of our political relations with Great Britain on the Washington Treaty.

The following are the comparative movements of the City Banks for the past fortnight:

	April 13.	April 20.
Capital	$87,155,500	$87,155,500
Loans	274,354,300	273,050,600
Gold and Greenbacks	56,210,700	58,187,200
Deposits	123,287,100	125,630,700
Circulation	27,387,000	27,911,300

PRICE OF STOCKS AND BONDS.

American Gold	113	N. Y. Central Scrip	63
U. S. 5-20's of 1867	115⅝	Rock Island	113¾
U. S. 6s of 1881	118½	N. West	81¾
U. S. 10-40s, 5 ₱ cts	111	Do. Preferred	95
U. S. New Loan	112⅛	St. Paul	62
N. Y. Bounty Loan	108¼	Do. Preferred	81
Tennessees	70	Lake Shore	97
Virginias, new	51	Ohio and Mississippi	49⅝
Missouri Bonds	96	Toledo & Wabash	78¼
U. S. Currency 6s	126½	Erie	72
Central Pacific	103	Union Pacific Stock	40
Union do	93	Adams Express	59½
Western Telegraph	75	American Express	74½
Pacific Mail	73⅛	United States Exp's	75
N. Y. Central Stock	99¾	Bills on London	109¾

The advances made on last week's table are: On Gold and Government Stocks 2 per cent.; Tennessee Bonds, 2¾; Central Pacifics, ⅜; Union Pacifics, 1¼; Pacific Mail, 5⅜; Erie, 10; Union Pacific, 1; Adams Express, 1¾, and Rock Island, ¾ per cent. The Stocks of N. Y. Central, Lake Shore, N. W. St. Paul, Ohio & Wabash about same as previously quoted. In Harlem Stock, (not usually an active speculative,) there is an advance of 12@14 per cent, on favorable legislation at Albany in regard to the Fourth Avenue and its Grand Depot. The general market strong at the close of the week.

PRODUCE AND PROVISIONS.

New York, Friday, April 26, 1872.

Receipts.—The receipts of the principal kinds of produce since our last embrace 10,077 bales of cotton; dried fruits, 173 pkgs.; eggs, 19,503 bbls.; flour, 58,049 bbl.; wheat, 36,200 bush.; corn, 233,200 do.; oats, 201,938 do.; barley, 500 do.; grass seed, 362 bags; beans, 938 bbls.; corn meal, 1,026 do.; do., 1,779 bags; hops, 38 bales; pork, 5,928 pkgs.; beef, 209 do.; cut meats, 3,588 do.; lard, 5,316 do.; lard, kegs 774; butter, 11,138 pkgs.; cheese, 3,764 do.; peanuts, 1,725 bags.; 1,219 hhds. tobacco; 7,712 boxes do.; 4,038 bbls. whisky; 252 bales wool.

Butter.—A more settled appearance of spring increases the caution of buyers in deference to new white, and only really choice half tubs will bring 35c. Welsh is rather slow of sale, and a fair round parcel is now quoted in favor of buyers. The late invoice of California gave complete satisfaction, and an inquiry for the new addition is quite established. State pails are doing no better than selected half tubs. There has been a shipping demand for old, using 425 pkgs. We quote pails, 35@36c.; half tubs, 34@35c.; Welsh, 31@32c.; common state, 25@30c.; Western, 20@29c.

Beeswax—Is held firmly, at 41c. for Southern.

Beans.—Mediums and marrowfats are the same price, a feature which has not occurred before in several years. Receivers are able to place mediums promptly, while for other descriptions the trade drags. Sales of prime mediums at $3.20@3.25, good do. $3@3.10, fair do. $2.80, pea $3@3.30, kidney $3@3.50, red kidney $2.25@3, prime marrowfats $3.20@3.25, good do. $3@3.15.

Cheese.—There is still a very unsatisfactory feeling. The backwardness of the season lends some hope of getting rid of a good part of the old make at comparatively fair prices. Where a prompt bid is made at anything near the views of holders, a trade generally follows. There has not been enough new received as yet to compel a market. Shippers bid low, say about 14@14½c., but holders refuse this feature. Some of the cheese reshipped from England have been offered at 17c.; they are in good condition. We quote, the factory, 17@17½c.; good do., 16@16½c.; fair do., 15c.; farm dairy, 13@16c.

Cotton.—Has been very dull and weak. The advices from the South speak of warm weather. The principal cause of the depression lies in the apprehension that considerable quantities of cotton will be applied on May contracts; many holders for this month are anxious to close out.

	Uplands.	Alabama.	N. Orleans.	Texas.
Ordinary	20	20⅜	20⅜	20⅛
Good Ordinary	22	22⅛	22⅜	22⅝
Low Middling	22⅞	23⅛	23⅜	23¾
Middling	23½	23⅞	23⅛	24
Good Middling	24⅝	24⅞	24⅞	24⅞

For future delivery latest sales on the basis of low middling are at 22⅞c. for May; 23⅛c. for June; 23⅜c. for July; 23⅝c. for Aug.

Dried Fruits.—The few parties who control the stock of apples find it difficult to realize late extreme prices, and, in instances, concessions have been made. Peaches are hard to sell at unchanged prices. Small fruits are scarce and firm.

Apples—Old State, qrs., 7@8c.; Western, new, 10@10½c.; Southern, new, qrs., 8@9c.; do. fine, sliced, —@—c.; new State qrs., 11@11½c.; do. sliced, fine, 13@15c.; Peaches, peeled, new N. C., 17c.@18½c.; do. Geo., 15@16½c.; peeled E. Sh. Va., 15@16½c.; new unpeeled halves, 7½c.; do. quarters, 5½@6c. Plums, 25@27c. Cherries, new, ₱ lb., 30@32c. Blackberries, 12½@13c. Raspberries 30@32c.

Eggs.—We are having now the heavy supplies that in most seasons come along during Easter, and as the demand is usually lighter at this period, when shad come in, receivers find it difficult to place the supplies even at the material concessions allowed. Sales of Western at 16c.; State, Pennsylvania, Jersey and Long Island, 16½@17c.; Southern, 15@15½c.

Flour.—The home trade have been free buyers, but shippers have bought sparingly. Prices generally are higher, most marked in the high grades, which are scarce. $6.35@6.85 for superfine State; $7.00@7.10 for common extra do.; $7.15@7.25 for good to choice do.; $7.30@7.75 for fancy do.; $6.35@6.85 for superfine Michigan, Indiana, Ohio, Iowa, &c.; $6.50@7.30 for extra do.; $7.30@8.10 for choice extra do., including shipping brands of round hoop Ohio at $7.25@7.75, and trade brands of do. at $7.80@9; good to choice white wheat extras at $8.15@9.25; Minnesota, fair to very choice extra, at $7.75@9.25; St. Louis at $8.00@9.00 for common to fair extra, and $9.10@11.50 for good to choice. Southern at $8.00@11.50 for extras and $9.50@12 for good to choice. Rye at $4.10@5.10.

Fresh Fruits.—Regular arrivals of Charleston strawberries relieve the dull appearance of the fruit market, and choice will bring $2.50 per quart. Recent shipments were not in fine order, but sold at $2@2.25. The portion of apples that were caught in the canal are nearly worthless. Prime Russets are quotable at $5.50, and lots range at $4.50@5. Cranberries are reduced in stock to a retailing quantity, quoted at $5@5.50 per crate. Peanuts are abundant in the south, and prices are weak here. Wilmington, choice, $2@2.25 per bus.; others, including Virginia, $1.70@1.90 do.

Grain.—In wheat a material advance is quoted, based upon a better foreign market and moderate stocks. The inquiry from all sources has been fair. We quote—No. 2 spring, in store, $1.58@1.61; No. 1 do., $1.62@1.65; winter red Western, $1.78@1.80; amber Western, $1.57@1.60.; and white Western at $1.87@2.05. Rye is quiet at 90@92c. for Western. Oats are coming in freely, and have sold lower: Western, 52½@53½c.; Ohio, 53½@55c. Barley is active and firm at $1.05@1.56 for common to choice Canada West. Corn is offered at lower figures with a slow inquiry. Western mixed, 75c.; Western yellow, 76@75½c.; white Southern, 76c.

Hay and Straw.—Reports from the interior show that farmers have not more than enough stock for their own use, owing to the backward season, and dealers here hold on to winter prices. Sales at $1.40@1.45 for shipping; $1.50@1.75 for retail qualities; 50@65c. for salt; 80c.@$1 for clover. Straw at $1.05@1.10 for long rye; 85@95c. for short rye; 75@85c. for oat; 50@70c. for wheat.

Hops.—As usual at this season business in full parcels is checked, everybody holding off to hear from the new crop. Brewers are taking a few lots at late prices. Sales at 50@55c. for prime, down to 25c. for common; English, 60@65c.

Maple Sugar.—There is some accumulation of stock as the opening high prices keep buyers out of market a while. Very fine samples are arriving from this State; the range is 16@19c.

Poultry and Game.—The supply of dressed is unusually small from near points, as farmers are busy plowing and planting, and not much Western is due at this season. We quote:

Live, State and N. J., 20@22c.; do. Western, 18@20c.; roosters, 11@12c.; ducks, per pair, $1@1.12. Geese—Western, $1.75@2; do. Canada, $1.75@2; do. Jersey, $2.75@3.25; turkeys, 23@24c. N. J. and Pa. chickens, 25@30c.; do. turkeys, 30@32c.; capons, 42@45c.; broilers, $2.12 ₱ pair; Western chickens, 18@23c.; do. turkeys, 27@28c.; live are scarce and wanted.

Game.—Snipe are in good supply and saleable at the low figures. Wild pigeons arrive freely and are lower. English snipe per doz., $1.75@2; plover, $1.50 do. Wild pigeons $1 feathered and $1.12@1.25 picked.

Peas.—Canada are quiet at $1.25@1.27. Green are in good demand and steadily held at $2@2.20. Southern blackeyed have been sold at $2.70 per two-bushel bag.

Provisions.—Mess pork is held with confidence, with some speculative feeling. We quote at $13.75 for spot, $14 for June. Prime mess, $12.75 for spot, and $13 for May, with sales at these figures. Dressed hogs are steadily held at 5¾@6¾. Middles are in good export demand, and decidedly higher. Short rib, 7¾c.; long clear, 8¼c.; short clear, 8½c. Cut meats are firm at 9¾10c. for hams in pickle, 9@9½c. for do. in salt, and 5¾@5¾ for shoulders in salt. Smoked meats at 10½@11c. for hams, and 6¾@7c. for shoulders. Lard is held higher, with considerable inquiry, and a strong market reported from the West. Western steam, 8⅝c. for spot, 9½c. for June, and 9⅝c. for July. State lard is quiet at 9¾@10c. Beef dull at $7.50@9.50 for plain Western mess, and $10@12 for extra mess. Beef hams are dull at $24@27. Tierce beef is inactive at $15@17 for prime mess, and $18@21.50 for India mess. Tallow is held higher; prime city, 9¾c.

Seed.—Clover is selling at 9@9¼c. for Ohio, 9¾@9¾c. for prime Indiana and Michigan, and 10c. for State, with the business limited to the home trade. Timothy is quiet at $2.75@3.25 for common to prime.

Vegetables.—The large supply and good quality of old potatoes makes dealers very earnest in their instructions to shippers of new from the South this season in reference to sending small sizes. There are always a detriment to trade in the New York market, and this year if seed will be neglected, as buyers will use their advantage in selecting choice old. Bermuda produce is quite freely offered with potatoes at —@— ₱ bbl., tomatos 30c. per 5-qrt. box, onions $4 ₱ crate. Old potatoes are in good receipt by rail and prices are easy. Green peas arrive as heavily as 1,500 crates each steamer, and are quoted at $4.50@5 ₱ bu.

Potatoes, Early Rose, bbl., for seed, $2.25@3.00; P. Blows, $2.25@2.50; Prince Albert, $1.75@2; Monitor and Goodrich, $1.25@1.50; Jackson, $1.50@1.75; Dyright, $1.50@—; sweet Del., $3.75@4.00. Onions, red and yellow, $2.—@2.50; Coun., 100 strings, $3. Garlic, per 100 bunches, $22@24. Turnips, Russia, bbl., $2. Cabbages, per 100, $5@8. Beets per 100, $1.25. Carrots per 100, $1.50.

Whisky—Is quiet, and steadily held at 90½c. for Western.

Wool.—There is a better inquiry from manufacturers for fine lots of domestic and foreign, at full prices. Pulled are easier in price. Latest sales are at 80@85c. for XX Ohio; 70c. for extra pulled; 75@83c. for super; 87c. for unbed; 50c. for Texas; 32c. for California burry; 46@46½c. for Cape; 41c. for Mestiza.

COUNTRY CHEESE MARKETS.

Little Falls, N. Y., April 27, 1872.

The market at Little Falls for the week ending April 27th was quite well represented for the season, about 800 boxes from farm dairies having been delivered. Much of this was of rather poor quality, being badly skimmed, and prices went as low as 7c. for the poorest. The sales of fair, meaty cheese, well cured, run from 12c. to 13½c. A considerable quantity was sent forward to New York to be sold on commission. Only a few factories were in market, the prices for this class of goods ranging from 13½c. to 13¾c. Between 200 and 300 tubs of butter were delivered, sales being made at 28c. to 30c.

We have advices from abroad for the first week in April. Our London correspondent reports a steady sale for American cheese, extra fine bringing 70s. to 74s.; fine, 65s. to 68s.; seconds, 60s. to 64s. The other descriptions of cheese sell as follows:—English Cheddar, 66s. to 68s.; Wiltshire, double, 60s. to 63s.; Cheshire, medium, 60s.; fine, 68s. to 72s.; Scotch, 66s. to 71s. Dutch Cheese.—Edams, 60s. to 68s.; Gondas, 46s. to 56s.; Derby shape, 64s. to 66s. Butter continues scarce for fine, but for secondary and inferior sorts buyers name their own figures. The quotations are as follows:—Cammells, 116s., for extra; Corks, 128s. to 132s.; Normandy, extra, 136s.; Canadian, 70s. to 90s. The corresponding prices last year were as follows: Friesland butter, 150s.; American cheese, 74s.

The weather during the early part of the week in Herkimer was cold, with a light fall of snow.—X. A. W.

LIVE STOCK MARKETS.

New York, April 25, 1872.

There has been quite an increase in all kinds of live stock, and the markets show a weakening in consequence. The shad season may be said to have regularly opened, and people begin to turn to them for a change. Eggs have also cheapened, leaving meats above the general ideas of consumers, hence their neglect to such an extent that at the present writing the markets are well nigh demoralized, particularly in the sheep line. There is more call for spring lambs to serve up with the green peas arriving from the South.

Beeves.—Total for the week just ended, 8,776, against 8,247 for the previous week. This is a very heavy run for a fortnight, and still there is not much decline. About ½c. covers it, but the feeling is much weaker now than it was this day week. There are several droves unsold to-night. The supply was very large last Monday, amounting to 168 cars at Communipaw, 122 at 100th street, and 14 at Weehawken. Large as were the numbers, all were sold. Good quality helped the trade. There were cattle on sale which brought 14c. by the yardful. They were splendid premium-grade Durhams of 10¾ cwt. Even the Texans were of pretty good quality, especially those which had been still-fed. We are now getting many distillery cattle, and the opinion prevails that there are a good many of them to sell this spring. The present warm weather will send them forward. Our receipts of all kinds of cattle since Monday have been 3,451 head. Fat droves sell at 13@13½c., fair cattle commanding 12½@12¾c. Texans are worth 11@12c., as per quality. One drove of scant, 6¾ cwt., went at 12c., 57 lbs. per cwt. Bulls are worth 5@6c. ₱ lb., live weight. Five cars good 7½ cwt. Illinois cattle run out at 12½@13c., with two cars still-fed, 1,225 lbs., grass, at 12¾c., 58 lbs. per cwt.

The following are the closing prices for the week

In comparison with what cattle brought one week ago, for net weight of beef:

	This week. Cents.	Last week. Cents.
Choice beeves, ₽ lb	13¼ @ 13½	13¼ @ 13¾
Good to prime	12½ @ 13	12⅞ @ 13⅛
Ordinary to medium	11⅞ @ 12¼	12 @ 12½
Lowest grade	11 @ 11½	11 @ 11⅝
Average sales	12 @ —	12¼ @ —

Milch Cows.—Cows have sold better during the past few days, and prices are $3@5 per head higher. The late cool weather, with a good beef market, has enabled milkmen to dispose of their fat cows to advantage, and this always makes them the more willing to buy fresh animals. True, milk has been very abundant and low, but this is not likely to continue. Some poor cows have been sold at $25@30 each, with ordinary to medium at $40@55, good to prime $65@80 very few going above $75. Receipts for the week 86.

Sheep and Lambs.—Receipts for the week 19,202 against 12,374 the previous week. This large increase in numbers, together with a falling off in the demand after mutton was advanced commensurate with the high prices of live stock, has now caused a reaction, and we rate sheep half a cent lower than they were quoted the beginning of the week. Besides this, the market is very dull, and many lots remain unsold. The late prices were the highest for many years, and mutton eaters couldn't stand it, or at least they objected strongly. The high rates also brought stock forward faster, and we now quote 6¼@8c. for clipped, and 7½@10c. for wool lots, a few extras selling at 11c., such as 71 extra 110 lb. Mass. A car 89 lb. O., sheared, sold at 6¾c., with a car good 90 lbs. at 8c., and two cars unshorn Mich., 78½ lbs., at 9½c. Lambs vary from 14 to 19c. per lb., so wide is the range of quality. By the head they sell at $6@9, and are in demand.

Hogs.—The 32,593 head now reported are 4,600 more than were received the previous week. The market rules dull and heavy at close upon ¼c. decline on dressed. There are not enough live selling to make a price, but it would be difficult to obtain 5c. for prime hogs. City dressed sell at 5¾@6¼c.

Veal Calves.—These are increasing in numbers, the arrivals for the past week being 3,151. They are also coming forward of better average quality. The cool weather of last week caused heavy shipments of dressed calves. Some of them arrived in good order and sold at 10@12c., but many of those coming in today—warm weather having set in again—are in bad condition, and the sanitary police take them. We repeat that it is unsafe to send dressed calves to this market thus late in the season. Live vary from 5 to 6½c. for small and poor, up to 7@8¼c. for fair to extras, very few even of choice calves exceeding 8c. One lot Bucks Co., Pa., 160 in number, of 130@150 lbs., just sold at 8c., with a lot 120 lb. State veals at 6c.

SPECIAL NOTICES.

FOR MOTH PATCHES, FRECKLES

and TAN, use PERRY'S MOTH and FRECKLE LOTION. The well known and reliable remedy for Brown Discoloration of the Face. Prepared by Dr. B. C. PERRY, Dermatologist, 49 Bond street, New York. Sold by *Druggists*.

RUPTURE CAN BE CURED

without suffering. ELASTIC TRUSSES are superseding all others. Before buying Metal Trusses or Supporters, send for a descriptive circular to the ELASTIC TRUSS CO., No. 683 Broadway, New York.

New Advertisements.

AVOID LEAD POISON.

TIN-LINED LEAD PIPE is the only water pipe in the market which combines safety to health with strength, durability, facility of bending, and making perfectly tight joints. Water flows through it as pure as if drawn through silver. It is approved by all the leading chemists and physicians in the country; also, the Water Commissioners of New York, Brooklyn and Boston, in addition to the plumbing of houses, it is largely used in conveying water from springs and wells, also for beer pumps and mineral waters. Circulars and sample of pipe sent by mail free. Address THE COLWELLS, SHAW & WILLARD M'F'G CO., 313 Center St., New York. Price 15 cents a pound for all sizes. Also manufacturers of Block-Tin Pipe, Lead Pipe, Sheet Lead, Solder, etc. ORDERS filled at sight.

HARVARD UNIVERSITY,
Cambridge, Mass.
Technical and Scientific Departments.

Thorough and systematic instruction for the civil and topographical engineer, the mining engineer, the chemist, naturalist, farmer, florist, landscape gardener, overseer and stock-breeder.

For the Circular of these Departments for 1872-73, or any other information about Harvard University, address J. W. HARRIS, Secretary, Cambridge, Mass.

LOW CASH RATES!
THE
Charter Oak Life Insurance Co.
OF HARTFORD, CONN.
ORGANIZED 1850.
$10,000,000 ASSETS.

Issues policies of Life Insurance on all the ordinary plans at lower rates than other mutual companies and pays annual dividends increasing yearly. The plan called

DEPOSIT INSURANCE,

lately introduced by this Company, is superior to any short term Endowment or *Tontine* plan, as it fixes a large surrender value for the policy at the end of any of its current years.

First Mortgage Sinking Fund
Thirty Years
7 Per Ct. Gold Bonds
AT
90 and Accrued Interest.

The Road runs from Buffalo to the Detroit River, and is the Eastern link in the new AIR LINE from BUFFALO to CHICAGO, and has been under construction for about two years past by railroad men who have seen the necessity for a STEEL RAIL, LOW GRADE SHORT ROUTE between the great railroad systems which diverge from Chicago, Toledo and Buffalo.

Among the builders of the road, by whose cash subscriptions 200 miles (out of 230) have already been graded, bridged and made ready for the superstructure, a large part of the steel rails bought, all of the materials for the stations and a part of the equipment purchased, are:

MILTON COURTRIGHT, JOHN F. TRACY, WM. L. SCOTT, DAVID DOWS, HENRY FARNHAM, R. A. FORSYTH, HENRY H. PORTER, JOHN M. BURKE, M. L. SYKES, Jr., B. F. ALLEN, all Directors either in the Chicago and Northwest or in the Chicago, Rock Island and Pacific; GEO. OPDYKE, of the Midland Road; JOHN B. ALLEN, SIDNEY DILLON, DANIEL DREW, J. S. CASEMENT, J. & J. CASEY, O. S. CHAPMAN, JOHN ROSS, DAVID STEWART and F. H. WINSTON.

THE ROAD will be

33 MILES SHORTER THAN ANY OTHER ROAD,

either BUILT or in contemplation, between Buffalo and Chicago, and will also shorten the distance between Toledo and Buffalo 23 miles.

THE MAXIMUM GRADE on the entire line does not exceed FIFTEEN FEET to the mile—and Ninety-six per cent. of the Road IS STRAIGHT.

The ROAD WILL BE COMPLETED and in running order on or before December 31 of this year.

The principal and interest of the bonds are payable either in New York, London or Frankfort.

We confidently recommend the bonds to all classes of investors.

DOTY'S IMPROVED
CLOTHES WASHER,
WITH THE
METROPOLITAN BALANCE WEIGHT.

This machine will wash clothes well and thoroughly, much faster and easier than can be done by hand, and with far *less wear to the garments.*

What is Said about It.

"You cannot do a better thing for your wife on a washing-day than to provide her a Doty Washer and a Universal Wringer. It will keep aches from her back and arms, wrinkles from her forehead, and roughness from her hands. It will do the work of a hired woman, and save your linen from being scrubbed out and her temper from being chafed out."—*N. Y. Weekly Tribune.*

Why the Universal is Superior to all other Wringers.

It has **ROWELL'S PATENT DOUBLE COGS.**

It has the **PATENT STOP,** which keeps the Cogs from disconnecting.

It has the **MALLEABLE IRON FOLDING CLAMP.**

It has the **FOLDING APRON,** or Guide.

It has **Two PRESSURE SCREWS,** which give double the capacity for pressure.

Sold by the House Furnishing and Hardware Trade generally.

CARHART'S
PATENT TWO-HORSE
Pulverizing Cultivator

Was Awarded the First Premium at State and County Fairs in 1870 and '71.

It is superior to the best Wheel Cultivator.
The price is only Twenty Dollars.
The draft is reduced nearly one-half.
The depth you wish it to run is regulated without the use of wheels.
It can be drawn close to a tree or plant without injuring it.
It is not disturbed by short undulations of earth, like the Wheel Cultivator, but pulverizes, levels and fits the ground for the Mowing Machine better than any Cultivator in use, and can be used for more purposes than any other implement on the farm.

Syracuse, N. Y.

HILL'S
"Archimedean" Lawn Mower

In placing this LAWN MOWER before the Public for the season of 1872, it needs no recommendation, as it has a world-wide celebrity. With the improvements recently added to this favorite Mower, we are fully warranted in saying it has no equal in the WORLD. And its immense sale for the last 30 days throughout the United States is sufficient proof of the above assertion and of its great superiority. This Lawn Mower is constructed upon truly scientific principles, and it is the only PERFECTLY BALANCED Lawn Mower ever made, operated by a ball and adjustable handle, points that are indispensible, securing ease of operating, and a perfect, beautiful and level cut.

The Hill's "Archimedean"

was the FIRST (and original) BALANCED LAWN MOWER invented in this country or any other, was patented in the United States and Great Britain, and its invention brought into general use a machine that is now a necessity, and almost an indispensible article. All others now made are copies of this machine, and the public are cautioned against them.

☞ For sale by all the leading Seedsmen and Agricultural Implement Dealers throughout the United States and Canada.

Illustrated Catalogues and Testimonials post free, upon application to us or any of our Agents.

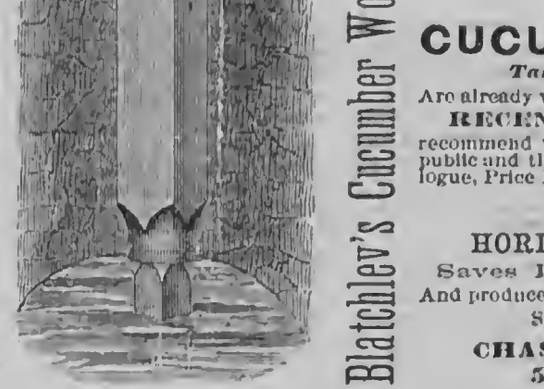
FARMERS, DAIRYMEN AND BUTTER BUYERS!

PACK YOUR BUTTER
IN
WESTCOTT'S
RETURN BUTTER PAIL

Approved and recommended by the leading authorities of our country on dairying, and acknowledged by all butter dealers to be the very best package in use.

Butter packed in this Pail brings **5 to 10 cents more** a pound in the New York City market than the same quality in any other package.



READ THIS:

NEW YORK, Nov. 15, 1871.

We, the undersigned, Produce Commission Merchants of the City of New York, consider Westcott's Return Butter Pail, manufactured by Silsby Bros., Belmont, N. Y., *the best package in the market.* It is our experience that Butter packed in this Pail *sells more readily and commands a higher price* in this market than in any other package, and we heartily recommend its general use by the dealers, dairymen and butter buyers who ship to this city.

Respectfully,

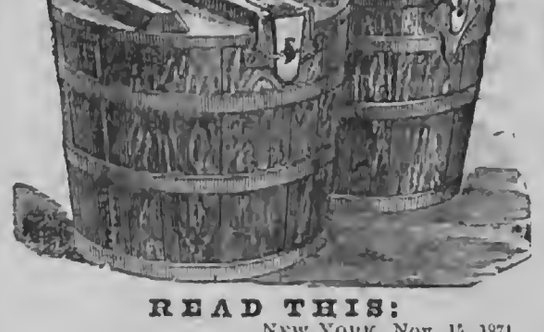
(Signed by 45 leading Commission Merchants.)

The Westcott Return Butter Pail meets my approval as a good butter package. It is one which I always feel safe in recommending.

X. A. WILLARD,
Dairy Editor Moore's Rural New-Yorker.

Dairymen, send for a Circular! Dealers, send for a Price List! We are the sole manufacturers of **Westcott's Return Butter Pail,** and also manufacture very extensively Butter Firkins, Half-Firkin Tubs, 25-pound Butter Pails, Well Buckets, &c., &c.

SILSBY BROS.,
Belmont, Allegany Co., N. Y.
Principal Warehouse, Binghamton, N. Y.



The *uniform success* of the Clipper Mowers in the field, the testimony of every farmer who has used them, that they are the *lightest in draft,* the *most durable* and the *most economical* machine for the farmer to buy, fully substantiates what the proprietors have always claimed—that the Clipper is the **Best Mower in the World.**

To the No. 4 size is attached the Dropper (cutting 5½ feet, with *separate Finger-Bar* for reaping), constructed with great improvements—in fact perfected; and in point of efficiency, strength, lightness of draft and symmetry of proportions, it is, as a Reaper, also unequaled. Farmers! see it before you buy. Trust your own judgment upon it. Look at its many improvements possessed by no other machine. Remember, it is fully warranted. Send for Pamphlet.

CHEAP CORN CULTURE.

LATE SPRING! CROWDED WORK!

This year a large amount of work must be done in a very short time. With our wide Harrow more than twice as much ground can daily be prepared for seed as without it, and all crops *cheaply cultivated* through the season in a *superior* manner.

ALLEN HIGLEY, Windsor, Ohio, says:—"I saved one-half month's labor in two days, getting a much better crop without using a hoe."

ANDREW RAESSLER, Shelbyville, Ill., says: I can harrow (when as much ground with it as with other Harrows."

EDWIN THORNE, Millbrook, N. Y., says:—"We can dispense with cultivating once each way, saving a vast amount of labor."

E. F. SMITH, Morning Sun, Iowa, says:—"It was much easier on the team, though one-third wider, doing more work."

L. R. AUSTIN, Coldwater, Mich., says:—"I have a 40 and a 30-tooth square drag, but with *your* Harrow can do twice the work in half the time."

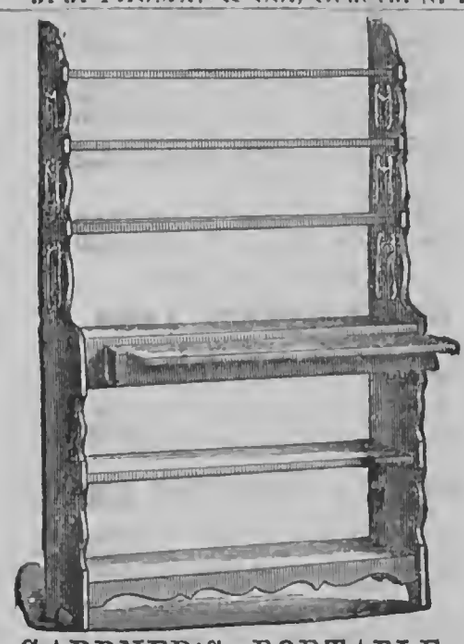
IRA BEARD, Cahoka, Mo., says:—"I think it equal to three common Harrows."

F. PETITT, Salem, N. J.:—"My brother says his does the work of three old Harrows; mine I think saved me $5 in one and a-half hour's work."

BOYS RIDE AND DO ALL THE HARROWING.

21-page Catalogue; 11 pages farmers' experience.

J. J. THOMAS & CO., Geneva, N. Y.



GARDNER'S PORTABLE
BOOK-RACK, BOOK-CASE, AND WRITING DESK COMBINED.

This is the first good article of furniture that has ever been made, which can be taken apart in less than a minute and packed away or shipped from place to place all easily as a few short boards, and can be set up again by any person in a few moments without the aid of any tools. Small sizes form a substantial and complete Book-Rack. Larger sizes form a substantial Writing-Desk and Book-Case Combined.

Prices for large sizes, 5 feet 4 inches high, solid Black Walnut, from $10 to $22. Prices for smaller sizes down as low as $1. Also, Portable Wardrobes, prices $10 to $20.

A liberal discount to the trade. Ten per cent. off to all preachers.

The First Premium was Awarded
on our Book-Racks and Writing-Desks at the
Great Fair of the American Institute
NEW YORK, 1870.

Our goods can be found at the Furniture Dealers and Bookstores generally throughout the country.

Paints, Oils, Blacking, &c.

ARE YOU GOING TO PAINT?
MORE THAN
100,000 HOUSES
HAVE BEEN PAINTED WITH THE
AVERILL CHEMICAL PAINT
IT IS THE BEST

In the world for exterior work upon Cottages, Villas or Buildings of any kind, whether built of brick, wood or iron. It is a liquid, *ready for use*, and requires no oil thinning or drier. Purest white, and any desired shade can be had in packages from one gallon upwards.

EXTRACTS FROM OUR LETTERS:

CHAS. HALLETT, Esq., of Riverhead, L. I.:—"Years ago I had your paint applied by the side of the best white lead. The lead requires repainting, but the Averill Chemical is yet looking well."

Gen. DAVID H. STROTHERS:—"Your Paint fulfils your representations."

Rev. S. C. ALEXANDER:—"Our Institute has saved $150 by using your Paint. It is splendid."

PETER HENDERSON, Esq.:—"I find the Chemical Paint retains the colors and gloss far superior to that done by Oleo lead and oil at the same time."

Gen. JAS. NEGLEY, M. C.:—"I find it the cheapest and best."

SETH THOMAS, Esq.:—"It gives better satisfaction than any paint I ever used."

Sample card of beautiful colors, and recommendations from owners of the finest residences in the country, furnished free by the

AVERILL CHEMICAL PAINT CO., 32 Burling Slip, New York, or 118 Superior St., Cleveland, Ohio.

P. S.—The superiority of these Paints has already brought numerous *worthless* imitations in the market. We caution the public against using them.

The Season for Painting
HAS COME AGAIN.

If you propose to paint, first send stamp for a book called "Plain Talk with Practical Painters, with Samples of Colors." The book is worth a dollar, and costs nothing. JOHN W. MASURY, 111 Fulton St., New York. ☞ Specialty in Pure Paints and Colors. Masury's Ready-Made Colors are the only ones which stand the test of time. Do not be deceived.

The Herdsman.

LONG-HORN CATTLE.

YORKSHIRE, Eng., has the credit of giving rise to the Long-Horns. They enjoyed a considerable local reputation. The district of Craven was their original home. Before BAKEWELL'S time CULLEY described them as "Long-bodied, big-boned, coarse, flat-sided, and often lyery or black-fleshed." But many even of these Craven cattle were noticeable for rotundity, length of carcass, mellowness of skin and the excellent quality of their milk. The improvement of the breed dates from 1720. Sir THOMAS GRESLEY and a blacksmith named WELBY did much to improve this stock. Mr. WEBSTER of Canley near Coventry was also a Long-Horn breeder of local note. BAKEWELL improved the breed and they were known as Improved Leicesters. His breeding was close and there was little risk run by crossing. He commenced with two heifers from Mr. WEBSTER'S herd at Canley, using on them a bull from Westmoreland. His aim was rotundity of form and aptitude to feed. In this he was successful. But the result was not an ability to fill the milk pail like the old breed. Mr. MARSHALL describes the characteristics of the Improved Leicesters, or Long-Horns, as follows:—"Fore-end long and light (this we may observe is a fault apparent in the few herds remaining in England); neck thin, head fine but long and tapering, eye large, bright, and prominent. The horns vary with the sex; those of bulls comparatively short, from fifteen inches to two feet. The oxen extremely large, from two and a-half feet to three and a-half feet long. Cows nearly as long, but fine and tapering. Most of the horns hang downward by the side of the cheeks, and then, if well turned, as in many of the cows, shoot forward at the points; the shoulders fine, thin, and well placed; girth small, as compared with Short-Horn and Middle-Horn breeds; the chine remarkably full when fat, but hollow when low in condition; loin broad, and hips wide and protuberant, the quarter long and level, fleshy thighs, with small, clean, but comparatively long legs; carcass round, and ribs well sprung, flesh of good quality, hide of medium thickness, and color various—the brindle, the flinch-back, and the pye most common. As grazier's stock, they undoubtedly rank high; the bone and offal small, and the fore-end light, while the chine, the loin, the rump, and the ribs are heavily loaded, and with flesh of the finest quality. In point of early maturity they have also materially gained; in general they have gained a year in preparation for the butcher."

Such was the character of the Improved Long-Horn, as established by those leading breeders. The Short-Horns seem to have soon displaced this breed, with all its peculiar excellences. There is scarcely a single herd of these Long-Horns left in Leicestershire, Westmoreland, Lancashire, and Yorkshire, which were their original homes. The Short-Horns are dormant. A recent writer says:—"Sixty years ago the Long-Horn was the most important and fashionable breed of cattle inhabiting the counties of Derby and Stafford, and there still linger in the district wondrous tales of the quantity of milk yielded by some favorite cow, or the more marvelous weights which the oxen and heifers attained, when grazed on the rich, alluvial pastures of the Trent, the Dove, or the Derwent. From some cause or other, the breed has gradually receded in public estimation, and the only herds of note now existing in England are those of his Grace, the Duke of Buckingham, at Stowe Park, Bucks; Sir JOHN HARPER CREW, Bart., Calke Abbey, Derbyshire; JOHN GODFREY, Wigston Parva, Hickley, Leicestershire, and R. H. CHAPMAN, of Upton, Nuneaton, Warwickshire. The Duke of Buckingham has a herd of fine animals, numbering at the present time nearly 100 head; they are directly descended from the

LONG-HORN CATTLE.

Bakewell, Canley, Rollright, and some of the purest old Warwickshire families. The herd is of long standing, and has been bred with great care and judgment. Animals from this herd have frequently distinguished themselves in the show-yard.

"Sir JOHN HARPER CREW, who was formerly an admirer and breeder of pedigree Short-Horns, and though it is scarcely ten years since he commenced to cultivate the Long-Horn, now possesses a herd of forty breeding cows, which, for uniformity of type, could scarcely be excelled by their great rivals, the Short-Horns. They come to hand mellow to the touch. The skin, though thick, is covered with a profusion of rich, soft hair; the rib is well sprung, chine broad, shoulders well placed, barrel round and deep, the general appearance in unison, denoting a healthy and vigorous constitution. They are good milkers, and, as a rule, prolific breeders. What appears to us as their only weak point in these days of high feeding and quick returns is, that they are longer in arriving at maturity than the improved Short-Horn; consequently they give a less return for the quantity of food they consume.

"T. W. Cox, Esq., of Spondon Hall, near Derby, has a very good herd, tracing their account from the herd of Bakewell and the old Warwickshire sorts, on an outlying farm which he has in hand. Both rearing and cheese making are practised at Spondon. A small herd is kept for the use of the hall. All the steers are made off to the butcher at about three years and a-half old. Mr. Cox has long been a successful exhibitor at the Royal, as well as the Smithfield and Birmingham fat shows, and also at many of the local societies in the neighborhood. The family of COX have been celebrated for many generations as breeders of Long-Horns. Mr. CHAPMAN of Nuneaton keeps a herd of thirty cows; they are heavy-fleshed animals, of the old Warwickshire blood. All the calves are reared; the most promising males are saved as bulls. Cheese making is practiced, and Mr. CHAPMAN expresses himself well satisfied with the quantity of the produce; the milk is considered richer in butter than that of the Short-Horn. By a careful selection of breeding animals with a view to early maturity, the Long-Horns might yet regain much of their ancient popularity."

"OVERFLOW OF THE GALL."

ONE week ago to-day I had the misfortune to lose my heifer, two years old—one I raised myself, and thought a good deal of. She was in good order all this winter—indeed, fat; but towards spring she became sick occasionally, and then settled into a steady sickness of three weeks, and died, leaving a calf two weeks old. No one seemed to know what the trouble was. The doctor I employed called it the "dry murrain;" others inflammation of the kidneys, bowels, lungs, horn-ail, or something else. She was never so weak but what she got up without help, till the day she died; and until the last two days would eat and drink some. After she died a *post mortem* examination was determined upon, and three or four of my friends proceeded to the business. Verdict—"Died from overflow of the gall."

I replied that I should sooner think that she died of dropsy; for when the hide was being removed, a yellow kind of water flowed from her body, and the fat was like a soft jelly, full of the same kind of liquid. Her heart-case was enormous in size, and when opened with a knife, discharged a vast quantity of water. The external surface of the heart looked like fried liver, though it appeared natural inside; the lungs of a bluish color; liver looked natural; gall-bag about four inches long. Now, I would like some one to tell me whether overflow of gall occasioned all this. Does it induce a dropsical condition? What are its symptoms and cure? Answers to these inquiries may enlighten my own mind and benefit others. —H., *Friendship, N. Y.*

OUR correspondent is not special enough in describing the appearance and actions of the animal before death. Did the eyes turn yellow, and the skin and urine? Was rumination suspended and the animal thirsty? Was she costive, listless? We suspect the trouble was jaundice, caused by the obstruction of the passage of the bile from the gall bladder into the duodenum. It is a common cause of suffering among cows in spring. We know of no such disease as "the overflow of the gall."

A Blind Cow.—I have a cow that got hooked while in the stanchions, by the cow standing next to her. The tip of the horn struck her in one eye and she is now blind in both. Can any of your readers tell me why she should lose the sight of the eye opposite to the one injured, and what (if anything) will restore her sight?—C. D. R.

Land Department.

NEW JERSEY LANDS AND PEOPLE.

IN the "Diary of a Ruralist," under date of Jan. 17th, I notice remarks upon New Jersey—its "poor lands and penurious people." "Ruralist" should remember that railroads almost universally pass through the poorer section of country, and, in going from New York to Philadelphia, he can by no means see a sufficient portion of our State to enable him to form a just idea of its fertility. True, we have a good deal of idle land that is producing nothing; much more that is miserably tilled, but some that is producing well, and this is the case in every State. New Jersey, from the character of her soil, her location, and her very great facilities for reaching the markets, ought to be the Garden of America. But, even in this age of discoveries and improvements, who could expect that, yet? Though one of the oldest States, she is still in her infancy, and time must be given her to bring the soil to that degree of fertility which will soon, of necessity, be demanded of her.

But, even now, notwithstanding the "hundreds and thousands of acres of poor, worn-out land" that "Ruralist" saw, there are (according to Agricultural Report for 1870, page 38) only four States in the Union that produce as much per acre as our State, while the Empire State stands number ten. I think these statistics will show that, whatever may be the state of her soil as regards fertility, New Jersey will compare favorably with her sister States.

But, with the advantages over other States which she possesses, it would be discreditable to her to only *equal* her neighbors. Much of our land is exceedingly well calculated for market-gardening and for small fruit raising, as well as for producing the more common farm crops,—and we would like to inspire every tiller of Jersey soil with the knowledge that land must be liberally fed with manures in order to get the largest returns; with a zeal that would lead him to try to excel in whatever branch of agriculture or horticulture he might be engaged, and with an aversion to the *common* system of *poor* farming.—JERSEY FARMER.

From Fredericktown, Knox Co., O.—The first settlement of our county was in 1800; since then forests have been receding before the woodman's ax for the last seventy years. The county was heavily timbered, consisting of oak, walnut, poplar and ash, they being the most valuable kinds, with an abundance of maple and beach. Bottom land is timbered principally with sycamore, some of large dimensions, measuring thirty feet in circumference. Our county is well adapted to the growth of all kinds of grain. It is, throughout, so well adapted to miscellaneous agriculture that our farmers pursue all branches of husbandry. Fruit trees were long neglected, but of late we are setting out new orchards of apple and peach trees. The first total failure of peach trees was in 1856; the previous winter was the coldest known to any of our inhabitants in this county. The mercury ran down to eighteen degrees below zero. The winter of 1871 was much colder, and peach trees, as well as less hardy trees, were more or less injured. The mercury ran down to twenty-six degrees below zero. The farms of Knox county vary in size; there are a few that are quite large—from two to four hundred acres each. Farms are selling at from $55 to $80 per acre.—A. D. SHERMAN.

California Land Monopoly.—W. F. G. writes:—"I learn that California is cursed with land monopolies—that there are these disadvantages to a settler that ought to be removed. Can you tell me anything about its educational facilities?" From what we can learn, the land monopolists of California are a curse to it. Some of them do not even live on their land, nor lease it to tenants; but annually employ a force to put in crops, and again at harvest time another force to gather them; the balance of the year they reside elsewhere. There are many most excellent schools in the State, but, if we are correctly informed, most of the money to support the schools is raised by local taxation. There is no general fund nor public lands set aside for school purposes, as in many of the other new States. Hence the school tax, in many localities, especially where there are large non-resident land owners, bears heavily upon a few.

From Vermillion, D. T.—Please tell FRANK W. TYLER, who inquires the price of Southern Indiana land, and the inducements offered by that locality for a farmer of small means, that no matter what the price, or how extraordinary the inducements, it cannot exceed, if equal, the inducements offered to men of that class by the Vermillion Valley, Dakota. For climate, soil, class of settlers, future railroad prospects, and geographical position, to say nothing of the rapid influx of population, and land free to all who will improve it within from five to fifteen miles of active, growing towns, this valley cannot be vied with by any portion of the United States.

REFERENCES:—Every citizen of Dakota, "FOSTER'S Outline History of Dakota," and every traveler who has paid a visit to this portion of our territory.—F. MCKERCHER.

Inquiries About Florida.—1. Is Florida a healthy country? 2. Would it be advisable for a person somewhat troubled with bilious disease to go from the North to Florida to live? 3. Where would be the best place south of the 37th parallel for a person with limited means to locate? Will not some of your Florida correspondents answer?—H. A.

Inquiry About Oregon.—Will some of the subscribers of your valuable paper, residing in the State of Oregon, please answer the following questions:—What is the price of land, of stock, farm labor, and what the kind of timber? Also any kind of information that would be interesting to a person thinking of going there to settle.—A. COMPTON.

Arboricultural.

ARBORICULTURAL NOTES.

Unfruitful Dwarf Apples.—I have an orchard of dwarf apple trees, which have been set out eight years, and have borne scarcely any. Now, I would like to know if it ever will? Most of the trees have grown nicely. Will they ever take root and grow as standards? I would like to place standards in their place if they are worthless.—C. Z. LAURENCE, *Laurence Co., Pa.*

DWARF apple trees usually come into bearing when quite young, and we do not know why yours are an exception to the general rule, unless they have already taken root above the junction with the stock, and are changing to standards. If they are growing vigorously, we should feel encouraged to allow them to remain, provided they are of choice sorts. Perhaps insects destroy the fruit when small, and you would be no better off if the trees were standards. Dwarf apple trees should bear wherever standards succeed.

Deep-planted Pear Trees.—Last year I planted one-year-old pear trees over holes dug large and deep on new land, and did not allow enough for the settling of the filling. The trees now stand from four to eight inches lower than they did in the nursery. Ought they to be raised? The soil is not clay, and not much of it level. The trees are growing well.—X., *Middletown, N. J.*

IF the trees grow vigorously we should not replant them; but to have the roots covered eight inches deeper than they were in the nursery, is a little too much, but on light, dry soils, four inches would not be sufficient to do much injury. In taking trees out of a heavy soil, such as used by most of our nurserymen who cultivate pear trees extensively, and planting them in lighter soils, the roots should be buried a little deeper than they were in the nursery.

When to Cut Timber.—In the old of the moon of August, 1870, I cut down about half an acre of small growth of timber, mostly hickory, from five to fourteen inches in diameter. It lay in the tree as it fell till the following winter and spring, when I trimmed it up and chopped it into stove wood, and put in woodhouse. In the winter of 1871 and 1872 I burned it for common fire-wood, and have not discovered any worm eating or powder-post, as is common for wood in such circumstances. I saved a few buts for ax handles. I split one of them the other day and found it as withy and free from worm-eating as the day it was cut.—JOSIAH FOWLER, *Erie Co., O.*

Mexican Rhododendron.—Please inform me what is the name of the shrub from which the inclosed leaves are taken, and oblige—SUBSCRIBER, *Santa Fe, New Mexico.*

THE leaves are those of some species of Rhododendron, but we cannot give the specific name without having the flowers, or at least knowing their color and size.

When to Transplant Box.—L. W. asks:—"When is the proper time to transplant Box?" Now.

The Swine-Herd.

IMPORTATION OF NEAPOLITAN SWINE.

SEVERAL months since, I forwarded an order to one of the most distinguished breeders, to send me a pair of his best Neapolitan pigs. They have just arrived at this port, in the Italian bark "Lonisa Bruno." They are superior to any I ever saw in England, and quite equal to those imported by my friend, Mr. CHAMBERLIN, of Columbia County, some twenty years ago.

These pigs are of pure slate color, are almost entirely destitute of hair, giving the skin the appearance of that of a West India lap dog. In form, they are much like Fig. 23 of Lord Western's Essex boar, at page 81 of "Harris on the Pig." The barrel, however, is somewhat longer; the back crowning instead of slightly hollowed; the face and ears a trifle more in length—the latter turning forward instead of being pricked up.

The Neapolitan is a size larger than the Essex, matures as early, and fattens as quickly. The pork is said to be *more delicate* than that of any other of the pig kind, with a flavor resembling that of a very fat, tender, six months chicken.

This is a valuable breed of itself, and admirable for crossing on coarse white swine. The produce of such is highly esteemed in Europe. It is said that the Neapolitan has perfected the improved Essex, as now bred in England. A. B. ALLEN.

New York, April 24th, 1872.

PIG-PEN PAPERS.

Who Originated the Improved Cheshires?—In the RURAL NEW-YORKER of March 16th, I find a statement concerning the improved Cheshire pigs, to wit:—That it originated by Mr. T. T. CAVANAUGH of Watertown, N. Y. I also have two circulars from Messrs. CLARK & GREEN of Belleville, Jefferson Co., N. Y., which state that Mr. A. C. CLARK of Henderson, Jefferson Co., N. Y., was the originator of this justly celebrated breed. It is not probable that both are correct; and I would be pleased to know which is.

I have two pigs from Messrs. CLARK & GREEN that answer the description of this breed perfectly; and for beauty and size—considering the amount of feed given—I think there is no other breed of hogs in Central Ohio that will equal them.

I also have a Chester White hog, a year old, that will not weigh over 250 pounds, that we have fed well. Last Saturday I had him castrated and his mouth examined, and many of his teeth were gone, and what were left were nearly all rotten. He has been kept on swill and corn. Will some one please give the desired information?—J. A. REAMY.

Black Teeth Ailing E. W. Libbey's Pigs.—I think that E. W. LIBBEY'S pigs (see RURAL April 6, page 226) have black teeth. I had some similarly affected a year ago. For some time I could not discover what ailed them; they had been fed corn, the slop from the kitchen, with an occasional dose of sulphur, and access to the ground; were in good order and seemingly thrifty. They were taken with a cough and loss of appetite; and trying to eat seemed to make them cough worse; were also weak in the hind parts; could scarcely raise themselves. A neighbor seeing them one day, thought perhaps they had black teeth. We made an examination, and found it so. I took a nail and placed one end on the teeth, which was just forward of the double teeth, gave it a smart blow with the hammer, which broke them, and my pigs soon recovered. Why some should have them and others not, I do not understand; and why they should affect them as they do, I would like to know.—L. B. T.

A Prolific Poland Sow.—WILSON HARVEY of Warren Co., Ohio, has a sow that had 13 pigs on the 22d of February, 1871, 11 of which she raised, and he fed them and butchered them Nov. 22d, and the average weight 265 lbs. gross. On the 21st of August, same year, she had 13 pigs, 11 of which she raised, and will average now (March 25th, 1872), over 200 lbs. gross. On the 11th of February, 1872, the same sow had 13 pigs, 9 of which she is raising. In all, 39 pigs in a little less than one year, 31 of which she raised and is raising. Stock-Poland China, or Warren county hogs. Who can beat this?—S. H. E.

Remedy for Kidney Disease.—We advise EDWIN MACOMBER to feed his pigs corn soaked in the lye of wood ashes, or in strong soap suds, and rub the loins with spirits of turpentine. We have saved pigs in this manner.

Domestic Economy.

ODDS AND ENDS.

To Color Red on Cotton.—I have noticed an inquiry for a recipe for coloring red on cotton that would not fade. I will send one that is used here for carpet rags, and is considered a very good imitation of Turkey red. One pound sumac to four pounds of cloth; steep it over night in the sumac; in another tub of cold water put two ounces of muriate of tin; dip from sumac to the tub of murlate and let stand a short time; then rinse in cold water. Make a dye of basswood—one pound to one of cloth; boil fifteen minutes; cool down; add the cloth, stirring well; boil an hour, then take out the cloth; add one ounce oil vitriol; boil a few minutes; rinse in cold water.

Another recipe, taken from Scientific American some years ago:—One pound of sumac to ten pounds of cloth; soak over night; then give it a strong mordant of the acetate of alum. This latter is prepared by dissolving one pound of alum for every ten of goods; then adding, in a dissolved state, one ounce of acetate of lead, stirring all up and allowing the sediment to fall to the bottom. The clear is then used as a mordant at a temperature of 160°. The goods are handled in this about ten minutes, then sunk under the liquor for six hours, after which they are lifted, dripped and washed thoroughly. Then they are fit for madder dye. This must be done in a copper or brass kettle, gradually brought to a boil, then boil an hour; one and a-half pounds madder to one of cotton; add a little sumac.—J. E. G.

Graham Bread.—Inquiries of S. J. D.—(See RURAL, April 13.) Should the mixture be made so thin as to be really poured into the basin, as is said? Should it remain in the steamer ¾ of an hour from the time it is first set on over the cold water, or should it be ¾ of an hour from the time the water begins to boil? Is it an even or rounded up teaspoonful of soda that is required? In steaming Graham bread raised with yeast, at what stage of the process should it be put into the steamer, and should it, too, be placed over cold water; also, how long should it be permitted to remain in the steamer? I wish a good way to make Graham bread without the use of soda, as I do not consider that its use is healthy. I also wish to use no other than the Graham flour in making the bread. Any information that S. J. D., or any of your readers, will be kind enough to give in regard to this matter, more particularly to that part which refers to making the bread with yeast, will be thankfully received by—J. G. D.

Alcoholic Liquors in Cooking.—Considering the terrible evil of intemperance, which is annually destroying thousands of fathers, brothers and husbands of our land, and embittering the lives of tens of thousands of mothers, sisters, wives and children, and in some parts of the country threatening the very foundations of government, should we not, sister housekeepers, be exceedingly careful, in the preparation of food, not to use any ingredients which may create or excite an appetite for stimulating or intoxicating drinks, as many who have gone down to drunkard's graves have confessed that they acquired the taste for that which wrought their ruin, at their mother's table? Let us at once proscribe, as entirely unworthy our practice, the use, in any form, of intoxicating or stimulating liquors, and discourage it in others, as we desire the prosperity of our loved country, and the everlasting welfare of mankind.—R.

To House-Cleaners.—When you have taken up a dusty carpet, don't touch a broom to the floor until you have taken a dust-pan and fill it with moist earth from the garden or elsewhere. Scatter the earth all over the floor; *then* use your broom as if scrubbing, and finally sweep all up together. You will find that you raise scarcely any dust in the operation, and you will have a very clean floor, that scarcely needs mopping at all. Don't fail to try it once, and you will not need urging to repeat it.—MRS. A. L. GREGORY, *Rockford, Ill.*

Jerusalem Artichokes for the Table.—S. P. N., Binghamton, N. Y., asks "the best mode of preparing artichokes for the table," and adds:—"I remember having eaten them, freshly dug, in my younger days, and am astonished that more of them are not produced." So are we—both as a food for stock and for humans. We have used them on the table as we do cucumbers, for a salad, with vinegar, pepper and salt. Some cook them—we do not know how. Let those who do, tell us.

Soft Graham Bread.—Stir yeast or milk rising into warm skim milk; then stir in Graham flour enough to make a batter as thick as can well be stirred with a spoon; put into deep bake dishes and set in a warm place to rise, the same as kneaded bread; when light, bake moderately until there is a hard, brown crust over the top, which, if preferred, may be softened by covering with a damp cloth.

Graham and Indian Bread.—Take hot water, though not scalding, and stir into it corn meal until it is about half thick enough for a good batter; then cool it with cold water, and make a thick batter by adding Graham flour; give the whole a good stirring; put into pans about three inches deep; let it stand an hour or so, then put it into a hot oven, and bake steadily two hours and a half. When taken out, cover with thick cloths for an hour or two. It is best if eaten when warm, but is good cold.—GERALDINE.

Keeping Eggs in Salt.—L. W. DERBY asks if eggs, packed in salt, put away in some cool place, will keep through the summer months. We know they will keep some time, but have had no experience keeping them through the summer.

To Keep Insects from Hams, it is recommended to sprinkle each ham thoroughly with hickory wood ashes, and then pack in clean casks.

The Apiarian.

THE BEST WAY TO TREAT BEE ROBBERS.

LAST year I had great trouble with my bees—one swarm robbing another. I should like apiarians of experience to tell me how to prevent it.—W. N. O., *Catskill, N. Y.*

C. DADANT thus tells, in the Bee Journal, how he did it:—"I began by contracting the entrances of the neighboring hives. Then I stationed my son in front of the one attacked, directing him to push away with a feather duster (a leafy twig does just as well) all the bees seeking to enter, and let pass all those coming out. Meantime, I procured two pieces of plank, or blocks, about six inches square. I placed one of these each side of the entrance, bringing two corners together, so as to enclose a triangular space or yard in front of the entrance, and covered this yard with a piece of wire-cloth having one-eighth inch meshes—taking care to adjust it so close that not a bee could enter the yard from the outside. The robbers soon cluster on the wire-cloth, seeking for entrance, while some presented themselves under it, striving to get out. In eight or ten minutes, I suddenly pulled away the blocks and wire-cloth, instantly brushing away anew all the bees, till I was sure that no robbers remained; and then replacing the blocks and wire-cloth as before.

"The hives remained thus shut up an hour or two. By that time, most of the robbers, tired of fruitlessly seeking an entrance, had returned to their ordinary labor. The corners of the two blocks were then separated so much as to allow one or two bees only to pass at a time. The inmates of the hive soon became accustomed to the entrance, while the robbers vainly endeavored to gain admittance through the meshes of the wire-cloth. If a few succeeded occasionally in finding the entrance, they were immediately seized by the guards and summarily ejected.

"After sundown, in order to let in the few bees belonging to the hive which had not yet found the new entrance, I removed the wire-cloth, and replaced it early next morning. As soon as I thought that simply contracting the entrance of the hive would secure the colony from further attacks, I removed all my devices.

"This mode of checking robbers will always prove successful, if the *ruchee* has a queen, or the means of raising one, provided all the robbers are got out of the hive before the bees pertaining to it are confined."

BEE NOTES AND QUERIES.

Candy for Bees.—J. S. CHANDLER sends the Bee Keeper's Journal the following recipe for making candy perfectly white: "Best coffee sugar, 2½ pounds; the nicest syrup, 1½ pints; boil very carefully, until by dropping in a little cool water it will fly like glass and will not stick to the teeth when bitten; then work until white. Boil in tin, copper, or brass; not iron. This costs less than 25 cents a pound, and by using good brown sugar, which I think would be just as good, it would cost about 20 cents. I should think, also, that it need not be worked until *very* white, thereby saving some labor. Of course the candy when done must be poured on a greased platter to cool; use nothing but a little flour to keep it from sticking to the hands when pulling it. When pulled sufficiently, draw it out into stick-size, and top it with a heavy knife to cut the sticks the proper length.

Food for Queens when Laying Eggs.—W. G. P. Flour is fed to bees for pollen by apiarians in spring, as soon as they begin to fly. Pollen and water is the chief food of the queen when laying eggs. She must have pollen, and hence the necessity of supplying it to the bees before they can gather it from flowers. Oatmeal, finely ground, is regarded by many bee keepers the best substitute for pollen.

Scientific and Useful.

GUTTA PERCHA.

GUTTA PERCHA is obtained from many species of the *sapotacea*, but chiefly from that known as *Isonandra Gutta* of the Malay Islands, and consists of the solidified milky juice found between the wood and the bark. It is imported in the form of brown cakes, which are sliced thin and washed in hot water, and then kneaded into cakes, which, when rolled between hot cylinders, form sheets, and on being cooled are as hard as wood. This property of becoming plastic is one of the most important in a commercial point of view; for gutta percha thus forms an excellent material for molding, and hence its extensive use in electrotyping, making of picture frames, etc. As a coating for sub-marine cables and for telegraphic purposes it has been largely used, also for water pipes and the soles of shoes. Indeed, it would be impossible to name all the purposes to which it has been applied since pointed out by S. MONTGOMERIE, in 1843, when he first drew attention to its great value and to the source whence it could be abundantly obtained. L. S. H.

USEFUL AND SCIENTIFIC NOTES.

Mouse Trap.—This little device, for catching out-of-door mice especially, is highly commended. Equipment;—One brick, two pieces of stick, a piece of matting (strong), and a few pens. To set the trap, push the two sticks into the ground about a foot apart. Thread three or four peas on

the string of twisted matting; tie the string tightly to the sticks, the peas being in the middle; rest the brick in a slanting direction on the peas. The mice will nibble through the peas and the matting, and down falls the brick and crushes the nibbler. The ground under the brick should be flat and firm.

To the Old Subscriber that has a Troublesome Siphon.—There is no reason why the water should not run continuously if the pipe is not clogged with worms, dead grass, or some such extraneous matter, and has no air-holes. Try this:—Attach the nozzle of a hand forcing-pump to the lower end of the pipe, and force a copious supply of water back through the siphon, and notice the nature of the discharge from the upper end. Cease pumping, and immediately detach the pump; and if, as above stated, no air-holes exist, the water with which the pipe is already filled will change its course and flow continuously.—A. J.

Labrador Tea.—Inclosed you will find a specimen of plant which is used in this vicinity as tea, and is called Labrador Tea. It is used as a very healthy beverage. It grows on high, sandy soil. Is Labrador the proper name? If not, will you please to give me the proper name?—J. W. H., *Wendover, Ont.*

THE proper or correct name of the plant is *Ledum latifolium*. We suppose almost any plant, not poisonous, is good to steep and make tea, provided one likes such a beverage; but we should prefer the genuine *Thea*, to any of our wild plants.

Sheep Husbandry.

NOTES AND QUERIES.

Grub in the Head.—A short time since I saw in the RURAL a remedy for "Grub in the head" in sheep—spirits of turpentine and melted butter. I had a sheep that was down with them, for I had seen her blow them from her nose. She could not get up without help, but when up could walk about. I prepared and used the remedy, according to directions, and about an hour after, on going to the yard, found the sheep dead. I think that her death was hastened by using the turpentine. It is too powerful to be poured in the ear; but I satisfied myself that she had grubs. I opened her head and found six or seven of from ¼ to 1¼ inches in length. If any of your readers are about using the remedy, let them desist; for I fear that the consequences will be fatal.—T. B. G.

Grass for Pasture—Sulphur for Nursing Ewes.—What kind of grain or seed is the cheapest and best to sow for sheep pasture the coming summer? Also, is sulphur good for sheep nursing lambs; if so, in what quantity, and how often.—OLD SUBSCRIBER.

WE know of no grass the seed of which can be sown this spring with the hope of its furnishing feed for sheep the coming summer. We do not recommend feeding sulphur to healthy sheep. Some breeders do. We shall be glad to hear from such on the subject.

Ewes Eating their Lambs.—Is there any preventive against breeding ewes preying on the tails and legs of lambs by eating them off in a few hours after the lamb is dropped. I have several lambs that have had their tails bitten off. To-day I found an ewe that had dropped twins and had actually devoured five legs and both tails within two hours after they were dropped. One of the lambs was dead and the other in a dying condition.—C. J. S., *Ovid, Seneca Co., N. Y.*

The Sportsman.

NOTES FOR SPORTSMEN.

Hunting Partridges.—The only sportsman-like way to bag partridges is with a good dog and gun. Let J. R. get a *pure-bred* Setter or Pointer, learn to shoot on the wing, and he will despise the trapping of *game* birds, as every true sportsman does.—SPORTSMAN, *Hanover, N. H.*

When to Kill Woodcock in New York.—GEO. HUGUNIN, P. M., Oswego, N. Y., writes us that the law specifying that Woodcock shall not be killed from Feb. 1 to July 4, was amended April 26, 1871, making it unlawful to kill or have in possession from Feb. 1 to July 15.

Industrial Societies.

INDUSTRIAL SOCIETIES.

The Ingham Co., Mich., Ag. Soc.'s Fair is to commence September 25.

The McDonough Co., Ill., Stock Ass'n holds its annual meeting at Macomb, July 3-5.

The Holt Co., Mo., Ag. and Mech. Soc. holds its next Fair at Oregon, Mo., Sept. 3-6.

The Kansas City Ag. and Indus. Ass'n will hold its next Fair Sept. 23-28.

The Northern Kansas District Fair is to be held at Atchison, Sept. 10-14.

The Nemaha Co., Kan., Ag. Soc. holds its Fair at Seneca, Sept. 18-20. *Sec.*—Wm. Histed, Seneca, Kan.

The Maine State Ag. Soc. is to hold its Fair for 1872 and 1873 at Bangor, that of 1872 to occur Sept. 17-20.

The Minnesota State Fair is to commence Tuesday, Sept. 17—probably at St. Paul, though location is not yet decided.

The Allamakee Co., Iowa, Ag. Soc. holds its Fair Sept. 10-12. *Pres.*—JOHN HANLY, Jr. *Sec.*—C. D. Beeman.

The Greene Co., Ill., Ag. and Mech. Soc. holds its Fair at Carrollton, Ill., Sept. 3-6. *Sec.*—I. K. Powell.

Woodson Co., Kan., Ag. Soc.—Officers for 1872: *Pres.*—G. W. HUTCHINSON, Center Ridge. *Vice-Pres.*—James Crane, Neosho Falls. *Treas.*———, Stokebrand. *Rec. Sec.*—J. L. Gilbert, Kalida. *Cor. Sec.*—R. F. Eagle, Rose.

The Indiana State Fair is to be held at Indianapolis, commencing Sept. 30 and continuing through the week. Officers: *Pres.*—JOHN SUTHERLAND, La Porte. *Vice-Pres.*—I. D. G. Nelson, Fort Wayne. *Sec.*—Alex. Heron, Indianapolis. *Treas.*—C. Dickson, Indianapolis.

Berks Co., Pa., Ag. and Hort. Soc.—The following persons have been elected officers of the Society for 1872: *Pres.*—ISAAC ECKERT. *Sec.*—Frank B. Shaffers. *Treas.*—Geo. W. Bruckman. This is one of the largest associations in Pennsylvania, having over one thousand members. The Fairs held on their extensive grounds at Reading City, Pa., are among the largest and best attended of any in the country.

Floricultural.

PLANTS CALLED "WILD TEA."

I WILL shed a little light upon the "Wild Tea" subject. The *Ceanothus Americanus* is New Jersey tea, and is sometimes called Wild Tea. It has a woody stem, somewhat like Hardhark (*Spirea*). It has ovate, serrate, accuminate, three-nerved leaves, which are quite pubescent beneath. It has an auxillary panicle of sub-corymed, small white flowers, and blossoms in June.

A plant of another genus, *Ledum latifolium*—Labrador Tea, Marsh Tea—is also called "Wild Tea." This is a perennial plant, with oblong leaves, the leaves of which are somewhat folded (replicate), and are ferughous (irony) and tomentose (having a fine down) beneath. The stock is irregularly branched, and hairy or wooly. In June or July it has a long terminal corymb of whitish or reddish flowers. I have met with it in Maine, Massachusetts, Connecticut, and Michigan, and, I presume, it is indigenous to all Northern States and Canada, and may be found in almost any marsh therein.

Both are sometimes used as a substitute for Thea (table tea). J. H.

Amber, Mich.

FLORICULTURAL NOTES.

Flower-Basket for Vestibules.—There are so many charming ways of ornamenting country homes with flowers and plants, that we are astonished more devices are not made by inventive housewives for this purpose. We should like (and, in that respect, second the motion of SALLY SECOR, who "*does* wish the ladies would send us sketches of what they are doing in the way of home ornaments") those of our readers who have devices which give themselves and their friends pleasure, to send us sketches of them. One of the prettiest ornaments for a vestibule is a well furnished plant-stand, in the form of a basket, as shown herewith. It is made of cut wood, gathered together in the center with a light brace of iron, and is furnished on the inside with a double zinc basin, of which the first part is perforated, so as to allow the superfluous water to pass off; an iron stem occupies the center, and two branches to support three vases in artistic earthenware, or, better still, in iron wire, tastefully trellised, holding moss in which the plants are placed. Underneath are planted *Dracænas*, *Caladiums*, *Begonias*, *Ferns*, *Pelargoniums*, young *Palms*, *Fuchsias*, with a border of *Lycopods*. A *Cissus* or a *Tropæolum Lobbianum* climbs up the iron stem. The topmost vase contains a *Palm* or a *Yucca*, some light *Pteris* or *Nephrolepis*, some *Commelina zebrina* in falling festoons, and the lateral baskets are similarly decorated. The effect of this basket is very pretty, and requires but little attention.

Plants for Names.—Please give me the names of the inclosed plants. My garden is full of them now in full bloom.—A SOUTHERN GIRL, *Carrolton, Ala.*

IT is always more difficult to name cultivated varieties of plants, because there are of some species thousands of sorts, and all very near alike. True species may readily be determined from dried specimens; but garden varieties are much more difficult. As near as we can make them out, the plants you send are as follows:—No. 1, *Pyrus Japonica*; No. 2, *Muscari Botryoides*, or Grape Hyacinth; No. 3, *Narcissus*; No. 4, *Narcissus Orientales*; No. 5, *Narcissus calathinus*; No. 6, *Narcissus incomparable*; No. 7, *Galanthus nivalis* or early Snow Drop.

Red Flowering Currant.—Inclosed you will find a flower which is admired by every one in Oregon. It grows on a shrub, and the common name for it is the "Dog Currant." It blooms about the 20th of March, and when the berry ripens it resembles the wild grape of Oregon. When they get ripe will send you specimen.—GEO. W. HARTZ, *Gambett Co., Oregon.*

THE flowers are those of the Red Flowering Currant of Oregon and California, known to botanists and gardeners as *Ribes sanguineum*. We have cultivated it for many years as an ornamental plant, the fruit being of little value.

Cannas from Seed.—Please tell me how to grow Cannas from seed.—N. P. C.

CANNA seed, although so very hard that they have long been known by the name of "Indian Shot," grow almost as readily as peas. If they have become very dry, soaking in warm water will hasten their germination. Put the seed in a vessel and pour hot water upon them and allow it to cool; but do not put boiling hot water upon them a second time, nor place water where it will remain hot. After soaking one or two days, sow the seed in pots or in the garden.

Propagating Honeysuckles.—IDA H. M. asks "how to multiply Honeysuckles." One of the simplest methods is to bend down a branch in spring and cover a portion of it in the earth; by autumn it will be well rooted, and can then be separated from the parent plant. Cuttings made in spring or winter will usually grow when planted in the open ground in the same manner as we do with currants.

Leaves for a Name.—Inclosed please find leaves of a plant. Please give name, and if it blooms what kind of bloom it has. —JOHN BLOCK, *West Virginia.*

WE cannot undertake to name plants

FLOWER BASKET FOR VESTIBULES.

from leaves only. We think, however, that the leaves are those of *Euonymus Japonica*, a small evergreen shrub, bearing very small white flowers. It is probably hardy in Virginia, but tender in the latitude of New York City.

Soot for Rose-Bushes.—A correspondent of the New York Observer says:—"Never give up a choice but decaying rose-bush till you have tried watering it two or three times with soot tea. Take soot from a chimney or stove in which wood is burned, and make tea of it. When cold, water the rose-bush with it. When all is used, pour boiling water a second time on the soot. The shrub will quickly send out thrifty shoots, the leaves become large and thick, and the blossoms will be larger and more richly tinted. To keep the plants clear of insects, syringe them with quassia tea. Quassia chips can be obtained of the apothecaries."

A Neat Trellis for Plants.—With a little slightly galvanized wire any one can

TRELLIS FOR PLANTS.

make this little iron trellis in a very neat manner—and it will look much neater and prove handier and more graceful than the painted stick trellises which are so common.

Treatment of Callas.—Will you tell me whether to cut my Calla off this Spring and set it in the cellar to rest, or let it grow all the year?—H. E. A., *Highland, Ulster Co., N. Y.*

LET your Callas grow continually, giving plenty of liquid manure, pot room and water. They require no rest if well fed.

Goodyear Pubescens is the name of the plant FRANK FINCH sends us. It is often used in hanging baskets. The flowers are borne on a spike about six inches high. It succeeds best in the shade.

Diary of a Ruralist.

DAILY RURAL LIFE.

FROM THE DIARY OF A GENTLEMAN NEAR NEW YORK CITY.

About Bees.—*April* 22.—W. E. LADD, according to his note in a late number of the RURAL NEW-YORKER, thinks I went beyond my depth in trying to keep bees. Perhaps he is right; but having handled a good many swarms with my own hands successfully, besides reading about everything published on the subject in the past two thousand years, I feel qualified to express an individual opinion in regard to the intelligence of the honey-bee, if nothing more. Movable frames, guides, and a hundred other variations in the structure of hives answer very well for patents; but they add nothing to the instinct of the little honey-gathering insect, which remains always the same. I am not quite so ignorant as not to know how to make the bees "start right" in the movable frames or guides; but the point I wish to make is, that the honey bee is no more intelligent, nor possesses any higher order of instinct than thousands of other species of insects, which are seldom or ever mentioned in the writings of our wise men. I will further assert that there are also scores of other insects of far more value to mankind; and I will not include in the list silkworms nor cochineal. Honey is not one of the necessaries of life any more than whisky or tobacco; but there is money in it, hence the excitement in regard to bee-keeping. But there is one important question connected with this subject which will ere long come up for discussion and settlement in our courts of law; it is whether a man has a right to keep more bees than he can provide pasture for. The gentleman referred to by Mr. LADD who sold $7,500 worth of honey last season, probably did not expend one cent to furnish his bees pasturage.

It is strongly urged by some farmers that bees, by extracting the honey from the flowers of buckwheat, injure, or greatly lessen, the yield of grain; if so, who is to sustain the loss? If this be true with buckwheat, why not with other plants? There are persons who do not choose to live in an atmosphere filled with honey-bees, and in some neighborhoods it is dangerous for a lady or gentleman to pick a flower or gather a luscious fruit, on account of the presence of bees. Apiarians, certainly, have a right to multiply their stocks to any extent; but they may yet be compelled to keep their bees at home, as well as their dogs and fowls. Whole vineyards of luscious grapes are sometimes destroyed by the honey-bees, notwithstanding certain wiseacres declare that the bee cannot break the skin of a grape, not being provided with the proper mandibles or proboscis for this kind of work. Perhaps they dig a hole with their feet; but that they can soon find a way to get at the contents is pretty certain. A neighbor of mine had several fine peach trees last year, loaded with choice fruit; but as soon as the peaches began to ripen, the bees from a neighbor's apiary came in thousands, attacking each specimen as soon as in a suitable condition. I cannot see that a man has any better legal or moral right to keep bees to annoy his neighbors, by destroying their fruit, or by trespassing on their premises, than he would have to keep pigeons, ducks, geese, or any other fowl. My reason for thinking as I do may be owing to ignorance of the rights of man; if so, perhaps Mr. LADD will enlighten me on the subject.

Shepherdias in Bloom.—*April* 23.—A pair of large *Shepherdia argentea*, or Buffalo-Berry trees, in my garden, are in full bloom to-day. This is one of the few edible, fruit-bearing plants in cultivation that must be planted in company, as a single plant will never produce fruit. The pistillate (female) and staminate (male) flowers are borne on separate plants; therefore, those who order Buffalo-Berry trees should remember this, and always purchase a pair, if no more. One staminate plant will answer for a half dozen or more pistillates; but they should always be planted near together. The fruit of this species resembles small red currants, is not only edible, but of an agreeable acid flavor. It is a native of the Northwestern territories, especially on the upper Missouri and mountains of that region. This would, probably, make a most excellent hedge plant, as the ends of the small twigs are terminated with sharp spines. The young seedlings grow quite rapidly, and by mixing the two sexes in a hedge, a most beautiful effect would be produced in the autumn, when the pistillate plants were loaded with scarlet berries.

Effect of Cold Upon Plants.—*April* 24.—The past winter has been the severest ever known in this section of the country. We had but little snow, and, although the mercury did not go as low, by several degrees, as it often has in years past, still, plants, and especially evergreens, suffered terribly. The very hardest species, such as Hemlock, American and Siberian Arbor Vitæ, were killed by the hundreds and thousands. It is very singular how the cold affected individual plants. In hedges, one or more plants were killed, root and branch, and those adjoining not injured in the least. The same indiscriminate slaughter of specimens is observed in groups of the hardiest species known. In a neighbor's garden, I notice American Arbor Vitaes killed, and within twenty feet of them, peach buds were not injured, and the trees, to-day, are in bloom. One specimen is taken, and another left; the cause is past finding out. From my experience during the past winter, I should be at a loss to make out a list of hardy evergreens; for nearly everything of the kind has suffered more or less. If trees that grow wild almost within the Arctic circle are not hardy, then I do not know where we are to look for them, unless it is in the South. A large deciduous cypress (*Taxodium distichum*), raised from seed gathered from a tree near the mouth of the Mississippi, passed the winter uninjured, while species of evergreens from Washington Territory and Oregon, growing within fifty feet, were killed.

Rural Architecture.

BUILDING A CONSERVATORY.

IN reply to Mrs. J. L. M. in the RURAL, I would say that we have a small room, opening from the dining room, and built out into the piazza, which we use for a conservatory. It is warmed from the stove in the dining room, but should be made as warm as possible in building. The floors should be double and filled with coarse mortar between them; the sides should be covered with straw board under the clapboards. Ours has four windows, two on the side and one at each end. The room is six by nine feet. A room of this size will hold 75 or 100 plants of ordinary size. We have found many valuable hints in regard to plants, plant cases, plant stands, etc., in "WILLIAMS' Window Gardening." I would recommend the lady spoken of to procure the book, and I think she will never be sorry.—D. G. B.

I WILL give Mrs. J. L. M. my limited experience about "building a conservatory." The wing to my cottage had a piazza running the whole length, and facing the West, being four feet deep. I enclosed ten and a half feet from the south end, with wainscoting two feet high, and large sash from that up to the ceiling, the sash being three feet wide by five feet three inches long; three sash in front, and one sash at each end. The wainscoting was made double, so that the sash can be dropped down to the floor between the wainscoating; only four lights of glass to each sash, 15 by 23. A door is made to open directly into my dining room. This door is kept open day and night, and the heat from the dining room is ample to keep the plants from freezing in the coldest weather. I heat from a furnace in the cellar, and a register in dining room floor.

A few nights, the past winter, when the mercury ran down to 30° below zero, we put papers between the sash and plants. The floor is made double, with an air space of an inch. It has an incline of about one inch in two feet, and holes bored at the lower edge to carry off the water when the plants are showered. On wash days we leave the kitchen door open, leading into the dining-room, from which the plants gather dampness, that seems to be valuable. On these days we also water the plants with the soap suds. The result is, we have strong, vigorous plants in bloom the year round, and the conservatory windows attract the attention of every passer.

The foundation of the piazza being laid up into cut stone, and the sash and wainscoting being well filled, it does not seem to make my dining-room perceptibly colder than if the conservatory door was kept closed. We have only two years' experience, but have met with success ample to warrant the expense, which was about $50.

I would advise "Mrs. J. L. M." not to build a conservatory of the size she names; it would only be an agravation. Mine is twice as large as she proposes, and I find it insignificantly small—conveniently holding only about sixty pots, two tubs and four baskets. L.

Watertown, N. Y.

The Poultry-Yard.

BRAHMA FOWLS.

I REGARD the Brahma, taking everything into consideration, to be the most profitable of any breed. I do not mean to say that they will sell for the highest fancy prices, but that they are the most profitable to raise to kill. It is the breed for the farmer. They seem hardier, stand our cold winters better, and are the *best* producers of eggs.

In regard to their sitting propensities, many say that they are hard to cure of this desire. To this I will simply say that they are not as hard as the Cochins; but I never have trouble with them. I always let them sit. They are the best sitters and mothers, excepting Cochins, and will raise a brood of Bantam chicks nearly as well as a Bantam hen. As is well known, there are two varieties of Brahmas—Light and Dark—and to tell which is the best is quite a problem, even for one who has bred them for years. If I could have just such fowls as I would wish, I would take Light Brahmas, as their color is so much better; good hens, especially, are beautiful; their penciled necks, green tails and white bodies, full and plump; legs yellow and well feathered. But it is difficult to get such Brahmas.

Of late years breeders have taken it into their heads that Brahmas, to be right, should have the Cochin shape. This is all wrong, and should be discouraged at exhibitions where they compete for premiums. Brahmas used to have rather long legs, compared with Cochins, and looked big. Now this is reversed. I lately saw a Light Brahma cock which was well marked, but rather small as I thought. "What do you think of him?" asked the gentleman who was showing me his fowls.

"He is well marked, but too small," said I.

"How much do you think he weighs?" said he.

"Eight pounds," I replied.

"He weighs nearly twelve."

Appearances are deceptive, but the true shape of the Brahma is large, bulky and grand. Make them stand up; make them look big whether they are or not; for remember that appearances are deceptive, and I should rather have a fowl look larger than it actually is, than smaller.

BREEDER.

KEEPING FOOD BEFORE FOWLS.

IN RURAL NEW-YORKER of March 16th, page 181, GEO. K. HAWLEY says he disagrees with Dr. P. in keeping feed costantly before poultry. Why he should thus disagree with the doctor, having never practiced that mode of feeding, and yet confesses that the desired result is attained, is to my mind not positively satisfactory. My own experience is, that this past winter I have kept feed constantly before my fowls, and obtained more eggs than formerly. By referring to my list of sales of eggs I find that during the month of January there were sold 16⅛ dozens from fourteen hens, or fourteen eggs to each hen during that month, besides a few used in a family of three persons, and they have continued through to the present time at about the same rate. Yesterday there was one hen sitting, and twelve eggs laid.

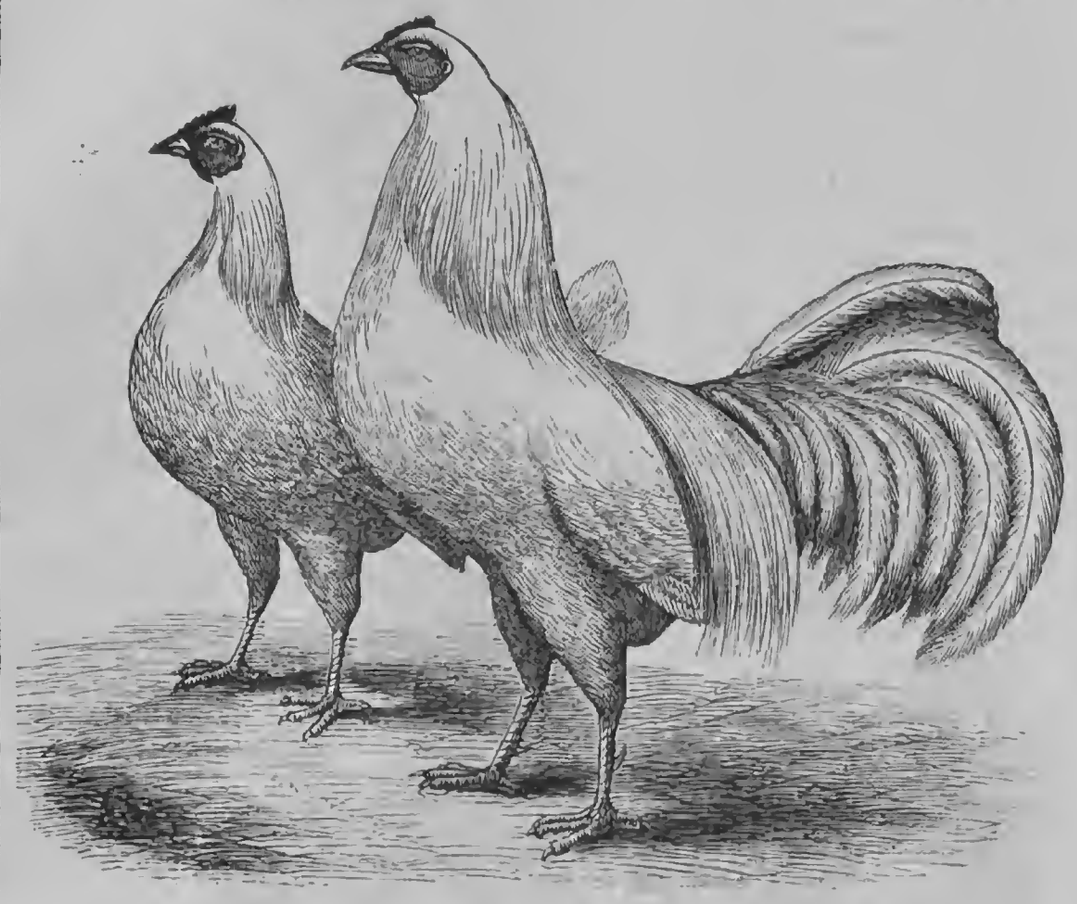
Your correspondent, G. K. H., will observe that if the above average is carried out for each month in the year, he will have from fifty to seventy-five more eggs per hen than the average of hens will lay. My method to obtain eggs in winter, is, to procure young hens, supply the requirements of nature in their feed, and provide them clean, warm quarters. O. P. REEVE.

Middletown, N. Y.

SILVER-SPANGLED HAMBURGS.

IN answer to C. F. TYLER, who desires to know what qualities Silver-Spangled Hamburgs have to commend them except beauty, we would say that our Silver Hamburgs endure confinement remarkably well. They never desire to sit, laying instead. They lay an egg as large as the Brahma, and do not eat one-half as much. Their eggs are very fertile, every egg, as a general thing, producing a chick. The chicks are very lively, easy to rear, and quick in feathering; and were we asked what two breeds we would prefer to keep, if we were so situated as to be unable to keep more, we should say, without hesitation, Silver-Spangled Hamburgs, to lay all the time, except a short rest while molting, and Light Brahmas to lay during the winter, and sit on the Hamburg eggs during the summer. As we do not keep all the breeds of fowls, we would not take it upon ourselves to assert that they lay more than any other breed: but we quote W. B. TEGETMEIER, the celebrated English writer on poultry matters, who says of them:—"Their elegance and utility are daily increasing the number of their admirers; and as egg-producers they are unquestionably unrivalled."

Penn Yan, N. Y. B. BROS.



WHITE GEORGIAN GAME FOWLS.

POULTRY NOTES AND QUERIES.

What to do with Fowls that Break Eggs Before Laying.—In an experience of over twenty-five years with poultry, I have never found any remedy for a hen that breaks an egg before laying. After losing many from that cause I now, as soon as it happens, which I always know very soon thereafter, as I attend to them in person, I have them killed and dressed for the table, and find them as good as any other fowl; but in the event it has not been discovered in time to save them by using as above mentioned, I convert them into fertilizers by putting them in the manure heap. I therefore would advise Mr. H. W. DAWS to adopt the same course; for die they must, sooner or later. I am no fancier; have none to sell; but simply raise them for family use, and when I have any surplus eggs, I dispose of them.—A CONSTANT READER OF THE RURAL, *Richmond, Va.*

Where Have the Shanghais Gone to?—What has become of the much vaunted Shanghai fowls, either White, Red, Buff or Black? I do not see any represented in the Asiatic class at the different poultry shows nor advertised for sale in any of the agricultural papers. What is the reason; have they become obsolete, or are they considered inferior to any of the rest of the Asiatic breeds?—A SUBSCRIBER.

BELIEVING in the Darwinian theory of Evolution, it may be said that the Shanghais have served their time on this sublunary sphere—at least until some enterprising Yankee introduces them—under a new name.

Protest Against Deprecating Over-Feeding.—I have read much in your paper about over-feeding fowls—their being too fat to lay, etc. I don't believe a word of it. I keep from forty to sixty all the time. I gave free access to the corn crib and they became very fat. They have laid an abundance of eggs, especially since the middle of February. When I have been short of grain I have been short of eggs. I have the common barn-yard fowl with a little black Spanish blood in them.—P. H. S., *Macon, Mo.*

Fowls Moping.—Can you inform me what disease it is that affects poultry when they sicken, sit, and mope about, with dullness of eye, and looseness the color of contents of a broken egg? They mope and keep loose for two weeks, or more, and finally waste away, through feebleness, and die. Is this the roup, or not? Please insert this for some one to answer.—N. C.

Brahmas as Layers.—I think I can answer Mr. C. R. R.'s request as regards the Brahama hen laying as well in summer as the native ones. I can say, from experience, that the Brahma hen will lay full as many eggs, if not more, if well taken care of, as any native hen; at the same time they are not so much inclined to hatch as the most of our native hens are. The Brahma hen, when pure, rarely lays less than sixty eggs before wanting to hatch.—E. Y.

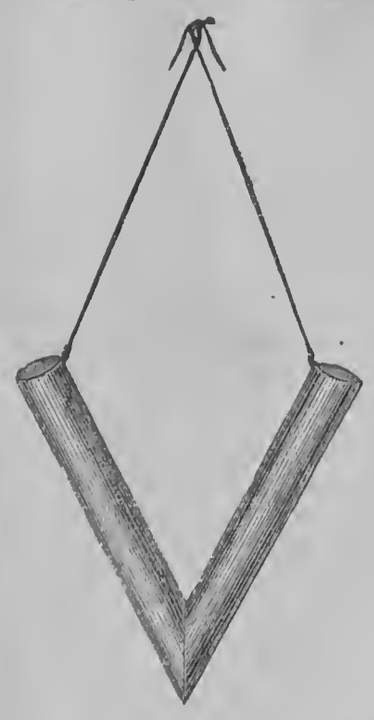
White Georgian Games.—We give an illustration of approved specimens of this breed of fowls. Those who have bred them, claim for them the qualities of good layers, sitters, mothers with superior quality of flesh. The plumage is clear white, with but little yellow tinge on the cocks; legs yellow; comb, face, deaf ear, and wattles, very bright red.

To Keep Insects from Birds' Eyes suspend a little bag of sulphur in the cage. This is said to be healthful for the birds and keeps away the insects by which they are liable to be infested.—P. H. S., *Macon, Mo.*

The Vineyard.

KEEPING GRAPES.

WE have hitherto given one or two modes of keeping grapes by inserting the stems in bottles of water. Here is another method introduced to the Fruit Committee of the Royal Horticultural Society of England, by W. DODDS, gardener, who has succeeded with it, and its simplicity must commend it to our readers. He says:—"My plan was to cut the grapes, place them in bottles and hang them up to the wires in our late vinery at one end where no plants were kept, the other part of the house being full of plants. I have had them perfect in color, excellent in flavor, the stems quite green, and, many of the bunches as perfect as they were when cut from the vine—all this for over three months." He uses the very inexpensive and portable device illustrated



herewith, in place of bottles, as shown on page 228, RURAL April 6. By its use, if one wishes to take the grapes into another house it is soon done. Mr. DODDS' experience convinces him that dark rooms are not proper places to keep grapes for any length of time in good appearance and flavor. They require plenty of air and light. These tubes—above illustrated—are not costly.

The Horseman.

WOLF TEETH IN HORSES.

I WANT to say in regard to wolf teeth in horses, that I know they will blind a horse. If any one doubt it, let them knock out (or, what is better, draw with forceps) the tooth on one side, and leave the other in; give both eyes the same treatment, and if the eye on the side of the tooth does not go blind I'll forfeit twenty-five dollars for a failure. When a horse-doctor says they do not blind a horse, I advise all to beware of him.

I have never failed of curing, even when a horse could see but very little, with the following treatment:—Get the tooth out. If you have no forceps, get a man to hold the horse; take a No. 10 or 20 spike and hammer, place the spike in the horse's mouth, run your little finger up to the end of the spike, to be sure you have it square on the right tooth, hit the spike *hard* with the hammer, so as to be sure and fetch it the first time, if possible; then take as much fresh-strained honey as you can take up on the point of a case-knife, raise the upper lid of the eye with one hand, have your assistant wipe the honey on the first finger of your other hand, and insert it far up on the inside of the lid; let go. After treating both eyes, take about one tablespoonful of fresh butter, and put in each ear; hold on to the tops of the ears until the butter melts and runs into the head; repeat the treatment, if necessary, in two or three days; or, if you have not honey, take the white end of henbane, and salt—equal parts—and insert it in the eye by blowing it through a quill. In each case, get it under the upper lid. Use the butter the same.

Battle Creek, Mich. O. F. L.

NOTES FOR HORSEMEN.

Quarter-Crack.—Having seen in the RURAL NEW-YORKER an article on the treatment of quarter-crack, I am prompted to send you a mode of treatment which I have tried successfully, the fissure growing entirely out in a little over two months, although I was compelled to use my horse every day. First let the fissure be cleared of all dirt carefully, and the edges pared so that they may be brought smoothly together; then by means of a small rod of iron, drawn out to a slender point and bent like a shoemaker's closing awl, and heated, make as many holes, about one-half inch apart, as

it will require sutures for the length of the fissure, through its edges from side to side, just deep enough to hold firmly; next take well annealed iron wire, about No. 10 to 12, in short pieces, pass each piece through the holes across the fissure and bend the ends over so they shall meet, thus closing it smoothly and firmly; and by melting a little beeswax, by means of a heated iron, into the crack, this part of the work is done. Next have a shoe fitted to the foot, closed at the heel, and supplied with toe and heel calks so that the horse will not slip—such as may seem expedient for the season. I am confident, if properly done, you will have the pleasure of seeing your horse all right in a few weeks. I will endeavor to give you the idea by a rude sketch, of a horse's foot so affected and treated.—WM. B. CARPENTER, *Leavenworth, Kan.*

A Balky Mare's Imagination.—R. S. HOUGHTON writes us he used to start a balky mare in this wise:—"I used to act as though I unhitched her, and then take down the tie strap to lead her, and she always followed me right along without any trouble. She was hitched to a load in a bad place and I could not get her to go any other way. Have tried it two or three times successfully.

To Kill Lice on Horses.—J. B. LEE says:—"Use one ounce of arsenic to a pail of soft water. The horse should be washed thoroughly in some warm place."

Dairy Husbandry.

CANADIAN DAIRYMEN AGAIN IN CONVENTION.

The Dairy Conventions this year have been numerous and very largely attended. They commenced during the first week in January, and the last one of note was that recently held at Belleville, Canada, by the Ontario Dairymen's Association. This is a new organization which has been formed for the accommodation of the large dairying interest in the eastern townships of the Province. The interest is larger in this section than we had supposed. It was stated at the Convention that 3,500,000 pounds of Cheese had been shipped last year from Belleville in the county of Hastings, while there were some thirty-four factories located in the counties of Leeds, Grenville and Carlton.

Mr. George Morton of Kingston, who claimed to have taken much pains in collecting statistics of the production of cheese in Canada, puts the quantity made last year at 400,000 boxes. Of this amount 50,000 boxes, he estimates, were consumed in Canada and the rest shipped abroad. If we estimate 60 pounds of cheese to the box, we have the annual cheese product of Canada no less than 24,000,000 pounds. This is a larger yield than we had supposed; and if the figures are correct they will serve an important purpose in estimating the quantity of American cheese to be shipped annually to Great Britain.

Some idea of the remarkable progress which dairying has made in Canada during the past few years may be gathered from a statement made at the Convention by Hon. Mr. Reid, M. P. He affirms that during the year of the repeal of the Reciprocity Treaty, Canada imported from the United States cheese to the value of $360,000, and that the cheese was consumed by Canadians. Now, according to Mr. Morton, Canada not only supplies for her own consumption, but ships abroad annually from fifteen to twenty millions of pounds.

The Convention was very largely attended, K. Graham, Esq., M. P. P., President of the Association, occupying the chair, and several other members of Parliament taking an active part in discussions.

The leading addresses were given by Prof. Belle of the Albert College, on the Chemistry of Milk; by Rev. W. F. Clark of the Ontario Farmer, on the Economy of Dairying; by L. B. Arnold of N. Y., on Handling Milk; and by N. A. Willard of Herkimer, N. Y., on the Production of Milk and the Curing and Marketing of Cheese. As these addresses are quite lengthy, we are unable in our limited space to give even a brief abstract of them, but may refer to such topics and suggestions as appear new in subsequent articles.

Ontario as a Dairy Section.—In discussing this question Mr. Morton of Gananoque said that nearly every section of Ontario, rough or smooth, was adapted to profitable cheese making; every variety of fodder required could be grown. He knew something of the capacity of land in Canada for dairying, being the owner of nine farms, and the proprietor of eight cheese factories. Most of his factories were situated on the Laurentian ridges, and he found them superior for dairy purposes. He believed that the lands in Ontario could produce as good milk, and that as good cheese and butter could be made on this Northern belt as anywhere on the continent. He thought cheese should be made the principal article of export of the Dominion. Dairying was a more profitable industry than any other, and is no longer a speculation. Cheese could be shipped from any Canadian port to England cheaper than from a factory in Western New York to New York City. This he knew from experience, as he was the owner of a factory in Western New York. He thought there were enough good dairy lands in Canada to supply England with all the cheese she needed.

Breeding Stock for the Dairy.—Mr. Nimmo of Napanee said he had thoroughbred Ayrshires and Short-Horns, but he believed the best breed for the dairy was obtained by crossing common Canadian cows with thoroughbred Durhams. He deprecated pure breeds for the dairy, and recommended crosses of thoroughbreds of good milking families on the best milkers of common Canadian cows. He had had much experience in raising stock. A cross between a good native cow and a pure-bred Durham, and then crossed with an Ayrshire, produced excellent milkers. He had seven cows which yielded 7,800 pounds of milk during 1870. Cows must have plenty of good food, and an abundance of good water, for a cow well fed and cared for was better than three poorly treated.

Mr. Brodie of Prince Edwards had been twenty years engaged in breeding animals, and he thought the Ayrshire the most profitable for the dairy, and he should recommend them without hesitation. The Short Horns, he said, were excellent. In some varieties, crossing breeds made excellent milkers, but be careful to select your breeds properly, and do not cross more than two or three times. He thought common stock, crossed with Short Horns, and the cows raised crossed with Ayrshires, would give animals that would prove good milkers.

Alsike Clover for Pasture.—In the discussion on the best grasses for dairy farms, Mr. Hinman of Colborne said that Alsike clover was very hardy and made good pasturage, but it will not do to mow it, and, therefore, he could not recommend it for meadows. He spoke of Red clover as giving a great flow of milk, but the milk was not of the best quality. He recommended seeding pastures with Timothy, Blue grass, White clover, Alsike clover, remarking that enriching pastures is an important element in creating a relish in grass for cattle.

The discussions on the various topics brought before the Convention were animated, and a large amount of useful information was elicited. The Convention, whether in respect to numbers or the character of its papers, may be regarded as a decided success, and the lessons taught will be of very great benefit to the dairy interest in Eastern Ontario. We regret that our limited space prevents our giving a more extended notice of the experience of some of the best farmers in Canada. The following were chosen officers of the Association for the ensuing year:—President, K. Graham, M. P. P., Belleville; Vice-Presidents, Geo. Morton, Gananoque, P. R. Daly, Belleville, Henry Wade, Port Hope; Secretary, S. T. Wilmot, Belleville; Treasurer, James Bird, Halloway.

In returning from the Convention we crossed the river from Kingston to Cape Vincent, and was told by parties who had tested the ice, to reach water, that it was between three and four feet in thickness—a rather unusual scale for the middle of March.

The Garden.

GARDENERS' NOTES.

Sechium Culture.—At a late meeting of the Farmers' Club, Dr. Naphegyi introduced the Chayote or bread-fruit of Mexico, and recommended its culture in the Northern States. The gentleman said he had no other interest in this vegetable than to be the introducer of a new vegetable. We regret to inform the doctor that he is too late, as we believe that it has been tried more than once in this vicinity, and failed to be of any use except as an ornament. Had the gentleman been a reader of the Rural New-Yorker, he would have noticed an illustration of his chayote or *Sechium edule*, on page 220, April 8, 1871; also other species of the same alluded to on page 268, April 29. Why don't the members of the Farmers' Club and the remainder of mankind read the Rural New-Yorker, and learn what has been and is being introduced in the way of new and old vegetables.

Mice in Hot-Beds.—I send you what I suppose to be a species of mouse, which I caught in my hot-beds, where they are doing considerable damage, by burrowing through the soil and cutting off the roots of vegetable plants. I have never, until last year, found this animal about my place, and it is new to us here. Will you please to give me its name, and method of destroying?—A Subscriber, *Portsmouth, Va.*

This pest of your hot-beds is the Ash-Colored Shrew (*Blarina cinerea*, Bach). It is quite common from Pennsylvania, southward, to the Gulf of Mexico. We don't know of any better way of destroying them than by poisoning their food with arsenic or strychnine. Find out what kind of vegetable roots they prefer, and then add a very little poison to the same and put it into their burrows.

Applying Manure to Sod for Tomatoes.—T. G. B., Kent Co., Del. has 200 loads good manure, made the past winter, under stall-fed cattle, fed with cooked feed. He has turned it over since March. Has a clover and timothy sod on which he wishes to plant tomatoes, and asks whether to apply the manure in the hill, or broadcast—plowed under the sod or as a top dressing. We have never grown tomatoes on sod ground; but our judgment would be that on his sandy loam for such a crop the sod should be turned under deep, the manure spread broadcast and thoroughly mixed with the soil by using the harrow or cultivator.

Mushrooms in Pots.—I am acquainted with a gardener who grew not long ago some beautiful mushrooms in pots, by accident as it were. In the spring of last year, after removing his old beds, he selected some comparatively spent spawn, and placed it in large pots, which held a bushel or so, setting them, or rather storing them, away in a dry shed. During the summer time, having occasion to look after them, to his surprise he found the pots plentifully supplied with beautiful mushrooms.—*Jabez Jay Chater, in The Garden.*

Lima Beans may be grown without stakes or poles by persistently pinching back after they have attained the desired hight—at least so some experienced gardeners say.

Modes and Manners.

MINTWOOD'S CONVERSAZIONE.

Treatment of a Green Silk.—Miss Merrie B., Waterloo, N. Y.—Your "green silk, with a stripe of gay, brocaded vine," would make an elegant polonaise to wear over a black or green silk petticoat. Leaving it in a dress, a polonaise of green silk a shade or two darker, or of black, with sleeves of the brocade, would also form a stylish costume. Eight to ten yards of silk are required for a polonaise. Information has already been given in regard to trimmings. Unless you are very capable, you will have the polonaise cut and fitted by a tailor or mantua maker. A black one will also do to wear with the poplin. Broad brimmed Leghorn hats will be worn this season as last.

Suit for Summer.—Rowena Cergo, Oneida Co., N. Y., writes she is "seventeen, rather fleshy, red cheeks, blue eyes, fair skin and hair, lives nine miles from the city, and writes to know what sort of an inexpensive suit will become her for the summer." Very stylish suits are made of Berlin striped poplin, black and white, made with a polonaise and trimmed with the same. Slender girls wear the addition of a round cape, if they choose. This goods costs fifty cents a yard, and from twenty to twenty-five yards are required. Two shades of gray, or cameo alpaca make beautiful costumes. With hat, gloves and umbrella to match, one can desire nothing more tasteful. Make the under skirt of the darker shade; trim with ruffles or flounces of the same, with headings and alternate folds of the other shade. If you are stout, and wish an additional wrap with a polonaise for warmth, a half-fitting, lined sacque, or paletot, will do. A light shawl, worn lengthwise, is a convenient wrap for cool days or riding.

Cease frizzing your hair, or it will always be thin. Brush it well, and wear it in a net.

Treatment of the Hair, Etc.—Miss Seventeen—To remove the dandruff from your head, wash it well twice a week with soft water, or water mixed with bay rum, or water in which a little borax and camphor have been dissolved. You can probably do nothing better for your hair than to have it cut. You can put up slips of it here and there once or twice a week in papers to relieve it of its unpicturesque straightness. Have it cut by a hair dresser, not too short. That cut off may be made into the present fashionable crimped chignon, which you can wear on "occasions." I have no "opinion" whatever of the "Curlique, electro magnetic curling comb," etc., you mention, as I know nothing about them.

What will Remove Sun-Burn, Freckles and Pimples on the Face?—Here are some recipes worth trying, perhaps. To remove freckles, apply two or three times a day, with a camel's hair brush, a solution formed of one ounce of rectified spirits of wine, and a teaspoonful of muriatic acid. Burnt alum and lemon juice is also recommended. For sun-burns, put two spoonfuls of fresh cream into half a pint of milk; squeeze in the juice of a lemon, half a glass of brandy, a little alum and loaf sugar; boil the whole; skim well, and when cool apply to the skin. This is also said to be inimical to freckles. The best remedy for sun-burn is to keep from becoming so—only requiring a little care. To cure pimples, eat and sleep regularly, take plenty of exercise, partake of only wholesome foods, and thus insure a healthful digestion. With that established, you have a good skin unless indeed it is diseased of itself, when you should consult a physician.

Dressing very Thick Black Hair.—Anna—You can dress your "very thick black hair" in a variety of ways. Pompadour front with looped braids at the back; one or two Chinese braids with ribbons at the end; or confine it in a net with a row of finger puffs over the top.

Shades and Colors for a Sallow Complexion.—Ira.—"What color and shades will best become a young lady of sallow complexion, gray eyes, and very dark brown hair?" Color known as cerne, cameo, garnet, wine, and black alwarp, illuminated with bright color at the throat and in the hair. The only safe decision can be made by experimenting.

Polonaise With Black and White Silk.—Janet, Ohio.—Make a sleeveless black silk polonaise and wear with your black and white silk. For an economical trimming cut the edge in leaf-like points and bind with the same; a standing ruffle of swiss or lace at the neck, a cravat bow of the same. Indian taffeta is a beautiful new silken fabric $1.50 per yard. Camel's hair cloth, all wool, at 75 cents per yard, is used for polonaises for cool weather, and for traveling costumes.

Cards and Correspondence.—"Jepthas Daughter" asks "for the latest novelties in cards and correspondence material." Ladies' cards are large, and printed in hair-line script. Cards for gentlemen are smaller in size, and for both envelopes are supplied, bearing a monogram, or not. This is a sensible fashion, as in leaving cards at a hotel or boarding houses, they will be, thus secured and addressed, sure of proper delivery. The custom of turning down a corner, or end of card, is now very commonly indulged. The upper left hand corner, signifies a visit in person; the lower left hand corner a visit of farewell; the upper right hand corner, one of felicitation; the other of condolence; one end turned over signifies that the visit is for the family. Cards for dinner parties are also inclosed in an envelope and left in the gentleman's dressing room, addressed, or handed to him at the same time the boquet for the buttonhole is presented. The envelope contains a card bearing the name of the lady he is to escort to dinner.

The square envelope—called the court shape, because used at the Court of St. James—is the fashionable shape for ladies' correspondence. The paper folds but once; if one wishes to use a larger sheet, the bath size is used, which is twice folded. Fashionable tints are violet, cameo, salmon, sea green, gray and rose. The gray with black lines stamped their width from the edge, and called the Oxford style, is used in mourning. For gentlemen, the paper should be unglazed, rough, and thick. Hold it up to the light and one can read the letters "Old Style." Ruled paper, or the following of lines in correspondence, is considered vulgar in cultivated society. A little practice will enable most persons to write tolerably straight without the aid of lines. Sealing wax is used by fastidious people, and always lends a letter a respectable look. A stamp for the same, bearing a device, costs from $3 to $4. Recently a college has been formed in New York for the device and manufacture of coats of arms for Americans. A die costs from $15 to $18, and represents the most prominent or worthy event in the history of the family. If one has been so fortunate as to have invented a telegraph, a steam engine, a perpetual motion, a sewing machine, or discovered a new species of strawberry or cabbage, the design can be made specific and forcible.

In novelties there are many beautiful designs in letter and note paper. A box of note-paper-envelopes, triangular in shape, with the cameo stamp, and containing twenty-five, costs $2 per box. The triangle is a sheet of paper so folded as to represent a three-cornered envelope, and when opened furnishes abundant surface for quite a note. They are very neat and dainty. The "Neptune paper" is of a sea-green tint, and each sheet bears a picture in colors of a different shell; envelopes to match, $3 a box. The "Jockey Club" bears emblems of dogs, horses, and all sporting creatures—$2 per box. Yacht crews have paper stamped with their signal device in color. For misses, the first name in full is stamped in color, at the top of the sheet, or in one corner. Some ladies, with quaint or picturesque conceits, devise their own signs. Thus, Fanny C. Brown, with a fan in gorgeous colors, quirls its string or chain into a C, and perches a honey bee on the end of that, thus giving her name in initial. Then there is toy paper for children, small in size and bearing a design, in color, of some toy.

The Literary World.

NEW PUBLICATIONS.

The Underground Railroad. By WILLIAM STILL. Philadelphia: Foster & Coates.

THIS book, by a colored man, has no reference to the quick transit problems in New York, but refers to the manner in which people escaped from slavery before the rebellion. It is a valuable and interesting record of facts, authentic narratives, letters, etc., narrating the hardships, hairbreadth escapes, and death struggles of the slaves in their efforts to reach the North. The book has 70 illustrations, and makes a large volume of nearly 800 pages. It will always be a work of deep interest to colored people, while in a few years white folks will look at it, wondering if it was possible for such things to take place in this country. The book is sold by subscription only. As the work of a colored man it will attract attention. It fully explains the workings of the Underground Railroad.

Ancient America.—By JOHN D. BALDWIN, A. M. New York: Harper & Bros.

ONE of those intensely interesting volumes which gives us glimpses of pre-historic times, so far as relates to this country. The book is profusely illustrated with pictures of the works of the mound builders in the West, ruins in Mexico, and other illustrations. The pictures are from original drawings, and the book gives a summary of what is known of American antiquities. The author has spared no pains to exhaust all sources of information in preparing this work, consulting many English, German, and Spanish works. All who would become familiar with the remains of that other civilization which once flourished in this country, will be glad to possess a copy of Ancient America.

The Labor Question.—Thoughts on Paper Currency and Lending on Interest, as Affecting the Prosperity of Labor, Commerce and Manufactures. By WILLIAM BROWN. Philadelphia: J. B. Lippincott & Co.

MR. BROWN is a Canadian writer, who has spent twenty years investigating this subject. He writes in an earnest, favorable manner, and says many good things. He is utterly opposed to paper money, and shows how the issuing of bank notes robs the people, oppresses the poor, enriches the few, deranges commerce, etc. All workingmen should read this book, as well as statesmen, and those who have the good of the people at heart. A large number of questions are discussed, all of which are of interest to the laboring classes. The book makes a volume of 240 pages.

Martin Chuzzlewit. CHARLES DICKENS. Household Edition. New York: Harper & Brothers.

WE have seen nothing handsomer in the shape of books than this household edition of DICKENS' works. The pages are double-columned, with new and handsome type, printed on fine, calendered paper, and profusely illustrated. This edition of Martin Chuzzlewit has fifty-nine illustrations, many of which are full page. For clear reading and convenience of handling we know of no better form than this "Household Edition."

The Thief in the Night.—By HARRIET PRESCOTT SPOFFORD. Boston: Roberts Brothers.

A SHORT but exciting story of two men who loved one woman, and the consequences. Mrs. Spofford is a fluent, dramatic writer, who knows well how to keep up the readers interest in a story. This book could only have been written by a woman; it contains ideas peculiar to the female. It is beautiful to read—fresh, and full of tropical life, sunshine, and flowers.

Notes, Explanatory and Practical, on the Second Epistle to the Corinthians, and the Epistle to the Galatians. By ALBERT BARNES. New York: Harper & Brothers.

A REVISED EDITION of a well-known work to which it is only necessary to call attention. Probably we shall never have any better work of its kind. The volume is a handy, compact one, of 367 pages.

The Rival Collection of Prose and Poetry, for the use of Schools, Colleges and Public Readers. By MARTIN LARKIN. New York: J. W. Schermerhorn & Co.; pages 501.

A LARGE, handsomely-printed book, full of good selections from the best American and English authors. All who are looking for a selection of this sort will find in this everything they can wish.

The Lovels of Arden. By M. E. BRADDON. New York: Harper & Brothers.

THIS is select novel No. 369. Novel readers are familiar with Miss BRADDON'S sensational style. The work is of usual interest, being an English love story, which introduces artists, pretty women, men of abnormal wealth, etc.

Miscellaneous.

REED & BARTON,

MANUFACTURERS OF

FINE

ELECTRO-PLATED

WARE.

This Illustration represents a new design of Electro Plated Fork, manufactured by Reed & Barton. In design and finish it so much resembles the solid silver, that even an expert would find it difficult to detect the difference.

All their forks and spoons are made of the finest quality of Nickel Silver, and are heavily plated with pure silver.

They also manufacture almost every other article of Table Ware, such as **Tea and Dinner Sets, Cake Baskets, Fruit Stands, Water Sets, &c.,** in many new and beautiful designs.

They pay especial attention to their **Patent Seamless-Lined Ice Pitchers,** which have been so thoroughly tested and given such satisfactory results.

Reed & Barton now have one of the largest works in the country, but they find it necessary to make extensive additions this season. They will, besides greatly enlarging their principal factory, build a new one, 240x40, three stories high, with French roof, thus adding more than 40,000 square feet of floor to the space now occupied in the production of their goods.

They have salesrooms at the factory, at Taunton, Mass., and at No. 2 Maiden Lane, New York.

LISTER BROTHERS,

NEWARK,

NEW JERSEY.

TO FARMERS.—DOUBLE REFINED POUDRETTE of the "LODI MANUFACTURING CO," for sale in lots to suit customers. This article is sold for *half the price* of other fertilizers, and is cheaper for tobacco, cotton, corn and vegetables than any other in market. It is made entirely from the night soil, offal, &c., of New York city. Price, delivered on board in New York city, Twenty-five Dollars per ton. I ask attention to the following Testimonials:

ONEIDA Co., N. Y., Oct. 12th, 1871.—*Dear Sir:* For two years past I have used the Double Refined Poudrette for corn, potatoes and garden Vegetables, and I have realized on the first crop 100 per cent. for all the money invested. Yours truly, T. B. ALLANSON.

WINDHAM Co., VT., Dec. 4th, 1871.—*Dear Sir:* I think the Lodi Company's Double Refined Poudrette the best manure I can find for tobacco, corn and potatoes. I shall order a number of tons another season. Yours respectfully, E. S. HOUTON.

JESSE VAUGHN of Lancaster, N. Y., under date of September 20th, says:—I applied the Double Refined Poudrette, last Spring, on corn and potatoes, and I believe I have the best corn in town, and my potatoes are an excellent crop. I have used your Double Refined Poudrette several times before, and always with good results, but this year the effect has been more perceptible than ever before.

A pamphlet giving full directions, &c., sent on application to JAMES T. FOSTER, 66 Cortlandt St., N. Y.

Business "	2.50	"
Reading "	3.00	"

☞ No advertisement inserted for less than $3.

SATURDAY, MAY 11, 1872.

HONESTY—INDEPENDENCE.

We must commend honest, independent men, wherever we find them. We must especially commend honest, independent journalists—men who will not be the organ of any man or set of men, but who will be guided only by their own convictions in the discussion of public affairs. Hence we rejoice that Horace Greeley has decided that The Tribune shall not, henceforth, be the organ of any party—that it shall not stoop to suppress Truth, refuse to commend what is right, nor fail to uphold what is good because it may be in the interest of any class of politicians to do so.

One cause of our civil dissensions, our political wrangles, our failure to elect the best men to office, our confusion of political terms and nomenclature, our injustice to honest men, our failure to support the wisest internal policy, our inability to vote intelligently, our distrust of politicians, and of the general confusion into which we are quadrennially thrown in our efforts to secure wise executive officers, is due to the fact that we have had no free and independent Press, with power and influence enough to tell the truth, the whole truth and nothing but the truth.

It is to us one of the best evidences that days of regeneration are dawning, when such papers as The Tribune discard partisan allegiance and proclaim their faith in and allegiance to the honesty and intelligence and best interests of The People, regardless of partisan purposes and policies. It means the secession of one of the greatest powers of corrupt centralization. It means a recognition of the important fact that Public Interests are paramount to partisan success. It means the dissemination of Truth and a free, frank, and full discussion of all measures affecting the Public Welfare. It means a recognition of the Supreme Sovereignty of the People, the power of Public Opinion and of the fact that the only safety to the Republic depends upon the clear and intelligent comprehension by the People of the Truth, no matter upon whom the weight of their disapproval may fall.

No patriotic man or woman will fail to rejoice, with us, that a journal with the acquired prestige of The Tribune, has thus segregated itself from all partisan bondage and is hereafter to "fight on its own hook." It does not matter whether we may agree or disagree with its postulates, the fact that its opinions are in no wise colored by partisan prejudice and affiliations, will give us faith in its motives and enable us to weigh its arguments with the greater nicety and impartiality; and its power to furnish us with *facts* will render it a most powerful aid to us in determining our own duty as Men and Citizens of the United States.

P. S.—Since the preceding was written (some days ago) and placed in type, and while closing this paper for the press, a telegraphic dispatch announces that Horace Greeley has been nominated for President by the Cincinnati Liberal Republican Convention. Well, we will not take back anything aforesaid, nor will we, at present, express our opinion in regard to the important event announced. "We shall see what we shall see." Meantime, we trust other influential journals, as well as The Tribune, will place themselves in the position the Rural New-Yorker has so long occupied—that of fearless independence in discussing Political and National Affairs.

AX-GRINDING AT THE FARMERS' CLUB.

There is always some one ready to turn the Club's grindstone, another to keep it wet, and a third person, who is skilled in holding dull axes upon it, when any one wants grinding done. We should not say a word about this neat little business if it were not a fact that frauds are thereby perpetrated upon the public. This is the way the thing is done: If a fellow wants his ax ground, he hunts up some one of these professional ax-grinders—and there are a half-dozen of them, more or less, attached to the Club, whom any one can point out, or who carry a label on their faces which indicates their vocation—and engages him for the campaign. Having arranged the matter satisfactorily with this professional, the latter informs the gallant Commander of the Club that he has a matter of great importance to introduce, and secures a hearing. He thereupon exhibits the dull ax, and suggests the appointment of a committee to put it in cutting condition. Knowing the men who are skilled in the business, he sends up a slip of paper to the jolly old Commander, who is good natured enough to appoint the persons named upon it as the committee. In many cases, this committee is appointed without any vote of the Club, and consists of men who are, like professional jurymen, "always ready for a job." Of course, this committee "examine" the dull ax and its owner and at the next meeting proceed to sharpen it, by making a "report," which, in nine cases out of ten, is full of fulsome praise and besputtered with superlative adjectives. Sometimes, a vote of the Club is taken to accept (not adopt) the report. At other times, it is simply "received;" and at other times, no action whatever is taken upon it. But if it is made and read before the Club, that is sufficient. The ax is sharp. It is published far and wide as a report of a committee of the Farmers' Club, and as having been adopted by that distinguished body. Of course, the ax thus sharpened cuts well. The owner gets compensated, and the ax-grinders get compensated; what do they care how much it wears off the grit (reputation) of the grindstone (Club)?

Efforts have been made by some of the members to break up this species of ax-grinding, and to save the reputation of an institution that may do much good, by abolishing special committees, and thus compel these professional ax-grinders to use their own grindstones. It has failed, although the Agricultural Committee professed to favor this reform. Still these special committees are appointed, and the time of the Club is largely consumed in grinding special axes for individuals. At the last meeting we attended, such an ax was ground by one of these professionals, and an effort made to get it adopted by the Club. A motion to recommit the report was not acted upon by the autocratic Commander, and the whole thing was left without action. But in several of the papers controlled—or wheedled—by the professional ax-grinders, the report was announced *adopted!* This is simply an illustration of the way the thing works.

NOTES BY THE WAYSIDE.

There are compensations in most kinds of business which make up for a good deal of dull routine. The old Agricultural Missionary (meaning myself) meets with a thousand things, funny, pathetic, horrid, sentimental, etc., etc., which, if he was Corresponding Editor of a paper devoted to gossip, he could weave into a sort of Dolly Varden miscellany of many colors. Take one day on the road, as a sample of many such.

Last week I was roaming through the County of Huron, State of Ohio, and left the train of the C. C. C. & I. "Bee Line" R. R. at the station of Greenwich; where, striking up a friendly relation with Wm. Haviland, (Post-Master and Agent of the Rural,) I had soon seduced the amiable William into the weakness of lending me his horse and carriage for an afternoon's drive in the country. The Rural has a big list within the range of the Greenwich post-office, and this is as good an introduction as the Missionary needs in his parish.

On a circuit of half a dozen miles are a succession of most excellent farms, on which the business of tillage, wool growing, dairy husbandry, and orcharding are pretty well distributed. Here is the farm of L. P. Sisson, stocked with some of the finest Short-Horn cattle in the country—land tile-drained, clean, high fences, and such an orchard! If it had not been for that final clause in the Tenth Commandment—"or anything that is his"—I should have been guilty of covetousness, for I *do* love to see a nice orchard. Right across the way from this last is the homestead of L. B. Marsh, an old Rural New-Yorker, from Onondaga Co., fifteen years ago. Coming on to this farm from a neighboring township, a few years ago, Mr. Marsh found an old turf-bound orchard, the fruit always small and wormy, into which he turned a lot of hogs, and has let them cultivate it ever since. The result is, good crops of fair apples, all free from worms. On the next hill—the hills are just far enough apart for homesteads—is the residence of Mr. McMillan, another of our Rural family, with a nice farm like the rest. All these men are cultivating Osage Orange hedges, for road and division fences, by the mile. The cultivation of this hedge is again becoming very popular in Ohio. The next hill is surmounted by the elegant residence of Mr. Parrott—a twenty thousand dollar farm, of excellent quality. Turning towards town on another road, I came upon a notably neat farm with a splendid new barn of modern architecture, and on inquiry was told it was the homestead of H. G. Washburn, another Rural man, with a stock of nice sheep. Near by this last is the home of the jolly old shepherd, J. B. Hale, with whom I have had lots of fun in the former days of Merino sheep.

This is a sample of a dozen like matter-of-fact things which I encountered on that road. Now let me tell you a sentimental story.—S. D. H.

[The sentimental story is given on page 319, under heading of "A Romantic Reminiscence."

RURAL NOTES AND QUERIES.

Large vs. Small Farms.—A correspondent, with an inquiring turn of mind, asks us if we are an advocate of large or of small farms. To be specific, we may say that we do not advocate either. We do not care whether a farm is large or small, so long as it is made as productive as possible. We do not know any reason why a man with sufficient brains, capital, and energy, should not cultivate well one thousand acres as easily as another man with less capital, but equal brains and energy, does ten acres; nor do we see any harm to grow out of it. We are opposed, however, to one man owning or controlling large tracts of uncultivated land, and calling it "a large farm," and himself "a large farmer." We are so opposed, because he does a greater public injury than public good by so doing. He may be a stumbling block in the way of every progressive farmer in his neighborhood, and profit by their thrift and industry, which enhances the value of the land he holds, without any effort of his own. We never did believe in a dog-in-the-manger policy in anything.

Michigan Agricultural Report.—We are indebted to R. Haigh, Jr., (Secretary *pro tem.*) for a copy of the "Ninth Annual report of the State Board of Agriculture of the State of Michigan, for the year 1870." This Report was made by the late Sanford Howard, whose sudden death, last year, caused a delay in its publication. A portrait of Mr. Howard is appropriately given as a frontispiece. The volumes contain much statistical and other information of special value to the people of Michigan, and all others interested in its agriculture. The Report exhibits the ability and careful accuracy ever displayed by Mr. Howard, and many will prize it highly from the fact that it was the last work prepared by that accomplished writer on Agriculture and kindred topics.

Buying Implements.—A "Patron of Husbandry," in Iowa, writes:—"We are having a lively time here among our implement manufacturers. Some of the Granges have been resolving not to purchase certain implements of certain manufacturers. I question the policy of such resolutions. What do you think?" We think, if we were a Patron of Husbandry, or any other man, we should buy the best implements we could find, where we could buy them cheapest, pay cash down for them, and then take good care of them after we got them—neither borrowing nor lending (except to serve a neighbor in distress), nor allowing them to be exposed to the elements one moment when not in use. It is the cheapest and best way to have good implements to use that we know of.

Where to Go to School.—J. H. C., Prescott, N. Y., 16 years old, working for himself, wants to know where he can go to school when he gets money enough; how much it will cost him to get an education? He should write to Cornell University, Ithaca, N. Y., asking this information, because there he can help to pay his way by daily labor. The Faculty will be glad to give him the required information.

Importing Stock for Breeding Purposes.—We notice that the Secretary of the Treasury has informed Congress that he construes the law regulating the importation of stock for breeding purposes free, to admit such stock from any foreign country—even Canada. The law has been supposed by some to exclude Canadian stock.

The Canada Thistle is to be exterminated from and kept out of Illinois, if there is any virtue in laws and penalties, and Commissioners of Canada Thistles to see that the law is enforced—for such a law has been passed by the Legislature. Illinois readers of the Rural should make themselves acquainted with its provisions.

Arbor Day in Nebraska seems to have been properly observed by one man, at least; for we see it stated that on that day (April 10) Mr. J. D. Smith, near Lincoln, Neb., planted, within ten hours, 35,550 forest trees—a tolerably good day's work! That is the way to protect our forests—plant trees.

The Stone and Rail Fence described by J. W. N. may be patented; but we do not think it is. He should apply direct to the Patent Office, Washington, D. C., for answers to such questions. There is where we should have to obtain it, and he can get it direct as easily as we can.

THE SEASON, CROPS, PRICES, ETC.

Condition of Winter Grain.—The Monthly Report of the Department of Agriculture says: "The April returns, as a whole, indicate rather more than average amount of destruction by winter-killing, retarded growth, and stunted appearance, but a sound condition of the roots of plants in suitable soil, or that covered uniformly with snow, which, with favoring weather, may secure a vigorous growth and a good yield."

Jonesboro, Union Co., Ill., April 27.—Thermometer 80° in the shade to-day. Peaches have shed their bloom. We shall have the largest crop of fruits of all kinds ever grown in Southern Illinois.—B.

Pentwater, Oceana Co., Mich., April 24.—I think that half or more of the peach buds are killed. Fruit trees are looking exceedingly well after such an uncommonly cold winter. The 21st inst. there was a fall of about six inches of snow. Very little rain to date.—G. W. G.

Westport, Conn., April 30.—The season is very backward here; frost not all out in some places where the ground was covered with manure. Oats are nearly all sown; some potatoes planted. No pasture yet; hay scarce. Weather dry and cold for the season; plenty of frost this morning. Apple trees bid fair for a good crop of blossoms. Pear trees look promising. Strawberries badly injured by frost. A good many of the wild blackberries killed; raspberries also. Eggs plenty and cheap—18c. per doz.; butter, 30@40c. A good many onions have been sown. Nothing will grow very fast until we get rain and warmer weather; prospect is dry weather.—A. S. N.

RURAL BREVITIES.

A Subscriber, Tipton, Iowa, can probably get the rubber bandage he refers to at any rubber store in Chicago.

The Wisconsin Dairyman's Association is to hold its first semi-monthly sale of products at Watertown, Wis., June 15.

Samuel H. Brown, a successful breeder of Essex and Berkshire pigs, died at Maple Grove Farm, Millbrook, Duchess Co., N. Y., April 5.

Mollie M. is informed that we have had no occasion to use the "magic compound" spoken of, and cannot say whether it is a humbug or not.

We notice it is estimated by Texas papers that the entire loss of cattle in Western Texas the past winter is 200,000 head. We don't believe it; we regard it a "bull" story.

The Nebraska Farmer, monthly, (Vol. 1, No. 1, $1.50 a year,) Abraham Deyo, Lincoln, Neb., Publisher and Proprietor, is the latest contribution of Agricultural periodical literature we have seen, and it is creditable to Nebraska.

Mr. Caird, in the London Times, places the number of cattle in Great Britain, annually available for the butcher, at 2,336,000; and sheep at 11,033,000; and yet these numbers are entirely inadequate to meet the consumptive demand.

New York City recently received 20,328 pounds of fresh roll butter, done up in a most compact form, enveloped in snow-white linen, and packed in brine in iron-bound tierces, from California—the first received from that State.

We are glad to notice that many English farmers are settling in Virginia, and are contented and satisfied with their prospects. Virginia is one of our best States for agricultural purposes, and deserves more attention from emigrants than she receives.

A Superior Specimen of Sweetness was the sizable cake of Maple Sugar sent us, some time ago, by our long-time and very efficient Agent-Friend, Wm. A. Hart of Friendship, Allegany Co., N. Y. It was the best "extract of maple" we have tasted for a long time.

A Bill is before the English Parliament which provides that no child shall be employed in agriculture under the age of eight years, and that no one from eight to twelve years shall be employed who cannot produce a certificate showing that he or she has attended school a certain time within twelve months

PUBLISHER'S SPECIAL NOTICES.

The Rural New-Yorker is electrotyped, and hence Back Numbers can always be supplied. Copies for sale by all News Dealers; price Six Cents.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or more. A host of people are subscribing for papers about these days, and we hope our Agent-Friends will give everybody an opportunity to subscribe for the best.

Show Bills, Specimen Numbers, Etc., of the Rural New-Yorker sent free.

To let a Cold have its own way is to assist in laying the foundation of Consumption. To cure the most stubborn Cough or Cold you have only to use judiciously Dr. Jayne's Expectorant.

The Public have for years endorsed *Burnett's Cocoaine* as an unrivaled hair dressing.

Various Topics.

OSWEGO NORMAL SCHOOL.

We give herewith a view of the Oswego Normal and Training School building, from Randall's "History of the Common School System of the State of New York," published by Ivison, Blakeman, Taylor & Co. In his work Dr. Randall speaks thus of the Oswego School:

This institution was organized by State legislation, in 1867, by the adoption and enlargement of the Training School previously established in 1863, and is now one of the largest and most prosperous institutions of the kind in the country, having an attendance of about 500 pupils, and graduating annually between 80 and 100. Edward A. Sheldon, A. M., late City Superintendent, is the Principal and Professor of Mathematics, a position which he has occupied since the first organization of the institution; Joseph A. Prindle, A. M., Head Master and Professor of Natural Sciences and Ancient Languages; Isaac B. Poucher, A. M., Teacher of Arithmetic and Algebra; Herman Crusi, of Geometry, History, and Philosophy of Education, and of German and French; Mary Howe Smith, Geography and History; Matilda S. Cooper, Methods in Arithmetic, Grammar, and Object Lessons; Mrs. A. T. Randall, Reading and Elocution; Sarah J. Armstrong, Rhetoric, English Literature, and Composition; Mary E. Perkins, Drawing; Mary D. Sheldon, Gymnastics, Botany, and Latin; Martha McCumber, Principal Practicing Schools; and Kate Davis, of the Primary Department. Special attention is bestowed upon the preparation of Primary School teachers. The Practicing School is composed of about 400 children of primary and junior grades.

OSWEGO NORMAL AND TRAINING SCHOOL.

AN ITALIAN LOVE TRAGEDY.

The city of Rome has been agitated recently by a tragedy as fearfully romantic as any that have been told in romance or sung in opera. On the 25th of February the Princess Caterina Chigi, a beautiful girl of eighteen years, went out for a walk to a jeweler's on the Corso. Nothing more was heard from her until the 27th, when her body rose to the surface of the Tiber. It was clad in the rich attire she wore on the day of her disappearance, but it was stained with blood from a dagger stab in her breast. The weapon, which had a beautiful diamond hilt, still remained in the wound, while on the plain white collar, pinned to her dress, was written the word vendetta. Vengeance, not the desire of robbery, was the inspiring cause of the crime. The deceased had been sought and won by Erberto Giuglie, junior prince of Aldobrandini, a house like hers, among the most illustrious in Rome. Religious ideas, however, gained possession of her mind, and she resolved to enter the cloister. The 25th of March, the feast of the Annunciation, was fixed upon as the day when she would turn her back upon the world.

When Erberto knew of her determination he was very angry, charging her with perjury, and vainly endeavored to induce her to abandon her change of plan. He then became sullen, and absented himself from the Chigi palace, where he had hitherto been a frequent visitor.

The circumstances of Caterina's death would make one suspicious, if not quite confident, that she had fallen a victim to Erberto's rage, even without positive proof that he was her assassin. They view things somewhat differently in Italy, and at last accounts Erberto had not been arrested. His high rank has given him immunity, and made many believe that he could not be the perpetrator of so fiendish a crime. The ownership of the very valuable dagger would seem to be easily traceable, and it is probable that ere this Erberto has been taken into custody, unless other developments have shown that another person is the criminal. The idea of Caterina's suicide is not tenable. The Chigi family are in the deepest mourning, and it will be long before the public will cease to talk of the sad fate of the young and beautiful princess.

ATTENTION TO SANITARY LAWS.

The present year seems to be regarded by medical men as an exceptional one for the prevalence of diseases of a malignant type. The cause of this is not definitely known; it may be some atmospheric peculiarity—the deficiency or the excess of some element in it. But it *is* a well-established fact that epidemics of every kind are checked by strict attention to sanitary laws, and spread rapidly when these laws are neglected. Fevers of various kinds are known to be caused by imperfect drainage, ill-ventilated rooms, and a general want of cleanliness. And even where general cleanliness is not neglected, the exhalations arising from a damp cellar or from a stagnant pool in the vicinity will engender disease. A careful inspection of houses by the occupants is a great safeguard, if discovered difficulties are promptly remedied. And now that the time of year leads us to hope for spring weather, we would suggest that ladies interest themselves somewhat about this matter, and personally examine their dwellings and surroundings, and assure themselves that everything about them is in as cleanly and wholesome a condition as is possible.

HOME CONVERSATION.

Children hunger perpetually for new ideas. They will learn with pleasure from the lips of their parents what they deem it drudgery to study in books; and even if they have the misfortune to be deprived of many educational advantages, they will grow up intelligent if they enjoy in childhood the privilege of listening daily to the conversation of intelligent people. We sometimes see parents, who are the life of every company which they enter, dull, silent and uninteresting at home among their own children If they have not mental activity and mental stores sufficiently for both, let them first use what they have for their own household. A silent house is a dull place for young people, a place from which they will escape if they can. How much useful information, on the other hand, is often given in pleasant family conversation, and what unconscious, but excellent mental training in lively social argument. Cultivate, to the utmost, all the graces of home conversation.—*Good Health.*

A ZEPHYR.

Mr. R. H. Stoddard, the poet-editor of The Aldine, one evening found some difficulty in finishing a poem that he had commenced, and as he sat musing over it, his fancy wandered from the subject and found expression in these lines:

Birds are singing 'round my window,
Sweetest songs you ever heard
And I hang my cage there daily,
But I never catch a bird,

So with thoughts my brain is peopled,
And they sing there all day long,
But they will not fold their pinions
In the little cage of song.

No dust affects the eyes like gold dust, and no glasses like brandy glasses.

A TRUTHFUL ROMANCE.

A Boston woman, who had long been given up for dead by all who were dear to her, lately appeared, "the ghost of her former self," to those who had thought never to see her again. She told a story of strange and horrible suffering. More than a score of years ago she had sailed, a young girl of 18, with her missionary husband for "India's coral strand." The vessel was wrecked on the Arabian coast and all on board perished save her husband and herself. He was preserved only to fall a victim to Arab cruelty and she to Arab slavery. While her beauty lasted she was the favorite wife of the most powerful chief in the South Arabian desert, but when that waned she fell from her "bad eminence," and was transferred to the harem of an inferior sheik. And so she lived, praying for death, but not daring to die, till, bandied from one barbarian to another, she, a Boston lady in whose veins flowed the purest Puritan blood, found herself the wife of an Arabian water-carrier. From his power an American traveler freed her and provided her with the means to reach home.

THE LOWEST TYPE OF HUMANITY.

On the Island of Borneo has been found a certain race of wild creatures, of which kindred varieties have been discovered in the Philippine Islands, in Terra del Fuego, and in South America. They walked unusually, almost erect on two legs, and in that attitude measure about four feet in hight. They are dark, wrinkled and hairy. They construct no habitations, form no families, scarcely associate together, sleep in caves and trees, feed on snakes and vermin, on ants, eggs and on each other. They cannot be tamed or forced to any labor, and are hunted and shot among the trees like the great gorilla, of which they are a stunted copy. When they are captured alive, one finds with surprise that their uncouth jabbering sounds like articulate language. They turn up a human face to gaze at their captors, and females show instincts of modesty; and, in fine, these wretched beings are men.

The Press.—The following is from a speech delivered by Dr. Chapin:—"I love to hear the rumbling of the steam power press better than the rattle and roar of artillery. It is silently attacking and vanishing the Malakoffs of vice and the Redans of evil; and its parallels and approaches cannot be resisted. I like the click of the type in the composing stick of the compositor better than the click of the musket in the hands of the soldier. It bears a leaden messenger of deadlier power, of sublimer force, and of a surer aim, which will hit its mark, though it is a thousand miles ahead."

Philanthropy is not religion, but there is no religion without philanthropy. He that is indifferent to the poor is no Christian, no matter what his creed or his professed experience. How to care for the poor is another question. It is to be done not merely by feeding the hungry and clothing the naked, but yet more by laws, and educational and religious influences which enable them to provide for themselves.

POETICAL BREVITIES.

THE FAMILY.

The family is like a book—
The children are the leaves,
The parents are the cover, that
Protective beauty gives.

At first the pages of the book
Are blank and purely fair,
But time soon writeth memories,
And painteth pictures there.

Love is a little golden clasp
That bindeth up the trust;
Oh, break it not, lest all the leaves
Shall scatter and be lost.

THE FATE OF BEAUTY.

A rose in beauty, glowing,
Beside a clear stream flowing
In rapid tide,
In the clear wave's reflection
Admired her own perfection,
And loved and sighed.
The wilding breeze, upspringing
Despoiled the leaflets, flinging
Them down the wave,
To seek, all crushed and vapid,
Young Beauty's fate so rapid,
An early grave!

UTOPIA.

There is a garden where lilies
And roses are side by side;
And all day between them in silence
The silken butterflies glide.

I may not enter the garden,
Though I know the road thereto;
And morn by morn to the gateway
I see the children go.

They bring back light on their faces;
But they cannot bring back to me
What the lilies say to the roses,
Or the songs of the butterflies be. [*F. T. Palgrave.*

SMILES.

A smile is but a little thing
To the happy giver,
Yet full oft it leaves a calm
On life's boisterous river.

Gentle words are never lost,
However small their seeming;
Sunny rays of love are they
O'er our pathway gleaming.

Our Story-Teller.

MINNIE DALE

BY ROSE GERANIUM.

Minnie Dale sat on an upper porch in the stealing chill and blackness of a far-spent, early spring twilight. The faint, slim moon, that glided swiftly over its track of marvelous, dreamy flakes of white cloud and mysterious, quivering, blue-black, had dropped behind the bare forest, and a thousand stars, like wind-tossed crocus petals, seemed to alight and float upon the half liquid expanse.

An almost audible hush anear, creeping, zephyr-bearing, in a silvery whisper, from the meadow stream, and following the pathway of the sound went the maiden's straining gaze, to rest on the water, which shot forth a faint, tender gleam. There had been work in her hands and a book upon her knee, but all had fallen to the floor, and her fingers unconsciously clutched the great masses of dark hair, drawing it over her bosom like a scarf. She was half crouched, half kneeling, her slender form leaning upon nothing but itself, and a look, part loneliness, part defiance, brooded over her features.

And Minnie was dreaming—dreaming of the ocean,—fancying the white, distant flash a gleam from some high-tossing billow, and the indistinct murmur an echo from the weary sea, complaining to the crags. Back as far as recollection bore her into the vague shadows of childhood, reached the longings for loveliness, and failing nearly all types of the *real*, her fertile brain caught every floating shadow and seasoned imagination.

How she slid into her musical name I cannot divine. Plain, straight-forward, useful, suggestive of nothing but angles, were her honorable parents, bearing about them, withal, a hinting of Quaker. Eighteen years previous to the date of my story they had ended their deliberation at the cradle-side by declaring "the child shall be called Minerva;" sole witness to-day, family record; for by insinuating degrees the title which was certainly born with her gradually found grace before her parents' eyes, until from toleration they slipped into practice.

So she was called MINNIE, and, as I have said before, she longed for beautiful things, and also to be loved, both of which desires were gratified in a degree very moderate indeed. I will not say her parents did not love her; value they certainly did, both from a sense of her usefulness as a manual automaton and a vague appreciation of intellectual worth. But in their hard, toilsome lives good things were so uncommonly scarce that the news of an active, live bit of talent alighting by their hearthstone was believed too good to be true. So, half of need and half neglect, they shut their practical eyes and unbelieving hearts to the state of things existing, and sought to train the damsel's hands and rivet her energies to all the due housewifely theories and practices. The restless soul that sat enthroned in the brown eyes declined steadfastly the honor, and obstinately bowed to the bent of its own sweet will, as well as the upstream tendency and divers small obstacles permitted.

"Sweep, cook, make garden, bed-quilts and grand dresses,—go to church and listen to the preacher preach his sermons," was the Code.

"Sing, do work by violent, spasmodical attacks, read, think, talk to nature and let her talk to you," said Instinct. I think Instinct was a little wrong, but a great deal right.

"You will be in beggary by and by," menaced the Code; but the sweet inner voice whispered: "Follow on, seek the pure." And with divided aim she went through the days, listlessly, waiting—"waiting for something to happen."

It is a fearful thing for this kind of desolate "waiting" to visit a young spirit in its bud-time. Heart-loneliness is sad, full sad to bear; but oh! the fearfulest sigh ever wrung from mortal lips is that which breathes the anguish of a young, faithless and despairing heart. I know not whether I should say MINNIE had never loved, or that she had always loved. I think she was born overflowing with affection, and she lavished it freely upon everything that did not resent it. Birds, bees, blossoms; things helpless and grotesque, all come in for appreciation, all requited. Red-robin dropped from his perch to the lowest twig of the plum tree to trill her a voluntary. Sagely blinked the brown toad as he sat by the door stone and dreamed of rare crumbs from her fingers. The flowers she stole time to tend breathed their grateful incense, and she sung on, in a kind of negative happiness that held possibilities for either grand enjoyment or fearful agony.

To-night, as she sat alone, a thousand minor keys were being touched by the spirit she was wooing. Visions of what her life had been—of what it might be. No wonder her soul rebelled at its fetters; yet underneath all ran a sweet melody of gratitude for blessings.

"O, what a joy to exist!" she murmured rapturously; "Some time I shall be *free*, shall mount to the glittering stars and track the wind spirits to their homes. Oh! how transcendentally glorious to be immortal!"

She sprang up in an ecstasy of delight, as if to rid herself of the clinging weight of flesh, then sank again upon her knees, hot tears bursting up.

"How hard to be alone!" moaned the quivering lips. "If only some one would think and feel as I do—would pity and guide me."

Very tenderly over her soul broke the music of a still small voice, whispering: "Cast thy burdens on the LORD." With frame bowed and tremulous she wept her sorrows out before the All-loving Heart, and when she arose a sweet trust, a holy confidence, enveloped her as a mantle. All through her dreams wound the stream of new, strange peace, and her awakening utterance was one of thankfulness and wondrous bliss. With her, believing was doing, and she carried her faith continually about her, nothing changed, save a gentler, more patient tone and added earnestness.

A year, a whole year passed and again the early blooms were bursting forth. In the sweet Sabbath evening calm, MINNIE wandered forth, as was her delight, to seek the first opening violets in the pastures. Close by the brook-side she found them—gems of starry beauty, all mirrored in the clear pure tide. Her song ceased, her eager fingers sprang forward to gather the blue delights, and a joyous ripple—a song without words—broke from her lips.

Long she sat among them, forgetting herself, everything, in her child-like pleasure. They, like all sweet finger-prints of the Creator, only lifted her thoughts from perishable things to the changeless glories of that fair country to which she was, all unconsciously, fast hastening. Her heart, full of deep emotion, welled over, and her thoughts found utterance as to some listening creature.

"Oh! if I could only take you with me, could find you *there*," she exclaimed at last. "It seems so hard that pure beauty like yours should be fading, while I so gross, so unlovely, may be exalted to immortality, and learn and grow wiser all through eternity. And I shall find those there who will understand me."

"GOD grant it!" uttered a voice at her side, so tender, so full of sympathy that it scarcely surprised her in her reverie. Looking up she beheld a face reflecting all the varied feeling that was playing upon her own; and the stranger continued, as he gathered up a handful of blooms that had fallen from her lap and held them in his grasp,—

"I owe you an apology for my accidental intrusion, but I hasten from that to offer you thanks. A nature like yours will not regret betrayal when you know how deeply your words have comforted me, soothed me, as none ever have before. Longings and loneliness like yours have been my lot. In the stir of a busy world I have ever been alone, and my heart has cried restlessly for sympathy. Here I have found it—full, pure. I would have retired at the sound of your voice, but my spirit stayed to drink the sweetness it forever craved. Forgive me, and again let me thank you."

Her eyes were dimmed by tears of unutterable feeling. She would have answered, but her voice refused utterance. He took her hand, warming it in his clasp for an instant, and was gone.

In the gray dawn, amidst the hum and bustle of the farm-house duties, MINNIE was missing from her place, and when they sought, they found her lying very still and white, with a strange radiance in her eyes.

"Not sick, but very, very tired."

All day long she lay like a thirsty, drooping flower, her flushed cheek crushing the wilted violets that strewed her pillow. Her sister, substantial, bluntly-kind duplicate of her parents, moved wonderingly about, and "could not see how she was sick—she did not complain." Good, spirit-blind creature! None were swifter than she to minister to bodily suffering, but the meaning of mental anguish, a thirsting for soul-food, she had never felt—could not understand. So she brushed the shriveled bits from her pillow and snowy spread, brought up such tempting food as her taste suggested, bathed the hot forehead, and left her to herself.

Evening came, and again the dawn. Still MINNIE was no better. They must have a physician. They had little use, ordinarily, for such aids; colds and toothaches were the prevailing diseases in the DALE family, and were, unexceptionally, repulsed by seasonable resorts to penny-royal tea and hot poultices. But they "must have a doctor" now, and accordingly a farm hand was dispatched to the village for such representative of his skill as could be easiest found. Soon he came, and the eagerly outstretched hand, the smile on the weary face of the patient girl, the quick flash of pain that crossed his, were the mutual signs of recognition.

He replied to their anxious questionings, giving such explanations as they could best understand. "Her frame was exhausted, her strength gone." He left a simple prescription, and recommended physical quiet and cheerfulness.

Days passed, and she did recover. Dr. HALLEM sat for hours at her couch, talking of the things she liked, reading from poems that thrilled her through and through, and her soul was in ecstasy. But she would not gain strength. At last, one day he threw aside his book, and bent over her in anguish.

"MINNIE, sweet sister of my soul," he cried, "is there no hope! Will you not return to me? Oh! come back to happiness—it is ours."

She smiled wearily, lifting her hands to his. Fully and well had their souls understood, though language had been idle. "It is too late," she replied, piteously, "too late now; but by-and-by we may talk and roam together. Do not grieve. My memory will be to you what you are to me as I near the crossing."

She bade them all good-by, and grieved to see their hearts so full of pain. "And now sing to me," she said, as her face lit up with an unearthly brightness.

Not in his own strength, but in a prayer-wrought power, rose the grand voice of Dr. PAUL HALLEM in holy song, and when he had ceased, the hand that lay in his had loosened its clasp forever.

LET us not love those things much which we are not sure to live long to love, nor have long if we should.—*Fuller.*

CAUGHT IN HIS OWN TRAP.

A GIRL, young and pretty, and above all gifted with an air of admirable candor, lately presented herself before a Parisian lawyer.

"Monsieur, I have come to consult you on a grave affair. I want you to oblige a man I love to marry me in spite of himself. How shall I proceed?"

The gentleman of the bar had, of course, a sufficiently elastic conscience. He reflected a moment, and then being sure that no one overheard him, replied hesitatingly:

"Mademoiselle, according to our law, you always possess the means of forcing a man to marry you. You must remain on three occasions alone with him; you can then go before a judge and swear that he is your lover!"

"And will that suffice, Monsieur?"

"Yes, Mademoiselle, with one further condition."

"Well?"

"Then you will produce witnesses who will make oath to having seen you remain a good quarter of an hour with the individual said to have trifled with your affections."

"Very well, Monsieur, I will retain you as counsel in the management of this affair. Good day."

A few days afterwards the young lady returned. She was mysteriously received by the lawyer, who scarcely gave her time to seat herself, questioned her with the most lively curiosity.

"Capital! capital! Persevere in your design, Mademoiselle, but the next time you come to consult me, give me the name of the young man you are going to make so happy in spite of himself."

A fortnight afterwards the young lady knocked at the door of the counsel's room. No sooner was she in than she flung herself into a chair, saying that the walk had made her breathless. Her counsel tried to reassure her, made her inhale salts, and even proposed to loosen her garments.

"It is useless, Monsieur," she said, "I am much better."

"Well, now tell me the name of the fortunate mortal."

"Well, then, the fortunate mortal, be it known to you, is yourself!" said the young beauty bursting into a laugh, "I love you, I have been here three times *tete-a-tete* with you, and my four witnesses are below, ready and willing to accompany me to a magistrate," gravely continued the narrator.

The lawyer, thus caught, had the good sense not to get angry. The most singular fact of all is, that he adores his young wife, who makes an excellent housekeeper.

THE BENEFITS OF WALKING.

WALKING briskly, with an exciting object or pleasurable interest ahead, is the most healthful of all forms of exercise except that of encouragingly remunerative, steady labor in the open air; and yet multitudes in the city, whose health urgently requires exercise, seldom walk when they can ride, if the distance is a mile or more. It is worse in the country, especially with the well-to-do; a horse or carriage must be brought to the door even if less distance has to be passed. Under the conditions first named walking is a bliss; it gives animation to the mind, it vivifies the circulation, it paints the cheek and sparkles the eye, and wakes up the whole being, physical, mental, and moral. We know a family of children in this city who, from the age of seven, had to walk nearly two miles to school, winter and summer; whether sleet, or storm, or rain, or burning sun, they made it an ambition never to stay away from school on account of the weather, and never to be "late;" and one of them was heard to boast that in seven years it had never been necessary to give an "excuse" for being one minute behind time, even although in winter it was necessary to dress by gas-light. They did not average two days sickness in a year, and later they thought nothing of walking twelve miles at a time in the Swiss mountains. Sometimes they would be caught in drenching rains, and wet to the skin; on such occasions they made it a point to do one thing, let it rain, and trudged on more vigorously until every thread was dry before they reached home.

ONE of the young Japanese girls has a brother in New Haven, who has requested that his sister may be kept out of his sight, as he no longer cared to look upon her after she had so far lowered herself as to seek an education.

IT is said a new woman's rights paper, to be called the New Times, will soon appear in New York.

Sabbath Reading.

THE BREAD OF THE HOLY YODOKEES.

FROM THE GERMAN OF ROSEGARTEN.

To prove His servants' truth and love,
The LORD, in beggar's plight,
Hungry and blind and lame, appeared
To good Yodokees' sight.

"Give," cried the saint. The steward said:
"One loaf alone is found,
What will remain for thee and me
And for our faithful hound?"

"Give," said the abbot, "without stint,
The LORD will send us more."
The steward took the knife and cut
The loaf in pieces four;

And, turning to the beggar, said,
A little frowningly,
"Thou one, the holy abbot one,
Two for the hound and me."

Ere long the beggar came again,
More wretched than before.
"Give him my piece," the abbot said,
"The LORD will send us more."

Naked and starving, still again
He wailed at the door.
"Give him thy piece, good steward, give,
The LORD will send us more."

He came the fourth time. "Steward, give
The hound's piece for his need,"
The abbot said; "the LORD will care
Who doth the ravens feed."

The beggar went. A voice was heard:
"My son, thy love I see,
Disciple true, as is thy faith,
So shall it be to thee."

The steward to the window ran,
And, on the stream near by,
Loaded with corn, and oil, and wine,
Four little ships did lie.

He hastened joyous to the strand,
But saw no man; instead,
Upon a white flag, wrought with gold,
In flaming words he read:

"He who the hungry raven feeds
Sends four ships to thy shore,
For thee, the steward and the hound;
The fourth one for His poor."

FANNY M. BARTON.

THE GIRONDOLA.

THE grand fire-works, which annually take place Monday evening after Easter, in Rome, at the expense of the Government, are very superb.

At the moment the clock of Santa Maria del Popolo struck the hour of eight, a lurid glow shot athwart the Pincian, the loud report of three cannons, followed simultaneously by a shower of rockets, gave the signal; and with the same magical rapidity as marked the golden lighting up of St. Peter's, the "New Jerusalem" in glorious beauty stood revealed. There it was—its lofty pinnacles, its streets of jasper, and its gates of pearl, as shown to the Evangelist St. John by the angel! And on a rising mound of glory stood St. John, while by his side a Being all glorious, with wings of silver, was pointing to this city of the Great King.

We were permitted to gaze on this beautiful scene for five minutes, when it gradually faded away and away, until, with the last faint glimmer, there shot into the air long streams of fire, breaking into myriads of many-colored stars flashing through golden rain! Again the cannon pealed, and rockets like the tails of comets trailed across the heavens; and then we saw another palace of a ruby hue, transparent, beautiful; over the entablature was written in letters of gold, "*Viva Pio Nono*," surmounted by the papal arms, at which the band struck up the national air. This vanished, and instantly the heavens were brilliant with sheets of variegated fire, in form like immense bouquets, from which little meteors, like birds, would suddenly dart and skim down to earth, or soaring higher, would shake down tiny particles of light, as it might be shivers from a rainbow.

Again the booming cannon and the hissing, flashing rocket; and now the whole front of the Pincian was one scene of blazing wheels, spinning round and round with ever-increasing speed, dropping sparks of gold and silver; and then from each cylinder suddenly burst forth streams of fire of every hue, mounting high in the air, and then, with a deafening explosion, forming into crowns and wreaths of the most ravishing beauty, sailing above the heads of the crowd, and then vanishing away.—*Our Monthly for May.*

ALWAYS consult discretion—it is more discreet to be silent than to speak when it is not accompanied by sense and reason.—*Epictetus.*

HE that has no bridle on his tongue has no grace in his heart.

Ladies' Port-Folio.

LOVE'S LIFE.

BY R. W. EASTERBROOKS.

Did you ever bury a love, My Dear,
And put it out of sight,
In the stillness of the night,
As something dead and forever gone,
Something dead which you might not mourn.
Something you were above, My Dear—
Something you were above?

And then has it ever passed, My Dear,
From out of its narrow tomb,
From out of surrounding gloom,
And hurried along to your soul once more?
With never a sound has it loosed the door
You barred and bolted fast, My Dear—
Barred and bolted fast?

I buried a love one night, My Dear,
Buried it down below,
One night long years ago,
And covered it up with the sod,
And over its ashes I trod
Till all was firm and tight, My Dear—
Till all was firm and tight.

And then I left it alone, My Dear,
What use to guard a spot
Where life and hope were not?
But graves where love is laid away
Must e'en be guarded night and day,
And hearts must be their stone, My Dear—
Hearts must be their stone.

So I left the old for the new, My Dear,
Turned away from my dead
With strangely silent tread.
Of what avail? There has followed me,
In all my journeys o'er land and sea,
The ghost of my love for you, My Dear—
The ghost of my love for you.

And we have met again, My Dear;
You crossed my weary way
For the first time since to-day.
Your smile grew sad as it met my eye,
And mine grew pensive—do you know why?
That both had suffered was plain, My Dear—
That both had suffered was plain.

Upon my heart is your head, My Dear,
And o'er the troubled past
Link rest and peace at last.
And as for the love that I buried below,
In silent sorrow long years ago,
I hardly think it was dead, My Dear—
Hardly think it was dead.

A ROMANTIC REMINISCENCE.

[We segregate the following from some "Notes by the Wayside," by our Corresponding Editor, Col. Harris—written from Huron Co., Ohio. The Colonel, after speaking of practical matters observed during a day among old friends in the country, says, "Now let me tell you a sentimental story"—and the story follows:]

Between ten and twenty years ago, while I was editor of the old Ohio Cultivator, I had for a constant subscriber at the Greenwich post-office, a fine old Quaker gentleman by the name of Smith, and among his children was one Annie, a girl of lithe form, raven hair and gipsey face, with quite a dash of romance for a Quaker girl. Sixteen years ago this Annie suddenly appeared in my office at Columbus, told me her name, took a pair of scissors and clipped a lock of my abundant back hair (for an album hair-wreath, as she said,) and as suddenly disappeared.

I had not seen one of the family before or since; but finding myself in the neighborhood on this occasion, I alighted at the homestead of the Smiths, walked up to the open door, where sat a venerable Quaker lady and a gipsy-featured girl—neither she nor I as young as we were once—and I said, "Pardon me, friends, but about sixteen years ago a young woman came into my office and clipped a lock of my hair, and now I have come to see what she has done with it."

By the time this clever bit of introduction was uttered, Annie's bonnie brown eyes were wide open, and her hands extended eagerly to clasp mine, as she exclaimed—"Are you friend Harris?" Well, of course I was; and then I was introduced to the venerable mother, and we sat and talked a steady stream for an hour; and Annie showed me the hair album, where, among many (other) distinguished names, was my own, along side of the identical lock of hair which this Delilah had clipped from my hirsute tresses, as before mentioned.

The elder Smith had been educated for the ministry, in New York; but, his health not being good, had settled here with his wife, in the wilderness, fifty-two years ago, and last year he died. The venerable widow is a lineal descendant of the family of Kip, from Holland, the original proprietors of lands in the lower part of Broadway in the city of New York. Widow Smith told me that she remembers hearing her great-grandmother say that she had milked the cows, barefooted, in a pasture where Trinity Church now stands! S. D. H.

EUROPEAN AND AMERICAN FEMALE ATTIRE.

How shocked would those ladies of our "first society" be, if they knew that their torturing and ill-formed shoes on whose stilt-like heels they tilt and suffer, no Paris shop-keeper would ever offer to a lady. For more than two years American women, especially young girls, have walked the public streets, with conspicuous chains and lockets, or flaunting bows of ribbon, attracting the attention of every passing gazer, solacing themselves by the thought that it was "perfectly French." If so, it was a custom which no French lady would wear on the public pavement. The dress of the French lady is artistic, simple, faultless—faultless often because it is simplicity itself. She may wear brilliant colors in her drawing room, and in her carriage—never on the street. When she walks she wears black or gray, and it never drags on the ground. When she goes to church she wears the same colors—is always attired in the simplest manner. This is true also of Italy. In the Sistine chapel, Rome, no lady can enter unless attired in black, with no covering on her head but a veil of the same hue. What a contrast to the church attire of American women! They are accustomed to think of themselves as perfect saints compared with Italian and French women, yet they enter the house of God as they would a theater. They don their gayest plumage, hang on all their chains and lockets, take off their kid gloves to show their diamond rings in the sacred temple just as in the Academy of Music. Worse, they stare and comment on each other's costumes, and absolutely make the church of worship a place in which to study the fashions. The same lack of fitness in dress is seen in the utter disregard to age, as well as occasions in the adaptation of dress. The woman of thirty or forty may be as beautiful as a woman of twenty, by her own right, if there's no incongruity between her years and her attire. It is only when the woman of forty dresses like the girl of twenty that she looks absurd. A French married lady never wears a round hat; an English lady only in traveling; an English maiden never at church. Yet everywhere American matrons, with faces lined and scarred, may be seen with staring jockeys, set on their gray heads like helmets, beflowered and befeathered, and more fantastic than the ones worn by their little daughters of ten. Flannel and linen and muslin are worthy of their Princes and Princesses abroad, but are by no means fine enough for the little Princes and Princesses American. All of which is not French, though to be "perfectly French" has been the alpha and omega of our alphabet in dress.

ANOTHER VIEW OF "WOMANS RIGHTS."

A "fair" paper in Troy, New York, concludes an editorial on "Woman's Rights" thus:—"Truly, there's a good time coming, boys. We shall have our 'thirds' in our wives' property, and they will be bound to support us and our children and pay our debts. There was but one drop of bitter in the prospective cup. It grinds us to confess it, but the humiliating concession must be made—*woman will* carry the latch key. She will go out after supper to 'see a woman' or to the 'post-office,' or to serve on a 'committee.' After mending the stockings, and canvassing the character of all the other men in our parish, with our clergywoman, who has dropped in, we go to bed. We lie awake between the measles and the whooping-cough, and late, near our wife stumbling over the door mat, fumbling about the keyhole, and coming up stairs *a la* Nebuchadnezzar, and experience the sensation of a corner 'grocery' entering our chamber. The picture becomes painful, and we drop the curtain."

Pretty Girls, unless they have wise mothers, are more educated by the opposite sex than their own. Put them where you will, their is always some *man* busying himself in their instruction; and the burden of masculine teaching is generally about the same, and might be stereotyped as follows: "You don't need to be or do anything. Your business in life is to look pretty, and amuse us. You don't need to study; you know all by nature that a woman need to know. The only sense you need is lovely nonsense. You are, by virtue of being a pretty woman, superior to anything we can teach you; and we wouldn't, for the world, have you anything but what you are."—*Pink and White Tyranny.*

A friend should be one in whose understanding and virtue we can equally confide, and whose opinion we can value at once for its justness and sincerity.

Reading for the Young.

WHICH IS THE BEST?

A DIALOGUE FOR SIX LITTLE GIRLS.

1st Girl—I'm a little country lassie,
I can iron, churn and bake,
Wash the dishes, feed the poultry,
Mix a famous johnny-cake;
Ride the horses down to water,
Drive the cows to pastures green—
I would not exchange my station,
For the throne of England's queen.

2d Girl—Mother calls me little student;
I can cipher, read and spell,
Draw a map or bound a country,
And in "mental" I excel.
I shall climb the hill of knowledge,
To its very top will go,
Then success will crown my efforts,
Teacher says—and ain't it so?

3d Girl—I am nothing but a noodle,
Mother told me so to-day.
But I really cannot study
When the very fields are gay.
Birds are calling from the tree-tops—
Spring is waking lake and rill;
You may mope o'er prosy lessons,
I will be a noodle still.

4th Girl—I'm a little city maiden,
You would know this by my style,
Quite unlike those country rustics,
With their broad uncourteous smile.
I'll not soil *my* hands by labor,
Mine were made for higher things;
Papa calls me "little angel,"
All I lack, he says, are wings.

5th Girl—I'm my mother's little helper,
And am happy all day long;
I can bring dear papa's slippers,
Sing the baby's cradle song.
Rock him till the angels' whispers
Make him smile from dreamland shore;
Ran a thousand ways for mother,
Can a little girl do more?

6th Girl—I's my mamma's 'ittle darling.
very small Don't you fink I's fresh and sweet,
With these roses at my shoulders,
And my muslin dress so neat?
Mamma made it dist on purpose
'Cause I's goin' to speak to you.
It *is* lovely, don't you fink so?
Wish 'twas yours? I *bet* you do.

[*Jennie Joy in Schoolday Visitor.*

LETTERS TO YOUNG RURALISTS.—VI.

FROM COUSIN JOHNNIE.

I was much interested the other night in hearing a gentleman talk about "snakes," so I tried to remember something he said to tell my little "Rural cousins." He had for a pet, at one time, he told me, a large black snake which he kept up in the garret, and which grew so tame that it would come out whenever he rapped on the floor, and drink milk from a spoon in his hand. It would also submit to have its back scratched, with evident pleasure. Black snakes, as some of you may know, are not poisonous, their means of defense being the power of winding themselves around their enemies, or their prey, and squeezing them to death. They are able to swallow quite large objects sometimes. The gentleman said he once saw one that had undertaken to swallow a nest of young woodpeckers! But, alas! for Mr. Snake, the nest was down in the hollow of a tree, and though his head went in the hole easily enough, he found it impossible to draw it out after taking in nest and birdies, so there he was discovered, hanging out of the hole, choked to death!

He also told us about the hoop snake, which has a sting upon its back, near its tail. When about to attack any object, it erects this sting like a thorn, takes its tail in its mouth, and rolls itself along like a hoop, with wonderful quickness, till it reaches its destination, when it suddenly lets go its tail, and strikes its thorn into the object of its wrath. It is said that any one so struck will die in twenty minutes. He told us, too, about the king snake, the natural enemy of the rattle snake and copperhead. It is said these latter snakes leave an odor like that of cucumbers, where they have passed along, and if the king snake gets upon their scent he will follow it up like any hound, till he finds them, when a battle takes place, in which, although he has neither fangs nor sting, he is sure to be the victor. It is in this way:—The rattlesnake (and the gentleman said it was the same with all snakes with poison fangs), makes a coil and throws himself upon his enemy, striking its fangs into it. These fangs, which are two in number, lie back against the roof of his mouth when not in use, and have a little poison sac at the root. When struck into any object a drop of poison is poured into these hollow fangs, and a tiny stream flows into the wound. But if he fails to reach his object he is unable to make another attack until he has again coiled himself. This the king snake knows, and while the other is preparing to make a new coil, he glides rapidly up to him, winds himself around the poor fellow, and squeezes him to death! But there—I have taken up so much space that I must now end the "snaky" part of my letter, by telling about another snake who, when danger is near, makes a hissing noise, which says to her little ones:—"Come to your mother, right away." The obedient little snakes (an example to some little boys and girls I have seen) hurry as fast as possible to her, she opens her mouth and they all crawl in, and away she wriggles to a place of safety.

I am glad Minnie S. likes Cousin Johnnie's letters. As she is the oldest, she must try and set a good example to her little sisters and be a comfort to her parents. Martha J. P. has so many pets it is a pity she could not share them with Anna B. Mc., who has none. I hope Anna will get a prize next time for perfect lessons. Lily B. F.'s plan of studying an hour a day in vacation is an excellent one, and I recommend it to all scholars.

Pleasure.—The roses of pleasure seldom last long enough to adorn the brow of him who plucks them, and they are the only roses which do not retain their sweetness after they have lost their beauty.

The most beautiful nature in the world is kindness.

The Puzzler.

ILLUSTRATED REBUS.—No. 19.

F. McMaster.

☞ Answer in two weeks, when we will publish the names of those sending us correct answers.

HOUSEKEEPER'S ENIGMA.—No. 1.

I am composed of thirty letters.
My 4, 24, 14, 16, 8 is essential in cooking.
My 9, 29, 2, 15, 11, 12 every housekeeper should possess.
My 1, 17, 22, 23, 10, 30, important member of the family.
My 18, 6, 13, 11, 8, 27, 12, a kind of cake.
My 28, 13, 19, 3, 21 don't receive much attention.
My 3, 5, 28, 25, 13, 3, troublesome freak of fashion.
My 30, 7, 26, 15 is a weaver's utensil.
My whole has been learned since marriage.

May.

☞ Answer in two weeks, when we will publish the names of those sending correct answers.

ARITHMETICAL PUZZLE.—No. 1.

Three-fifths of one-fourth of three-fifths of five score,
One-third of two sixes divided by four,
One-half of two-thirds, of six more than four threes,
One-fourth of two dozen and eight, if you please:
The initials of these when joined, you will spy
A thing this very moment under your eye.

Joseph Schultz.

The Empress Augusta of Germany is visiting Victoria.....Two thousand cartmen have struck in Liverpool....Earl Russell's motion has been postponed until the 6th of May....The Imperial Government has agreed to guarantee Canada a loan of £2,500,000 for a Pacific Railway, if Canada will accept the Washington Treaty.... There has been a rumor in Toronto that America has withdrawn the indirect claims. The Times congratulates the United States, and President Grant is to be complimented in Parliament.... The Atlanta Boat Club has made a favorable impression....The Earl of Dufferin will send his yacht to New York, to compete in the races.... A Polar expedition is projected....Prince Charlie won the 2,000 guineas race at Newmarket.

From France.

MANY Internationals have been arrested in Lyons ...Two or three Generals are to be tried before a court martial....Genton has been shot at Salory, and Blanqui has been transported for life....Passports for Switzerland are no longer required .. Gen. Wimpffen asks to be retired from the army ...The German troops still occupy France and will do so until the indemnity is paid, which may be until May, 1874 .. The Assembly refuses to allow the President to appoint a Council of State....Germany declares herself friendly to France.

Miscellaneous Foreign News.

THE eruption of Vesuvius, on April 26th, had assumed terrible proportions; thousands of people had left their homes, and were encamped on the fields; the flames rose to a great height, sending up rocks, and shocks of earthquake were felt at Naples; a dispatch send in the Chamber of Deputies, at Rome, on the 26th, said that 200 people had been burned by the lava; the people had left Jone del Greco. ..Gold has been discovered in the Red River country....There are reports that many prominent Cubans have surrendered to the Spanish authorities Von Beust contemplates a visit to the United States. ....On the 28th, the eruption of Vesuvius was decreasing; a new crater had opened near Tersigna; the stream of lava was 16 feet deep; thousands of acres of arable land have been ruined by the ashes....Fighting was going on around Matamoras, Mexico, on the 28th, and a bombardment of the place was daily expected The Canadian Pacific Railway bill has been introduced into the House ...The labor troubles continue in Germany, and thousands are out of employment in Berlin....On the 29th, the eruption of Vesuvius was grander than at any time since 1631; a shower of three inches of ashes fell in Naples, and business was suspended; fearful electric phenomenas took place .. The earthquake in Syria proves to have been fearful; some 1,000 people were killed, including four Americans....The late Tycoon of Japan has been called from retirement, and received an honorable appointment. ..The black flag has been hoisted at Matamoras, and many wounded are taken into the city ...Peace has been established at Hayti. ..The Pope has received 3,000 Romans; he stigmatized the scourge of unbelief....No damage has been done to Naples....Reinforcements continue to arrive at Matamoras.

SEMI-BUSINESS PARAGRAPHS.

Facts for the Ladies. — Miss S. A. Davis, Berlin, N. Y., has used Wheeler & Wilson's Lock-Stitch Sewing Machine seventeen years in collar making; supported herself and an invalid mother, whom she also tended, and has saved over $2,000; she has been a constant worker by foot power and not sick a day. See the new Improvements and Woods' Lock-Stitch Ripper.

Watch No. 24008, Stem Winder — Trade Mark "United States Watch Co., (Giles, Wales & Co.,) Marion, N. J."—has been worn by me about five months, during that time has varied but eight seconds. I have worn it while riding on horseback and in railroad cars.—CHAS. H. WOLF, firm Chas. H. Wolf & Co., Pearl St., Cincinnati, Ohio.

Founded on a Rock:—The disappointed adventurers who have from time to time attempted to run their worthless potions against Plantation Bitters, vow that they cannot understand what foundation there is for its amazing popularity. The explanation is simple enough. The reputation of the world-renowned tonic is founded upon a rock, the Rock of Experience.

We have never yet seen a Book of Testimonials containing more valuable evidence of real merit in the article spoken of, than the little pamphlet entitled "What people say about the Blanchard Churn." Send to any dealer in dairy implements for one of them.

THE MARKETS.

MONEY AND TRADE AFFAIRS.

NEW YORK, Saturday, May 4, 1872.

SINCE our last report the Treasury Department has published the monthly schedule of the Public Debt to May 1. It makes a further reduction of $12,588,000 on the Principal of the Debt, and a reduction of $900,000 per annum on the interest charge of the Debt. The following is the present classification of the Funded Stocks of the United States, payable, Principal and Interest, in Gold:

FUNDED (GOLD) STOCKS, UNITED STATES, MAY 1.

Date.	Coupon.	Registered.	Total.
5-20s, 1862	$243,333,450	$35,158,200	$279,091,650
5-20s, 1864	32,755,800	37,239,150	71,555,000
5-20s, 1865	120,128,321	40,170,900	160,299,250
5-20s, 1865, (new)	164,450,000	63,901,350	228,110,350
5-20s, 1867	225,535,400	92,438,050	330,073,850
5-20s, 1868	26,051,300	13,214,500	39,265,800
Total 5-20s	$822,854,250	$282,241,150	$1,105,095,500
Sixes, 1881	91,368,550	192,312,650	283,681,200
Fives, 10-40s	166,200,550	138,357,750	191,567,300
Fives, 1874	13,055,000	6,045,000	20,000,000
New Fives, 1881	78,065,650	121,935,350	200,000,000
Total	$1,092,451,500	$740,892,900	$1,833,344,400
Total March 4, 1869			2,107,846,150

Reduction of Funded Debt	$304,501,750
Yearly Gold Interest charge, 1869	124,255,340
Present yearly charge	104,054,631
Reduction Interest Charge	$20,200,719
Reduction in Funded debt as above	$304,501,750
Reduction of Treasury Circulation	23,218,068
Total payments on Debt	$327,719,818

The following are the comparative movements of the City Banks for the past fortnight:

	April 20.	April 27.
Capital	$87,155,500	$87,155,500
Loans	273,050,500	274,050,600
Gold and Greenbacks	58,187,201	63,339,100
Deposits	195,620,700	203,139,100
Circulation	27,911,500	27,840,000

N. Y. Central Stock	90¾	Bills on London	109¾

* Ex. May quarterly interest.

The changes in our quotations are a decline of ¼ per cent. in Gold and an advance of ¼ per cent. in the Government Stocks. The latter are comparatively scarce on the market, and although the Treasury offered on Wednesday to buy $2,000,000 United States 5-20s at or below the price of Gold, only $600,000 Bonds were obtained on these terms. In the Railroads, the decline is 4 per cent. from the extreme price of last week on Erie Stock. There is an advance of 3 per cent. on Rock Island, while New York Central, the Northwests, the St. Pauls, Lake Shore, Ohios, and Union Pacific are about the same figures as on the previous report. There is a strong speculation in Western Telegraph and Pacific Mail, and both are 3@4 per cent. higher than last week. The Express Stocks are 3 per cent. higher on United States.

The Bank report shows a further increased strength of five millions in Greenbacks, and Money has settled down to a comfortable supply to the Brokers and Merchants, at 7 per cent. per annum.

The Gold exports, usual at this season of the year, are still delayed by a supply of Bills drawn against various American Stocks which have been going abroad. Only about a million of Gold went out last week.

In general trade business is falling off in Dry Goods, while in Sugars, Metals, etc., the demand continues good and the importations large. Congress has voted, and the President approved, Free Tea and Coffee, the act to go into effect July 1. This takes a tax of 15 cents the pound off Teas and 3 cents the pound off Coffee. There will not be much trade in either until the duty is taken off. The current importations will go into Bonded Warehouses to await the operation of the new act.

It is reasonably certain that little else will be done with the Tariff this season, and quite sure that the Income Tax will be dropped.

Messrs. JAY COOKE & Co. report the sale of Northern Pacific Gold Bonds during March and April as $1,891,900.

PRODUCE AND PROVISIONS.

NEW YORK, Friday, May 3, 1872.

Beans and Peas.—There is more inquiry for marrowfats mainly from exporters with prices a little stronger. The market generally is firm with a well distributed business. Sales of prime mediums at $3.25, good do. at $3.05@3.20, fair lots as low as $2.90, prime marrowfats $3.25, good lots at $3.05@3.20, fair do. down to $2.70, kidney $3.40@3.50, pea $3.20@3.30, red kidney $2.25@3. Peas are steadily held at $1.25@1.27 for Canada and $2@2.20 for green.

Beeswax.—The arrivals are small and an immediate outlet is found for all that is received at full late prices. Southern 40@41c.

Broom Corn—is hard to sell at 7@9c. for new hurl, 5@7c. for new green, 3@5c. for red and 3@6c. for old.

Butter. New butter is decidedly lower, and, although trade is fairly active at the close, the few days of dullness have made sellers anxious to close out the white receipts as fast as they arrive, irrespective of declining quotations. A few tub parcels of slightly yellow, and grassy flavored quality, begin to arrive, but even these are not quoted above 35c. Welsh and half-tubs while range about together. Another carload of California has come forward, having been 34 days on the passage by rail—certainly long enough to see if it would *keep* for market. It was put out at 25c., the top price for Orange Co. fancy pails. We quote, pails, 30@35c.; extra half-tubs, 33c.; white do., 30@31c.; do. Welsh, 29@30c.; common State, 24@25c. Western, 25@28c. for fine, and 18@23c. for common. Receipts of butter for April, 36,050 packages; same month last year, 30,000 do.

Cheese.—The market is weak, with a slow trade; a few lots of old are coming in, and the receipts of new are a little larger. The business is still almost entirely from the home trade. Small lots of new are selling at 12@13½c., and occasionally 14c. Old brings 16c. for prime. The quotations are for old, fine factory, 16c.; fair lots, 14@15½c. State dairy, 14@15c. for fine, and 11c. for common. New at 13@14c. for prime factory, 12@13c. for fair lots, skimmed do., 10@11c. Farm dairy, good, 11@12c.; common do., 9c. Receipts of cheese for the month of April, 18,710 boxes; same month last year, 15,300 do.

Cotton.—The market is pretty well under the control of speculators, and the high figures ruling for contracts tends to keep prices generally pretty well up. The business from spinners and exporters is unimportant. We quote:

	Uplands.	Alabama.	N. Orleans.	Texas.
Ordinary	20	20¾	20¾	20½
Good Ordinary	22¼	22¾	22¾	22¾
Low Middling	23	23½	23½	23½
Middling	23¾	23¾	24¼	24¼
Good Middling	24½	24¾	24¾	25

For future delivery latest sales on the basis of low middling are at 23¾c. for June; 23 15-16c. for Aug.; 22¾c. for Sept.; 20¼c. for Oct.; 19¾c. for Nov.; 19¾ for Dec.

Dried Fruits.—Prices of apples are weak, with a slow trade. Peaches are quiet. Small fruits are scarce. Apples—Old State, qrs., 6@7c.; Western, new, 10@10¼.; Southern, new, quarters, 9c.; do. fine, sliced, 12@13c.; new State qrs., 11@11¾c.; do. sliced, fine, 13@13c.; Peaches, peeled, new N. C., 17c.@18½c.; do. Geo., 15@16½c.; peeled E. Sh. Va., 15@16½c.; new unpeeled halves, 7¾.; do. quarters, 5½@6c. Plums, 25@27c. Cherries, new, ₱ lb., 30@32c. Blackberries, 12¼@13c. Raspberries 30@32c.

Eggs.—Prices have again declined, the arrivals being unusually heavy. Pickling has commenced. The indications are that prices will rule a little firmer. Sales at 15½@16c. for Western; 16@16½c. for State and Pennsylvania, and 16½@17c. for Jersey. Receipts for April, 16,330 bbls. Same month last year, 70,800 do.

Feathers.—Live geese, 60@75c.; mixed, 40@50c.; hen, 7@9c.

Flour.—Prices have again been advanced 10 to 15c. per bbl. The business is nearly all for home use. Receipts are moderate, at $6.50@6.80 for superfine State; $7.10@7.25 for common extra do.; $7.30@7.40 for good to choice do.; $7.45@8.00 for fancy do.; $8.50@8.90 for superfine Michigan, Indiana, Ohio, Iowa, &c.; $7.00@7.40 for extra do.; $7.45@8.25 for choice extra do., including shipping brands of round hoop Ohio at $7.40@7.90, and trade brands of do. at $7.90@8.25; good to choice white wheat extras at $8.30@8.50; Minnesota, fair to very choice extra, at $8.00@8.50; St. Louis at $8.00@8.25 for common to fair extra, and $8.30@12.00 for good to choice. Southern at $8.00@8.75 for extras and $8.80@12.25 for good to choice. Rye at $4.25@6.20.

Fresh Fruits.—Russets range at $4.75@5.50, the latter for Roxbury. Cranberries $6 per crate. Charleston strawberries are in good supply, and public places already begin to use them. They have dropped to $1.25@1.50 per quart.

Grain.—Wheat further advanced 3@5c. per bushel, but at the close has become weak, on account of decreasing shipping trade.

We quote—No. 2 spring, in store, $1.59@1.64; No. 1 do., $1.65@1.66; winter red Western, $1.80@1.84; amber Western, $1.88@1.92; and white Western at $1.88@2.06. Rye is quiet at 91c. for Western in store. Oats are active and a trifle higher. Sales at 62½c. for Western in store, 58c. for do. afloat, 54½@56c. for Ohio. Barley is dull at 70c. for Western, and 91c. for Canada East. Corn is in active demand, principally from exporters, with large sales for spot, and forward delivery at better prices. Western mixed, afloat, 74½@75c.; Western yellow, 74½c.; white Southern, 78c.; also at 80c., deliverable the last half of May and first half of June, and 68c. for all June.

Hay and Straw.—There is very little stock coming in, and prices still rule unusually high for the season. Hay at $1.45@1.50 for shipping; $1.55@1.81 for retail qualities. Clover, $1@1.10; salt, 65@80c. Straw at $1.10@1.15 for long rye; 90c.@$1 for short rye; 80@90c. for oat; 55@65c. for wheat.

Hops.—As usual at this season business in full parcels is checked, everybody holding off to hear from the new crop. Brewers are taking a few lots at late prices. Sales at 50@65c. for prime, down to 25c. for common; English, 60@65c.

Provisions.—For pork there is a firm market, with a moderate trade. The reports from the West are encouraging. Mess, $13.75 for spot, $14.25 for August. September and October; extra prime, $11.25; prime mess, $13.25@13.50. Dressed hogs are steadily held at 6@6¼c. for city; middles are offered sparingly; long clear, 7c.; short rib, 7¾c. Cut meats meet with a fair shipping demand at 9¾@10c. for hams in pickle, 9¾@10c. for do. in salt, 5½@6c. for shoulders in salt, 6@6¼c. for do. in pickle. Smoked meats are quiet at 10½@13c. for hams, 6¾@7c. for shoulders, and 7¾@8¼c. for clear rib. Lard sells slowly, but holders are very firm in their views. Prime Western steam, 9¾c. for spot, 9¾c. for May, 9 11-16 for July, 9¾c. for August. Stearine is selling at 9½@9¾c. Beef meets with more attention at $7.50@9 for plain Western mess, $10@12 for extra mess, $15@17 for prime mess in tes., and $19@21 for India mess lcs. Beef hams are selling at $25@27. Tallow is in fair demand at 9¾@9¾c., with a steady market. Stock of pork in yards May 1st, 77,685 bbls., 11,754 of which are old. Stock of beef in yards May 1st, 56,203 bbls. and tcs., 7,155 of which are old.

Poultry and Game.—There is a full range of prices ruling for poultry, with small supplies. Pigeons are lower. We quote:

Live, State and N. J., 20@22c.; do. Western, 18@20c.; roosters, 11@12c.; ducks, per pair, $1@1.12. Geese—Western, $1.75@2; do. Canada, $1.75@2; do. Jersey, $2.75@3.25; turkeys, 22@24c. N. J. and Pa. chickens, 25@30c.; do. turkeys, 30@32c.; capons, 42@45c.; broilers, $2.12 ₱ pair; Western chickens, 18@23c.; do. turkeys, 27@28c.

GAME.—English snipe per doz., $1.75@2; plover, $1.25@2 do. Wild pigeons 50@62c., feathered, and 25@33c. picked.

Seed.—The home demand has been very light this season. There is scarcely any business at the close. Clover 8¾@9¾c. for Ohio, 9½@9¾c. for Indiana and Michigan, and 10c. for State. Timothy is selling in a small way at $2.75@3.25.

Tobacco.—There is a good business in seed-leaf, for export at full prices; beyond this the market is quiet. Sales of Kentucky leaf at 8@11c. Sales of Ohio seedleaf, new crop, 9½@14c.; Wisconsin do., 9@9½c.; New York do., 10@11c., and Pennsylvania at 17c.

Vegetables.—Green peas arrive freely, latterly in poor order, many lots barely paying freight; lots in good order brought $2@2.50 per bushel. Northern asparagus is in fair supply. Oyster Bay quoted at $5 per doz., and Shrewsbury, $2.50@4.00. Old potatoes are something firmer for choice bbls.; bulk about as before. Onions of all kinds are dull. Bermuda produce is in fair demand, and the market is enlivened with some other items of Southern green stuff than peas.

Potatoes, Early Rose, bbl., for seed, $2.25@3.00; P Blows, $2.50@2.75; Prince Albert, $1.75@2; Moultor and Goodrich, $1.25@1.50; Jackson, $1.50@1.75; Dyrlght, $1.50@2; sweet (bl)., $4.00@4.50. Onions, red and yellow, $2.25@2.50; Conn., 100 strings, $3. Garlic, per 100 bunches, $22@24. Turnips, Russia, bbl., $2. Cabbages, per 100, $6@8. Beets per 100, $1.25. Carrots per 100, $1.50. Bermuda potatoes, $8.50@9; do. tomatoes, 5-qt. crate, 90c.; do. onions, per crate, $3.

Wool.—Full prices are current in all grades, with a moderate business. Sales of heavy fleeces 70c., super pulled, 78c.; tubbed at 70c.; fall clip California, 37½c.; Montevideo, 51@53c.; Cape at 46c.; Australian, 65@70c.

Whisky—Closed dull and weak at 90c.

COUNTRY CHEESE MARKETS.

Little Falls, N. Y., May 4, 1872.

THE delivery of farm dairies at the Little Falls market for the week ending May 4th has been something over 800 boxes. Much of this was of inferior quality, being badly skimmed, and prices ranged, according to quality, from 8@12c. Extra farm, mealy and well cured, went as high as 13c., and we heard of one fancy lot reaching 14c.

The factories now begin to come forward more freely, the delivery this week numbering upward of 2,000 boxes. We give quotations of prices paid for leading factories, as follows:—Manheim, 13c.; Newport, 12¾c., Countryman, 12¾c.; Young, 12¾c.; A. Smith & Co., 13c.; North Fairfield, 13¼c.; Middleville, 12¾c.; Bates, 13c.; Shells Bush, 12¾c.; Bethel, 12¾c.; Cook & Ives, 13c.; Old Fairfield, 12¾c. All this cheese, it must be understood, was more or less skimmed.

The range of prices for butter was from 24@26c., and the finer qualities bringing 27c.

LIVE STOCK MARKETS.

NEW YORK, May 2, 1872.

WITH the exception of sheep, the live stock markets have been abundantly supplied during the past week. And yet the trade has been good, with few exceptions. Calves are abundant. Sheep are scarce.

Beeves.—Total for the week just ended, 8,253, against 8,776 for the previous week. Of this number, 4,351 were on sale last Monday—138 car loads at Communipaw, 13 at 106th St., and 20 at Weehawken. There was a fair demand. The stock was all sold, with a few exceptions. Texans went at 10@11¾c., and fat Illinois corn fed cattle at 12½@13c.; a few of the finest reaching 13¼c. Since then we have had 3,108 beeves, largely from Cincinnati distilleries. Some of the sales of to-day were 95 head good Ohio still fed steers, of 7¾ cwt., at 12¾c.; 61 Ill. corn steers, 7¼ cwt., coarse, at 13¼c.; 45 prime, 8 cwt., at 13¾@13¾c., and 5 cars Cherokees, 977 lbs., at 10½c.; 57 lbs. per cwt., with some bulls at 5½c. ₩ lb., live weight. Prices are scarcely as high as they were on Monday.

The following are the closing prices for the week in comparison with what cattle brought one week ago, for net weight of beef:

	This week. Cents.	Last week. Cents.
Choice beeves, ₩ lb	13 @ 13¼	13¼ @ 13½
Good to prime	12 @ 12¾	12¾ @ 13
Ordinary to medium	11 @ 11¾	11¾ @ 12¼
Lowest grade	10 @ 10¾	11 @ 11¾
Average sales	11¾ @ —	12 @ —

Milch Cows.—Receipts for the week only 51 head, and trade is better. The demand rather calls for more cows, while farmers are too busy to send them forward. Besides, they have parted with about what they wish to spare, and dealers find it difficult to pick up good milkers with which to fill orders. Some poor cows have been sold at $28@32 each, with ordinary to medium at $40@60, good to prime $65@80, very few going above $75.

Sheep and Lambs.—Receipts for the week 8,161 against 19,207 the previous week. This is the lightest run of the season, and still prices are not advanced. There is a fair demand for spring lambs, but mutton finds little favor. A dullness in wool keeps pelt buyers away. We regard the prices as ½@¾c. lower than they were one week ago. Sales of 2 cars O. sheared sheep, 82 lbs., were made at 7c.; a car 91 lbs. at 6¾c.; a car ordinary 86 lbs. Ill. unshorn sheep, 7¼c.; a car 95 lbs. fat O. wool sheep, 10½c. Lambs are worth 14@16c., a few prime selling at 17c. One lot of 33 Jerseys, 48 lbs., sold at 16c., with 83 at $8.50 per head; 49 at $8, and some culls at $3@5 per head. We quote unshorn sheep at 7½@10¾c. Just at the close there is a better feeling in sheep.

Hogs.—Total for the week 33,116, against 32,952 one week ago. City slaughtered sells at 5¾@6¾c. and live at 4½@4¾c.

Veal Calves.—Total for the week 3,357. They are very plenty to-day, and prices have reached the lowest point. State calves selling by the hundred at 5@6c. per lb. live weight. Some lots went below 5c. The best Bucks Co. were put down to 7c. this morning, one lot of 100 weighing 140 lbs. selling at that price, with 60 State calves 130 lbs. at 5c., and 165 of 135 lbs. at 6c.

SPECIAL NOTICES.

FOR MOTH PATCHES, FRECKLES

and TAN, use PERRY'S MOTH and FRECKLE LOTION. The well known and reliable remedy for Brown Discoloration of the Face. Prepared by Dr. B. C. PERRY, Dermatologist, 49 Bond street, New York. Sold by *Druggists*.

RUPTURE CAN BE CURED

without suffering. ELASTIC TRUSSES are superseding all others. Before buying Metal Trusses or Supporters, send for a descriptive circular to the ELASTIC TRUSS CO., No. 683 Broadway, New York.

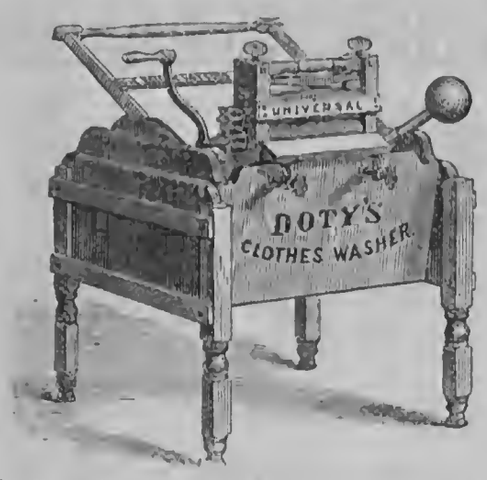
THE BEST IS CHEAPEST.



DOTY'S IMPROVED

CLOTHES WASHER,

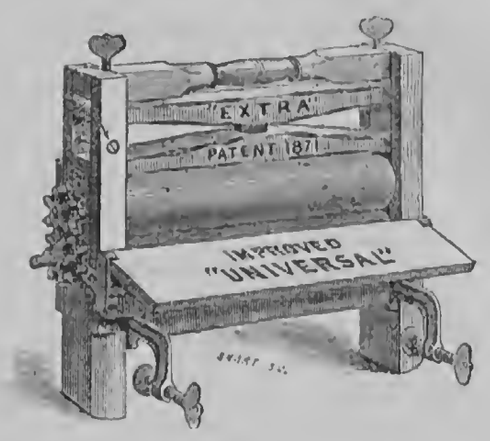
WITH THE

METROPOLITAN BALANCE WEIGHT.

This machine will wash clothes well and thoroughly, much faster and easier than can be done by hand, and with far *less wear to the garments.*

What is Said about It.

"You cannot do a better thing for your wife on a washing-day than to provide her a Doty Washer and a Universal Wringer. It will keep aches from her back and arms, wrinkles from her forehead, and roughness from her hands. It will do the work of a hired woman, and save your linen from being scrubbed out and her temper from being chafed out."—*N. Y. Weekly Tribune.*



Why the Universal is Superior to all other Wringers.

It has **ROWELL'S PATENT DOUBLE COGS.**

It has the **PATENT STOP,** which keeps the Cogs from disconnecting.

It has the **MALLEABLE IRON FOLDING CLAMP.**

It has the **FOLDING APRON,** or Guide.

It has **Two PRESSURE SCREWS,** which give double the capacity for pressure.

Sold by the House Furnishing and Hardware Trade generally.

METROPOLITAN WASHING MACHINE CO.,

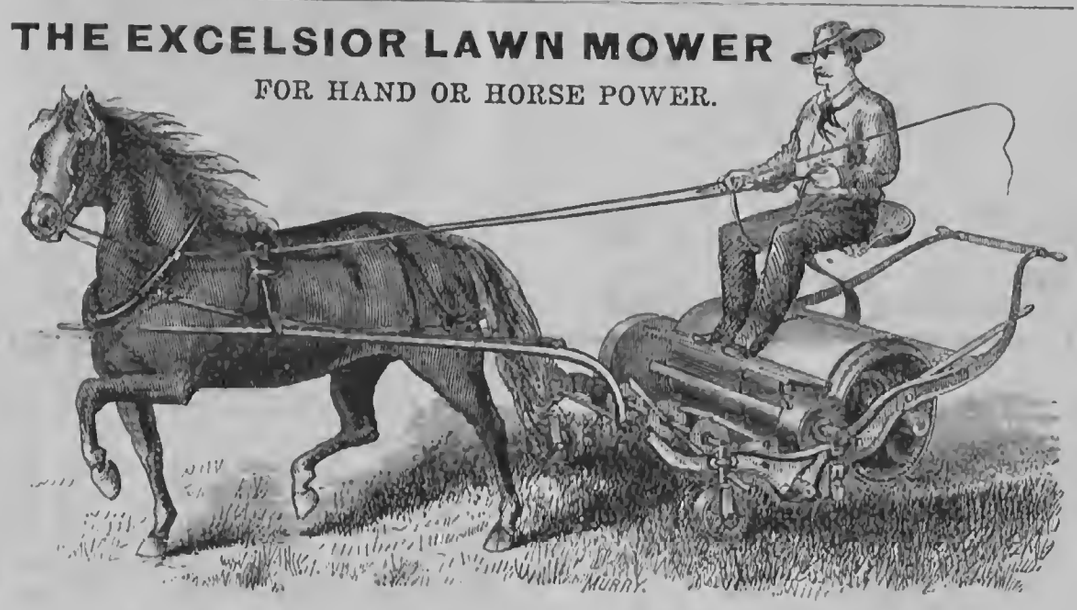
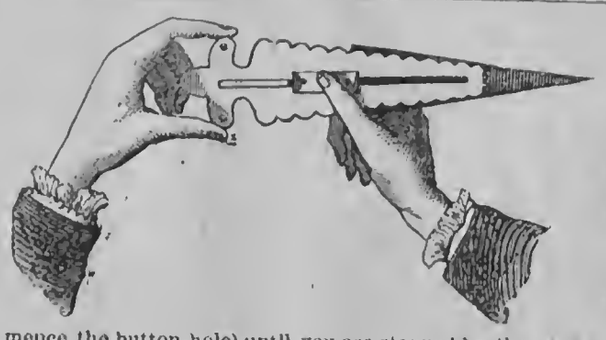
FOR HAND OR HORSE POWER.



Manufactured by **Chadborn & Coldwell M'f'g Co.,**

(Send for Circular.) **Newburgh, N. Y.**

☞ **For sale by all first-class Dealers and Seedsmen.**



THE PROTEAN LANCETTE.

Experience teaches that to secure for an article the favor and patronage of the LADIES, it must combine beauty and elegance of design, with practical utility. The favor with which our modification of the **BUTTON-HOLE CUTTER** has been received predicts that no Lady's Work Basket will be regarded as complete without it. It is also an admirable Envelope, Leaf and Paper Knife.

DIRECTIONS.

To extend the Lancet, hold the instrument as illustrated by the engraving; then holding it as you would a pen, with the cutting edge from you, insert the point (where you wish to commence the button-hole) until you are stopped by the gauge. Be careful not to extend the point too far at first, but cut and try until the hole is a sufficient size to allow the button to pass through; then observe at what point the slide is on the scale, that you may be able to retain the size.

The Lancet can be sharpened like an ordinary knife. Samples mailed post-paid on receipt of 50 cents.

DOOLITTLE MANUFACTURING CO., 599 Broadway, New York.

The Boys' Photographic Cabinet.

CARHART'S
PATENT TWO-HORSE
Pulverizing Cultivator

Was Awarded the First Premium at State and County Fairs in 1870 and '71.

It is superior to the best Wheel Cultivator.
The price is only Twenty Dollars.
The draft is reduced nearly one-half.
The depth you wish it to run is regulated without the use of wheels.
It can be drawn close to a tree or plant without injuring it.
It is not disturbed by short undulations of earth, like the Wheel Cultivator, but pulverizes, levels and fits the ground for the Mowing Machine better than any Cultivator in use, and can be used for more purposes than any other implement on the farm.

AGENTS AND CANVASSERS, address Acme Linen Marker Co., 33 Barclay St., N. Y., for Circulars, samples, &c., of the only reliable Linen Marker ever invented.

Implements, Machinery, Etc.

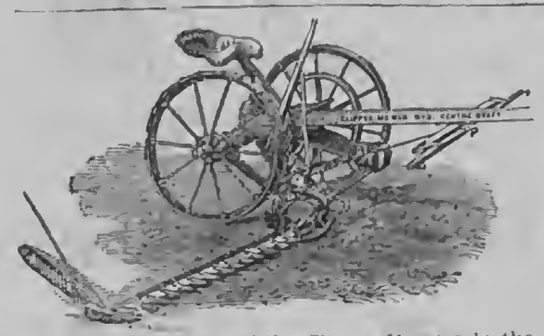
VICTOR.

A glance at the accompanying illustration will show that the "Victor" is the handsomest Lawn Mower made. It is also the most simple in its construction, and, all its parts being interchangeable, the most durable. It will cut wet grass as well as dry. It is impossible for it to clog, as all its gears are perfectly inclosed in the frame of the machine. Draught light. IT IS A SELF-SHARPENER; in fact, the "Victor" is so incomparably the best machine made that all we ask an intending purchaser is to compare it with any other before buying.

For sale by all first-class hardware and agricultural houses.

Send for Circular to the ARBETTER LAWN MOWER CO., Hartford, Conn.

THE ONLY PERFECT LAWN MOWER IN THE WORLD.



The *uniform success* of the Clipper Mowers in the field, the testimony of every farmer who has used them, that they are the *lightest in draft*, the *most durable* and the *most economical* machine for the farmer to buy, fully substantiates what the proprietors have always claimed—that the Clipper is the **Best Mower in the World.**

To the No. 4 size is attached the Dropper (cutting 5½ feet, with *separate Finger-Bar* for reaping), constructed with great improvements—in fact perfected; and in point of efficiency, strength, lightness of draft and symmetry of proportions, it is, as a Reaper, also unequaled. Farmers! see it before you buy. Pass your own judgment upon it. Look at its many improvements possessed by no other machine. Remember, it is fully warranted. Send for Pamphlet.

ANDERSON'S AGRICULTURAL STEAMER, for *Steaming* FEED FOR STOCK Heating Cheese Vats; Tannery Vats, Conservatories, &c. This Steamer is made of Wrought iron, thoroughly riveted and finished in good style. It has a reliable Automatic or Self-regulating Water Feeder, Safety Valve, Vacuum Valve, Water Gauge Cocks, Whistle, &c., all complete. The boiler is peculiar in construction, being ONE COMPLETE DOUBLE BOILER WITHIN ANOTHER, the two communicating one with the other. It has an extraordinary amount of fire space for the size of the boiler: No. 3, a medium size, having 3,833 square inches of fire surface; consequently, it requires but little fuel to run it. Either wood or coal may be used for fuel.

It will cook more feed, or heat more water, in a given time, than any other Steamer of the same size or cost. It is more durable than any other, for the reason that the fire-box is made of wrought iron, and is *entirely surrounded with water.* We are also manufacturing:

Anderson's Low Pressure Steam Heater, for Heating *Private Dwellings, Stores, Churches, Conservatories, &c.* We manufacture for all the territory east of Illinois.

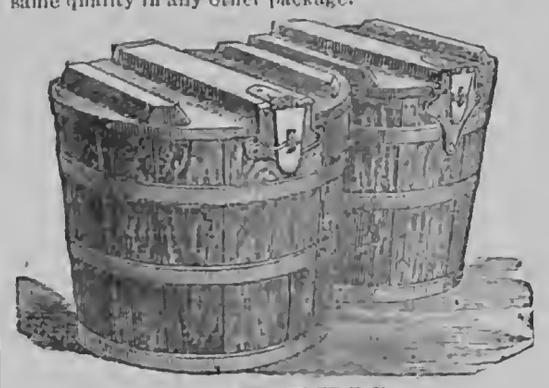
FARMERS, DAIRYMEN AND BUTTER BUYERS!

PACK YOUR BUTTER
IN
WESTCOTT'S
RETURN BUTTER PAIL

Approved and recommended by the leading authorities of our country on dairying, and acknowledged by all butter dealers to be the very best package in use.

Butter packed in this Pail brings **5 to 10 cents more** a pound in the New York City market than the same quality in any other package.



READ THIS:

NEW YORK, Nov. 15, 1871.

We, the undersigned, Produce Commission Merchants of the City of New York, consider Westcott's Return Butter Pail, manufactured by Silsby Bros., Belmont, N. Y., *the best package in the market.* It is our experience that Butter packed in this Pail *sells more readily and commands a higher price* in this market than in any other package, and we heartily recommends its general use by the dealers, dairymen and butter buyers who ship to this city.

Respectfully,

(Signed by 45 leading Commission Merchants.)

The Westcott Return Butter Pail meets my approval as a good butter package. It is one which I always feel safe in recommending.

X. A. WILLARD,
Dairy Editor Moore's Rural New-Yorker.

Dairymen, send for a Circular! Dealers, send for a Price List! We are the sole manufacturers of **Westcott's Return Butter Pail,** and also manufacture very extensively Butter Firkins, Half-Firkin Tubs, 25-pound Butter Pails, Well Buckets, &c., &c.

CHEAP CORN CULTURE.

THOMAS' SMOOTHING HARROW.

81 SLANTING TEETH OF TEMPERED STEEL. $25

LATE SPRING! CROWDED WORK!

This year a large amount of work must be done in a very short time. With our wide Harrow more than twice as much ground can daily be prepared for seed as without it, and all crops *cheaply cultivated* through the season in a *superior* manner.

ALLEN HIGLEY, Windsor, Ohio, says:—"I saved one-half month's labor in two days, getting a much better crop without using a hoe."

ANDREW RAESSLER, Shelbyville, Ill., says: I can harrow twice as much ground with it as with other Harrows."

EDWIN THORNE, Millbrook, N. Y., says:—"We can dispense with cultivating once each way, saving a vast amount of labor."

E. F. SMITH, Morning Sun, Iowa, says:—"It was much easier on the team, though one-third wider, doing more work."

L. R. AUSTIN, Coldwater, Mich., says:—"I have a 40 and a 30-tooth square drag, but with *your* Harrow can do twice the work in half the time."

IRA BEARD, Cuhoka, Mo., says:—"I think it equal to three common Harrows."

F. PETITT, Salem, N. J.:—"My brother says his does the work of three old Harrows; mine I think saved me $5 in one and a-half hour's work."

BOYS RIDE AND DO ALL THE HARROWING.

Paints, Oils, Blacking, &c.

ARE YOU GOING TO PAINT?

MORE THAN

100,000 HOUSES

HAVE BEEN PAINTED WITH THE

AVERILL CHEMICAL PAINT

IT IS THE BEST

In the world for exterior work upon Cottages, Villas or Buildings of any kind, whether built of brick, wood or iron. It is a liquid, *ready for use*, and requires no oil thinning or drier. Purest white, and any desired shade can be had in packages from one gallon upwards.

EXTRACTS FROM OUR LETTERS:

CHAS. HALLETT, Esq., of Riverhead, L. I.:—"Years ago I had your paint applied by the side of the best white lead. The lead requires repainting, but the Averill Chemical is yet looking well."

Gen. DAVID H. STROTHERS:—"Your Paint fulfils your representations."

Rev. S. C. ALEXANDER:—"Our Institute has saved $150 by using your Paint. It is splendid."

PETER HENDERSON, Esq.:—"I find the Chemical Paint retains the colors and gloss far superior to that done by the lead and oil at the same time."

Gen. JAS. NEGLEY, M. C.:—"I find it the cheapest and best."

SETH THOMAS, Esq.:—"It gives better satisfaction than any paint I ever used."

Sample card of beautiful colors, and recommendations from owners of the finest residences in the country, furnished free by the

AVERILL CHEMICAL PAINT CO., 33 Burling Slip, New York, or 118 Superior St., Cleveland, Ohio.

P. S.—The superiority of these Paints has already brought numerous *worthless* imitations in the market. We caution the public against using them.

The Season for Painting

HAS COME AGAIN.

If you propose to paint, first send stamp for a book called "Plain Talk with Practical Painters, with Samples of Colors." The book is worth a dollar, and costs nothing. JOHN W. MASURY, 111 Fulton St., New York. ☞ Specialty in Pure Paints and Colors. Masury's Ready-Made Colors are the only ones which stand the test of time. Do not be deceived.

REINVESTMENT

OF

MAY COUPONS.

To those who have funds to invest, and to those who wish to increase their income from funds already invested in other securities, we recommend NORTHERN PACIFIC SEVEN-THIRTIES. Bearing Seven and Three-tenths (7 3-10) Gold Interest, and secured by a First Mortgage on both the Road and Land Grant of great extent and value, they combine unusual Profitableness with unquestionable Security.

The proceeds of all sales of Land are required to be devoted by the Trustees of the Bondholders as a Sinking Fund to the purchase and cancellation of the First Mortgage Bonds, or temporarily to the payment of interest thereon, if necessary. This provision will make the Railroad Company itself a large purchaser of its own securities in the open market after the Road is completed, and until the Bonds mature or are bought in.

The semi-annual interest on the Registered Bonds is paid with Gold Checks, sent to the Post-Office address of the holder.

The NORTHERN PACIFIC RAILROAD COMPANY will, during the present month of May, offer for sale and settlement about Two Million Acres of its Lands in Minnesota, and many thousand acres are already taken and applied for. Thus the immense landed estate of the Company begins at once to be available.

All marketable stocks and bonds will be received (by express or otherwise) at current prices, in exchange for Northern Pacific Seven-Thirties, without expense to the investor.

Pamphlets and full information will be furnished on application.

JAY COOKE & CO.,

New York, Philadelphia and Washington.

☞ For sale by Banks and Bankers generally.

"FAMILY FAVORITE!"

THE

WEED. WEED.

The most perfect, reliable and generally useful machine in existence. For the family of the farmer or mechanic, where the work required of a sewing machine ranges from the heaviest garments of men's wear to the most delicate and ornamental fabrics for ladies and children, it has proved itself thoroughly efficient and entirely satisfactory. Of unequaled simplicity and compactness of construction, capable of being learned and operated with one-fourth the usual expenditure of time and labor, with a capacity for quantity, quality and variety of execution beyond its competitors, and a reputation for durability and reliability known and appreciated by thousands, it is offered to the people for the most critical inspection and comparison, with confidence that its obvious merits cannot fail to convince the careful examiner of its superiority. Ralph Evans

Rural Architecture.

A MISSOURI COTTAGE.

MR. S. F. EVELETH, Architect, contributes the following design, plans and specifications of a cottage erected in Missouri, to the Manufacturer and Builder:—It was built of brick, with 12-inch outer walls, and 8-inch walls for most of the interior partitions, and having a cellar 8 feet deep under the whole. The principal story has a hight of 10 feet, and the second story is 7 feet 6 inches at the eaves, and 9 feet at the center. The arrangement of rooms is sufficiently shown on the floor plans, and a pretty correct idea of the exterior finish may be got from the perspective view. Thoroughly and carefully built by days' work, the house cost about $4,700. There were some serious difficulties in procuring materials at the time however, and the owner expresses the opinion that he could execute the same design at the present time for about $3,000.

We give herewith a specification and bill of the most of the quantities required to build a frame house of the same design.

For the foundation there are required 65 perches of stone-wall, (25 cubic feet to the perch,) the wall being 5½ feet high and 18 inches thick. 17,000 bricks may be used for underpinning, chimneys, and piers for verandas; the chimneys built with grate fireplaces, as on the floor plans, and the piers carried down below frost; underpinning 2½ feet high by 8 inches thick; with 8 windows, each of 3 panes 10 by 16 glass. Outside sills of the following length, namely, two 25½ feet, two 19 feet 4 inches, two 22½ feet, four 5 feet, two 8½ feet, one 11 feet, one 6½ feet, one 14 feet, and one 16 feet 4 inches; all 3 by 8 inches, (halved?) at the angles.

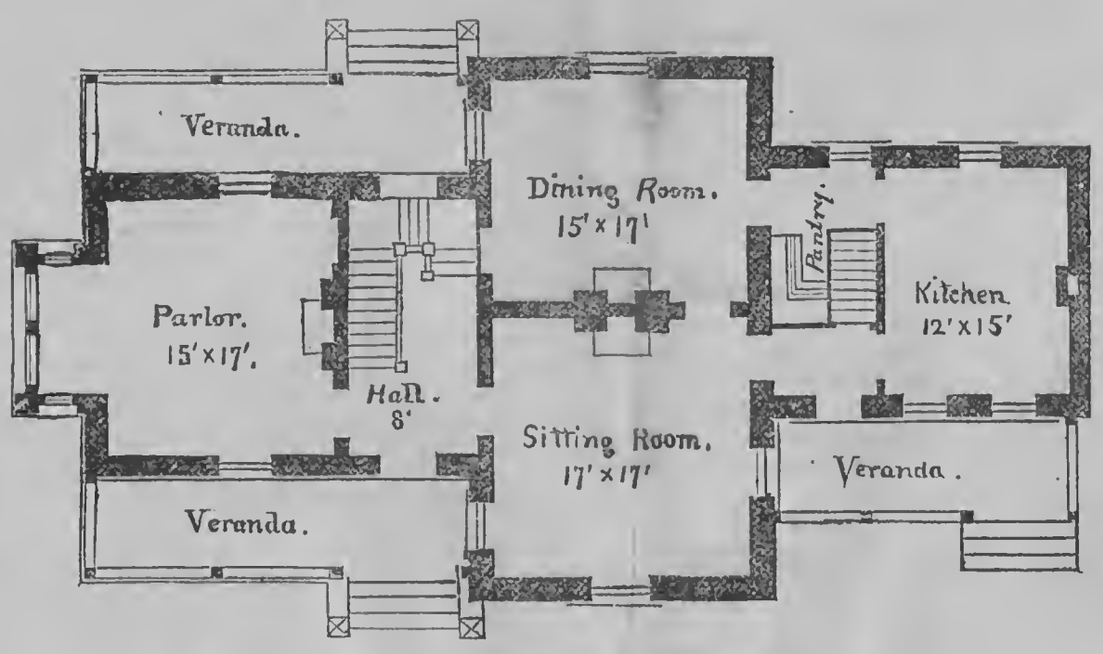
In addition to the above, two girders will be necessary in the center of the house, respectively 19 and 16 feet long, and 6 by 8 inches, with a substantial pier or post under the center of each. For the first floor, 48 joists, 19 feet 4 inches long, and 2 by 9 inches (repeated in the second floor), and 16 joists, 16 feet 4 inches long, and 2 by 8 inches, are required, joists to be set 16 inches on centers, with cross-bridging nailed in between them. The joists in the second story to be supported on 1 by 6 strips set into the studding. The walls require 8 corner studs 19 feet long, and four 12 feet long, each 4 by 4 inches. Also, 66 studs 19 feet long, 45 studs 23 feet long, 26 12 feet long, and 11 16 feet long; besides 10 studs 12 feet long, for the bay window, to be 2 by 4 inches, set 16 inches on centers; 2 plates 25½ feet long, two 22 feet long, and four 16 feet long, each 3 by 4 inches.

For the roofs, 30 rafters, 21 feet long, twenty-eight 10 feet long, and twenty-four 12 feet long, 3 by 5 inches, are necessary. The gable rafters, and the projecting parts generally, require to be planed and chamfered. Veranda floors framed with 10 sills, 1 to each post, 6½ feet long, 6 by 8 inches, 24 joists 8 feet long, and 8 joists 10 feet long, 2 by 8 inches. The foregoing framing-timber may be of spruce or hemlock, but the exposed framing for the veranda should be of sound pine. The length and sizes required are as follows—namely, 8 posts 15½ feet long, 2 posts 19 feet long, 4 posts 12 feet long, 6 inches square; also 2 plates 25 feet long, one 19 feet long, 4 by 6 inches, and two 1 feet long, and 6 by 6 inches; besides, 21 braces 3½ feet long, 4 by 6 inches, between the posts and plates, 10 rafters 8 feet long, and 3 by 4 inches, for the rear veranda; 8 rafters 6 feet long, and 3 by 4 inches, for the bay window; 6 rails for the balustrade, 8 feet long, 3 by 4 inches, and three rails 6½ feet long, 3 by 4 inches. The total of the spruce framing specified, including partition-studs mentioned hereafter, is 8,400 feet, and that of the pine timber is 1,106 feet, board measure taken in both cases.

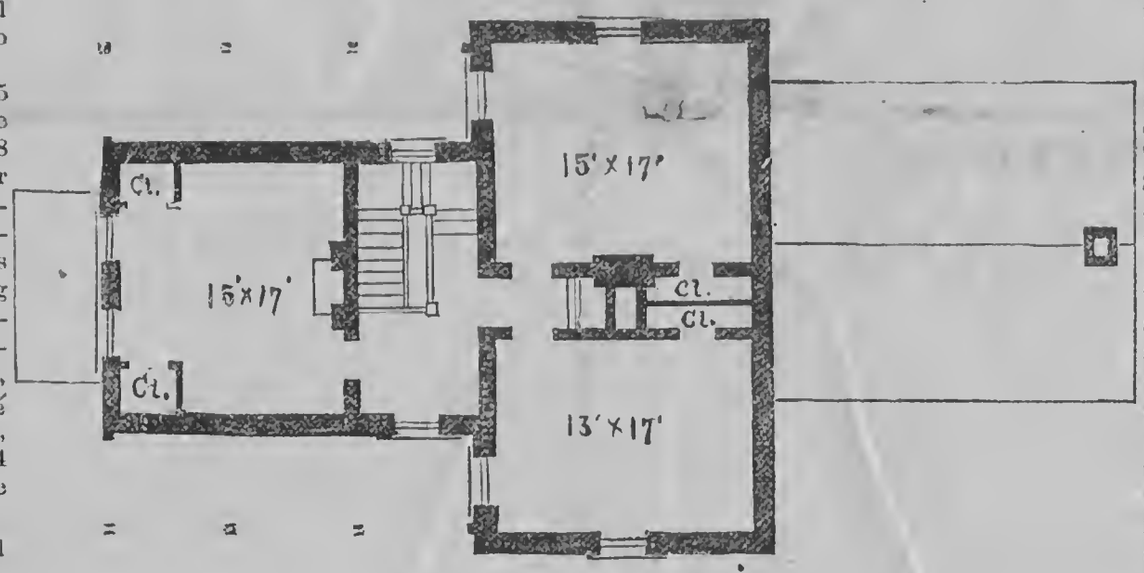
The *exterior* dimensions correspond with those of the plans, and the size of the rooms is consequently somewhat increased by the diminished thickness of the framed walls. The net surface of walls to be covered is 3,150 square feet; using tongued and grooved sheathing, a liberal allowance must be made for waste, and 4,000 feet gross would probably be near the quantity required. The actual surface of the roof is 2,900 feet allowing for roof-planking 1¼ inches thick, and for loss in tonguing, the quantity required is about 4,500 feet, board measure; slating 27 squares, and tinning 280 feet.

Gutters, about 120 feet in aggregate length, to be formed at the eaves, by building upon the roof planking, making the gutter like a flattened V in section; line it with tin, and secure it by galvanized iron straps extending back under the slating. Four leaders upon the higher portion, and two upon the lower part are required; in all about 100 feet in length. The exposed part of the roof-planking of course should be planed, and the openings in the timber-work of the verandas, as well as the angle of the gables, should be filled with scroll-sawed work.

About 210 lineal feet of 1½ by 8 stuff is required for the water table, and 800 feet, board measure, for the bases to verandas, corner-boards, cornices, etc. The net surface of flooring required is 3,050 feet, including floors for verandas. If 1¼ inches thick, as it should be, and laid in narrow strips, 4,500 ft., board measure, would be about the gross quantity required. Four long windows open on the front verandas, glass 3 feet by 8 feet 9 inches. There are 15 other windows, besides those in the bay.



MISSOURI COTTAGE—PLAN OF FIRST FLOOR.



MISSOURI COTTAGE—PLAN OF SECOND FLOOR.

A MISSOURI COTTAGE—ELEVATION.

Sizes of glass in the principal rooms of first story 2 feet 8 inches by 6½ feet, in the kitchen 2 feet 8 inches by 6 feet, and in the second story 2 feet 6 inches by 5 feet; 4 of these last, under the veranda roofs, are half of the size given. For exterior finish the windows should have a sill 2½ inches thick, casings 6½ inches wide, with coved band 1¼ by 3½ inches, and corbels under the sill.

Two entrance doors, one at each side of the hall, besides the kitchen door and 16 passage and closet doors, are necessary. Sizes, according to position, 3 by 7 feet, 2 feet 10 inches by 6 feet 10 inches, and 2 feet 8 inches by 6 feet 8 inches. The external walls should be lined up with bricks, or with lath and plaster furred off at least 1 inch from the wall sheathing. Sometimes when bricks are used they are set flush with the inner side of the studding of the walls. The framing should form three systems, that inclosing the two central rooms being the first, and those of the parlor and kitchen making the other two. In this way some of the central partitions will be set in raising the frame, but in addition to these, 40 studs 10 feet long will be required in the first story, and 50 studs 9 feet long in the second story; to be 2 by 4 inches.

Of plastering, 150 yards are required for the cellar ceiling, and 60 yards for the rest of the house. For the cellar one coat is sufficient, the chief use served by it being to protect the upper part of the house from dampness. For the occupied part of the house, however, the best plastering, usually three coats, is the most satisfactory, and in the long run apt to prove the cheapest. The principal stairs should be finished with hard wood newels, rail, and balusters. The inside finish would require about 1,800 feet, board measure, of material, mostly 1 inch thick. Kitchen and pantry to be sheathed up about 3 feet from the floor, and the pantry to have a cupboard on one side, with four shelves all around. The estimate for inside finish allows 20 feet to each window, and 30 feet to each door.

The materials named in this specification, estimated at New York prices, foot up in the sum of $2,715. To this are to be added the carpenter's work, painting and extra hardware and plumbing.

NOTES FOR BUILDERS.

Wooden Nails.—In these days of millions of iron, copper, and zinc nails, tacks, and brads, of lightning, self-feeding, and almost automatic nail machines, it is wonderful to find wooden nails coming into use Wooden pegs made by the same machines as shoe pegs, are now largely used for fastening boxes, and manufacturers receive large orders from the West, for inch pegs for this purpose. In China, Japan, and Hindostan, pegs of bamboo have been always used in fastening tea chests and wooden packages. The idea of using wooden nails seems to us a good one. The treenails used in ship building are an example of the value of such wooden nails. The rusting of nails exerts a very destructive action on timber, and this will be avoided by the use of wooden pins. Moreover, it is almost certain that before many years pass away, wood will become so valuable that it will not pay to use the material of packing boxes for firewood, as is at present done Now, so long as iron nails are used, it becomes a difficult matter, and one involving the rapid destruction of tools, to use old lumber. The use of wooden nails will obviate this difficulty.—*Scientific American.*

Form of Roofs.—The American Builder says:—"Perhaps no part of the builder's work requires more study than the roof form. To utilize the largest amount of space, and at the same time secure a certain piquancy of effect with the least outlay, is not an easy task, however easy it may seem to those uninitiated in the mysteries of building. Too great care cannot be used in choosing the proper number and variety of angles which so help to break monotony, and secure graceful contour. No where are these salient points seen to so great advantage as in the country, where the reaches of distance may be rendered the more picturesque by certain styles of building."

Stanchions for Fastening Cattle.—I see some of your correspondents do not like the stanchion for fastening cattle. I built a cattle barn last fall and received the engravings of stanchions in the RURAL NEW-YORKER just in time to adopt them. I put in the one LOGAN described in your issue of August 19th, and am well pleased. The cattle rest apparently as easy in them, either standing or lying, as though they were free, and are perfectly contented. That alone will pay me for the RURAL for several years.—C. F. MANIS.

The Herdsman.

FEEDING STOCK IN MAINE.

THE winter session of the Maine Board of Agriculture was held this year in the town of Paris. The State suffered last summer from a plague of grasshoppers more severely than ever before; they have done more damage in Utah in times past; but no State east of the Rocky Mountains has ever suffered so severe a calamity. This visitation has naturally turned the attention of farmers to the study of the cheapest method of feeding cattle. Great numbers of them are weighing accurately every mouthful of food that is eaten by their cattle, and keeping a record of each day's feeding. When the winter is over they will be able to give results that may be relied on, and which will enlarge the area of agricultural knowledge in a very considerable degree.

Browsing is resorted to, to a considerable extent. Fish are also fed to the cattle. After a little while they become very fond of them, and this strange food seems to answer very well for them. There was a great deal of very interesting matter communicated to the board, which will probably be published in due season in the annual report of the board; in the mean time I select a few items in advance for the readers of the RURAL NEW-YORKER.

Mr. THAYER finds that twenty pounds of well cured hay will, divided into three equal portions, keep a cow in good condition for 24 hours. When the cow is fed on ten lbs. of hay and five lbs. of meal, she will keep in the same condition as when fed on twenty pounds of hay. According to his experiments twenty bushels of corn are equivalent to a ton of hay. It is to be understood that the hay referred to is cut when in blossom and cured without exposure to dew or rain.

Mr. LAWRENCE has kept a colt a year old in a constantly growing condition on one quart of oats and four pounds of hay per day; the ration is divided into three equal parts and one part is fed at early morning, noon, and just before dark. This is the smallest ration that I have ever known for a colt. When the hay is Timothy, he cuts it; when it is of red top (*Agrostes vulgaris*) he feeds it without cutting. In all cases he wets his hay and oats with warm water He feeds his cows on ten lbs. of hay and four quarts of corn meal, wetting both with warm water before feeding. These experiments are interesting and instructive because there is no guess work about them; every particle of food given to the animals since they left the pasture has been accurately weighed and the weights carefully recorded. M.

SPAYING COWS.

L. B. ARNOLD, in a late Country Gentleman, thus describes the process:—"The operation of spaying cows is quickly and easily performed, and without much injury to the cows, but it requires an expert to perform it. The cow to be operated upon is placed in a stanchion, with her right side next to the side of the barn, or against something that will keep her from turning around that way. An assistant stands on her left side, and with his hand against her hip holds her to her place. This is all the fastening required. The operator, after lubricating his arm, inserts his hand into the vagina, carrying a short bladed knife. The ovaries to be removed being on the outside of the uterus and near the point of connection with the vagina, the operator moves his hand carefully to the proper point, and cuts a slit in the upper side of the uterus large enough to insert his fingers, so that he can put them through, grasp one of the ovaries and pull it inside. Then, with a pair of pincers (long enough to reach in and grasp the ovary and one end still remain outside), the ovary is firmly clasped close up to the uterus, so as to be sure to hold the whole of it, and the pincers fastened. With the hand outside the pincers are turned, and the ovary twisted off. In the same way the other is twisted off, and the work is done. The cutting requires to be done with caution, as the rectum lies on the uterus at the place of cutting, and a little inaccuracy might cut through it and produce death. The operator, too, must make himself acquainted with the exact location of the ovaries, to enable him to make the incision at the right place. The operation requires from ten to fifteen minutes to the cow. It seems not to be very painful, and they get over it in about a week. It is much less severe than cutting through the side, but I do not think it is quite as sure to be perfectly effectual. The operations for me were performed by Prof. LAW of Cornell University."

WHY ANIMALS NEED SALT.

PROF. JAMES H. JOHNSON of Scotland, says that half the saline matter of the blood (75 per cent.) consists of common salt, and as this is partly dissolved every day through the skin and kidneys, the necessity of continued supplies of it to the healthy body is sufficiently obvious. The bile also contains soda (one of the ingredients of salt) as a special and indispensable constituent, and so do all the cartilages of the body. Stint the supply of salt, and neither will the bile be able properly to assist digestion, nor the cartilages to be built up again as fast as they naturally waste. It is better to place salt where the stock can have free access to it than to give it occasionally in small quantities. They will help themselves to what they need, if allowed to do so at pleasure, otherwise when they become salt hungry, they may take more than is wholesome.

NOTES FOR HERDSMEN.

Does Smutty Corn Poison Cattle?—R. M. BEAVER, Marshall Co., Ill., writes the Western Rural:—"I can answer that question understandingly, that it does—if they can get what smut they can eat. It is not a common occurrence, and I think it is never fatal, except in large and late varieties of corn. I am satisfied there is no cure after the effects are observable. Plenty of salt is a good preventive of bad results. Water only makes them eat the more. I have lost ten head out of one hundred in one day. This occurred in corn that was brought from Kansas here; it was large and late. I never had one to get up the second time, or live one hour after taken. A little at a time will do no harm."

Scours in Calves.—Will you give the best remedy for a calf that scours—discharges bloody; *eats* and *acts well*, but grows thin in flesh; age 4 weeks; feed skimmed milk, occasionally sour. Have had calves troubled so when 3 months old. —M. A. HULL.

GIVE two or three ounces of castor oil with flour gruel; or two ounces of salts, followed with draughts of oak-bark tea; or give pulverized catechu, opium and Jamaica ginger, of each a-half ounce, and prepared chalk one ounce, mixed and divided into twelve powders. Give a powder twice a day. Bran mashes, green food, flour gruel, and plenty of salt should be given.

Do Cattle Chew Grain?—U. S. PETERS, Otsego, N. Y., asks the Farmers' Club this question—whether they chew it as they do hay or grass, and whether it makes any difference whether meal is fed before or after eating hay. To this Mr. CRANE responded. "Cattle do not chew grain as they do hay, therefore it is better to have it ground. I have seen this matter carefully tried, and particles of the barley and oats would pass through whole, thus showing that they were not chewed after having once passed from the mouth. I do not believe in cooking food for cattle, but I know it is best to have it ground fine."

A Freak of Nature.—ALEXANDER F GOULD had a cow drop her calf about the middle of March. She gave no milk, and he concluded he was going to lose the use of her. About the 22d of April she dropped another calf. They were both full grown and smart. The first could not have been an abortion, because it would have affected the last as well as the first. She now gives a good mess of milk. The above came under my observation, as I reside with Mr. GOULD. Has any one ever known an instance of the kind?—H. H. LEACH, *Pamodia Four Corners, Jeff. Co., N. Y.*

To Take the Swelling Out of a Cow's Bag, a correspondent of the New England Farmer recommends rubbing the bag well with skunk's oil, once a day for two or three days. He adds:—"The oil of a fat skunk may save ten of your best cows, worth $50 each." It is also good to rub on the bag when hurt in summer. The editor says skunk's oil is very soft and penetrating—that it has long been considered one of the best applications for scratches in horses and for any trouble with the skin of animals when it is chafed.

Thorough-Bred vs. Full Blood.—C. C. B., Summit, Ind., is informed that "full blood" and "thorough-bred" are synonymous terms as applied to stock.

To Cure Barn Itch on Cattle, two or three applications of fat salt pork are recommended.

Hygienic Information.

CURE FOR WHITLOWS.

I HAVE seen various prescriptions for these most troublesome affections in your journal from time to time. I think I can give you a much better one—one which is inexpensive and effectual for whitlows, or any kind of external inflammation. I was laid up with one eleven weeks, out of which came a bone five-eighths of an inch long; and another, seven weeks, which threw off another such bone. The pain was indescribable. It is now thirteen years since I have been in possession of my remedy, before which I was scarcely a year without one or more. But since I have had it, I have never had one come to a head, though I have felt them in their incipiency several times, at which I have applied a plaster, which has invariably given speedy relief, which is as follows:

Take a pint of salad or sweet oil, and half a pound of red lead in powder; beat them well together; set them over a slow fire and keep stirring. Let them simmer very gently till the composition is turned a light brown; then take it from the fire and add two ounces of resin and two ounces of beeswax; keep stirring until they are well mixed, and when nearly cold it can be formed into rolls or other convenient form for use; it is to be made into plasters as required. It will keep good any length of time. A plaster may remain on several days, unless thrown off by the matter, which will never be the case if applied in time. Be exact in the quantity of the articles, and particular in boiling; if boiled too long, it will turn to a very dark color and be nearly spoiled. GEO. HAWKE.

Macon, Mo.

ARTESIAN WELLS A SOURCE OF DISEASE.

WE notice that the medical journals are asserting that the artesian well system, especially in the Southern States, is operating disastrously upon the sanitary condition of the people where it exists. Localities that were not unhealthy prior to the flowing of these wells have become unhealthy, and malarial fevers prevail. This is attributed to the large amount of moisture they bring to the surface, to the enhanced decay of vegetable matter in hot climates as a consequence, and to the deposit from these mineral waters of deliquescent oxides and salts which retain moisture. While we hear of these complaints in the warm climates, we have heard and read of none in the more temperate latitudes—for instance in Illinois, where there are numerous wells discharging great quantities of water. Do any of our Livingston Co., Ill., readers know of any facts going to establish this objection to them there?

HYGIENIC NOTES AND QUERIES.

The Best Hair Restorer.—Make a strong tea (say a pint each) of red sassafras and sage; pour them into a quart bottle, and saturate the scalp thoroughly two or three times a day, using a stiff brush. The more you use the brush the better. If the hair is harsh, put a spoonful of hickory nut oil (which can be obtained by pressing the kernels in a vice) into the bottle. I know the above is good, for I have seen it tried on an old lady's head whose hair had fallen off from the effects of sick and nervous headache, till she was entirely bald. In about three months a coat of hair as soft and fine as an infant's appeared. Please try it, and report success. "Time and Patience" is the motto.—R. GUTHRIE, *Campbellsburg, Ind.*

Remedy for the Rheumatism of the boy twelve years old, who wrote in RURAL NEW-YORKER, April 6. The following has invariably relieved me when attacked:—To one drachm of iodide of potash, add one pint of cold water, and take a dessert spoonful of the solution three times a day. Bathe the parts affected with a strong decoction of vinegar, saltpeter and red peppers, steeped together. It is better if applied warm. If practicable, wrap the affected parts in a red flannel cloth saturated with the above.—N. WILLIAMS, *Highland, N. Y.*

Bronchitis and Catarrh.—Mrs. L. PEEBLES asks for a remedy for bronchitis and catarrh, she having been a sufferer for more than a year.

Ringworm Remedy.—Take one-half teaspoonful pulverized gunpowder, one-half as much lard; mix well together. Apply once—a sure remedy.—H. G. ADAMS.

Field Crops.

THE CULTURE OF SAGE.

SAGE is most profitably grown as a second crop. The seed should be sown in early spring in drills about eight inches apart, the young plants kept free from weeds, and the ground about them pulverized by frequent hoeing. Previous to sowing the seed the ground should be enriched with some light kind of manure, thoroughly rotted and well spaded under. After fining down with the rake the lines are struck out, the seed sown—one ounce being sufficient for 200 feet of drill—and covered lightly. If the ground is dry enough to permit, it is always best, after the seed is sown and covered, to roll the bed or pat it down with the spade. This is very important, particularly in dry weather. Many argue that the less compact the ground the greater its power to absorb the dews, and consequently the better it is for the seeds. This, at first sight, would appear to be true; but, though more moisture is absorbed at night, it is also more easily evaporated during the day, and it is the extremes of moisture and dryness, rapidly alternating, that cause seeds to shrivel and die. In very dry weather, if I have occasion to sow seeds, I frequently walk over the drills, pressing the soil upon the seeds with the ball of the foot. A uniform degree of moisture, even if it is not great, with the proper amount of heat, will soon germinate seeds. This is an important point, and one in which failure very often occurs.

The young plants are allowed to grow in the seed-bed until July, when they are planted in the field, the rows fifteen inches apart and the plants in the rows ten inches. By frequent hoeing and proper attention, the sage will completely cover the ground by early fall, provided, of course, that the ground has been well manured, when it should be gathered before hard frosts.

A ready market is found for it, in the cities, in the green state, but those unhandy to market generally dry it and keep until winter.

To dry it nicely requires some care. We stretch stout twine across a building, or attach it to the rafters, having the strings about 18 inches apart, then cut the sage close to the ground and hang on these strings. After a little practice it is rapidly done, as the plants, by being cut low, will not average more than three branches each, making the labor of hanging much lighter than if it should be cut high. The plants should not be crowded too much upon the strings, and should be abundantly aired, as this will tend to give the sage, when dried, a lively green color. When preparing for market, which it is best to do on a damp day, we take from the strings and place in a pile convenient to the workman, who, with a block before him, grasps a small handful and chops off the ends of the branches, while two or three other workmen are engaged in tying in small bunches. One active chopper will thus keep in employ about three tyers. The coarse ends of the branches are useless for market purposes.

Some markets prefer to buy by weight, when it is prepared the same as when sold by the bunch, except that it is not tied, but packed loosely in bags, containing 5, 10, or 20 pounds.

We consider this method of raising sage much superior to the old one of allowing the plants to remain in the ground year after year. By this plan, it occupies the ground but two and a half or three months, and may follow, as a second crop, early vegetables that are cleared off by the middle or last of July. M.

POTASH FOR POTATOES.

IN a recent address, Dr. NICHOLS, of the Journal of Chemistry, alluded to the "deterioration in our potato crop during the past twenty years," and made the following explanation regarding the causes of this falling off:—I have a field of potatoes upon my farm which I expect will yield 300 bushels to the acre, which may be regarded as an old-fashioned crop. I know that this crop will remove from the soil, in tubers and tops, at least 400 pounds of potash. I am also certain it will remove 150 pounds of phosphoric acid. Now these amounts are very large, and serve to show that the potato plant is a great consumer of the two substances; and also, it shows that in order to restore our potato fields to their former productive condition, we must supply phosphatic compounds and substances holding potash in large quantities. For six or eight generations in New England, our fathers have been exhausting the soil, by removing these agents in their potato and other crops, and we have reached a time when the vegetables are starving in our fields for want of their proper food. Our farmers have found that new land gives the best crops, and this is due to the fact that such fields afford the most potash. But so long as we crop our pastures so unreasonably, we cannot resort to new land, as land is not new that has had its potash and phosphatic elements removed by grazing animals. Remember that a potato field which gives but 100 bushels to the acre requires at least 160 pounds of potash, but by allowing the tops to decay upon the field, 60 pounds of this is restored to the soil again, as that amount is contained in them. A medium crop of potatoes requires twice as much phosphoric acid as a medium crop of wheat, so that in two years with wheat, the land is deprived of no more of the agent than it loses in one year with potatoes.

SUGAR BEETS IN NEW JERSEY.

THE State Legislature of New Jersey has passed a law exempting from taxation for ten years any establishment engaged exclusively in beet sugar manufacture. Calling attention to this fact, Prof. GEO. H. COOK of the New Jersey Agricultural College says:—"The introduction of this business in this State must begin with raising the beets; and for this purpose trials as to the methods and cost of cultivation need to be made. Farmers are entirely safe in raising the beets, for they make excellent feed for stock, being quite equal to carrots, mangold wurtzels or turnips for that purpose, and from ten to twenty tons an acre can easily be raised. On the farm of the State Agricultural College, last year, two kinds of sugar beets were raised, the Silesian, which yielded eighteen tons an acre on good ground, and the Nursery, on poorer ground, which yielded nine tons. They were cultivated in rows twenty-eight inches apart, and about ten inches apart in the rows. The planting was in the latter part of May. * * * The benefits to the farmer are, 1st, that the manufacturer will pay him $5 or $6 a ton for the beets and return the pulp, which is about one-fifth the weight of the beets, or say three tons an acre, and which for feeding cattle is worth about one-half as much per ton as good hay. 2d. The manufacture is carried on in winter and not in summer, and so furnishes winter employment for the same set of laborers that work on the farms in summer. 3d. It supplies the stimulus and the rewards for improved tillage, at the homes of the farmers everywhere."

POTATOES WITHOUT BUGS.

E. P. F. BRAUDER, Redfield, Mich., gives the following mode of planting potatoes, in the Western Rural:—"Prepare the ground as usual—the drier and richer the better. When warm, plant your potatoes the usual depth, as thick as the soil will warrant. I think one, or, at most, two good eyes in a place, best, but if soil is rich, they may be thick enough, so that the whole ground may fill with tubers, and cover with straw sufficient to keep down all weeds, say from three to five inches, and your potatoes will need no more care until they are ready for the harvest. Do not plant till the ground is warm, as the mulch keeps out heat. Cover with earth before mulching, or the tubers will be ill-flavored. The 'Colorado beetle,' or 'yellow-striped potato bug,' will not touch them, as its larvæ are not migratory, and as it cannot penetrate the straw to reach the earth, the instinct to preserve the race, so strong in all insects, bids it shun the straw-covered ground."

FIELD NOTES AND QUERIES.

Sowing Grass Seed with Buckwheat.—A Michigan correspondent asks us if we would recommend sowing timothy and clover seed with buckwheat. We reply no. We have tried it, and never found it a successful practice in any instance, although we have read of it being so. If we wanted a good meadow or pasture, we should prefer to treat the land as we would for buckwheat, but sow the clover, timothy, etc., without the buckwheat. We should expect enough better stand of grass to compensate for all we might lose from the absence of a buckwheat crop.

Brazilian Southern Queen Potato in Mississippi.—A. C. STEIDE speakes highly of this sweet potato in the Rural Carolinian, for Jackson Co., Miss. He says:—"I find the Southern Queens the most prolific and best keeping potatoes in this county. I find my hogs prefer them to any other potato. I think them the best potatoes for stock that can be grown here. I find them sound in the ground now, where they were planted last spring, notwithstanding the unusually severe cold of January and February. The Southern Queen is not a good table potato, and I raise it only for stock. If you wish to grow large ones, you must mulch heavily between the rows with straw, or lay rails or brush, so that the vines will not take root between the rows; indeed, you will find that mulching any potato will increase its size and quality."

Sunflowers as a Field Crop for Oil.—Have none of your readers grown sunflowers and manufactured oil from the seed? If so, I wish they would give their experience, especially as to the manner of extracting the oil. Not long ago, on a friend's table, I found a delicious salad oil, which I was assured was made from sunflower seed; but how it was extracted, what machinery was used to crush the seed and express the oil, I could not learn. We know by experience that sunflower seed is an excellent food for fowls, and although I have never fed it to stock, I am satisfied that it may be utilized in that direction. I should be glad for facts from men of experience as to the matter suggested above; and I have no doubt others will profit thereby as well as—R. N. GREEN, *Lake Co., Ill.*

Orchard Grass.—Will you please inform me what orchard grass seed is worth per bushel, and where it can be obtained?—P. BROWN, *West Liberty, Iowa.*

THIS is one of many similar inquiries. It would seem natural that our subscribers, desiring to obtain seeds of any sort, and to learn the price thereof, should write to a seedsman for information; but the thought does not seem to have occurred to them. We presume there are seed stores near Mr. BROWN that can furnish him with the seed, as well as those advertising in our columns. Seed can be obtained of any of the New York city seedsmen advertising in our columns at from $3.50 to $4 per bushel. The seed is growing scarce, and there is a prospect of an advance in price. The demand for it is large.

To Prevent Crows Pulling Corn.—Take, to each peck of corn wet with warm water one tablespoonful of gas tar; stir until it is well blackened; then roll in plaster to dry. I have tried it for years, and never knew it to be disturbed by anything. It is also a good way to prepare corn to sow near a barn where fowls are apt to scratch it out. They will not eat more than one kernel.—W. A. D.

Pomological.

POMOLOGICAL GOSSIP.

Dr. Hexamer's Strawberry List.—Dr. F. M. HEXAMER, a careful and extensive strawberry grower, near New York City, writes the Horticulturist:—"From many years' careful observation at our own fruit farm as well as from the results of fruit growing on soils different from ours, I recommend for general cultivation the following select list of strawberries as best adapted to the widest extent of territory and the different systems of cultivation:—On heavy soil, Nicanor for early; Wilson and Charles Downing for medium or main crop; Triomphe de Gand and Jucunda for late; Napoleon III for the latest. On light soil, Downer for early; Wilson and Charles Downing, main crop; Seth Boyden and Green prolific late; and Kentucky for latest. All of these varieties are valuable for the market on account of their firmness."

Lawyer Apple.—We have received today (May 4) a specimen of this apple from Messrs. PARK & GOODYEAR, Parkville, Mo. It is a beautiful apple—large, dark red, and of mild flavor. It is described as of a "rich, sprightly cranberry flavor, hardy and productive." It is evidently a good keeper; but we cannot call the flavor rich nor sprightly. But it has a flavor that will please many—not sufficient cranberry flavor to please us. It is certainly an acquisition as a late keeper for the more Southern latitudes.

The Walter Grape is highly spoken of—is said to have been successfully cultivated at Oshkosh, Wis., Mr. J. P. ROE of that place being inclined to place it at the head of the list of grapes. He had better give it further trial before he does so.

The Horseman.

EDUCATING HORSES.

THERE are some who are natural teachers. They are sagacious, good judges of human nature, self-controlled, vigilant, quick to discover and seize upon the weaker points of character and thereby attack the fortress of Disposition and carry it by storm, breaking down or overwhelming insubordination. So with horse-educators. The first thing essential in horse education is an educated, well-balanced, thoroughly cool and sagacious man, who understands horse-nature, as the phrenologist understands human nature, at sight, and who knows just where and how to aim in order to hit the most impressible part of the animal's disposition.

Such a man Prof. MAGNER seems to be; but that he can teach any man to be what he is himself we have serious doubts. He can tame vicious horses. So we have seen teachers tame vicious boys. But all men are not horse-tamers nor boy-tamers. But every one may learn something by seeing how a skilled mechanic makes a machine; so any man who desires to, may learn something by seeing how a skilled horse-educator controls a horse; hence it usually pays a man who has to do with horses to see how other people manage them.

Prof. MAGNER is, without doubt, most skilled in horse management—has common sense, is a judge of horse nature and has nerve, magnetism and all the qualities which go to make up a thorough horseman. And judging by his book, which is before us, entitled "The New System of Educating Horses, including Instructions in Feeding, Watering, Stabling, Shoeing, etc., with Practical Treatment for Diseases," he has knowledge that is valuable to every horseman. We can commend his book, and, so far as we can judge, his system of educating horses, to the attention of our readers.

NOTES FOR HORSEMEN.

To Cure a Balky Horse.—When he stops and refuses to be coaxed to go, one should first determine by his grit whether it can be whipped out of him. If you whip him, confine him as close as possible by winding the lines round the hub of the wagon. Go at him with a brush or limb. Be thorough, or it is of no use. If that does not cure him, drive down a stake, put on a strong halter, check him up, and chain his whiffletree back to the load; take off the other horse and leave him to consider his ways without food or drink. When you think he has repented, take the other horse back, hitch on; try him; if he rebels, leave him until he will go. In all cases be very sure not to overtax his strength with too much load. O. F. L.

Three-Horse Evener.—Here is my plan:—Take a white oak or ash scantling, 2 by 4, 5 feet 3 inches long; dress off, and taper each end to 4½ inches on one edge, leaving it the full thickness 2 feet from one end. Now bore a hole 1½ inches from the end, and 3½ inches from the straight edge; next bore a hole 20 inches from the first, and 1½ inches from the last hole; 40 inches from the second, which makes it come 1½ inches from the end—same as first hole; attach a clevis and ring from the 20 inch hole to the plow, a common double-tree, with two horses at the first, and the last hole for the third horse. I have used this plan a long time, and have found it to work well.—J. A. D., *Ancaster, Ontario, C. W.*

Horse Distemper.—I. F. DAY.—The best mode to treat horse distemper is to feed plenty of bran mashes, and poultice the throat with bran or turnips, and as soon as the swelling begins to soften, if it does not break, it should be opened with a knife. Also smoke the nostrils with old boot leather, in a kettle or tin, once a day, which helps to loosen the discharge from those parts. Do not get him wet or exposed to cold, and he will certainly come round all right.

Sore-Shouldered Mule.—I think the following is better than the one given by "T. B. C.," Meadville:—To two quarts of white oak bark liquid, add two ounces sulphate of zinc; bathe the part affected night and morning.

To Cure a Kicking Colt.—Fasten a cord to the end of his tail, pass it between his legs and fasten to the lower part of the collar; draw tight, and your colt will not lift a foot to kick.—WM. BASSETT, *Oakland Co., Mich.*

The Sportsman.

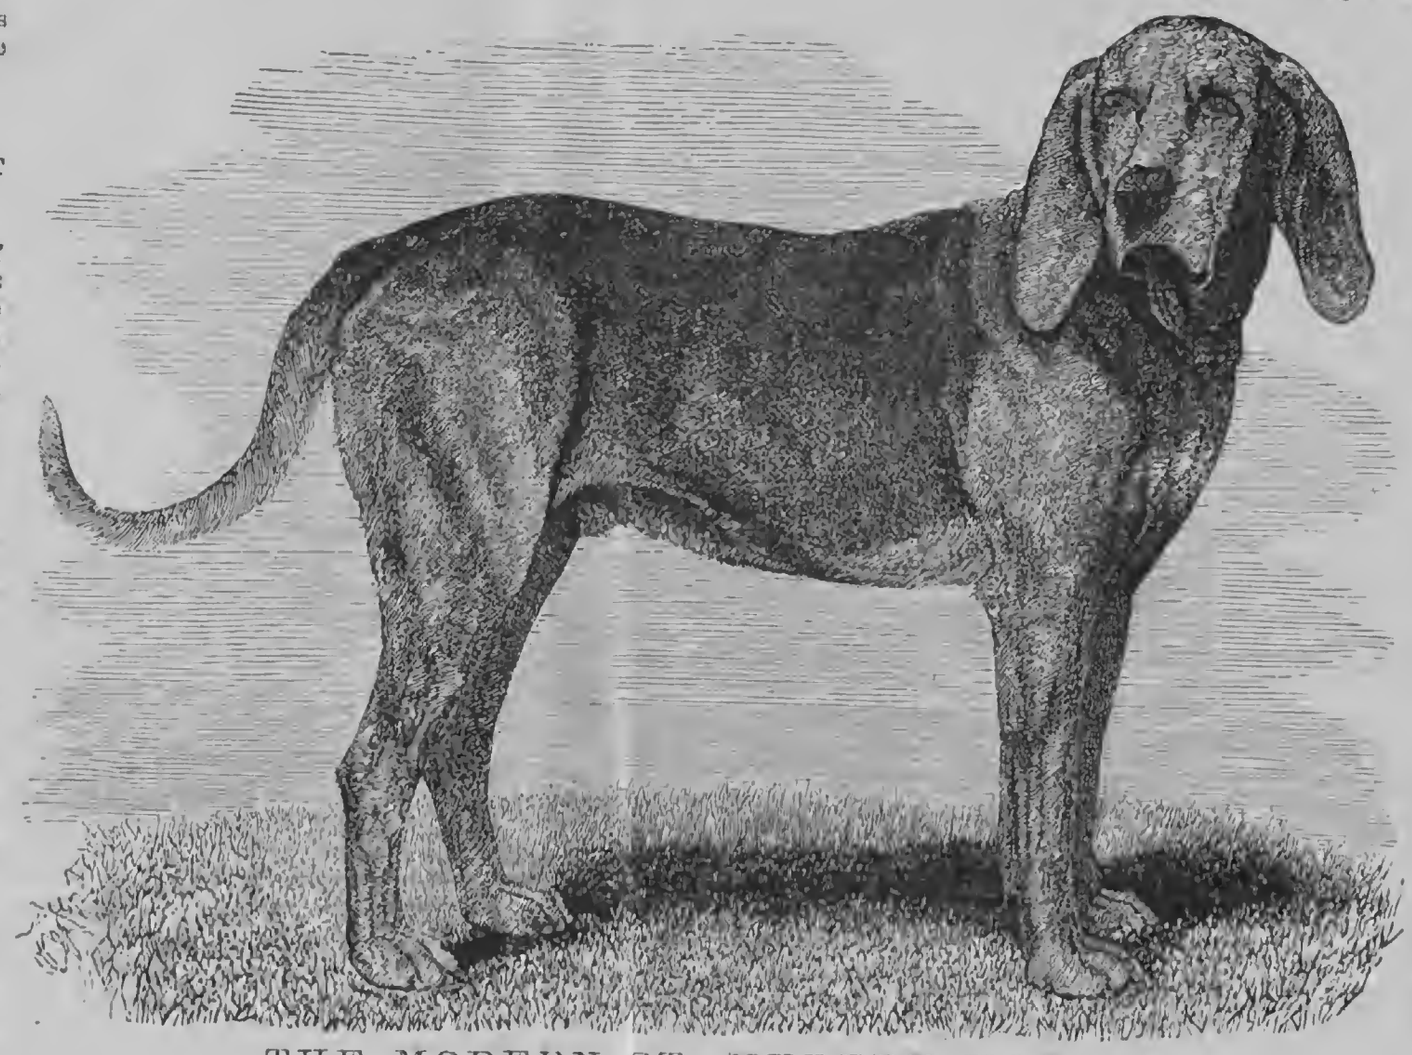
TACKLE FOR TROUT.

In answer to Charley's inquiry as to what tackle to use to catch trout and horned dace, I state that, though not much of a sportsman, as a general thing I can catch trout and horned dace where there are any to be caught. I use a pole about ten or twelve feet long; a line five or six feet long; a hook with an eye, and the barb turned to one side; a small lead sucker about six inches from the hook; for bait, use angleworms or grasshoppers. A hard linen line is best, for trout sometimes bite off the hook. Use the same tackle for horned dace.

Preble, N. Y. G. O. R.

THE MODERN ST. HUBERT HOUND.

This Royal French breed of hounds, according to Count Le Couteulx de Canteleu, were in the eighth century known as Flemish hounds, and are descendants from the famous Belgian hounds mentioned by Silus Italicno. The author above named says:—"There is no doubt that the English bloodhound is a descendant of the St. Hubert hound. This hound is not existing in its original purity in France. It does not change scent easily, has a fine nose, is deep-tongued, but is a little too heavy and throaty. These are the features preserved in the English bloodhound, while, in France, crosses have produced harrier-like dogs, well shaped, active, light, very fleet, full of love of sport, hunting the roebuck particularly well." The author recommends, as a means of reviving the ancient St. Hubert, breeding the stallion English bloodhound, to the female black hounds, to be found in Ardennes or the Voges — thus intermixing the elements of both. Our illustration is of the Modern St. Hubert Hound.



THE MODERN ST. HUBERT HOUND.

Farm Economy.

TO MAKE A FARM PAY IN ARKANSAS.

O. Jones, Hempstead Co., Ark., writes: "I wish to know how to make my farm pay a profit proportionate to investment. The 'cotton and corn' system in vogue here *don't pay*. I have two hundred acres open land. The soil is stiff, black land. Sixty acres good bottom land, the rest hilly and much worn, gullied, &c. I have a good market for hay, grain and stock. I live 80 miles from navigation. I have a summer 'range' for cattle and horses and a winter one for hogs. Labor is high and land cheap."

In response we can only suggest what our correspondent himself suggests in his note. The good bottom land will grow red top and Timothy grass, and the uplnnd the clovers, orchard grass, &c. Those worn and gullied lands ought to be in grass. If there is a good market for hay, grain and stock, you should utilize your lands to supply that demand. Grass and stock raising involve little labor comparatively, which you say is high. Grain, with the implements of culture and harvesting now in vogue — gang plows, drills, reapers and threshers—need not involve much dependence upon labor. The more grass you produce and stock you keep, the more grain you can grow on a given quantity of land, provided the manure is properly saved and used. If there is any market for milk, butter and cheese, so much the better. Get your lands in grass, growing enough corn to feed your teams, and grain to supply your household. Plow under your clover to enrich your worn land until it is in a condition to provide permanent pasture or meadow. Judicious, economical conduct of your farm in this way will every year add to its value and to your profits and resources. But one thing should be fixed upon as an unchangeable policy. Make every inch of land produce something.

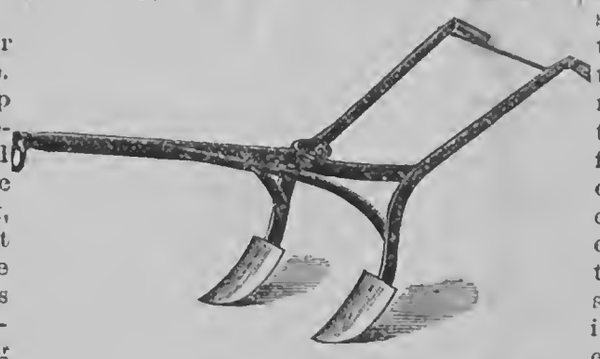
PLASTER ON MOSSY PASTURES.

F. M. C. is informed that we would sow plaster this spring on upland pastures and meadows that are mossy. We have often done it with profit. It is not a bad plan to harrow such meadows and pastures, and sow liberally with grass seeds—Timothy, red-top, orchard grass, and the red and white clovers. Then roll the land, and top-dress with plaster, ashes, and well-rotted manure, if you have it. Grass lands, whether pasture or meadow, pay for care, cultivation, and feeding, as surely as any lands cropped in any manner you please. When such land becomes mossy, it is a sure sign the husbandman has neglected it, and is likely to lose the interest on the money invested in it. It is wanton shiftlessness that allows good grazing lands to grow up in moss.

We should have said that a liberal top-dressing of lime is also excellent, or a mixture of lime, ashes, and plaster. Salt is also often used in such a mixture with profit, in equal parts.

THE ALLIANCE SHOVEL PLOW.

We need not argue the value of a shovel plow with any tillage farmer who has ever used one; but, simple as a shovel plow looks, the proper adjustment of this implement is one of the nicest feats of mechanism. To be right, the shovel plow must be set *just right*. Here is the figure of a double shovel plow, which I have watched from its invention, a few years ago, by Mr. Nixon, of the Alliance Agricultural Works, to its present perfection of form and adjustment, and know it is just right; and, better than this, the farmers of Ohio have found out that it is just right, and the plows go off hot from the shop, like hot cakes. The Alliance



Shovel Plow has a wrought-iron frame—strong, light, and easily adjusted to run deep or shallow, and is sold at about $7. Nixon & Co., Alliance, Ohio, are the manufacturers.—S. D. H.

Utilizing the Contents of Privy Vaults.—Thomas Darling is informed that the contents of privy vaults should never be wasted by agriculturists—they should always be utilized. Night soil is one of the most valuable available manures; one least used by American farmers, and yet, one which should be most economically saved. The best way we know of to prepare it for use, is to daily throw into the vault a small quantity of pulverized charcoal; or dried muck will do; or coal-ashes; or even clayey loam is better than nothing. Thus, it is deodorized, and rendered portable, and may be applied as other manures are. We have never tried leaching it, and applying it in liquid form, as you suggest, but it certainly may be so used; though we should prefer the above mode.

Diary of a Ruralist.

DAILY RURAL LIFE.

FROM THE DIARY OF A GENTLEMAN NEAR NEW YORK CITY.

Planting Strawberries.—*May* 1.—To obtain fine, large strawberries, one needs to plant new beds almost every year. It is true that some varieties will yield well in old beds, but as a rule the improved larger sorts should not remain in the same beds for more than two or three years, and I am inclined to think that it is the cheapest plan to destroy the old beds after they have produced one good crop. If the soil is rich enough for strawberries it will produce a bountiful supply of weeds, and to keep these in check is really more work than to set out a new plantation. A man can certainly plant an acre with strawberries in much less time than he can clean out weeds from the same space, especially if they are to be pulled by hand or cut out with a hoe from among a thick mat of old strawberry plants. Two crops of fruit from the same plants is about as much as should be attempted from any of the larger sorts. Frequent renewals will, in the long run, be the surest system for obtaining large fruit and a profitable crop.

I still retain some of the older sorts, such as Wilson's Albany and Triomphe de Gand. These two are my first choice; and, although I have tried five hundred other sorts, I have found no superiors, when we take all their good qualities into consideration. In quality there are many better berries; in size, a few only that are larger than the Triomphe when given high culture; but for productiveness, I have found none that equal the Wilson. Of course, in other localities and soil, my choice might be different. Experience is the best teacher in horticultural affairs, and one needs to try many sorts in order to find the best for any locality or soil. I would not advise a man to decide from the appearance of my variety on my grounds as to which one or more would do best in his, unless he was located in my own immediate neighborhood, and on a similar soil.

Magnolias in Bloom.—*May* 2.—Among the more showy of the early blooming trees, the Magnolias will long be placed in the front rank. *Magnolia conspicua* is a magnificent species from Northern China; the flowers, a pure white, with a faint tinge of purple at the base of the petals. The flowers are three or four inches long, and about the same in diameter. They appear before the leaves, and are produced in such abundance that a tree, when in bloom, looks like an immense snowball. *M. Soulangiana* is similar to the former, except the flowers are striped and tinged with purple. *M. Lennei* is a comparatively new hybrid variety, with large, rich, bright purple flowers. At present, the price at which good, strong plants are sold ($5) will prevent its rapid dissemination; but in a few years it will, no doubt, be as plentiful as the older sorts. My only plant of this sort passed through the late severe winter without injury, and it is today in bloom. There are several other species and varieties which bloom at this time, or a few days later, that are deserving of special attention by those who admire handsome, ornamental trees.

Siberian Peonias.—*May* 3.—The greater part of the peonias in cultivation originated from species natives of very cold climates, and some of the earliest blooming sorts come from Siberia. Some of these are very beautiful, and bloom with the Hyacinth, Snowdrop, Tulip, and other early spring-flowering bulbs. One of the prettiest of these Siberian peonias is the double fringe-leaved *P. tenuifolia pleno*. The flowers are deep crimson, and only about two inches in diameter. It is an improved variety of the wild, single species, and only grows six to ten inches high. The foliage is as handsome as the flowers, being finely cut, looking more like green feathers than leaves. There are also several other Siberian species, such as the *P. tritenatar*, or thrice-three-leaflets, and the *P. vestalis*, or white Siberian, *P. uniflora*, or one-flowered, and many other beautiful species and varieties. The rage for new plants has made people overlook these old and valuable plants, and has resulted in a great loss to our gardens.

Orobus Vernus.—*May* 4.—This is another early spring-flowering plant belonging to the pea family. The name of the genus is derived from two words—*oro*, to excite, and *bous*, the ox, as many of the plants included in the genus furnish nourishing food for cattle. This little vernal, or spring-blooming, species has quite large, purple, pea-shaped flowers; root is perennial, forming large clumps, from which a great number of flower-stalks shoot in early spring. My plants have been in bloom for the past two weeks, coming in with the earliest of spring flowers. *Orobus Vernus* is another of the old plants seldom seen in cultivation in these days of far-fetched and dear-bought novelties.

Arboricultural.

BLIGHT AMONG THE PEACHES.

Having been a reader of your paper in years past, I feel that the enclosed specimen of peaches will afford you some interest. Hope you will be able to throw some light upon the cause. The enclosed sprig is a fair sample, taken at random from an orchard of about one hundred trees. Single fruit is the exception. Many of them are four double; large quantities three; and more than half as per specimen enclosed. The trees are about ten years in bearing; had very little fruit last year, it having been killed by late frost.

Van Buren, Ark. W. J. Alexander.

The peach buds have probably been injured by cold or sudden changes, but not enough to entirely destroy them; the result being an abnormal growth. A similar phenomenon is often seen in the wild native plum, when cultivated in uncongenial soils and climate—the fruit assuming the form and appearance of a fungus growth without the seed or texture of the natural fruit. The cause of such changes is not positively known, but may be considered as climatic, the result being a deformed growth.

ARBORICULTURAL NOTES.

Transplanting Norway Spruce.—Will you please tell me at what time of the year I should transplant "Norway Spruce?"—J. W. Avaun.

Just as soon as the ground is dry, and warm enough to work easily in Spring. When you begin to plant potatoes and garden vegetables, it is time to transplant evergreens of all kinds.

Time to Cut Cions.—Please inform me the best time to cut cions for grafting, to insure their growth.—D. P. Compton, *Meadville, Pa.*

It is too late to cut cions for grafting this season, unless from trees that have been transplanted and the buds are still dormant. The seasons best for this purpose are Fall, Winter, or early Spring.

The Poultry-Yard.

ABOUT PIGEONS.

The Archangel Pigeon.—The illustration of a pair of these pigeons, which we give, will attract attention. This pigeon is not easily obtained. It was introduced into England from Russia. We never saw one in this country. Its coloring is rich and unique. The head and neck-hackle should, after the first molt, according to TEGETMEIR, be of a deep and brilliant copper-red, changing into dark bronze; the wings and back of a deep black, shining with a brilliant burnished luster, and reflecting the richest iridescent hues of blue-green. The flight feathers are of dusky black. The tail, when first imported from Russia, was black, but was found by T. to be of a dull blue at the base with a black bar at its termination. The eye is a bright, golden, orange red. Some of the birds are pearl-eyed. The small feet should be of a bright, deep red. The tuft is formed at the junction of the feathers of the skull with those of the neck; these feathers should not be sufficiently long to overlap, and should end in a finely drawn point at the back of the head. Any approach to a broad shell-tuft, resembling the Trumpeter, is to be regarded a defect. This pigeon has a smart carriage, stands well on its thighs, the head well up, the shoulders close set, and the girth narrow. These pigeons are prolific and make good nurses.

POULTRY NOTES AND QUERIES

Hens Laying Small Eggs.—I would like to ask if any of the readers of the RURAL NEW-YORKER can tell me what makes our hens lay so many small eggs? We always have more or less of them, but this season a great many more than usual—sometimes two or three a day. They are all sizes, from a robin's egg to a quail's. The eggs are perfect in shape, and have a good shell on them. Their feed is corn, oats, wheat screenings, tallow scrap, etc. I used to think that it was the last egg that a hen laid when I find a small one; but now I think I have some hens that lay all small eggs. If I knew which ones lay these small eggs, I could soon put a stop to it; but the trouble is to find out. Our fowls are of several different breeds, mixed, such as Black Spanish, Black Hamburg, and one or two other kinds. I do not think other people's hens trouble them in this way; at least I do not hear any complaint. Our hens lay pretty well, generally, having averaged, in years past, 100 eggs to the hen, in a flock of from 70 to 90. Hoping some one can give us a little light on the matter, and will do it through the RURAL, I am—N., *Westport, Conn.*

Pulling Peacock Feathers.—I see an inquiry in RURAL NEW-YORKER of April 13, as to what time a peacock's tail should be plucked. We have had a fowl of that kind for six years. We pull his tail from May until the last (just as we can get hold of him, as he is very wild about pulling time, and seems to have a knowledge of what is going to take place). If left longer than the last of May, he begins to lose it. At the time above mentioned I strip him of all of his beauty; the breast and neck feathers are very nice for making lamp mats, decorating home-made picture frames, etc. Our fowl is very quarrelsome with male turkeys; we are obliged to keep two gobblers all the time, one *alone* he would soon put out of the way. The peacock is a bird of great activity; we would not do without ours for twice the worth of him, he is so lively and such a curiosity to persons that have never seen one strutting.—MRS. C. L. WATERS, *Clarksburg, W. Va.*

Packing Eggs.—I wish to inquire of some of your readers if the method of keeping eggs, published last December and endorsed in February, will preserve those put down early in the season, say in May and June? Last year I used lime water—a recipe that I saw in the RURAL—1 pint salt and one pint lime to one pail water. It preserved them perfectly; but the shells of part of the eggs were badly discolored, which raises objections in the market. If any one can give me a better plan, or tell me how to prevent the discoloration, it will be gratefully received by—ONE RURAL READER.

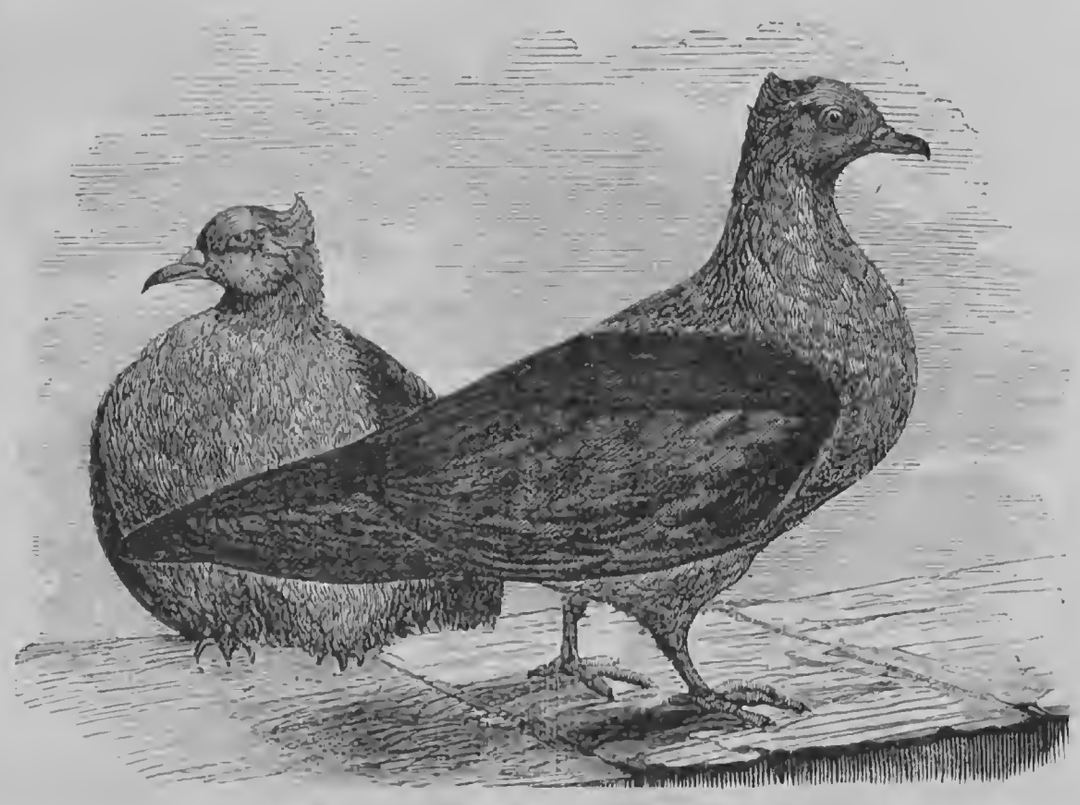
Golden Pheasant Fowls.—G. R. CRANDALL asks for a description of Golden Pheasant fowls. We know of no distinct breed of fowls with that name. The Golden Spangled Hamburgs are sometimes called Golden Pheasants, but improperly. They are an excellent fowl. Their color is golden or orange-yellow, each feather having a glossy dark-brown or black tip, particularly noticeable on the hackles, wing-coverts, and also on the darker feathers of the breast of the cock. The plumage of the hen is yellow or orange-brown, margined (as in the case of the cock) with glossy black.

Spangled Silver Hamburgs.—In reply to the inquiries of C. F. TYLER, "What quality have silver-spangled Hamburgs to commend them except beauty? Will they endure confinement well?" I would say, they are the most prolific layers of all varieties of fowls. Their eggs are not large, but their weight per annum, probably, will exceed all others. They will endure confinement as well as any of the small-sized breeds, but not so well as Brahmas and Cochins.—J. CLARENCE SIDELL.

Scurfy Legs.—In answer to ROBERT TEASE in RURAL NEW-YORKER, March 9, and also to J. A. K., in RURAL, April 13, I would say their fowls have scurfy legs. Two or three applications of turpentine to the legs in as many weeks will cure them. I do not mean spirits of turpentine.—P. H., *Lynn, Mass.*

IF ROBERT TEASE will grease his fowls' legs with kerosene oil once or twice, they will soon get well. I have tried it on my own, and never knew it to fail.—A. C. S.

Limed-Leg Disease.—J. A. K.'s fowls are afflicted with the limed-leg disease. He must cure them, or they will die. Take



ARCHANGEL PIGEONS.

equal parts of sweet oil and oil of turpentine, and apply to their legs twice a week. The best time to doctor fowls for such diseases is when they are at roost.—J. L. C.

Poultry with Denuded Necks.—J. M. W., Batavia, N. Y., writes that a large number of his fowls have their feathers picked off the neck, leaving a bare, but apparently healthy skin. No symptoms of lice exist. Asks what ails them and what to do for them. Your fowls evidently need animal food. Give them fresh meat two or three times a week and burned bones or oyster shells, charcoal, and plenty of good, clean water.

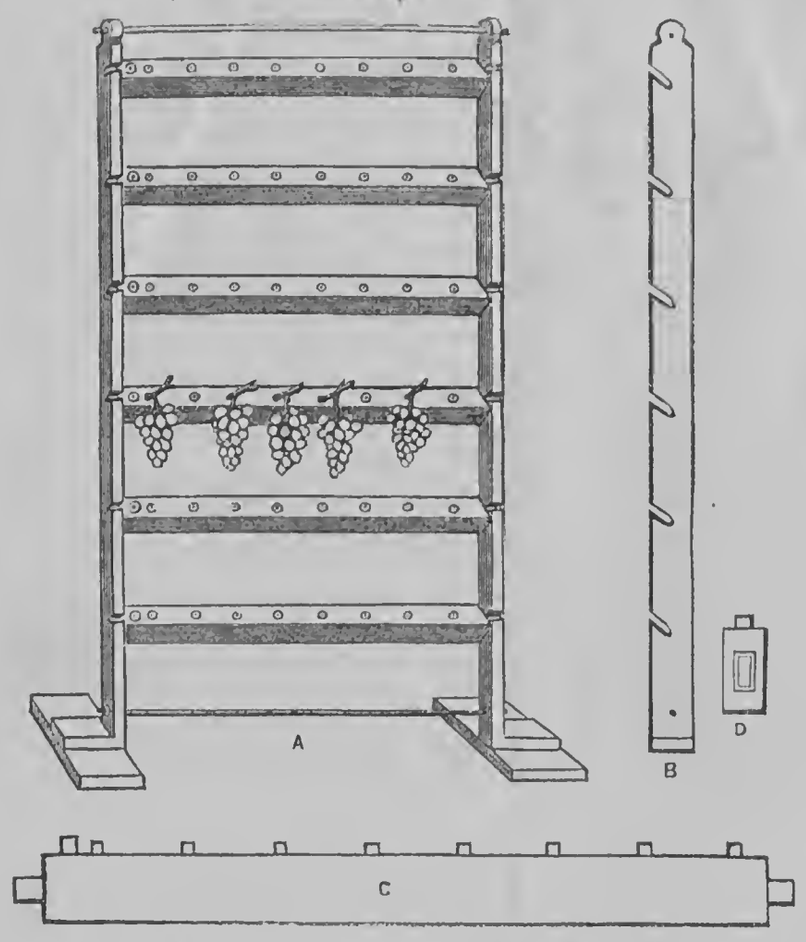
Eggs Disappearing from Under a Sitting Hen.—L. W., Mamaroneck, N. Y., has a Light Brahma hen sitting, from under which several eggs have disappeared, leaving no trace whatever. No other hens can get to her. Asks what has become of them. He concludes she has eaten them.

Lice on Young Chickens.—"A Constant Reader" asks for the best known remedy for lice on young chickens. Let those who have good and sure remedies reply.

The Vineyard.

VINEYARD NOTES.

Preserving Grapes.—Here is a new English device for preserving grapes with the stems in water, of a class with those heretofore given in these columns. Instead of a series of bottles, or of tubes, as recently given, a zinc trough is substituted, and the stems are thrust through the rails. A, is the front view; B, side view of the support; D, edge view of the trough; C, side view of trough. This method of keeping grapes—by putting the stems in water, as



AN ENGLISH PLAN FOR PRESERVING GRAPES.

heretofore described—is obtaining great favor among the gardeners of England, and will be found useful here. A prominent gardener says:—"There is no question about its being the right course to pursue with late grapes. It not only relieves the vines, and allows one to clear the house, and utilize it for any other purpose, but the grapes may be kept perfectly for months."

Floricultural.

FLOWERS FOR BOUQUETS.

I WANT a special catalogue of the best flowers for bouquets, up to the present time, to be grown, summer and winter, in the open border, in the green-house, or in the conservatory or stove room. Has any publication been issued on the special subject of cut flowers? Can a conservatory be heated satisfactory without injury to plants by an anthracite coal stove, wherein the heat can be regulated?—D. R., *St. Paul, Minnesota.*

THERE is a great variety of plants which are indispensable for the conservatory or green-house in winter, but of no value for cut flowers in summer. We will first give a list of shrubs or woody plants that bloom freely in winter. *Azaleas Chinese; Camellias; Daphne odora*, flowers purplish white, very fragrant. *Pittosporum variegatum*, flowers white. *Abutilon Mesopotanicum*, trailing or drooping habit, free bloomer, the calyx scarlet, the petals golden yellow. *Poinsettia pulchertima*, a tropical plant producing bracts six to eight inches in diameter of a bright scarlet. *Libonia floribunda*; this is truly a great acquisition to our winter blooming plants; tubular flowers an inch in length, orange scarlet. *Bouvardia Hogarth*, bright scarlet, trusses large, free bloomer, the best of all colored varieties. *B.-jasminoides*, pure white, branching habit, good growers and free blooming variety. *B. Davisonii*; flowers white, but not a very vigorous grower. *Calceolaria* in variety. *Gardenia Florida*; flowers white. Double white flowering Almond. *Deutzia gracilis*; flowers pure white. *D. crenata flora pleno*, pinkish white. *Weigela nivea*; though the above four shrubs are hardy, they are indispensable to the green-house.

Half Shrubby and Herbaceous Plants.—Monthly Carnation. *La Purite*, carmine color, the best of all pinks for forcing. *President Degraw*; pure white, deeply fringed. *Edwardsii*; similar to *Degraw*, but of a much freer growth. *Calla Ethiopica*; flowers pure white. *Cuphea platycentra*; scarlet. Double white *Chinese Primrose*; probably no plant gives better satisfaction than the Primrose; a strong plant will produce from three to four hundred flowers during the winter. These plants require plenty of pot room to make them bloom well. *Eupatorium arboreum*, bluish white. *E. conspicuum*; fine white. *E. elegans*; pure white, very profuse bloomer. *Fuchsia speciosa*, *F. serratifolia*; two best varieties for winter blooming. The plants should not be allowed to flower much through the summer where one intends to have them bloom in winter. *Geraniums* in variety; the double ones do not bloom as freely in the house as the single ones. *Heliotropes*; if these are wanted for winter flowering the plants to be taken up should be severely pruned in August; this will cause young shoots to start out. The plants require plenty of room and a place near the glass. *Mahernia odorata*; flowers bell-shaped, yellow. *M. vitata*; crimson, blooming in early spring; very fragrant. *Myrsiphyllum asparagoides* (Smilax); a trailing vine extensively cultivated in cities for its leaves, which are used in cities for making wreaths, etc. *Salvia splendens*; an old variety, but a very showy plant on account of its flowers, which are of a bright scarlet. *Stevia compacta*; fine compact truss of pure white flowers. Of Roses there is a great variety; but there are but few good winter blooming sorts, as most kinds are subject to mildew. The following we think among the best:—*La Pactole*; canary yellow. *Countess de Bertha*; one of the very best, and very fragrant. *Agrippina*; bright crimson. *Suffrano*; orange yellow. This is a standard sort and highly prized, it being a free bloomer and strong grower. *Bon Silene*; this is a very fine rose, the bud being very large, of a purple and carmine color, grown very extensively by florists, it being one of the best for forcing in winter.

FLORICULTURAL NOTES.

The Odor of Flowers.—A scientific contemporary says:—"It may be laid down, as a general principle, that a larger proportion of white flowers are fragrant than those of any other color; yellow come next, then red, and lastly, blue; after which, and in the same order, may be reckoned violet, green, orange, brown and black."

A Bouquet of beautiful Wild Flowers was received by mail, (male?) at the RURAL sanctum last week. From whom?

Dairy Husbandry.

RELATIVE RICHNESS OF MILK.

In the RURAL NEW-YORKER, April 6th, is an interesting article under the heading, "How much Milk Required for a Pound of Butter." To my mind there are various points of interest that must be looked at, and taken into the account before we can understandingly settle this milk and butter question. It is a well known fact that the milk of a three or four year old cow will not make so much butter per quart as the milk of the same cow when seven or eight years of age.

Again, as stated in the article referred to near its close, the milk of the same cow is richer late in the season than early in the season when the grasses are more succulent. Again, on the same principle, it will be found that the milk of the same cow will vary much in richness in different seasons, even when kept in the same pasture. Of this I had a striking proof in the summers of 1870 and 1871. In the summer of 1870 I had two thorough-bred Durham cows (mother and daughter, aged six and three years) that I had to milk three times a day from the time they dropped their calves early in May, until after harvest. In 1871, the same cows in the same pasture gave only about two-thirds the amount of milk. To my surprise, at the close of the year, I found that the amount of butter made in 1871 exceeded the amount made in 1870. In 1871 we had very little rain; in 1870 a good supply. Hence, the wetter the season the less butter we should look for in proportion to the quantity of milk. Then frequent hot days in rainy seasons have their influence in cutting down the product of cream.

There is another point to be taken into the account before the main question can be settled understandingly. Suppose here are two cows that give each twenty-five quarts of milk per day, the milk of one weighing twenty-five lbs., and that of the other only twenty-three pounds, which cow has furnished the richest milk? Within the last ten years I have found only one man, with whom I have conversed, orthodox on this point; all, with that single exception, have said "*The heaviest* milk is the *richest*." If poor milk is lighter than rich, why do we not find the cream at the bottom of the pan? T. L., SEN.

Menomonee Falls, Wis.

CONCERNING CURD MILLS AND MILK COOLERS.

WILL you please give me your opinion of the Curd Mill. Is it a good mill? How is it operated? Will a cooler of this sort be sufficient—viz:—Take a barrel with a scroll of pipe on the inside. While the barrel is full of cold water, let the milk run through the scroll. About the bellows-cooler and the aerator, how are they made?—B. G. KENYON, *Benton Co., Iowa.*

THE curd mill is a very useful appliance in the dairy. It is of especial service when the cheese is to be made from milk that has not been kept in good order, or that happens to be faulty from a variety of causes liable to occur in hot weather. When the curds are packed in the vat, after the Cheddar method, the curd-mill is indispensable, since by its use the mass is broken up preparatory for salting with much more readiness and uniformity than can be done by hand. In addition to improving the texture of the cheese by the use of the mill, the grinding of the curd and exposing its particles to the air at this stage is thought to have a favorable influence in promoting a good flavor to the cheese.

Curd mills are made with single and double cylinders, and are usually worked by hand, the mill being placed across the vat. Some of the mills have a heavy balance wheel, which facilitates their operation.

Recently a curd mill has been invented which cuts the curd into small cubes. It consists of a triangular box, with two sides formed of knives in checks, with a gang of knives in checks working backward and forward in the box, and moving on a pivot at the acute angle of the box. This machine requires much less power in its operation than the cylinder.

Milk can be thoroughly cooled by pouring it through a scroll of pipe arranged in a barrel and surrounded with cold water. A milk cooler of this kind can be made very cheaply, and without much trouble, but is somewhat objectionable on account of the difficulty of keeping it clean; besides it does not give a chance to air the milk, which is important for the escape of animal odor, thus assisting in the better preservation of the milk. The aerator and cooler combined will be found a much more useful appliance in this line of dairy implements.

CHEAP AND SIMPLE MILK AERATOR.

MR. B. B. MOON of Norway, Herkimer Co., N. Y., formerly of the North Fairfield factory, and well known as a skillful manufacturer of "fancy factory" cheese, writes us as follows:

"An effective utensil for airing milk is an inverted three-quart tin basin with a socket attached to the bottom for a handle with which to force the inverted basin to the bottom of the can of milk. A few holes in the bottom of the basin will allow the air to escape after being forced into the milk. Perhaps a better form of the vessel would be that of a prism with the socket attached to the edge opposite the open side—the holes for the escape of the air to be about two inches apart along the edge. I believe this machine is *unpatented*. It is cheap, easily cleaned, and, I think, will be effective for the purpose designed."

We give a rough sketch of the implement suggested by Mr. MOON in Fig. 1. *S.* being the socket for the reception of the handle, and *a*, *a*, the holes for the escape of air.

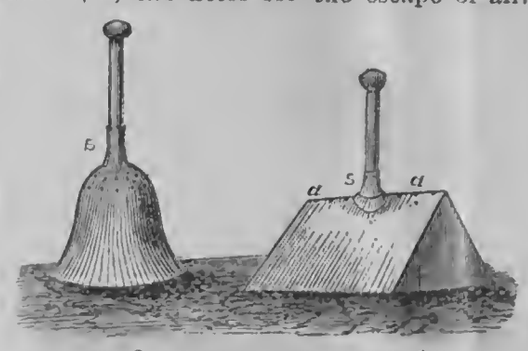


FIG. 2. FIG. 1.

We are inclined to think that a better form of the implement would be that of an inverted bell, something like that of Fig. 2. It would present less sharp corners to clean, and is more equally balanced, thereby being more readily forced down into the milk.

This is an implement which any tinsmith can make and will cost only a few shillings; it is very simple, is within the reach of every dairyman, and if, as Mr. MOON says, it is efficient in airing milk, will commend itself to every one who desires to improve the quality of his milk and keep it in good order preparatory for the factory.

COMPOSITION OF CONDENSED MILK.

THE London Lancet gives the following as the average composition of samples of condensed milk furnished in the London market. It says:—"Condensed milk is now prepared on such a large scale and by so many different manufacturers that there can be no doubt of its utility or of the large demand which exists for such an article. The results below agree as nearly as can be expected with others made recently in the laboratory. The sample was perfectly sweet, sound and free from lactic acid:"

Moisture	25.10
Fat	11.73
Caseine	15.17
Milk sugar	16.24
Cane sugar	29.46
Ash	2.30
	100.00

DAIRY NOTES.

Skimming Milk for Cheese.—WM. BLANDING says:—"Does the English cheese contain more butter than ours? On the contrary, our cheese, by analysis, shows richer in butter than theirs. When the American cheese reaches the other side of the water, if poor in manufacture, ever so porous and spongy, or ever so poor in flavor, it is not poor in butter, but is richer in that quality than the goods we are striving to imitate or excel. This would seem to indicate that the excess of butter might be saved, and the quality secured by good milk, careful manufacture and curing. It is a question with some, whether all the cream will work into the cheese if it once becomes separated from the milk. I have had opportunity for some observation, by working up the milk twice a day, as compared with once, and have had as good results in both quality and quantity in the latter case as the former, and in both cases had, as far I could see, an equal amount of cream rise on the whey vats."

Selling Creamery Butter Early.—H. COOLEY, Greene, says:—"A strong argument for the early sale of creamery butter, is found in the fact that the very best butter rapidly loses flavor, and at sixty or ninety days old would hardly be recognized as the same that it was when first made. Few families use more than ten pounds of new butter before it deteriorates in flavor perceptibly. Our patrons soon learn this fact, and call for their butter in smaller quantities and oftener. The particular aroma which is especially sought after is essentially characteristic of new butter.

Domestic Economy.

THE "WHY" IN VEGETABLE COOKERY.

WHY should Seakale never be boiled in plain boiling water, but in milk and water and salt; or, instead of milk, a little bacon fat, butter, lard, or beef dripping?—Because kale requires to be cooked in soft water and be kept of a good color. Soda would soften the water, but turn the kale black. Equal parts of milk and water may be used, but then milk is expensive, while by using a little fat in the water the kale is equally good, and is not greasy when served.

Why should Celery for sauce or for stewing be boiled in a little milk, butter, and salt, and with sufficient water to very little more than cover it?—Because it requires soft water to cook it in, and the milk and water in which it is cooked will, after the celery is dressed, serve for sauce if it be thickened with one or two tablespoonfuls of corn-flour mixed with a little milk, and adding it to the celery and liquor it is in. It is then converted into a thick sauce, and served as such, or if for stewed celery the latter can remain in the sauce till wanted, then be placed in a dish, and the sauce strained over it.

Why should Carrots not be split for boiling?—Because the flavor is entirely lost by splitting them. They require boiling in soft water; soda would blacken them. Some fat, as dripping or other fat, should be put in the water when it is put on cold; when it boils fast put in two ounces of salt, and the carrots whole or cut across, *not split*, and boil them two hours after they have boiled up. These directions are for boiling carrots in winter.

Why should summer Carrots not be scraped?—Because the delicate flavoring would be spoiled. They should be washed clean, be put into boiling water with a little fat and salt, be boiled from fifteen to twenty minutes, then be strained and thrown into cold water. With a clean cloth rub off the outside skin, and throw each carrot as it is done into hot water till the moment of serving.

Why should Parsnips not be split for cooking them?—For the same reason as for carrots—splitting destroys the flavor. They should be boiled as directed for carrots, but only for twenty minutes, half an hour, or an hour, according to the size—the largest only an hour.

Why should Soda be boiled with greens, cabbages, broccoli, and turnip greens?—Because the oil which all these vegetables contain, more or less, the soda extracts, and leaves the greens sweet and wholesome; but the water is, after boiling the greens with soda, most unwholesome, perhaps poisonous. How wrong, then, it is to eat greens not cooked with soda. A piece of soda, filbert size, is sufficient for a very large saucepan of boiling water. Turnip greens have scarcely any oil in them, but are, nevertheless, much more wholesome for eating when cooked with a little soda. From the seed of cabbage the colza oil is manufactured.

Why should Vegetables be washed in rather warm water first, then in cold, to cleanse them from sand and insects?—The hot water, which must be hotter than tepid, causes the insects and sand to fall out at once. Insects do not always dislike cold water and salt, but the hot water kills them. It must be understood that only a small handful of greens or one head of cabbage at a time must be washed, and then instantly thrown into the cold water, which crisps and thoroughly cleanses them. Spinach, leeks, celery, and seakale are thus rendered very clean, and, moreover, are very rapidly cleansed. It is worse than useless to attempt to cleanse vegetables in salt and water. The hardness which salt creates in the water prevents all cleansing properties. The salt may kill the insects (it does not always do this), but they stick on hard and fast; the hot water makes them fall out at once, and the cold water crisps and blanches them.

Why should Savoy Cabbages, white-heart summer cabbages, and cabbages that have been a long time growing, be cut across the ribs of the leaves, and not lengthwise? Because all cabbages that have been a long time coming to maturity have extremely tough fibers; if these are cut lengthwise one has to chop the fibers with the teeth in eating them, and, moreover, such cabbages take a longer time to boil, and are often served a tasteless, overdone, watery mass. If such greens be cut across the stems, in circles of two inches in width, be washed in warm water, then in cold, and be boiled in boiling water and a little soda for from fifteen to twenty minutes, not a moment longer, if so long, the greens are sweet and exceedingly tender and wholesome, purifying the blood and promoting health. A dish of badly cooked greens is enough to create a severe fit of indigestion in those who eat them.

Why should the stems of hard white Cabbages be never cooked with the other parts of the cabbage? Because they take twice as long to cook as the soft parts, so that the latter is an unwholesome paste before the stalks are done, and if they are thrown away either before or after cooking them it is waste. The stems of cabbages that are crisp should have the soft green part cut from them to be cooked by itself; the stems when stripped from the green be tied in small bundles, cooked for from twenty to twenty-five minutes in plenty of boiling water, salt, and a little soda, and be served with butter sauce over them. Then a dish of seakale is not more delicious. These cabbage stems may be called "chardoons," and will gratify the palates of all who taste them thus cooked. Young spring cabbages, of course, do not need this treatment.

Why should Turnips be cut across the fiber in rings of less than half an inch in thickness? For three reasons:—First, the turnip need only be peeled very thin, instead of in the usual manner, thickly and wastefully; secondly, by so cutting them the fibers are cut across, so that however old the turnip is, it is never stringy; thirdly, they require only fourteen minutes to boil in plenty of boiling water and salt, and thus the delicate flavor of the turnip is preserved, also they can be more easily mashed. The thinner the circles of turnip are cut, the quicker they cook and the less fiber they will have.—*Mrs. Warren, in Treas. Lit.*

COFFEE VS. HUSBANDS AND WIVES.

IN a late RURAL NEW-YORKER, a lady asks "how to make good coffee, to please my husband?" Allow a dessert spoonful of coffee for each member of the family; put in a little egg; then pour on some cold water, and let it stand for a minute or two; then pour on boiling water. Do not let it boil long. Now, this will make good coffee, but as to pleasing her husband, I fear she will find that a life-long question.

This coffee query suggests two scenes: First, I fancy a cosy dining-room; breakfast table neatly set, and a large family seated around it. A kind, gentle wife and mother is pouring out the coffee. She passes a cup to her husband; he tastes it, then pushing the cup hastily from him, says: "MARY, I do wish you would learn how to make coffee; this is not fit to drink."

Poor woman! She says nothing, however, but as soon as breakfast is over, she writes to RURAL readers to know "how to make coffee to please her husband."

Again, I fancy another family seated at a breakfast table. The husband is sipping his coffee, and speaks highly of it, then says: "Wife, I expect friend BROWN here next week. A capital fellow, with but one weakness, and that is a liking for good coffee; so if you want to impress him favorably, give him No. 1 coffee to drink." This wife smiles assent, and she, too, writes to know "how to make *very* excellent coffee."

If all husbands would kindly suggest, instead of demanding, changes or improvements in cookery, there would be less of this "incompatibility of temper" that causes so many husbands and wives to be divorced. If wives would but thankfully receive suggestions from their husbands, instead of getting angry, and saying "they reckon they know how to keep house," fewer husbands would be driven from their homes to the bar-room.

Oh, ye girls who contemplate matrimony! either banish the thought from your minds (as you will, if you are wise), or devote your whole time and talents to the study of domestic economy! Your romantic lover tells you he cares naught for "meat nor drink" while he possesses your love; but he will get over that after you give him a few "wash-day dinners."

Young men who are about to become martyrs, practice eating sour bread and drinking weak coffee, so that you may be better prepared for tranquilly entering the married state! Would that all were as free from care as me, for I will be

"AN OLD MAID."

Brine for Cucumbers.—My rule is one pint of rock salt to one pail of water.—DELLA M. F., *Coldwater, Mich.*

Domestic Inquiries.—L. H. O. asks "how to brighten up soiled black kid gloves."

Scientific and Useful.

HOW A HARNESS SHOULD BE MADE.

I HAVE been a constant reader of your valuable paper for over two years, and in all that time I have never seen any account in regard to the manufacture of harness—such as heavy draft and light carriage harness. I think it is a matter that every farmer should be interested in, also every man who owns a horse, to have his harness made for draft in the most uniform style and for service. I will give my style, and would be glad to hear from others:—First, the collar should be made of the best of kip with a light upper rim and heavy draft or bulge—large, with a gradual taper to the top of the throat; all well stitched with thongs. The hame should be made to fit the neck of the horse, as there are so many different shaped necks; so should the collar. The trace should be of good solid leather, cut two inches wide and of any desired length, of three even pieces of leather, with three rows of stitching from end to end. The breeching should be folded and well stitched; hip straps, one and a-quarter inches in width; side straps, one and a-quarter inches wide; back strap, one and three-quarter inches wide; back-band, one and three-quarter inches, stitched double, with a heavy center pad; belly-bands, one and three-quarter inches, folded; all of the best of leather; bridle head-piece, one and three-quarter inches wide; cheeks, one inch; throat-latch, three-quarters of an inch; hitching strap, one inch; all to buckle into the bits, which should be made of leather, for winter use.

Our light harness, according to my judgment, should be made light and of the best material. Collar, light; traces, one and one-eighth inches; breeching, one and three-quarter inches wide; a one and one-half inch hip-strap, five-eighth stitch; double backing-straps, seven-eighth stitch; double back-strap, one and one-eighth inches wide, stitched double, twenty-two inches from crupper end; crupper, round, with large swell in center; saddle, two and a-half inches wide; shaft tugs, seven-eighth inch; belly-bands folded, one and a-quarter inches wide; bridle head-piece, one and one-eighth inches wide; checks, five-eighths of an inch wide; throat-latch, half an inch wide; reins, five-eighths of an inch; center-piece of rein, half an inch; hitching-strap, five-eighths of an inch.

I want to hear from others who are interested in harnessing their horses and desire a harness for strength, durability and neatness. J. J. T.

USEFUL AND SCIENTIFIC NOTES.

Cement for an Aquarium.—I send you a recipe which I have used eight years in my own aquarium with perfect success. The cement has never been removed, and the tank has never leaked a drop during the time:—One part, by measure, say a gill, of litharge; one gill of plaster of Paris; one gill of dry, white sand; one-third of a gill of finely powdered resin. Sift, and keep corked tight till required for use, when it is to be made into a putty by mixing with boiled linseed oil, with a little patent dryer added. Never use it after it has been mixed with the oil over fifteen hours. This cement can be used in marine as well as fresh water aquaria, as it resists the action of salt water. But the tank must have either an iron or stone frame work; a wooden one will warp and cannot be made tight with any kind of cement. Be sure your plaster of Paris is pure. Dentists always keep that which is good. It is best to let the tank stand a day or two before the water is put in. The best plants I have used are the water cress and the Calla lily.—MRS. D. R. B., *Fredonia.*

Aquariums.—W. A. WEAVER asks some one to give him directions for the construction and management of fresh water aquariums. On page 92 of RURAL NEW-YORKER, August 12, 1871, he will find an illustrated article which will answer his inquiry. But it is quite possible some of our readers can give him instructions which will be equally valuable. We shall be glad to publish such.

Wax Flowers and Hair-Work.—I should like to know how to make wax flowers and hair-work (hair-flowers). Will not some one of the readers of the RURAL give me instructions?—MRS. S. B. WARD, *Marion Co., Oregon.*

Pipe to Supply Water for Trout-Ponds.—Lead is preferred to iron; but wood pipe is preferred to either by those who have used the three. This answers R. P. N. of Connecticut.

Miscellaneous.

UNITED STATES
LIFE INSURANCE COMPANY,
261, 262 & 263 BROADWAY,
NEW YORK.

John E. De Witt, President.

DEPOSIT INSURANCE

Is a new form of LIFE INSURANCE, originated and just introduced by the old and popular

Charter Oak Life Insurance Co.,
OF HARTFORD, CONN.
ORGANIZED 1850.
$10,000,000 ASSETS.

It is confidently recommended as far superior in all respects to any Tontine or other plan upon which payment of profits is deferred. Insurance on all the usual plans is offered by this Company at far Lower Rates than are charged by other mutual companies.
☞ Agents in all the principal cities and towns.

FASHIONS FOR SUMMER.

943.

DOLLY VARDEN Polonaise is the charming novelty of the season, and becomes the decided favorite of all who see it, when Dolly Varden goods—much in vogue—or any kind of wash material is used. By unbuttoning the lapels at the side and back, and by loosening the belt, it becomes a plain pelisse without plait or gather; by readjusting again it is transformed into an elegant, tight-fitting polonaise. As this change can be made in less than THREE MINUTES, and as it requires only six yards of yard-wide goods, it is easy to see why it is so highly honored. All sizes. Price of pattern, including a CLOTH MODEL, which shows exactly how to make and put it together, and how it will look when finished, $1.

SPECIAL OFFER.—To any person who will cut this advertisement out, and inclose it with $1 to us before the first day of June next, we will mail to them this pattern, with the cloth model, and will send them SMITH'S ILLUSTRATED PATTERN BAZAAR FOR ONE YEAR FREE! NOW is the time to subscribe for the BEST FASHION MAGAZINE IN THE WORLD, AND THE ONLY FASHION PUBLICATION that Imports styles and furnishes patterns of them. We give a CLOTH MODEL with every pattern. Our regular subscription price is ONE DOLLAR A YEAR. We give every subscriber patterns of their own selection FREE to the value of HALF A DOLLAR.

Single Copy mailed for 25 cents. If you wish for something RARE in Summer style, send stamp for "SMITH'S ILLUSTRATED SPECIAL." Address

Business " 2.50	"
Reading " 3.00	"

☞ No advertisement inserted for less than $3.

SATURDAY, MAY 18, 1872.

KEEP COOL, AND GROW CORN.

Now that the great quadrennial Presidential Campaign is at hand, it behooves the Producers of the Country—and of such are most of our subscribers—to keep cool, and attend, first and foremost, to the labors of the Farm, the Work-Shop and the Factory. It is the first duty of the Rural Population to Plant, Cultivate and Harvest—for the production of corn and other crops is of far more consequence to the prosperity of the People and Country, than the election of this or that man to the Presidency, or the dominancy of any political party. Not but that we would have producers actively participate in political and governmental affairs—for it is right and proper that they should do so—but at the present time, especially, it is of paramount importance to make suitable provision for feeding and clothing the people. Much as is and will be said about corruption, and the impending ruin of the Republic (unless this or that party succeeds), those who have witnessed the wild and injurious excitements of Presidential contests during the past forty years, know that the salvation of the Nation depends more upon the industry, integrity, and the (so to speak) "level-headedness" of the masses, than upon the elevation of any man or political organization.

Let us take things calmly and sensibly—attending to our home business with assiduity—then intelligently examine, and dispassionately decide, upon the claims of this or that man or party to our suffrages, and finally act (vote) in such manner or direction as we believe will secure the best interests of the whole people and country. There are already indications that the Presidential Campaign of 1872 will be one of the most heated and demoralizing ever experienced. Thousands of ordinarily calm and level-headed people will be likely to become more or less excited, and not a few—either honestly seeking the good of the country, or with the chimerical idea of securing office and emolument—will injure themselves by neglecting their business, and spending time and money which should be carefully husbanded.

Doubtless corruption exists in our Municipal, State and National affairs, and there is need of reform in many departments of Government. The developments of the past year—notably those concerning the operations of the Tammany Ring in New York—have properly awakened the people on the subject, and various reforms have been inaugurated and should be consummated. The truth is that corruptions of various officials—Local, State and National—have been so thoroughly ventilated by the Press that the People will not fail to see that reform is instituted in many departments, whatever political organization may prevail. But while constrained to help the good cause of political purification in all proper ways, let us not forget that it is a paramount duty to feed and clothe the Nation—and hence that we should Keep Cool and Grow Corn.

RURAL NOTES AND QUERIES.

Sanctum Gossip.—"Daily Rural Life" entered the sanctum the other morning, fresh from the breezy Jersey hills, with his hands full of flowers. His first salutation was, "Isn't this a tough Spring? I tell you I believe what the Winter left unkilled the dry Spring will use up." Dry? "Yes, sir, dry. We are all drying up. We dare not move a plant; work is behind, and the deuce to pay generally. Pray for rain, B.; pray for rain." And the venerable old gentleman whisked out of the sanctum as if he was after a beetle.

—Another gentleman, from Brooklyn, came in, and asked us if we had ever seen a geranium whose stems and foliage were a pure creamy white, without a tint of green about it. We had not. He had found one in the possession of a German shoemaker in Brooklyn, who had grown it four years. It is evidently a sport, or has been propagated from one. Our friend thinks it permanent and beautiful. Of its blossoms he could say nothing—did not know as it had ever bloomed. The shoemaker had refused $20, offered him by a Greenwood gardener, for the plant.

—A gentleman, with a farmer-face and demeanor, but looking as if he preferred other men should do the work, pitched into us the other day because we opposed the free distribution of seeds by the Department of Agriculture. He wanted to know what the Department is for if not to help farmers to reliable seeds. We replied that if that is what it is for, it is a stupendous failure, for its seeds are no more, if, indeed, they are not less, reliable than those sent out by our first-class seedsmen.

—General FRANK D. CURTIS showed us his handsome face the other day. He has been to Washington. Although he told us a good deal about the Department of Agriculture, he did not tell us anything new. Evidently he thinks somebody ought to relieve poor old Judge WATTS and his over-tasked Chief Clerk SWANK, and allow them a vacation. But we were more interested in what he said about tree planting. Said he planted a thousand trees the other day—Larch, Chestnut, Norway Spruce, etc. He is planting trees on every spot of land that cannot be profitably cultivated—trees that will make valuable timber some time. Then he told about his orchard grass meadows. He says those that are four years old are splendid. He has just been seeding seven acres. He put on the seven acres a bushel of Timothy, a bushel of Red Clover, and five bushels of Orchard Grass seed. He sows the Timothy and Clover because he finds that Orchard Grass does not get established under two or three years, and he wants the Timothy and Clover to occupy the land and protect the Orchard Grass plants. The latter is slow to start, but when a field is once seeded well with it, it makes excellent pasture or meadow.

—Another old friend came in to say that he thought every man who had ever used commercial fertilizers ought to give his experience with the same, and state what per cent. of benefit he had derived thereby. He thought such statements, with details as to the manner of use, ought to be given as a matter of self-protection. He wished we would say so. Here it is.

Some Facts about Tacks.—The length of Tacks, as understood and given by the manufacturers, is by the "ounce," which is printed on the label, and stenciled on the box or package in which the goods are placed for transportation. "Three ounce" (3 oz.) means that the package so labeled contains tacks three-eighths inch long, and that for every three ounces of tacks of that length there should be 1,000 tacks. Four ounce would be seven-sixteenths inch long; six ounce, eight-sixteenths; eight ounce, nine-sixteenths inch long, and for each "full-weight" package thus labeled there should be 1,000 tacks.—and so on up to twenty-four ounce, which likewise is equivalent to one and a quarter inches long, and 1,000 tacks. The manufacture of tacks is becoming an extensive business in this country. The American Tack Co. (whose advertisement will be found in this paper,) furnish a superior article, and have recently adopted the plan of supplying consumers direct, either by mail or express, according to the size of the package or quantity ordered.

Lightning Rods.—Our good friend JOHN PHIN, who is both genial and sensible, read an Essay before the Farmers' Club of the American Institute, recently, entitled "Plain Directions for the Construction and erection of Lightning Rods," which has been published in neat form by the Handicraft Publication Co., 37 Park Row, N. Y. City. Every man who has, or wants to have, a lightning rod should read it. It proves that lightning rods are a protection, tells what lightning rods should do, states the proper material for them, the proper size, best form and arrangement, whether they should be painted, terminations, best method of attaching, etc., etc. Thoroughly practical and scientific, it is a most useful hand-book for the protection of those who purchase.

The Carhart Patent Two-Horse Pulverizing Cultivator, writes a correspondent, has decided merit, and is destined to come into general use. It is as simple as a plow or harrow, and, in many places, does the work of both. It can be run deep or shallow, as circumstances may require, and will pulverize and level short undulations better than can be done in any other way. It is just what has always been needed, and cannot be dispensed with in good and thorough farming. When the soil is well fed and thoroughly worked, an abundant harvest is sure to follow. This cultivator is particularly adapted for exterminating quack and thistles. By using a peculiar-shaped tooth, it cuts off every thistle, and works quack and other roots toward the top of the ground. It can be changed in a variety of ways, and used in the place of many other implements, and the cost being only $20, brings it within the means of every farmer.

Graceful Compliment to an Eminent American Horticulturist.—The London, Eng., Gardeners' Chronicle and Agricultural Gazette, of April 6, publishes an excellent portrait of Hon. MARSHALL P. WILDER of Boston, with an elaborate biographical notice which it introduces in the following terms complimentary to our countryman:

"We are glad to have the opportunity of laying before our readers the portrait of one of the most distinguished of Transatlantic Horticulturists, and one who, by his zeal, industry and determination, has not only conferred lasting benefits on his own country, but has, by his careful researches and experiments in hybridization and fruit culture, laid the horticulturists of all nations under heavy obligations to him. The name and repute of MARSHALL P. WILDER are as highly esteemed among the elect fraternity in Great Britain as they are in America."

No one can rejoice more than ourselves when such just compliments are paid to American citizens whom we delight to honor.

St. Paul, Minn., Commerce.—We have, from OSSIAN E. DODGE, Sec'y of the St. Paul Chamber of Commerce, the fifth annual report of that organization—a most carefully prepared and complete work, illustrating the wonderful growth and commercial enterprise of that young city. From this report we learn that there were in 1871 seventy-four wholesale houses in the city whose sales amounted to $13,341,826. There are ten railroad lines entering the city, on which 39 trains arrive and 40 depart daily. The number of buildings erected in 1871 were 832, at a cost of $1,735,781. Elaborate tables of imports and exports are given, showing a wholesome trade.

George Vasey, Botanist of the Department of Agriculture.—We notice by the last Monthly Report of the Department, that GEORGE VASEY of Illinois makes his appearance as Botanist of the Department. We have known Mr. VASEY some years, and of his work. He is a modest, industrious man. Judging by his salutatory he has a liberal comprehension of his duties, and we hope he may prove, by his work, to the agriculturists of the country, that there is a direct practical relation between botany and agriculture.

Catalogues, Etc., Received.—From CHILDS & CO., Los Angeles, Cal., price list of Los Angeles, Nursery....From H. HERBERT EMERY, Rules and Regulations of Grand Industrial Exposition at New Orleans, commencing May 1, under the management of the South-western Exposition Association....From T. C. MAXWELL & BROTHERS, Geneva, N. Y., Wholesale Trade List....From T. S. HUBBARD & CO., Fredonia, N. Y., Wholesale Price List of Grape Vines....From KINGMAN & CO., Peoria, Ill., Catalogue of Standard Farming Machinery and Tools.

Nathan C. Ely Ill.—His many friends will be sorry to learn that the Hon. NATHAN C. ELY, the genial and highly respected Commander of the Farmers' Club of the American Institute is seriously ill with Pneumonia—so ill that he will be unable to preside at the Club for several weeks. He will be greatly missed there; for we know of no one who can take his place and impart to its proceedings the same vivacity and spiciness, and direct it with equal wisdom.

The American Artisan announces the dissolution of the firm of BROWN, COOMBS & CO., the retirement of Mr. COOMBS, on account of his health, and the purchase of his interest in the Patent Agency and Artisan by Mr. LEICESTER ALLEN, for the last four years Associate Editor of the Scientific American, who will hereafter be the Editorial Manager of the Artisan.

The Fourth Annual Report of the Noxious, Beneficial, and Other Insects of Missouri, made by State Entomologist CHARLES V. RILEY, has been received. It is a volume of 150 pages. It is fully illustrated, and contains information of great practical value to the agriculturists and horticulturists of Missouri. It is a credit to the State, to its liberality and intelligence, and to the industry and scientific ability of its author.

Farm Gardening and Seed Growing, by FRANCIS BRILL, (New York: ORANGE JUDD & CO.,) seems to be a very sensible, practical work by a practical man. Mr. BRILL'S father was a gardener; and he himself has had an extensive experience, and he talks about what he knows, which is more than can be said of many authors of industrial works.

The Pair of Dressed Chickens sent us, recently, by O. HOWLAND, Auburn, N. Y., were appreciated by those who had the good fortune to place their pedal extremities under our dining table, and partake thereof. Thanks!

JAMES HOARD and JOHN SISSON, Almond, N. Y., have 9 ewes which have 19 lambs. They want to know who can beat it!

THE SEASON, CROPS, PRICES, ETC.

Forest Hill, Harford Co., Md., May 6.—A fine show for fruit of all kinds. Peaches, cherries, pears and apples all in bloom at this time. It is quite dry here—main wells and springs without water. Wheat very poor; killed by fly in Fall, and Winter freezing.—L. M. V.

Olivet, Mich., April 23.—The season is very backward; but very little plowing done yet in this vicinity. Wheat very poor, but the weather is favorable—cool, with an occasional rain and some snow. Stock wintered very well; sheep have done the poorest; farmers are losing from 30 to 50 per cent. of the lambs. It is the wish of the people generally that Congress will not reduce the wool tariff, but let it remain as it is.—T. B. L.

Jackson, Hinds Co., Miss., May 1.—Planters here are fully two weeks behind time and cotton is suffering for want of rain. Our gardens will soon suffer for like reason. Strawberries commenced ripening with me April 2d; first good mess, April 15th, and excellent quality—variety, "Wilson's Albany." Fruit of all kinds promises to be plentiful. Had a mess of Irish potatoes—"Early Rose"—two weeks ago; planted in January.—G. C. E.

Johnstown, Fulton Co., N. Y., May 4.—The weather is very cold yet. Grain mostly sown. We have had but very little rain this Spring, and the ground is very dry for so early in the season. We have constantly cold west winds. Grass has a very poor start this Spring, and unless we get rain soon, the hay crop will be light in this section. Farmers are now plowing for corn. Wages will average round here from $18 to $20 a month by the year; by the season, $20 to $30, and good hands scarce at that.—R.

Highland, Oakland Co., Mich., April 24.—Spring very cold and backward; some of the farmers have just commenced sowing oats, but more are plowing than sowing. Wheat is looking bad,—worse than I have seen it in twelve years. In a drive which I took the 21st and 22d, from Fenton, Genesee county, across the country South to Ann Arbor, Washtenaw county, distance 42 miles, I saw but four good pieces of wheat, and those were well protected by timber. Some were plowing up their wheat and sowing to oats. I do not think, on an average, that farmers will get any more than their seed and bread.—L. C.

RURAL BREVITIES.

MRS. E. E. RUTH, Decorah, Iowa, asks where she can get *Beaucarnea recurvata*.

MARQUIS D. JOHNSON of Vermont should examine our terms for advertising.

C. B. SHOULD write to any seedman advertising in our colums for tobacco seed. You cannot get it into a hot-bed too soon now.

MARY ANN DOANE is informed that there is no law that we know of against using letter envelopes as many times as one chooses, by turning or otherwise.

CANADIAN FARMERS are organizing Monthly Fairs, after the manner of Old England, in various parts of the Dominion, for the sale of live stock and other farm produce. American farmers will be wise enough to do so yet.

EVERY day we get requests to republish certain articles that have hitherto appeared, because the readers have lost the papers containing them. We cannot do it. It is easier to save and file the RURAL.

AUGUSTUS J. ROWE, Exeter, N. H., sends us a patented device for fastening a cow's tail during milking, which he says is much used and liked in his neighborhood. It was invented by JOHN M. WEARE.

THE well-known house of B. E. HALE & CO., Eastern Agents for the Rock River Paper Co., manufacturers of paper roofing, sheathing, etc., has removed from Nos. 22 and 24 Frankfort St., to Nos. 56 and 58 Park Place—a much more eligible place for their increasing business.

THE PRESBYTERIAN GENERAL ASSEMBLY will meet at Detroit, May 16th. Some of the important topics likely to come up before it for discussion are:—Rotary Elders; a New Basis and Ratio of Representation; Preaching by Women; The Boards; Contributing and Dispensing; Sustentation, etc. Send $1 to JOHN H. DEY, at Detroit, and get a full daily report, pre-paid.

PUBLISHER'S SPECIAL NOTICES.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or more. A host of people are subscribing for papers about these days, and we hope our Agent-Friends will give everybody an opportunity to subscribe for the best.

Show Bills, Specimen Numbers, Etc., of the RURAL NEW-YORKER sent free.

BUSINESS NOTICES.

DR. STRONG'S REMEDIAL INSTITUTE,
Saratoga Springs, N. Y., is unsurpassed in the treatment of Lung, Female and Chronic Diseases. Turkish, Russian, Electro-Thermal and Sulphur-Air Baths. Hydropathy, Vacuum Treatment, Movement Cure, Oxygen, Calisthenics, &c. TERMS LOWEST IN WINTER. Send for a Circular. Endorsed by Bishop Janes, Rev. T. L. Cuyler, D. D., and Tayler Lewis, LL. D.

It is Altogether Wrong to trifle with a Bad Cough or Cold, when the risk is so great and a remedy so sure, prompt and thorough as Dr. Jayne's Expectorant can be readily found.

HOW TO OBTAIN A "COLLINS"
Solid *Cast* Cast-Steel Plow for $5. For particulars, address COLLINS & CO., 212 Water St., N. Y.

THE WAKEFIELD EARTH CLOSET.
Get Descriptive Pamphlet at 36 Dey St., New York.

Barbers.—Honest and intelligent ones recommend Burnett's Cocoaine.

Biographical.

THE CINCINNATI NOMINEES.

FOR PRESIDENT,

HORACE GREELEY

OF NEW YORK.

FOR VICE-PRESIDENT,

B. GRATZ BROWN

OF MISSOURI.

SUCH is the ticket presented by the Liberal Republicans, in National Convention assembled, (at Cincinnati,) and which is being indorsed by many outside of that organization. As a matter of information and history, we give herewith brief biographical sketches of the nominees—together with a portrait of each, from recent photographs—the same as we propose doing in regard to the candidates of the other parties, when presented for the suffrages of the people:

HORACE GREELEY.

HORACE GREELEY was born at Amherst, N. H., Feb. 3, 1811, and is, consequently, sixty-one years of age. His father, ZACCHEUS GREELEY, was an honest farmer. HORACE was a hopeful son, given greatly to a thirst for knowledge, and it is recorded of him that before he had attained the age of ten years he had read every book that he could borrow within a circuit of ten miles of his father's house, and this mostly at night by the light of pine knots, for there was no gas in those days and grease was scarce. HORACE early determined to become a printer, and at the age of fifteen he entered the office of the Eastern Spectator, at Poultney, Vt., as an apprentice. Here he served for four years, becoming the best typo in the office, and devoting his spare time to giving assistance in editing the paper. His knowledge of political statistics, party leaders, movements, etc., was so extensive that he was regarded an authority in such matters. Meantime his parents had removed to Erie, Pa., where HORACE now visited them. He worked as a compositor in Erie, Jamestown and Lodi, until August, 1831, when he went to New York with a scanty wardrobe and only ten dollars in his pocket, seeking employment. He found it, and for two years filled situations in various offices.

On the 1st of July, 1833, he entered into partnership with FRANCIS STORY, and they commenced business as the printers of Dr. SHEPARD'S "Morning Post," the first penny paper ever published. The paper failed in 3 weeks, and the firm of GREELEY & STORY was dissolved in six months by the death of the junior partner. Mr. GREELEY then took in as partners JONAS WINCHESTER and E. SIBBETT, under the firm of GREELEY & Co. They started the "New Yorker," of which Mr. GREELEY was editor, in 1834. It was a political, literary and family newspaper, and lived seven years. During this period Mr. GREELEY wrote for the "Daily Whig," and in 1838-9 he went to Albany and edited the "Jeffersonian," a Whig weekly, at the urgent solicitation of SEWARD and WEED, in whose interest it was published; but these ungrateful politicians gave him scarcely enough for his services to pay his board and washing, although the ability with which he conducted the paper was a subject of general remark and surprise. In 1840 he edited the "Log Cabin," a HARRISON and TYLER campaign paper, and on April 10th, 1841, he commenced the publication of "The Tribune," the history of which is the history of Mr. GREELEY for the past thirty years. He was in Congress for a short time, in 1848-9, was candidate for Comptroller of this State, against Judge ALLEN, three years ago, has written several practical and historical works, and often lectured on political, practical, and social subjects; but it is as Editor of the New York Tribune that HORACE GREELEY has achieved his fame, and he is to-day regarded as the foremost of American Journalists.

BENJAMIN GRATZ BROWN.

B. GRATZ BROWN is a native of Kentucky, and 46 years of age. He graduated at Yale College, in the class of 1847, studied law, and settled in St. Louis, where he soon became prominent in politics. Like Mr. GREELEY, he first attracted public attention and won fame as an Editor—as Editor of the St. Louis Democrat, from 1850 to 1857. He had supported VAN BUREN and ADAMS, in 1848, and as an emancipationist in a slave State, gravitated toward the Republican organization, of which he was the original head and front in Missouri, supporting FREMONT in 1856, LINCOLN in 1860 and '64, and GRANT in 1868. When the rebellion opened, he was in at the beginning, participating in the capture of Camp Jackson, and the subsequent operations which held Missouri to the Union. In 1863 he was chosen to the U. S. Senate, to fill the unexpired term of WALDO P. JOHNSON, secessionist, who was expelled for treason.

He was elected to the State Legislature in 1852, and remained there for a number of years. He entered life as a Democrat, following BENTON. He became identified with the German population of St. Louis, and has always been supported by them. He is said to have made the first speech in behalf of emancipation in a Southern Legislature. In 1866 he declined a re-election to the U. S. Senate, and did not participate in politics until 1870. He opposed the proscriptive Constitution of Missouri, and a large party of Liberals, led by SCHURZ, made Mr. BROWN their standard-bearer for Governor. He was elected by the unprecedented majority of 42,000. His administration has been a success, and he is looked upon as a founder of the Liberal Party. In appearance, he is of average hight, light complexioned, with reddish hair, and blue eyes.

HORACE GREELEY.

JAPANESE PRINCESSES.

THE Japanese Princesses are five in number, three in their teens and two still younger, and they retain the native dress, which, to a Chicago reporter, seems to lack petticoats. It is marked by a thick girdle, wide sleeves, and overskirts lashed to the sides. The hair is gathered into several chips, secured by gay skewers, ribbons, etc. Their faces are broad and noses flat, but they have fine eyebrows and eyes, and "after all they are pretty." They are to be sent to different schools, to secure more complete disuse of their native tongue, and enable them to learn English more rapidly. Ten of the present party have been in America before.

B. GRATZ BROWN.

A NEW ARROW FOR LOVE.

BY C. CORDNER.

HE comes with such a witching way
What can I say?
He pleads a little, then he smiles,
Which so beguiles!
Sometimes a great round tear he shows,
Which he says flows
Because his arrows find no mark
Upon my heart!
Then, chubby knees are bent in prayer—
"I *want* one there!"
Then quivers dropped, and bows unstrung—
"He's to be hung,"
Unless an arrow he can find
To change my mind.
So, day by day, the question wears,
With all its prayers.
A shining ring around my feet,
Where bright eyes meet,
As ever round and round it turns—
And sometimes burns
Me, for my waywardness and fun,
Because not won.
Well—I've made up my mind for *once*,
(Being no dunce,)
That till the arrow *can* be found,
Above the ground,
Whose point shall bear a diamond light
To give Love sight,
I'll keep on teasing with my fun
Till it is won.

Our Story-Teller.

IN THE TWILIGHT.

A TALL, blue-eyed girl, with loose, brown curls flowing from her face, like an aureole of amber brightness, and a slender throat, white and smooth as mother of pearl, that was Valentin Bruce, as she sat by the open French window, dreamily watching the sunset flame melt into open billows of light.

And Colonel Mordaunt smoked his despairing cigar in the fragrant shadows of the shrubbery, and wondered what fortunate mortal might be fated to buy Valentin's wedding ring, and pay her millinery bills, and to be her humble slave and servitor through life.

Colonel Mordaunt tossed his cigar among the rose acacias that skirted the lawn, and began to select a cluster of exquisite moss roses, heedless of the thorns that pierced his unaccustomed fingers.

"She likes flowers," he soliloquised, "and moss roses are certainly the prettiest flowers that grow. I will win a smile from those velvet lips of hers."

He twisted a blade of pliant grass around the mossy stems, in place of a ribbon, and sauntered carelessly up the gravel walk.

All of a sudden he stopped.

"Frank Aldrich's voice," he exclaimed, biting his lips with vexation, as a merry peal of laughter floated through the purpling twilight from the open meadows beyond.

"What brings the puppy here, now, of all times and seasons in the world."

"Hallo, Jack!" said Aldrich, "been sentimentalizing out in the dew? The ladies were just fretting over the chance of your taking cold."

Mordaunt's face brightened up—then Valentin did think of him sometimes.

"That is," pursued the relentless Aldrich, "poor, thoughtful sister Katy said she was afraid you would have a cold, and Miss Bruce said nothing."

Mordaunt's countenance elongated again. But he stepped forward and laid the knot of moss roses on the folds of Valentin's white muslin dress, with a few murmured words that nobody could understand.

"Flowers yet?" said Frank, superciliously, "upon my word, Jack is getting prodigal."

Valentin looked carelessly down at the cluster of pink buds, and then deliberately took them up and tossed them out upon the lawn.

"Explain, if you please," said Frank, composedly, while Mordaunt grew scarlet, and bit his lips until the blood started.

"There was a worm—a horrid green worm on one of the buds," haughtily said Valentin, shaking off one or two crimson petals that still adhered to her dress. "I have a perfect horror of all such noxious insects."

"Do you hear that, Jack?" appealed Mr. Aldrich, lazily turning around in his chair. "It is a pity you were so unfortunate in the selection of your floral offering."

But Mordaunt had left the room. Kate followed him the next minute.

"Dearest Jack, are you vexed with Valentin and Frank? They don't mean to annoy you, I'm sure——."

"Not vexed, dear," said Mordaunt, speaking slowly and sadly—"only grieved. I am sorry Miss Bruce finds me so disagreeable."

He went up stairs, while Kate hesitated a moment below.

"He is better by himself," she said, men-

tally. "Poor fellow, he's dreadfully in love, and I wish Valentin and Frank wouldn't tease him so."

And she went down to gather honeysuckles for the parlor vases, and muse on her brother's manifold grievances.

"It's too bad, so it is!" she murmured, winking back the bright drops that would suffuse her hazel-brown orbs. "I shall talk seriously to Valentin about it this very evening."

Meanwhile, Mordaunt stalked sulkily up stairs, into his sister's pretty little sitting-room, where the muslin curtains were fluttering to and fro in the delicious night wind, and the sofa was drawn into a little recess beside a table all littered with books and magazines, needle cases and thimbles, and the indescribable *debris* which two girls invariably collect around themselves in the course of a June afternoon.

He threw himself recklessly down on the sofa and drew the soft fold of Kate's cashmere shawl over him, as if jealous lest the soft eyes of the watching stars, that were just beginning to gem the heavens, should witness the struggle that convulsed the strong man's heart.

Not that his grief wrought itself into any external sighs. No, there was neither groan nor motion more than there had been when he was wounded at Spottsylvania, and rode on at the head of his regiment as bravely as though the red blood had not been dripping from his arm with slow and deadly drain. One might almost have fancied him asleep as he lay there white and silent, with the curtain sweeping down around his motionless head.

"Katy!"

Like the tremulous coo of the wood pigeon. Valentin's voice murmured the two soft syllables with the coaxing accent of a child. And in the same instant she knelt down beside the sofa, her white dress sweeping over the crimson carpet in tides of translucent pearl, and one arm thrown carelessly over the folds of the deceitful cashmere shawl. Mordaunt's first impulse was to spring up and declare his individuality—his second to lie still and let fate manage the matter to suit her capricious self. So he lay still accordingly, experiencing a very singular and not at all disagreeable sensation from the contact of the caressing arm.

No doubt he was a treacherous, hypocritical wretch—but, fair lady, or chivalrous gentleman, don't judge the poor fellow too harshly, until you have been in precisely the same circumstances yourself. It is just possible—only possible, you know—that you might do the same thing.

"Now you are angry with me, Kate!" pleaded the soft voice, "because I threw those flowers away? And you won't speak to me; and I know I deserve it, darling."

There was a moment's silence, as if Miss Valentin had expected some sort of a response to her pretty penitence. But she didn't get any; so, after a brief pause, she went on:

"Indeed, Kate, I did not mean to grieve you—and I won't do it again. I am sorry for my ridiculous freak. Do you suppose he was very angry, Kate? Do you think I ought to ask his pardon? But then you know he didn't see me steal around the lawn, when that odious Aldrich was gone, and pick up the roses again."

There was strong symptoms of coming tears—a sort of quivering sob in the voice.

"You won't forgive me, Kate? Not if I tell you that I really do love your tall, stern brother? Only, Katy, I was silly enough to want to tease him a little, and test my power over his noble heart. I love him, Kate, I may tell you of it, dear, without being bold, or unwomanly, because you know we have often talked about his liking me a little—and—oh, Kate, answer me!—don't be so cold and cruel! Surely you can't be asleep!"

"Where are your lips, *cher amie!*" she coaxed, playfully. "I shall soon break the magic spell of silence that binds them. You know you never could keep vexed with me more than five minutes at a time. Why, where's your hair? Where—"

She sprang suddenly to her feet with a piercing scream—her wandering hand had touched the dark, heavy mustache on which Colonel Mordaunt prided himself so specially.

He strove to catch the hand—to detain the frightened beauty long enough to plead his cause in earnest, impassioned words, but in vain. Fear seemed literally to lend her wings. Away, like a frightened white dove she flew, uttering wild, hysteric screams, and fairly falling into the arms of the astonished Katy Mordaunt, who was just coming in from the star-lighted garden with both hands full of dewy branches of honey-suckles.

"Valentin," she exclaimed, dropping the spicy blossoms, "why, what is the matter? What can have startled you so dreadfully?"

"Oh, Katy! Katy!" sobbed Valentin, clinging to her friend's shoulder with a nervous vehemence, "there is a man in your room—a robber, hiding under your cashmere shawl on the sofa. Oh, I am nearly frightened to death!"

Katy's serene, brown eyes dilated a little—then brightened into a smiling archness. "A robber!" she repeated with provoking calmness. "Nonsense, Valentin, you are mistaken. It was only Jack. I saw him go in there not half an hour ago. The idea of taking our Jack for a robber." Katy's laughter rippled merrily at the mere fancy.

Only Jack? In the midst of her terror, the possibility had never once occurred to Valentin Bruce's mind. Only Jack! The forty thieves themselves would have faded into nothingness before the mere idea of Colonel Mordaunt having heard all these soft pleading and unconscious admissions. One moment Valentin felt as if every vein throughout her whole frame were filled with molten fire—then she grew white and cold as a marble statue. Life and strength seemed ebbing away from her, and for the first time in her life Valentin Bruce fainted away.

Katy Mordaunt quietly sprinkled scented water on the pallid forehead, and began to unlace the white muslin dress. As she did so, a faded bunch of flowers fell from Valentin's bosom, and Katy smiled to herself as she recognized the moss buds that had been so haughtily thrown out on the lawn that very evening.

"I'll keep them for Jack," she said. "Ah, Valentin, you'll be my sister-in-law yet."

How shyly the blue-eyed damsel stole into the breakfast room the next morning. She would cheerfully have fasted all day long, sooner than enter into the presence of the tall Colonel; but what was the use? The dreaded first interview must be got over, sooner or later, so here she was, with downcast lashes, and cheeks dyed as deep pink as the rose-colored wrapper she had on. No more haughty airs and graces; no more cool composure. She was at Mordaunt's mercy, and she knew it. Now, would he take a cruel advantage of her helplessness. Or would he—

But just there her cogitations always stopped.

He was standing at the window, looking out upon the morning sunshine that bathed the short, velvety grass before the piazza. But he turned quickly as she entered, with a bright, welcoming smile.

"Valentin," he said gently, "was I dreaming last night, or did I hear you say that you loved me? Oh, my darling, tell me that it was no baseless dream!"

She came slyly to his arms, and nestled there like a fluttering fawn, voiceless, yet happy. Still he was not contented.

"I want to hear it from your own lips yet again, Valentin. Nay, dearest, don't shrink away so pleadingly, but answer me."

"What shall I say?" she murmured, timidly raising her soft eyes to his face.

"Tell me that you love me."

Sweeter than the fall of musical cascades through groves of tropic bloom, softer than the thrill of nightingales in Persian valleys, the three charmed words touched on his ear, and he knew that she was his—his forever.

The courtship is drawing to a termination now—the white satin dress is finished, and the wedding-cake iced to perfection, and the white roses are in bloom that shall soon be woven into bridal bouquets; but Valentin is still extremely sensitive on the subject of Cashmere shawls and twilight confidences. And Katy Mordaunt—saucy little elf that she is—declares that Miss Valentin Bruce took advantage of its being leap-year to confide her sentiments to the dark-haired lover whom she delighted to torment.—*Selected.*

A CEYLONESE STORY.

LONG ago, a king—or, as some say, a very wealthy man, but it does not matter which, though a king sounds better—had an only child, a daughter, the heiress of all his wealth, who could not or would not speak. He tried all means to cure her, but in vain. At last he sent forth a proclamation that whoever, being of fitting degree, could restore speech to his daughter could marry her and eventually be lord of all her father's wealth. Many tried, but all failed. At last a prince who had a magical gift—that of causing things inanimate to talk with him—came forward, and was admitted to the hall where the princess was. He spoke to her, and tried to induce her to speak, but answer he got none.

Now a lamp was hanging in the hall, and to it the prince good-humoredly addressed himself. "Lamp," said he, "I will tell you a story."

"Say on," replied the lamp.

"Well," went on the prince, "four travelers—a carpenter, a painter, a cloth-merchant, and a jeweler—set out on a journey. By-and-by they came to a rest-house, halted there and prepared their food. The keeper of the rest-house had laid down on the floor a log of wood very suitable for carving. The carpenter, seeing this, pulled out his carving-gear, and carved the log into the shape of a woman, life-size and exquisitely beautiful. The painter next took his brushes and colored and po.ished the figure till it shone as brilliantly fair as a goddess. Then the cloth-merchant opened his packages, chose the finest silks and embroidered robes, and dressed the figure in his choicest drapery. The jeweler took gems, ear-rings, necklaces and spangles, and all such things, and bedecked the figure with them. Last of all, the figure was endowed with life. I do not take on me to explain how that came about, but it was the fact!"

"No more do I," said the lamp; "but, pray, go on. I hate digressions!"

"When," continued the prince, "that exquisitely beautiful being burst into life, all the four fell violently in love with her, and each wished to make her his wife.

"'Why, I shaped that matchless figure,' said the carpenter.

"'And I bestowed on her that blooming complexion,' retorted the painter.

"'And I robed her,' exclaimed the merchant.

"'But what are your choicest robes to the costly gems which were my gift? A woman is of little account without jewels,' cried the jeweler.

"Thus they went on clamoring and disputing. Now, O lamp! who was to be declared the rightful owner?"

First the lamp said one and then another, giving reasons—and whatever the lamp said, the prince contradicted. The dispute waxed hot and furious, but seemed never to come nearer to an end.

The princess heard all the dispute, and held her peace. At last she could bear to keep silent no longer. So she cried, "You are both silly! The true owner was none of the four, but the keeper of the rest-house, for to him the wood she was made of belonged!

"Ah! yes," said the prince, "you are in the right, my princess! And now that you have spoken, let me claim my reward and take you for my wife!" So they went before the king, who was enchanted with the cure, and they were married straightway and lived happy ever afterward—at least it is said that the princess never gave her husband any cause after marriage to reproach her for too persistently holding her peace.

THE LITTLE ROMANCE.

M. DE FONTANILLE had quitted Gascony, to lead at Paris the joyous life of a bachelor. Loving all the pretty things of this world, he kept his adoration for pretty little feet, so he busied himself in making a collection of all the darling slippers which had merited his enthusiasm, and he wore always over his heart the gay satin shoe of his most recent love. Business called him to Strasbourg. There he encountered, in a drawing-room, set up on the gilt Sphinx of an enormous Gothic andiron, a living foot, —smart, charming,—of admirable purity of form, and not larger or thicker than a biscuit *a la cilterc*. Astonished and ravished at the same time, M. de Fontanille procured an introduction to the mother of the damsel with that delicious little foot. He saw it every day, and became impassioned with it, till discovering that a provincial shoemaker, called in to make a new shrine for his idol, was waiting below for orders, he took fright lest the craftsman should bruise, wound, or, most dreadful of all, dishonor it by giving it a corn. His disquietude was fearful, insupportable; and in order to save that little *chef-d'œuvre* of which he wished to become lord and master, while making it his god, he offered up to it his name, his heart, and his hand! He was accepted, and after his marriage M. de Fontanille went nearly every year to Paris in order to have made, under his own inspection, new shoes for his wife. —*Memoirs of Madame Lafarge.*

A MAN cannot possess anything that is better than a good woman, nor anything worse than a bad one.

The world cannot make up for the loss of a happy conscience.

Sabbath Reading.

LONGINGS.

I LONG for strength, O LORD—
For strength to rise to Thee;
I long for sight, O LORD—
For sight thy face to see.

I long for life, O LORD—
For life that Thou dost give:
I long for grace, O LORD—
For grace that life to live.

I long for peace, O LORD—
For peace that knows no end:
I long for love, O LORD—
For love that Thou dost send.

I long for hope, O LORD—
For hope in Thy great love:
I long for faith, O LORD—
For faith to rise above.

I long for zeal, O LORD—
For zeal in Thy great cause:
I long for light, O LORD—
For light to learn Thy laws.

I long for CHRIST, O LORD—
For CHRIST who died for me:
I long for rest, O LORD—
For rest eternally.

I long for Thee, O LORD—
For Thee, for Thee I long!
When shall I find in Thee
The burden of my song?

Nova Scotia, April, 1872. VIOLET.

MR. COLLYER'S LAST SERMON BEFORE THE GREAT FIRE.

THE organ was of sweet tone, and was very well played; something almost weird in the voluntary started the tears in Rachel's eyes. Then the preacher rose in the pulpit. A large, strongly-built man, with full, cheerful face, iron-gray hair, and sympathetic, though piercing eyes, read the opening hymn, with a home-like earnestness, that, in an instant, made them forget him, while they were lost in the emotion of the lines. This direct simplicity controlled them even more when he read the Scripture. The passage was that in Luke, describing the unfruitful fig-tree, and the allusion to the eighteen men who were killed by the tower in Siloam. The young people felt almost as if the eighteen were their own friends, and wondered why they had never before cared for their destruction. After prayer, the congregation sat silent, while a few plaintive chords from the organ seemed to take up the eager and intensely personal petition. It was really a relief that no one said a word for those over-charged minutes. And when the preacher did rise, with the hymn-book, and read the first verse of the hymn, with intense feeling, no one was surprised that he laid down the book, and sat down, as if he could read no more.

"I want a principle within,
Of jealous, godly fear;
A sensibility to sin;
A pain to feel it near."

After the hymn was sung, he gave out his text.

"Or those eighteen, upon whom the tower in Siloam fell and slew them; think ye that they were sinners above all men that dwelt in Jerusalem?"

Our young friends had never heard such a sermon. They were magnetized by the speaker's personal power; they were led along in perfect sympathy by his simplicity; they were moved to intense feeling by his undisguised emotion. In the beginning, this or that quaint illustration or suggestion, thrown in without any reserve in his curious Yorkshire dialect, made them turn to each other sometimes with a sympathetic smile. But, before he was done, sympathy expressed itself rather by pressure of hand with hand, or stillness even more rapt than ever. For he was speaking now of the mutual and common life of men. How impossible for any one of us to live for himself, or to die for himself! We must not say nor think, that those are publicans, and we are purer than they; do they sin, is it not because the atmosphere of their lives has been so tainted? and who is responsible for that atmosphere, if not we, among the rest? He just alluded to the horrible frauds detected just then in the New York Ring, but it was without invective. From that allusion he passed on to speak with intense feeling of that average conscience of the nation, in which the conception or execution of such frauds could be possible; and he held man, woman and child to the duty of purifying that conscience and quickening the common life.

As our friends began their walk home, Nettie found herself walking with Mark Hlusdale. "If I lived within twenty miles of that man," she said, "I would hear no other preacher. I would come here if I came barefoot. O Mark! what lives we lead. How can one fling away life as one does?"

It seemed to Mark that he had never seen the real side of Nettie beneath her merry play, before.

Jane and Rachel were together, Horace with them. "I was never in a Unitarian church before," said Rachel. "Are they always so grave and silent as they leave church, and as they go home?"

"I doubt if they always hear such sermons," said Horace. "These people seem to me to feel as I do; as if I never knew before my duty to the world, or as if"—and he paused and shuddered—"as if we were all on the edge of a common calamity."—*"Old and New" for May.*

Ladies' Port-Folio.

DOES HE LOVE ME?

PRETTY robin at my window,
Welcoming the day
With thy loud and liquid piping,
Read my riddle, pray.
I have conned it, waking, sleeping,
Vexed the more for aye—
Thou'rt a wizard, pretty robin—
Does he love me? Say!

Lady violet, blooming meekly
By the brookiet free,
Bending low thy gentle forehead
All his grace to see,
Turn thee from thy wooing water—
Whisper soft, I pray,
For the wind might hear my secret—
Does he love me? Say!

Star, that through the silent night-tide
Watchest over him,
Write it with thy golden pencil
On my casement dim,
Thou art skilled in love's deep magic;
Tell me, then, I pray,
Now, so none but I may read it—
Does he love me? Say!

[*Harper's Magazine.*

ANOTHER WOMAN'S VIEWS.

C. H. C., in RURAL NEW-YORKER of April 20, gives some sensible remarks, with such absurdities, that I would fain call attention thereto. She believes that man should always *command*, and woman obey, because ADAM was created before EVE. Upon that logic, should not man obey the inferior animals, seeing they were first created? We are informed in GOD'S Word, confirmed by geology, that the All-Wise, in His plan of creation, began with the lowest, the most simple, of vegetable and animal life, and progressed upward with His creations; higher, and still more high, until He created man in his own image, and breathed in his nostrils the breath of life, and he became a living soul. He then rested from His labor; and beholding all the works of His hand, declared that all were good. But ADAM, though master of all creatures upon earth, was not satisfied, but desired a help-mate—not a slave, to go and come at his *command*, but a companion; "some one to love," some one to share his joys as well as his toils—for he found it was not good to be alone. The creative power was again called into action, and EVE was formed; but not of the *dust* of the *earth*. How dare any one affirm that the Almighty could retrograde in this one instance? "And they shall be no more twain, but one flesh." Can the right hand *command* the left? Where love dwells there is no occasion to *command*, as a request will suffice, and none but a despotic dastard would wish to inspire a wife or child with fear. Perfect love casts out all fear.

It is hard enough for a child to obey a parent, sometimes, though fully aware that the parent must be the proper judge of what is for the best. There is something so repugnant to free agency in a *command*, that parents would find their children more tractable if fewer commands were given. But to be commanded by a person of near one's own age,—with but little if any better judgment, and possibly less experience and conscience,—how preposterous! The word obey ought to be left out of the marriage ceremony, and *is* by men of thought. It is but a dead letter to all but the conscientious woman, and she is the one who ought to be permitted to follow the dictates of her own conscience. Why compel a woman to tell a falsehood at the altar of Hymen? I say compel—for who dares, at such a time, to speak forth her mind and say I am willing to be a good wife, but shall *never obey* him, should he require me to do wrong. None but a narrow-minded egotist would claim the right to *command*, because, forsooth, he belongs to the stronger and his wife to the weaker sex. Nowhere in life does the Golden Rule work more harmoniously than in the marriage relation.

I quite agree with C. H. C. in her opinion of ear rings. I think it would indicate as much refinement to have the nose pierced and wear rings therein as to wear them in the ears. I indorse her ideal of a well-bred woman; there is redundancy in the phrase, well-bred lady. No one can be a lady unless well-bred—if applied to a lady of wealth—but the best of it is that good breeding is free to all, and the poor can exercise as good taste in their apparel as though they were able to attire themselves in rich fabrics. Nothing but selfish vulgarity could tempt a woman to make herself conspicuous by her dress or deportment. True refinement shuns display. Oh, would I could persuade my sister travelers to eternity to give up all this senseless extravagance, this excessive adorning of the perishable dust, this frivolous pursuit of vanity, that leaves the heart a barren waste and the life but a *season*, with no *seed time* or *harvest*. GARNET.

THE RIGHTS OF SOME WOMEN.

WE have in mind two among the most agreeable women we have ever met, both in manners and general cultivation, who are fitted personally to adorn any drawing-room, and who can converse intelligently on any subject which may be broached there, but who are not in general society, in the town where they live, simply because one of them is a dressmaker and the other a milliner. Both devote their evenings to reading and study; they travel, they hear the best music, and are familiar with the best thoughts of the day; and to the few who are really acquainted with them, they are valued friends. But they are not often invited—because nobody thinks of it. Can society afford to do without such women as these? And their case is not exceptional. It is true that there are scores of young girls in our shops whose breeding and whole appearance are very questionable, and who could not be received, at present, into polite society. But do we hold out any inducements to them to cultivate themselves? Do they see that those in their position who have become refined and intelligent are any better off, socially, than themselves? Nay, may not they seem rather worse off, as having lost a taste for one kind of society, and failed to obtain admission to another?

But, it may be answered, we have church sociables for these very people. Yes, we have; and most of them are very poor affairs indeed. Would it do you much good, if you were a shop-girl, to go once a month to tea, at a church parlor, and be waited on with condescending assiduity by Mrs. Jones, who never speaks to you in the shop except to give an order? Or do you even care much for her kinder and more thoughtful neighbor, whom you always like to serve, because of her gentle ways, when she urges you to come to these sociables and "get acquainted," and never would think of asking you to her house for that purpose, no matter how unexceptionable your English and your dress?

Our rule is not so revolutionary as it seems. We *do* believe in an arrangement of society which shall permit the introduction of all worthy to take a place in it; a society where, at least for those not native to it, the qualifications shall be refinement and intelligence. Some are in who ought to be out, no doubt; but this cannot be helped. It is for those who are out and ought to be in that we now speak.—"*Home and Society*," *in Scribner's for May.*

FASHION IN THE NEW AND IN THE OLD WORLD.

THE young king of Siam, cherishing a friendly regard for an American lady who had, during the reign of his late father, resided in the royal city, requested her to send him her likeness. This was accordingly done by the hands of a mutual friend, and the gift, as we learn from a recent letter, was received with marked pleasure by the monarch. But after a long and careful scrutiny, he asked with a puzzled air, "Has my friend changed her nation or her religion? It must be one or the other. The features are the same, but the *dress*? This is not the costume she wore when I saw her last."

And thus it ever is in the East. Orientals cannot possibly comprehend why the style of dress should be changed, unless of necessity. Among them each nation and tribe has its peculiar costume, as well as its insignia of religious creed; and these fashions are *perpetual*, the lapse of thousands of years ordinarily being unmarked by any special change. The loose Oriental sleeve, adopted of late years by our ladies, has been worn in China for thousands of years; the various basques, sacks, and jackets, so generally prevalent among us at the present time, have all been portions of the national costumes of Burmah, Siam, and Malaya from time immemorial; and so of many of the styles introduced as *new* in our Western World. *Some* of their fashions, it is true, seem very absurd to our unaccustomed eyes; but ours doubtless appear equally strange to an Oriental, who regards red as the appropriate color for a bride, white for mourning, and yellow as the distinguishing costume of the clergy.—*May number of Lippincott's Magazine.*

ONE of the happy pair who had their heaven-made match sanctioned on the 29th of February, was horrified by the officiating and mathematical clergyman declaring that the golden anniversary of their wedding would not occur till 2072.

Reading for the Young.

THE "CALICO RUFFLE."

BY MAJABA.

EASTWARD on from a prairie home,
Sweet with the bloom of May,
Journeyed along a little maid,
Whose kin folks far away
Lived in style, and daily tried
Each other to outshine,
Although, alas! no one possessed
A gold or silver mine.

This little maiden, sporting with
Ten summers and one more,
As little knew of fashion's ways,
As they of ancient lore.
At first all seemed both nice and grand,
Although it was quite new,
To see the girls keep dressed each day,
Like Sunday all week through.

A simple dress were there one day,—
Dainty and trim and neat,
Its hue most pink—only more like
The apple blossoms sweet—
Recalls the words not yet forgot,
"A ruffle,"—with a sneer,
"On calico!" Ah! proud Miss KATE,
You buy your style too dear.

For you give up a warm, true love,
For heartless, haughty pride,
And cherish a rude, selfish mien
Fine dresses cannot hide.
But you may learn, as years pass on,
And fortunes come and go,
That life has more within its gift
Than fashion, dress and show.

OUR LETTERS FROM BOYS AND GIRLS.

A Letter to "Cousin Johnnie."—M. A. W." writes the following good letter:—"COUSIN JOHNNIE" complains that the questions in her first letter have not been answered. I will try to answer them, but whether it will prove satisfactory to her, or not, I cannot tell. Her questions were: "What is education, and what is the use of it?" Education is the cultivation of the human faculties, and without the use of education we should be unable to answer "COUSIN JOHNNIE'S" letters, or even to read the RURAL NEW-YORKER. I am afraid that I have answered "COUSIN JOHNNIE'S" questions poorly, but then my education is not finished as "COUSIN JOHNNIE'S" is, so you must excuse all mistakes. I am sorry to tell "COUSIN JOHNNIE" that my calf will not be a pet like hers, for after feeding and tending it all winter, it quietly breathed its last a few days ago. My school is closed and I am home on a vacation, which I am trying to improve by learning to twist yarn. It is the first step towards spinning, which I hope to be able to do some day. I would like to know if "COUSIN JOHNNIE" can spin, and whether she lives so far away that we shall never meet? I expect as soon as the roads get settled to resume my old amusement, horseback riding, and I would like to have her come and ride with me."

A Little Deaf Boy, WILLIE A. H., writes from Galway, N. Y., as follows:—"My father takes the RURAL, and I thought I would write you a letter to put in it. We live in the town of Galway. I am nine years old. I have been very sick, so my mother says, and I cannot hear anything, only funny noises in my ears. My ma tells me things, and I know what she says by her lips. I pray to GOD every night to make me hear, and I hope He will, for it will not do me any good to go to Church or Sabbath School while I am so deaf. When we moved pa had to hold me on his lap; I could not walk, but I can now, and ma lets me go out doors when it is warm. I have a nice desk, and I keep all my things in it; it has a large drawer in it, and I put my clothes in that. My uncle gave it to me."

A Buckeye Girl's Figures.—LILLIE B. F., writing from Fremont, Ohio, says; "Now what do you think of this city of six or seven thousand people, who let their cows, pigs and geese run in the streets and get their living out of farmers' wagons? * * * It is vacation now, and I am helping ma to cut and sew carpet rags, but I do not neglect my arithmetic; I study one hour each day. Pa is a farmer, and owns 185 acres of land. He raised last year 568 bushels of wheat, 1,701 bushels of oats, and 600 bushels of corn; he sold $127 worth of clover seed, $105 worth of hogs. Potatoes were poor; he sold but one load, for 55 cents per bushel. Colorado bugs were plenty. He raises horses, cattle and sheep.

Eight Sisters in a Group.—EFFIE E. O., writes:—I live in Hounsfield, Jefferson Co., N. Y. I have seven sisters; three are married. I had four brothers, but they are all dead. Two years ago one of my sisters came from the West and we all had our likenesses taken in one picture. The artist said he had never taken eight sisters in one group before. The Watertown, Carthage, and Sackett's Harbor railroad is going through papa's farm. The Railroad Co. has promised us a depot.

A LESSON FOR BOYS.

ONE day a fine Newfoundland dog and a mastiff had a sharp discussion over a bone or some other trifling matter, and warred away as angrily as two boys. They were fighting on a bridge; and being blind with rage, as is often the case, the first thing they knew over they went into the water.

The banks were so high that they were forced to swim some distance before they came to a landing place. It was very easy for the Newfoundlander; he was as much at home in the water as a seal. But not so poor Bruce; he struggled and tried his best to swim, but made but little headway. Old Bravo (the Newfoundlander) had reached the land, and then turned to look at his old enemy. He saw plainly that his strength was fast failing, and that he was likely to drown. So, what should that noble fellow do but plunge in, seize him gently by the collar, and, keeping his nose above water, tow him safely into port!

It was funny to see these dogs look at each other as they shook their wet coats. Their glance said as plainly as words, "We'll never quarrel any more!"

THE DIFFERENCE.

"WILLIE, why were you gone so long for water?" asked the teacher of a little boy.

"We spilled it, and had to go back and fill the bucket again," was the prompt reply; but the bright, noble face was a shade less bright, less noble than usual, and the eyes dropped beneath the teacher's gaze.

The teacher crossed the room and stood by another, who had been Willie's companion.

"Freddy, were you not gone for the water longer than was necessary?"

For an instant Freddy's eyes were fixed on the floor, and his face wore a troubled look. But it was only for an instant—he looked frankly up to his teacher's face.

"Yes, ma'am," he bravely answered: "we met little Harry Braden and stopped to play with him, and then we spilled the water, and had to go back."

Little friends, what was the difference in the answers of the two boys? Neither of them told anything that was not strictly true. Which one of them do *you* think the teacher trusted more fully after that? And which was the happier of the two?

The Puzzler.

ILLUSTRATED REBUS.—No. 20.

WHAT five songs are illustrated above?
Rockford, Ill. FOURTEEN.

☞ Answer in two weeks, when we will publish the names of those sending us correct answers.

PROBLEM.—No. 7.

MY garden is an equilateral triangle. From a stake near its center it is 20 rods to one corner, 30 rods to the second corner, and 40 rods to the third. How long is one side?

This problem can be solved, and an exact answer obtained, by plain Geometry and Algebra, without any "higher equations" or Logarithms; but, as BURLESON said once, "It will puzzle the most skilled to determine it." An *approximative* answer can easily be found, however, by using Logarithms. MATHEMATICUS.

☞ Answer in two weeks, with the names of those who send correct answers.

PUZZLER ANSWERS.—May 4.

ILLUSTRATED REBUS NO. 18.—Europe and America show to Asia and Africa what they once saw and would not have—a Divine Saviour. Correct answers have been received from A. L. Skeel, Mrs. D. C. Hobart, Clara A. Young, James L. Gallagher, Charles E. Welch, Samuel Parsons, Henry E. Bradley, Edward M. Blanding, Alonzo G. Woodworth, Will H. Frize, Mrs. M. E. Moffitt, Ida M. Potter, John S. Chase, Henry Griswold, Susan Walker.

RIDDLE NO. 3.—The "King" is the Sun and the "Agents of State" are the Comets. No correct answers to this riddle have been received.

News of the Week.

GENERAL REVIEW.

THE Cincinnati nominations of Greeley and Brown have everywhere been the subject of much discussion, and people all over the land are watching events, and deciding under which flag to fight....The Democratic National Committee has issued a call for a Convention to be held in Baltimore on the 9th of July. It is impossible to foreshadow its action....The Washington Treaty appears to be in a bad way, and fears are expressed that it will fail. It is said the Government at Washington refuses to withdraw the indirect claims....The Carlist insurrection in Spain has assumed formidable proportions. A battle has been fought in which the Carlists were defeated, but they are still very strong, and have control of several provinces... There has been a terrible flood at Madras, with a loss of many lives....The burning of many villages has been a feature of the minor disasters in the United States.

DOMESTIC NEWS.

New York City and Vicinity.

THERE was much excitement over the news of Mr. Greeley's nomination... A meeting has been held at the Cooper Institute for the purpose of building a monument to Gen. Thomas and New York's fallen dead....Stokes is sorry his counsel have deserted him....The Book Concern fraud has excited much attention at the Methodist General Conference session in Brooklyn, and Dr. Lanahan has made an appeal for justice ...Steinway and Sons gave a great banquet on the 4th, upon the completion of their 25,000th piano! Franz Abt, the great German composer, was present....The new Cotton Exchange was opened on the 4th....For the week ending the 4th there were 45 fires. Loss $71,000. ....Fifteen hundred painters have struck for 8 hours a day ..Gov. Hoffman has vetoed the Beach Pneumatic Bill....A fireman named Kraft was beaten to death by roughs on the 6th Greeley, as well as Grant clubs, are being formed throughout the city .. A wealthy merchant, named Henry Howard, is charged with defrauding the Government....Three suicides were reported on the 6th ...Small-pox continues to increase rapidly....The so-called "Lord Gordon" trial has commenced. It has been pretty clearly proved that he is an impostor....The Bar Association recommend the impeachment of Judge Curtis....T. Buchanan Read, the poet, is dangerously sick at the Astor House....The Universalists have held a meeting, and Mr. Greeley has advocated a Universalist Book Concern....The National Temperance Society held its annual meeting on the 8th....The Peace Society and the American Tract Society have held meetings.

Political.

THE World regrets the nomination of Mr. Greeley, and will support a regular Democratic candidate, if one is nominated....There was much rejoicing in various parts of the country over the Greeley nomination. One hundred guns were fired in New York, Albany, Syracuse, and other places..... The Cincinnati Germans have bolted the Greeley ticket....The New York Post thinks the Cincinnati Convention a failure ....The Senate has passed the Pacific Mail Subsidy bill....A new charter for New York has passed the State Senate....Mr. Judd's jury bill has become a law....The Alabama claims muddle continues, and the President and Cabinet have had a conference with the Foreign Affairs committee. It is now said the President will stand by the treaty, indirect claims and all.... Sir John A. Macdonald has made a powerful speech in favor of the Washington Treaty. He claims that it is for the advantage of Canada.... The court of impeachment has acquitted Gov. Reed of Florida....The Democratic National Convention is to be held on the 9th of July, at Baltimore....The Cincinnati nominees are well received in Mississippi....The Arms Investigation Committee has reported, and the War Department is exonerated....A Labor Reform Convention has been held in Williamsport, Pa. ... Greeley ratification meetings have been held in various parts of the country, and his nomination is daily growing more popular....Senators Fenton and Trumbull, S. P. Chase, and Garrett Davis have congratulated Mr. Greeley on his nomination....New Jersey Germans indorse Mr. Greeley....E. V. Smalley, a reporter for the Tribune, has been removed from a clerkship of the Military Committee....Tariff bills occupy the attention of Congress ...The resignation of Judge Cardozo has put an end to his impeachment ...The Union Republican Committee of New York City will not send delegates to the State Convention. It indorses Greeley....The Local Option Temperance law has passed at Albany .. The Albany Assembly has voted to remove Supt. Miller of the Insurance Department The Eight Hour law is to be enforced on the new post-office building in New York. The same law will be enforced on all Government works.

Miscellaneous Home News.

WHEAT is a failure in the Atlantic States, but is above the average in the South and West. Other grains, with cotton and tobacco, are doing well....Merino sheep to the value of $15,000 have been shipped to San Francisco....A National Convention of Photographers is in session at St. Louis....The Texas border is to be protected from Mexican cattle robbers... There is great excitement in Cincinnati, by the Irish, over an alleged Fenian traitor, one Corydon....The Army of the Potomac has held a grand re-union at Cleveland, Ohio. Gen. Stewart L. Woodford made the address, and Ed. T. C. Stedman read the poem.

The business portion of Ingersoll, Canada, on the 7th; loss, half a million of dollars.

FOREIGN NEWS.

From Great Britain.

THE Times suggests that it would be well to let Canada go....The Commons refuse to pass the unlawful Assemblies Repeal Bill .... It is proposed to buy the Atlantic cables, or at least reduce the rates....The Liverpool strike has ended ...The Newmarket race for 1,000 guineas was won by M. Lefevre's Reine in 1.54 by a neck ....A copyright treaty with the United States is urged....The dock laborers and sailors are on a strike in Southampton....It is said Lord Russel's address to the Queen on the Alabama Claims will be again postponed ..,The English Press comments favorably on the nomination of Mr. Greeley....The Queen has held a reception at Windsor, and received a number of American ladies....The Gladstone Government was defeated on the 7th ... A deputation of Scotch Clergymen has sailed for America....The Atalanta Boat Club crew excites the admiration of the English papers. A great struggle with the London Club is predicted on the 10th of June.

From France.

MARSHAL BAZAINE is to be tried at Versailles....Justice is to be administered to all generals who served during the war....Two hundred and fifty Communists have been sent to New Caledonia, in the South Pacific ...Miss Nellie Grant and Madame Thiers have been to Versailles to see the fountains...,The Commandant of Phalsbourg is to have the cross of the Legion of Honor....Marshal Bazaine has surrendered himself for trial....A review of the Paris troops will take place on the 19th. ..The Hotel de Ville is to be rebuilt at a cost of $1,750,000 ...The Marquis de Noailles will represent his country at Washington.

From Spain.

REPORTS of the insurrection are contradictory... There is much uneasiness at Madrid, and fears of the troops deserting the King are expressed....It is announced that the Republican members of the Cortes will resign....May 5th, the Carlists were defeated at Navarre, after a nine hours' conflict; the whole Carlist center was captured, and Don Carlos was reported a prisoner....Railroad bridges have been burned. ...The people cheer and ring bells when Don Carlos appears....A Republican rising in the South is feared .... Don Carlos is flying for France....There were more rumors, on the 6th, of the capture of Don Carlos....Seven hundred and fifty insurgent prisoners have arrived at Pampeluna ...The Carlists are masters of Biscay.

SEMI-BUSINESS PARAGRAPHS.

Facts for the Ladies.—Mrs. Coyne, Richmond, N. Y., has used her Wheeler & Wilson Lock-Stitch Sewing Machine since Sept., 1857, for the work of a large family; learned to use it without any instruction, and in three days has made three shirts, hemmed three tablecloths and six towels. It is the only machine that does work nicely enough for her; her little daughter learned to use it in one afternoon, and can run it as fast and do as good work as any one. See the new Improvements and Woods' Lock-Stitch Ripper.

Lyon's Kathairon.—Applied to the waste and barren places of the scalp, it fructifies and enriches them with a new and ample growth. It is not, of course, pretended that it will do this if the capacity for reproduction is extinct, but so long as it remains that wonderful rehabilitant will assuredly propagate the germ of the hair into life and activity.

Watch No. 1079, Stem Winder—bearing Trade Mark "Frederic Atherton & Co., Marion, N. J."—manufactured by United States Watch Co., (Giles, Wales & Co.,) has been carried by me two months; its total variation from mean time being half a second.—I. CALVIN SHAFER, 76 Cortland St., New York.

The more intelligent a farmer is, and the more particular he is about everything connected with his dairy, the better he appreciates and likes the Blanchard Churn.

The Jones Scale Works better than any other. Four-Ton Hay Scales, $75. Binghamton, N. Y.

THE MARKETS.

MONEY AND TRADE AFFAIRS.

NEW YORK, Saturday, May 11, 1872.

THE general trade of the week is well up to the average of business at this season of the year. With the exception of Dry Goods, the importation and sales of Foreign Merchandise are considerably ahead of last Spring, and the same is true of merchandise of Domestic manufacture. In the exports of Agricultural Produce the gain is less material, although there is some improvement noted in Breadstuffs and Provisions. The Foreign trade returns for seven months of the current fiscal year have been made up by the Bureau of Statistics in the Treasury Department, and from these we publish the following summary, showing a heavy adverse balance against the country, to be settled in Gold and American Stocks:

FOREIGN TRADE, UNITED STATES—SEVEN MONTHS.

Imported goods in gross	$322,173,305

* Ex. Dividend.

The changes in our Stock quotations are generally against the market, and heavily so on most of the Western Railroads, and Western Telegraph and Pacific Mail. The Government Stocks keep up to previous quotations, without following the advance of 1¼ per cent. in Gold. The consequence is the Treasury was able to buy this week $4,000,000 U. S. 5-20s below the price of Gold, and sold $2,000,000 at an advance of 1¼ per cent. on the previous weekly sale.

The market for both Gold and Stocks has been influenced by the unsettled diplomatic relations between this Government and Great Britain in regard to the proper construction of the Washington Treaty. And also by a sudden rise of Interest at the Bank of England to 5 per cent. These influences have not affected our own Money market, however, as the Bank movement continues to gain strength, and the Country Bank balances in New York, as usual at this season of the year, are on the increase.

Nothing new of a financial nature has occurred at Washington, since the approval by the President of the Act of Congress abolishing the Tea and Coffee duties after July 1.

PRODUCE AND PROVISIONS.

NEW YORK, Friday, May 10, 1872.

Receipts.—The receipts of the principal kinds of produce since our last embrace 9,401 bales of cotton; dried fruits, 307 pkgs.; eggs, 17,681 bbls.; flour, 42,789 bbl.; wheat, 7,500 bush.; corn, 302,250 do.; oats, 81,100 do.; barley, 7,500 do.; grass seed, 16 bags; hops, 126 bales; beans, 455 bbls.; pork, 6,631 pkgs.; cut meats, 7,994 do.; lard, 4,254; kegs do., 620; butter, 11,368 pkgs.; cheese, 3,982 do.; peanuts, 1,747 bags.; 2,101 hhds. tobacco; 10,143 pkgs do.; 4,615 bbls. whisky; 1,393 bales wool.

Beans and Peas.—Holders of marrowfat beans have been encouraged by an increased speculative inquiry and some call from exporters, and have advanced prices 15@30c. per bushel; but the improved prices are entirely nominal. Medium beans are in small supply and firmly held. The quotations are for prime mediums $3.25@3.30; good do. $3.10@3.20; fair do., $2.80@2.90; prime marrowfats $3.35@3.50; good do., $3.15@3.30; fair do., $2.90; red kidney, $2.25@3.00; kidney, $3.40@3.50. Peas quiet at $1.25@1.27 for Canada and $2@2.25 for green.

Beeswax.—The supply is insufficient, and 41c. is readily obtained for Southern

Broom Corn—is quiet at 7@9c. for new hurl, 5@7c. for new green, 3@5c. for red and 3@6c. for old.

Butter.—The supply has been light throughout the week, and has daily sold out close. Prices are firmer with the present limited arrivals, but with the improvement that now attends the quality of late make, fair receipts can be used at the prices, especially as the market is strengthened by a steady eastern and other out of town demand. We quote Orange Co. and River pails at 30@35c.; Chenango and other State pails, 30@33c.; Penn. do., 30@33c.; Welsh tubs, 30@31c.; half tubs 32@33c., including selections.

Cheese.—Prices of old have settled to a point which will probably be sustained until the market is cleared of this description. The market for new has fairly opened, as we have had a pretty good assortment on sale the last few days. Shippers have bought a few lots of strictly choice at 11c., but free business at this price is not warranted, on account of a decline in the Liverpool market. The markets at interior points have been generally a fraction higher, and this has given some encouragement here. The shipments for the week were 349,000 lbs., largely made up of skimmed, and sold at 11@12c. We quote fine old, 16@16½c. New at 13½@14c. for prime factory, 12c. for fair lots, 8@11c. for skimmed. Ohio factory, 13¼c. Dairy, 11@12c., for good.

Cotton.—The market has been very dull, and a fractional decline in prices is quoted. Exporters are out of the market. A fair quantity of stock offered.

	Uplands.	Alabama.	N. Orleans.	Texas.
Ordinary	19⅝	19⅞	20	20⅛
Good Ordinary	22	22⅛	22¾	22⅞
Low Middling	23	23⅛	23⅜	23½
Middling	23¾	23⅞	24⅛	24¼
Good Middling	24½	24⅝	24⅞	25

For future delivery latest sales on the basis of low middling are 23c. for May; 23½c. for June; 23¾c. for July; 23½c. for Aug.; 21¾c. for Sept.; 20c. for Oct.; 19⅝c. for Nov.; 19c. for Dec.

Dried Fruits.—For apples speculators are carrying the market along, and have been buying a considerable number of poor lots to keep control, paying 2½@5¾c. A small lot of blackberries have been sold at 13c. Peaches are dull and prices are entirely nominal.

Apples—Old State, qrs., 6@7c.; Western, new, 10@10¼c.; Southern, new, qrs., 9@9½c.; do. fine, sliced, 12@13c.; new State qrs., 11@11¼c.; do. sliced, fine, 13@14c.; Peaches, peeled, new N. C., 17@18½c.; do. Geo., 15@16½c.; peeled E. Sh. Va., 16@17c.; new unpeeled halves, 7¼c.; do. quarters, 5½@6c. Plums, 27@28c. Cherries, new, ₰ lb., 33@34c. Blackberries, 13@—c. Raspberries 33@35c.

Eggs.—Prices were put up early in the week to 17c. for Western, but the supplies the last day or two have been very heavy, and as heavy stocks are being carried the market is back again with a weak feeling. Sales at 16@16½c. for Western, 16½@17c. for State, Pennsylvania and Jersey.

Feathers.—Live geese, 60@75c.; mixed, 40@50c.; hen, 7@9c.

Flour.—An active call from the home trade and an increased number of orders on the market from shippers creates a very strong market with an advance of fully $1 per bbl. on the high grades and 40@50c. on other sorts. Receipts, $6.85@7.35 for superfine State; $7.50@7.70 for common extra do.; $7.75@7.80 for good to choice do.; $7.85@8.50 for fancy do.; $6.85@7.30 for superfine Michigan, Indiana, Ohio, Iowa, &c.; $7.50@7.35 for extra do.; $8.00@8.85 for choice extra do., including shipping brands of round hoop Ohio at $7.85@8.50, and trade brands of do. at $8.55@10.00; good to choice white wheat extras at $8.00@10.25; Minnesota, fair to very choice extra, at $8.00@10.75; St. Louis at $9.00@10.50 for common to fair extra, and $10.00@13.25 for good to choice. Southern at $8.25@10.50 for extras and $10.55@13.25 for good to choice. Rye at $4.75@5.75.

Fresh Fruits.—A few extra preserved red apples are quoted at $6.50@7, Russets range at $4.50@5.50, the latter for Roxbury. Some very choice large table Russets, from ice-house, are bringing $6 in a small way. Receipts per rail are in uneven condition, and have to be resorted to bring above prices. Strawberries are in demand, with the Charleston steamer bringing 2,000 quarts on some days. They sell at $1@1.25. Peanuts in fair demand, at $1.90@2.25 for North Carolina, and $1@2.20 for common to prime Virginia.

Grain.—Wheat is fully 8@10c. higher, with considerable inquiry from millers and speculators and better news from abroad.

We quote—No. 2 spring, in store, $1.72@1.75; No. 1 do., $1.76@1.78; winter red Western, $1.90@2.00; amber Western, $2.00@2.03; and white Western at $2.00@2.15. Rye is in the seller's favor, quoted at $1 for Western. Oats have advanced with a good trade; Western 55@57½c., Ohio 57@59c. State malt has been sold at $1@1.10 for two-rowed and four-rowed. Corn has been in brisk demand, largely from exporters, with free sales for forward delivery. Prices are decidedly higher; Western mixed 76@76½c., white Western 80c.; also for June at 80@80c.

Hay and Straw.—This has been the most remarkable season for several years. There is scarcely enough stock received to meet the calls from the home trade outside of providing for shippers. Receivers obtain pretty much whatever price they please. A few lots of shipping hay have been sold at $1.70, and strictly prime, for retailing, as high as $2, with common lots at $1.70. Straw at $1.15@1.20 for long rye; 80c.@$1 for short rye; 80@90c. for oat; 55@75c. for wheat.

Hops.—Business is at a stand-still, pending the reports from growing crops. A few sales to brewers are all that are reported. Prime qualities, 60@65c., with common at 25c.; English, 60@65c.; Bavarian, 65@75c.

Maple Sugar.—Prices for choice a shade firmer. Dark, 14@15c.; choice light-colored, brick and small cakes, 17@19c. Maple syrup, $1.25@1.50 per gallon.

Milk—is in good demand now that the warm weather has set in. The various roads brought, last week, nearly 8,000 cans, which sold readily at an average of $2.30 per can.

Poultry and Game.—Pigeons in smaller receipt and better prices obtained. For live poultry the demand is falling off and prices are weak. We quote: Live, State and N. J. chickens, 19@20c.; do. Western, 17@18c.; roosters, 11@12c.; ducks, ₰ pair, $1@1.12. Geese—Western, $1.50@1.75; do. Canada, $1.50@1.75; do. Jersey, $2.75@3.25; turkeys, 22@24c. dressed N. J. and Pa. chickens, 23@24c.; do. turkeys, 25@26c.; capons, 42@45c.; broilers, $2 ₰ pair; Western chickens, 18@23c.; do. turkeys, 23@24c.

GAME.—English snipe per doz., $1.75@2; plover, $1.25@2 do. Wild pigeons $1, feathered, and $1.12½ picked.

Provisions.—Pork is held firmly with small trade. Mess, $13.75 for spot, $13.80 for July. Extra prime, $11@11.25; prime mess, $13.25. Dressed hogs 5½@5¾c. Middles are lower, with less trade; long clear, 7¼c.; short clear, 8c; short rib, 7¼c.; long rib, 8½. Cut meats are offered freely at weak prices; hams in pickle, 9@10c.; for do. in salt, 8¾@9¼c.; shoulders in salt, 5¾@5¾c.; do. in pickle, 5¾@6¼c. Smoked meats are selling slowly at 10½@13c. for hams, 6@6½c. for shoulders, and 8@8¾c. for clear rib. Lard is firm at 9¾ for prime steam, for spot, 9¾c. for May, 9⅞ for July. Stearine is quiet at 9¾@9¾c. Beef is offered freely at $7.50@9.50 for plain Western mess, $10@12 for extra mess. Tierce beef is dull at $15@17 for prime mess. $19@21 for India mess. Tallow is held firmly with a good trade from shippers; city, 9⅜.

Seed.—Grass are selling in lots to the home trade at 9¼c. for Ohio, clover, 9½@10c. for Indiana, Michigan and State. Timothy at $2.50@3.

Tobacco.—The export trade has been unusually brisk thus far this year, and holders have been enabled to obtain a very satisfactory range of prices. Sales at 20@40c. for sundry lots of old, and of new at 13@18c. for Connecticut and Massachusetts fillers; 25@30c. for do. seconds; 10½@15c. for New York; 10½@12c.; for Ohio; 8½@9½c. for Wisconsin. Kentucky leaf has been in slow demand, the home trade almost the only buyers. Sales at 8@11c.

Vegetables.—Potatoes have a fair sale but the demand is not strong enough to advance quotations. Asparagus is abundant and is one of the items that yearly finds increased consumption. Green peas from Florida and Charleston are irregular in price owing to variable condition. Poor crates sold as low as 40@50c.; best, $2. A few new potatoes from Florida brought $6. Bermuda onions are lower.

Potatoes, Early Rose, bbl., for seed, $2.25@3.00; Pinkeye Blows, $2.50@2.75; Prince Albert, $1.75@2; Monitor and Goodrich, $1.25@1.50; Jackson, $1.50@1.75; Dyright, $1.50@2; sweet Del., $4.00@4.50. Onions, red and yellow, $2.25@2.50; Conn., 100 strings, $3. Garlic, per 100 bunches, $22@24. Turnips, Russia, bbl., $2. Cabbages, per 100, $6@8. Beets per 100, $1.25. Carrots per 100, $1.50. Bermuda potatoes, $8.50@9; do. tomatoes, 6-qt. crate, 90c.; do. onions, per crate, $1.50@1.75

Whisky—Is lower, with free receipts. Sales at 85c. for Western.

Wool.—There is more inquiry from manufacturers. Foreign meet with the most attention at the moment. Holders are very firm in their views. Latest sales at 55c. for unwashed Georgia, 75c. for washed do., 77½@80c. for Ohio, 85c. for combing pulled, 80c. for super pulled, 33@36c. for Mestiza, 40c. for Buenos Ayres, and 47c. Cape.

COUNTRY CHEESE MARKETS.

Little Falls, N. Y., May 11, 1872.

THE market at Little Falls for the week ending May 11th was brisk, with a delivery of about 300 boxes from farm dairies, and sales of from 1,500 to 1,800 factory. Much of the farm lots was very lean, and prices ranged from 6c. to 13c., according to quality. Fair, well cured cheese sold readily at 11c. to 12c., while the more meaty brought from 12½c. to 13c.

The factorymen were present in goodly number, and transactions were brisk. We quote leading sales as follows:—Ladewville, 12½c.; J. D. Ives, 13c.; A. Smith & Co., 13c.; Countrymen, 13¼c.; Eatonville, 13¼c.; Top Notch, 13c.; P. Shaup, 13c.; Snell's Bush, 13¼c.; Old Fairfield, 13¾c.; Columbia Center, 13¼c.; Dairy Valley, 13⅜c.; Crain's Corners, 13¼c.; Danube Cold Spring, 12c.; North Fairfield, 13½c.; Herkimer

Co. Central, 13c. (skimmed, 10c.); Keys, 12¾c.; Manheim, 13¼c.; Middleville, 13¼c.; Newport, 13½c.; Newville, 13¼c.; Norway, 13c.

About 200 tubs of butter, on delivery and sales, were made at 25c. to 27c.

We have advices from abroad for the third week in April. Our London correspondent says stocks of American cheese nearly exhausted, and extra fine sells at 74s.; fine, 69s. to 70s.; good, 64s. to 68s.; secondary, 56s. to 58s. The other descriptions of cheese sell as follows:—English Cheddar, 60s. to 62s.; Wiltshire, double, 64s. to 74s.; Cheshire, medium, 56s. to 60s.; fine, 62s. to 70s.; Scotch, 66s. to 72s. Dutch Cheese.—Edams, 44s. to 66s.; Gondas, 62s. to 66s.; Derby shape, 50s. to 60s.

In butter, sales are nearly confined to best European. We give quotations:—Clonmells, 116s.; Corks, 114s. to 116s.; Normandy, extra, 130s. to 134s.; Canadian, 70s. to 85s. The corresponding prices last year were, Corks butter, 120s.; American cheese, 76s.

LIVE STOCK MARKETS.

NEW YORK, May 9, 1872.

THE sudden change from cool to hot weather caught the butchers with large quantities of dressed meats, which they are now working off, instead of buying live stock. In the case of veal, and to a small extent, of beef, the sanitary police have made some seizures of meat spoiled by the hot weather. With the exception of sheep, which are not plenty, prices are lower, and the markets are both overstocked and extremely dull. Fresh vegetables are coming forward freely, and they are taking the place of meats to a considerable extent, shad coming in for a large share of patronage.

Beeves.—Total for the week just ended, 8,489, against 8,253 for the previous week. Of this number, 4,398 were on sale last Monday—140 car loads at Communipaw, 131 at 100th St., and 10 at Weehawken. The stock was pretty well used up on that day, the weather being favorable, and 13¼c. were obtained for choice animals, good selling at 12½@13c.; but, with 3,500 cattle since then, and a heated term ushered in, there is a complete change. It will be borne in mind that our receipts of cattle have been very large of late, and it is a marvel that the market did not break before. Even now the talk at the West is that the stock has been sent forward so much faster than usual that the supply is likely to run short, and that prices will probably advance again. Somewhat unsettled markets may be looked for during the early summer. Grass is very good at the West, and cattle generally look well. There are more distillery cattle than usual coming forward. Several hundred of to-day's receipts could not be sold, though offered at a decline of ½c. from the rates of Monday. It takes very fine animals to bring 12½c. One car of 8¾ cwt. sold at that price to-day, with some fair 6 cwt. Cherokees at 10¾c. Missouri is sending in a good many cattle.

The following are the closing prices for the week in comparison with what cattle brought one week ago, for net weight of beef:

	This week. Cents.	Last week. Cents.
Choice beeves, ₽ lb	12¼ @ 12¾	13 @ 13¼
Good to prime	11¾ @ 12¼	12 @ 12¾
Ordinary to medium	11 @ 11½	11 @ 11¾
Lowest grade	10 @ 10½	10 @ 10¾
Average sales	11½ @ —	11¾ @ —

Hogs.—Total for the week 41,831, against 33,146 one week ago. Such enormous receipts in the hottest weather of the season, thus far, could scarcely fail to depress the market, but no one looked for such a complete demoralization and so great a decline, amounting to close upon 1c. ₽ lb. on dressed, no one being found to purchase live hogs at any price. The dealers are losing heavily. The hog crop was evidently an enormous one. City slaughtered sell at 5¼@5¾c.

Milch Cows.—Receipts for the week only 93 head. The little improvement noted last week still continues. Warm weather has made a better demand for milk, hence producers are the more ready to buy fresh cows. Whole car loads have been sold at $55@60 per head, with single cows at $75@80. We noticed a fancy animal holding for $100. Few cows are now sold below $40. Some poor cows have been sold at $30@35 each, with ordinary to medium at $40@60, good to prime $65@80, very few going above $75.

Sheep and Lambs.—Receipts for the week 13,798 against 8,181 the previous week. This light supply would cause a stronger market but for the hot weather and a decline in beef. Even mutton cannot now be kept any length of time without spoiling, so great is the heat. High mutton and cheap veal turns the trade upon the latter. It takes very fair unshorn sheep to bring 9¼c. Some lots of 91 lbs., Ill., sold at 9¾c. Most of the sheep are now coming from Ohio, and have been sheared. They sell at 6¾@7¾c., a few extras going at 8c. Spring lambs are in good demand, and are worth 14@16c. ₽ lb. Something fine sells a little higher. One choice lot of rising 70lbs. went at 18c. They are mostly sold by the head, at $6½@8¾ each, with extras at $9.

Veal Calves.—Total for the week 5,171. The very low prices of last week induced butchers to turn their trade in this direction, as far as possible, for their greatest profit was in veal. Those sending dead calves to market have been very fortunate until now. The present hot weather turns them over to the Sanitary police. Live calves are quoted at 5¾@6c. for ordinary, 6¾@7c. for fair to good, and 7¾c. for choice.

DIED.

COOK.—In Williamsport, Pa., the 1st Inst., Mrs. S. A. COOK, wife of HORACE J. COOK, in the 38th year of her age.

SPECIAL NOTICES.

FOR MOTH PATCHES, FRECKLES

and TAN, use PERRY'S MOTH and FRECKLE LOTION. The well known and reliable remedy for Brown Discoloration of the Face. Prepared by Dr. B. C. PERRY, Dermatologist, 49 Bond street, New York. Sold by *Druggists*.

RUPTURE CAN BE CURED

without suffering. ELASTIC TRUSSES are superseding all others. Before buying Metal Trusses or Supporters, send for a descriptive circular to the ELASTIC TRUSS CO., No. 683 Broadway, New York.

New Advertisements.

LISTER BROTHERS,
NEWARK,
NEW JERSEY.

TO FARMERS.—DOUBLE REFINED POUDRETTE of the "LODI MANUFACTURING CO," for sale in lots to suit customers. This article is sold for *half the price* of other fertilizers, and is cheaper for tobacco, cotton, corn and vegetables than any other in market. It is made entirely from the night soil, offal, &c., of New York city. Price, delivered on board in New York city, Twenty-five Dollars per ton. I ask attention to the following Testimonials:

ONEIDA Co., N. Y., Oct. 12th, 1871.—*Dear Sir:* For two years past I have used the Double Refined Poudrette for corn, potatoes and garden Vegetables, and I have realized on the first crop 100 per cent. for all the money invested. Yours truly, T. B. ALLANSON.

WINDHAM Co., Vt., Dec. 4th, 1871.—*Dear Sir:* I think the Lodi Company's Double Refined Poudrette the best manure I can find for tobacco, corn and potatoes. I shall order a number of tons another season. Yours respectfully, E. S. HORTON.

JESSE VAUGHN of Lancaster, N. Y., under date of September 20th, says:—I applied the Double Refined Poudrette, last Spring, on corn and potatoes, and I believe I have the best corn in town, and my potatoes are an excellent crop. I have used your Double Refined Poudrette several times before, and always with good results, but this year the effect has been more perceptible than ever before.

A pamphlet giving full directions, &c., sent on application to JAMES T. FOSTER, 66 Cortlandt St., N. Y.

SOLUBLE PACIFIC GUANO

This is the best Fertilizer without exception. It contains the proper proportions of Soluble Phosphoric Acid, Ammonia and Potash. Sixteen thousand tons were used last year.

☞ Certificates and directions may be obtained at the Agency, at office of GEO. E. WHITE, 160 Front St., New York.

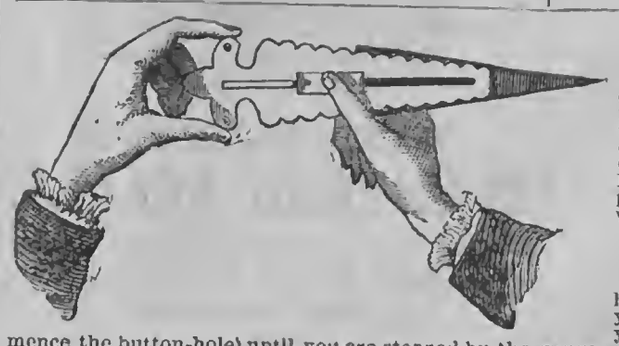
THE PROTEAN LANCETTE.



Experience teaches that to secure for an article the favor and patronage of the LADIES, it must combine beauty and elegance of design, with practical utility. The favor with which our modification of the **BUTTON-HOLE CUTTER** has been received predicts that no Lady's Work Basket will be regarded as complete without it. It is also an admirable Envelope, Leaf and Paper Knife.

DIRECTIONS.

To extend the Lancet, hold the instrument as illustrated by the engraving; then holding it as you would a pen, with the cutting edge from you, insert the point (where you wish to commence the button-hole) until you are stopped by the gauge. Be careful not to extend the point too far at first, but cut and try until the hole is a sufficient size to allow the button to pass through; then observe at what point the slide is on the scale, that you may be able to retain the size.

The Lancet can be sharpened like an ordinary knife. Samples mailed post-paid on receipt of 50 cents.

DOOLITTLE MANUFACTURING CO., 599 Broadway, New York.

PERSONAL ITEMS.

DELMONICO of New York has gone to Europe.

HERR WACHTEL is the father of eight children.

CARHART'S
PATENT TWO-HORSE
Pulverizing Cultivator

Was Awarded the First Premium at State and County Fairs in 1870 and '71.

It is superior to the best Wheel Cultivator.
The price is only Twenty Dollars.
The draft is reduced nearly one-half.
The depth you wish it to run is regulated without the use of wheels.
It can be drawn close to a tree or plant without injuring it.
It is not disturbed by short undulations of earth, like the Wheel Cultivator, but pulverizes, levels and fits the ground for the Mowing Machine better than any Cultivator in use, and can be used for more purposes than any other implement on the farm.

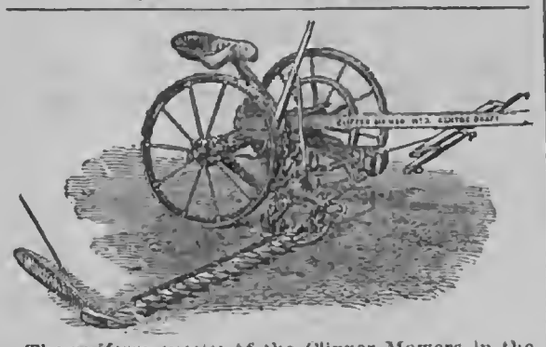
BUY THE BEST!

STYLES, SIZES & PRICES TO SUIT ALL FARMERS.
Descriptive Circulars Forwarded by Mail.



The *uniform success* of the Clipper Mowers in the field, the testimony of every farmer who has used them, that they are the *lightest in draft*, the *most durable* and the *most economical* machine for the farmer to buy, fully substantiates what the proprietors have always claimed—that the Clipper is the **Best Mower in the World.**
To the No. 4 size is attached the Dropper (cutting 5½ feet, with *separate Finger-Bar* for reaping), constructed with great improvements—in fact perfected; and in point of efficiency, strength, lightness of draft and symmetry of proportions, it is, as a Reaper, also unequaled. Farmers! see it before you buy. Pass your own judgment upon it. Look at its many improvements possessed by no other machine. Remember, it is fully warranted. Send for Pamphlet.

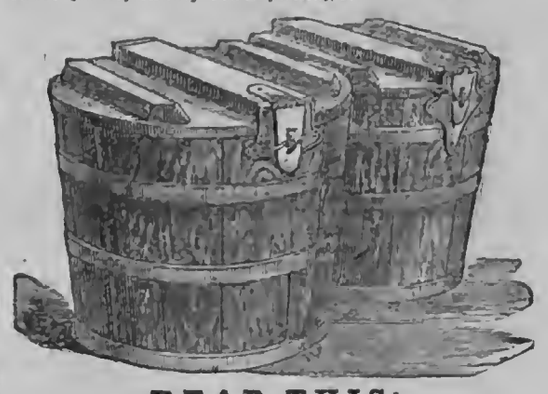
FARMERS, DAIRYMEN AND BUTTER BUYERS!
PACK YOUR BUTTER
IN
WESTCOTT'S
RETURN BUTTER PAIL

Approved and recommended by the leading authorities of our country on dairying, and acknowledged by all butter dealers to be the very best package in use.
Butter packed in this Pail brings **5 to 10 cents** more a pound in the New York City market than the same quality in any other package.



READ THIS:
NEW YORK, Nov. 15, 1871.
We, the undersigned, Produce Commission Merchants of the City of New York, consider Westcott's Return Butter Pail, manufactured by Silsby Bros., Belmont, N. Y., *the best package in the market.* It is our experience that Butter packed in this Pail *sells more readily and commands a higher price* in this market than in any other package, and we heartily recommend its general use by the dealers, dairymen and butter buyers who ship to this city.
Respectfully,
(Signed by 45 leading Commission Merchants.)

The Westcott Return Butter Pail meets my approval as a good butter package. It is one which I always feel safe in recommending.
X. A. WILLARD,
Dairy Editor Moore's Rural New-Yorker.

Dairymen, send for a Circular! Dealers, send for a Price List! We are the sole manufacturers of **Westcott's Return Butter Pail,** and also manufacture very extensively Butter Firkins, Half-Firkin Tubs, 25-pound Butter Pails, Well Buckets, &c., &c.

CHEAP CORN CULTURE.
THOMAS' SMOOTHING HARROW.
81 SLANTING TEETH OF TEMPERED STEEL. $25

LATE SPRING! CROWDED WORK!

This year a large amount of work must be done in a very short time. With our wide Harrow more than twice as much ground can daily be prepared for seed as without it, and all crops *cheaply cultivated* through the season in a *superior* manner.

ALLEN HIGLEY, Windsor, Ohio, says:—"I saved one-half month's labor in two days, getting a much better crop without using a hoe."

ANDREW RAESSLER, Shelbyville, Ill., says: I can harrow twice as much ground with it as with other Harrows."

EDWIN THORNE, Millbrook, N.Y., says:—"We can dispense with cultivating once each way, saving a vast amount of labor."

E. F. SMITH, Morning Sun, Iowa, says:—"It was much easier on the team, though one-third wider, doing more work."

L. R. AUSTIN, Coldwater, Mich., says:—"I have a 40 and a 30-tooth square drag, but with *your* Harrow can do twice the work in half the time."

IRA BEARD, Cahoka, Mo., says:—"I think it equal to three common Harrows."

F. PETITT, Salem, N. J.:—"My brother says his does the work of three old Harrows; mine I think saved me $5 in one and a-half hour's work."

BOYS RIDE AND DO ALL THE HARROWING.

24-page Catalogue; 11 pages farmers' experience.

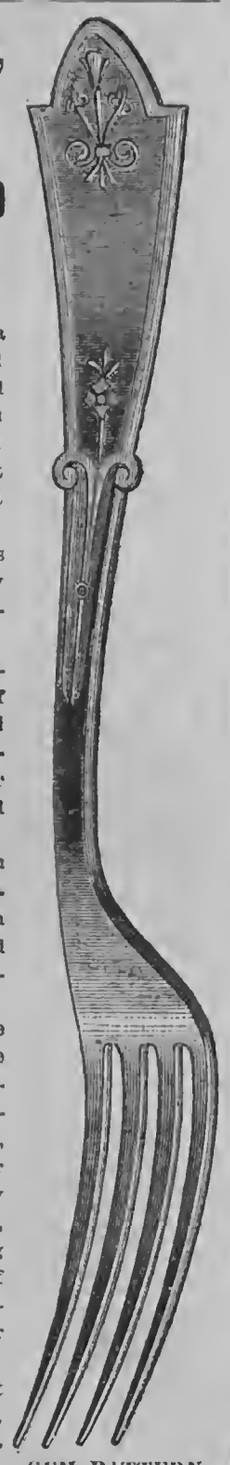
REED & BARTON,
MANUFACTURERS OF
FINE
ELECTRO-PLATED WARE.



GEM PATTERN.

This Illustration represents a new design of Electro Plated Fork, manufactured by Reed & Barton. In design and finish it so much resembles the solid silver, that even an expert would find it difficult to detect the difference.

All their forks and spoons are made of the finest quality of Nickel Silver, and are heavily plated with pure silver.

They also manufacture almost every other article of Table Ware, such as **Tea and Dinner Sets, Cake Baskets, Fruit Stands, Water Sets, &c.,** in many new and beautiful designs.

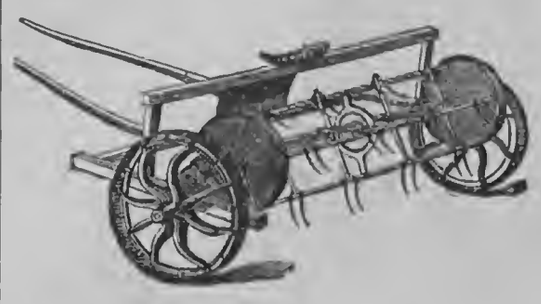
They pay especial attention to their **Patent Seamless-Lined Ice Pitchers,** which have been so thoroughly tested and given such satisfactory results.

Reed & Barton now have one of the largest works in the country, but they find it necessary to make extensive additions this season. They will, besides greatly enlarging their principal factory, build a new one, 240x40, three stories high, with French roof, thus adding more than 40,000 square feet of floor to the space now occupied in the production of their goods.

They have salesrooms at the factory, at Taunton, Mass., and at No. 2 Maiden Lane, New York.

Implements, Machinery, &c.

THE AMERICAN HAY TEDDER



Enables the most important Agricultural product of America to be cut, cured and stored in the barn in one day. Improves the quality and increases the value of the hay crop. Prevents all risk of damage from storms and sudden showers. Is simple, durable and of light draft. Was awarded the New England Agricultural Society's only first prize, at the Great Field Trial, at Amherst, Mass., as being superior to all others, and the best and only perfect machine for tedding or turning hay.

HILL'S "Archimedean" Lawn Mower

In placing this LAWN MOWER before the Public for the season of 1872, it needs no recommendation, as it has a world-wide celebrity. With the improvements recently added to this favorite Mower, we are fully warranted in saying it has no equal in the WORLD. And its immense sale for the last 30 days throughout the United States is sufficient proof of the above assertion and of its great superiority. This Lawn Mower is constructed upon truly scientific principles, and it is the only PERFECTLY BALANCED Lawn Mower ever made, operated by a ball and adjustable handle, points that are indispensible, securing ease of operating, and a perfect, beautiful and level cut.

The Hill's "Archimedean"

was the FIRST (and original) BALANCED LAWN MOWER invented in this country or any other, was patented in the United States and Great Britain, and its invention brought into general use a machine that is now a necessity, and almost an indispensible article. All others now made are copies of this machine, and the public are cautioned against them.

☞ For sale by all the leading Seedsmen and Agricultural Implement Dealers throughout the United States and Canada.

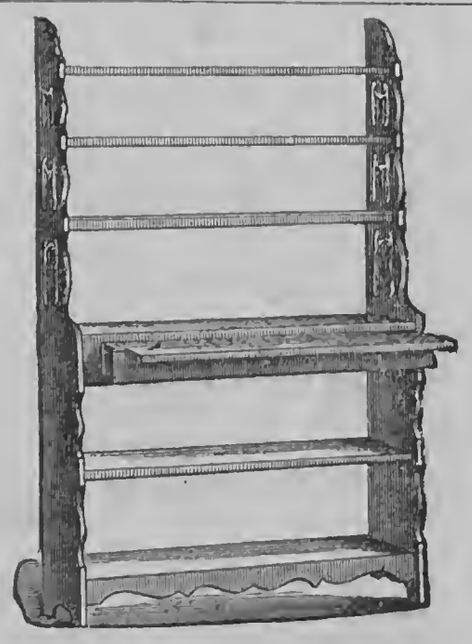
Illustrated Catalogues and Testimonials post free, upon application to us or any of our Agents.

Manufactured by

The Hill's "Archimedean" Lawn Mower Co.,

Hartford, Conn.

(Works at Colt's Armory.)



GARDNER'S PORTABLE
BOOK-RACK, BOOK-CASE, AND WRITING DESK COMBINED.

This is the first good article of furniture that has ever been made, which can be taken apart in less than a minute and packed away or shipped from place to place all easily as a few short boards, and can be set up again by any person in a few moments without the aid of any tools. Small sizes form a substantial and complete Book-Rack. Larger sizes form a substantial Writing-Desk and Book-Case Combined.

Prices for large sizes, 6 feet 4 inches high, solid Black Walnut, from $10 to $22. Prices for smaller sizes down as low as $1. Also, Portable Wardrobes, prices $10 to $20.

A liberal discount to the trade. Ten per cent. off to all preachers.

The First Premium was Awarded
on our Book-Racks and Writing-Desks at the
Great Fair of the American Institute
NEW YORK, 1870.

ARE YOU GOING TO PAINT?
MORE THAN
100,000 HOUSES
HAVE BEEN PAINTED WITH THE
AVERILL CHEMICAL PAINT
IT IS THE BEST

In the world for exterior work upon Cottages, Villas or Buildings of any kind, whether built of brick, wood or iron. It is a liquid, *ready for use*, and requires no oil thinning or drier. Purest white, and any desired shade can be had in packages from one gallon upwards.

EXTRACTS FROM OUR LETTERS:

CHAS. HALLETT, Esq., of Riverhead, L. I.:—"Years ago I had your paint applied by the side of the best white lead. The lead requires repainting, but the Averill Chemical is yet looking well."

Gen. DAVID H. STROTHERS:—"Your Paint fulfills your representations."

Rev. S. C. ALEXANDER:—"Our Institute has saved $150 by using your Paint. It is splendid."

PETER HENDERSON, Esq.:—"I find the Chemical Paint retains the colors and gloss far superior to that done by the lead and oil at the same time."

Gen. JAS. NEGLEY, M. C.:—"I find it the cheapest and best."

SETH THOMAS, Esq.:—"It gives better satisfaction than any paint I ever used."

Sample card of beautiful colors, and recommendations from owners of the finest residences in the country, furnished free by the
AVERILL CHEMICAL PAINT CO., 32 Burling Slip, New York, or 118 Superior St., Cleveland, Ohio.

P. S.—The superiority of these Paints has already brought numerous *worthless* imitations in the market. We caution the public against using them.

The Season for Painting
HAS COME AGAIN.

If you propose to paint, first send stamp for a book called "Plain Talk with Practical Painters, with Samples of Colors." The book is worth a dollar, and costs nothing. JOHN W. MASURY, 111 Fulton St., New York. ☞ Specialty in Pure Paints and Colors. Masury's Ready-Made Colors are the only ones which stand the test of time. Do not be deceived.

A Railroad Watch.

Travelers by Railroad frequently find their Watches completely demoralized by the continuous jar of the train. To overcome this difficulty has long been a problem with watchmakers, and it is now successfully accomplished in the new grade made by the

American Watch Co. of Waltham.

This Watch is made in the most substantial manner, on the most approved principles, and combines all the recent improvements. It has a new micrometrical regulator, by which the slightest variation can be easily corrected. It is carefully adjusted, and may be entirely relied on to run accurately, wear well, and ENDURE THE HARDEST USAGE, without any derangement whatever. We confidently recommend this Watch to the trade and the public as the BEST WATCH FOR THE PRICE IN THIS MARKET.

The full trade-mark engraved on the plate of each Watch is

"American Watch Co., Crescent-St., Waltham, Mass.,"

and it is distinctively known as the CRESCENT-ST. Watch.

For sale by all leading Jewelers.

THE

WEED. WEED.

The most perfect, reliable and generally useful machine in existence. For the family of the farmer or mechanic, where the work required of a sewing machine ranges from the heaviest garments of men's wear to the most delicate and ornamental fabrics for ladies and children, it has proved itself thoroughly efficient and entirely satisfactory. Of unequaled simplicity and compactness of construction, capable of being learned and operated with one-fourth the usual expenditure of time and labor, with a capacity for quantity, quality and variety of execution beyond its competitors, and a reputation for durability and reliability known and appreciated by thousands, it is offered to the people for the most critical inspection and comparison, with confidence that its obvious merits cannot fail to convince the careful examiner of its superiority. Manufactured by the

WEED SEWING MACHINE CO.,

HARTFORD, CONN.

REPRESENTED IN ALL THE PRINCIPAL CITIES AND TOWNS.

SOMERLEYTON GARDENS.

Entrance to the Winter Garden at Somerleyton, England.

We give herewith an illustration of Rural Adornment as seen in the Somerleyton Gardens in Suffolk, Eng. We publish this to illustrate the taste of the Old World and as a suggestion for the New—to aid in the education which the rapid acquirement of wealth renders necessary to our people. All beautiful forms educate. All suggestions of this character help us in the work of making practical our own conceptions of beauty. The Winter Garden, the entrance to which we show, is 100 feet square, with a lofty dome-shaped roof. The Garden describes its interior as follows:

In its center is a noble fountain, supported on rock-work by four dolphins, and surmounted by a marble statue of "The Nymph of the Lily," from the top of which the water is thrown through a jet to a hight of nearly fifty feet. Water is also emitted from a number of small jets and from the mouths of dolphins situated near the base of the rock-work. This fountain is surrounded by a basin some fifty feet in diameter. Cool-house ferns ornament the base of this tasteful display of water works, among which we noticed *Woodwardia radicans*, *Scolopendriums*, etc.; and in this water are *Callas*, *Valisnerias*, and other aquatic plants. The roof of this Winter Garden is supported by light iron columns, all of which are covered with climbers, such as *Passifloras*, *Kennedyas*, *Fuchsias*, *Tecomas*, *Lapagerias*, *Tacsonias*, *Mandevillas*, etc.; trellisses along the sides of the house in front of the glass, and also the rafters, are covered with the same elegant drapery. From the roof are suspended ornamental wire-baskets filled with plants of a suitable character. Marble statues, and vases filled with flowers, stand at regular intervals apart along the passages and other prominent situations. At the middle entrance to the hall are two aviaries, which give life and interest to that part of the building. Surrounding the grand central display of waterworks are beds filled with *Camellias*, *Acacias*, *Tea Roses*, *Brugmansias*, *Hydrichiums*, and similar plants, planted out, the whole fringed with plants in flower in pots. Palms and tree ferns are, however, what would set this house off to best advantage, and for which it seems in every way suitable.

FLORICULTURAL NOTES.

A Non-Blooming Cactus.—I have a cactus, brought from South Carolina in 1862. I do not know its name; grows on stems over an inch in diameter, covered with thorns. It never has blossomed. Can any one tell me the reason?—J. E. G.

In cultivating the *Cacti* due regard should be made to the natural habit of the plant by dividing the year into periods of growth and rest. For six months or more the plants should be kept growing by giving water; then it should be gradually withheld and the plant allowed to rest for a few months; then again moisture should be applied. This, of course, is a very general rule; but it will apply to most of the cultivated as well as wild species and varieties. The flowers usually appear after the period of rest and as soon as the new growth commences. There are, however, some of our native tropical species which do not bloom until they are several years old, and when brought under cultivation this period seems to be almost indefinitely postponed.

Plant Exchange.—Would some of your California subscribers be kind enough to send me some specimens of the ferns of that State, and receive in return those which are natives of New York? I have tried to find them at the florists, but without success. They are plants which are worthy of more general cultivation.—James Fitzgerald, *Bedford Station, Westchester Co., N. Y.*

Simple Mode of Growing the Huntsman's Cup (*Sarracenia purpurea*).—Get healthy, fresh young plants, and pot them in peat now with a few lumps of crocks or a few lumps of peat at bottom, the last the best. Use thirty-two or forty-eight sized pots, according to the size of the plants, and then place them on a light shelf in a greenhouse or pit, near the glass, with full light in either case. Put a saucer under each, filling it with water, and keeping it so, not otherwise attending to the plants, except perhaps to syringe them when the other inmates of the house or pit receive that attention. In that way you will have dwarf, healthy, and stubby specimens of this most interesting plant, that will, after a year or two's growth, bear comparison with any in existence.

Send us Floral Notes—Not describing the pleasure you derive from floriculture, but practical experiences and facts observed, that will enable others to succeed as you do.

ENTRANCE TO SOMERLEYTON GARDENS.

The Horseman.

NOTES FOR HORSEMEN.

Mr. Bonner's Colt Startle, five years old, trotted, Friday, May 10, during a strong gale, and carrying the proper weight, a full mile in 2.24¾ minutes. This did not satisfy Mr. Bonner, who insisted on the colt trotting again, which he did, making the mile in 2.19¾ minutes, doing the first quarter in 31½ seconds; the half mile in 1.09; the three-quarters in 1.43¾, and the mile in 2.19¾. Commodore Dodge, Robert Fletcher, and Sim Hoagland acted as judges. Startle was driven by Geo. Hopkins. Startle was sired by old Hambletonian; his dam was a Star mare, the blood of which has crossed best with Hambletonian. He is gentle in disposition, and honest and square in his trotting. He is probably the most valuable trotting stallion in the world.

Breeders' Trotting Stakes for 1874.—Trotting Sweepstakes for three-year old Colts and Fillies of 1871; mile heats in harness, to be governed by the rules of the National Association for the promotion of the Interests of the American Trotting Turf, $150 each; $25 to be paid at time of entering, $25 on or before April 1st, 1874, and the balance ($100) on or before the 1st of September preceding the race, after which the whole amount will be play or pay. The race to be trotted at, or in the vicinity of Albany, on Tuesday, September 22d, 1874, good day and track, or the next good day and track. Gentlemen of Albany will add $250—either to go to the winner, in which case the second horse will save his stake, or to go to the second horse, in which case the third horse will save his stake—as may hereafter be decided.

Sealed entries must be made on or before Thursday, June 27th, 1872, enclosing forfeit money, and must accurately state color, sex, marks, pedigree, breeder's name, and date of birth; they must be endorsed, "Breeder's Stake for 1874," and enclosed in an outer envelope addressed to Messrs. Luther Tucker & Son, Albany, N. Y., who will properly record the same, and in due time notify subscribers and the public of the particular track selected.

Wolf or Blind Teeth, Ringbones, Etc., in Horses.—I am satisfied they do affect the eyes, and should be pulled when they first affect the eyes. I have saved several of my own from blindness by extracting them; and when the eyes were covered with film, have removed it by blowing in soap, or crushed sugar, pulverized very fine, through a quill or elder. I have cured a number of ringbones and curb-spavins by blistering with Spanish flies. Get ten cents worth of the powder from the druggist; put them in a bottle; cover 1½ or 2 inches with alcohol or spirits of turpentine; after standing 24 hours, shake it, and apply, by rubbing it in three or four times. If that does not kill them, apply again in ten or twelve days. When getting well, it, and all other sores, should be greased, to prevent white hair.—L. M. V.

Balky Horses.—One correspondent of the Rural New-Yorker cures his horse of balking by a rope "persuasion," and by speaking some word or sentence in Dutch or Hog Latin that he has not been accustomed to hear, so that if he ever dares to balk again, the repeating of that same sentence will remind him of his rope persuasion. What a remarkable memory that horse must have! Another correspondent thinks there is no cure, and so kills. Here is a remedy which I have frequently seen recommended, and have also seen tried with success:—Fill the horse's mouth with a piece of turf, which will give him something else to think of, and he will start ahead.—M. Hunt.

Remedy for a Kicking Colt.—An ounce of prevention is worth a pound of cure. I take a good strong cord, double the brush of the tail, put a stick in and make it fast to the whiffletree or tongue of the wagon, if they are double. Use gentle means, be firm, and drive the animal steadily along.—Liberty Fiske.

How to Prevent a Horse Pawing in the Stable, is what several correspondents would be glad to know. One of our correspondents recommends attaching a weight to the leg, by means of a short strap or chain. We have never tried it. Perhaps some of our correspondents have suggestions to make.

How to Care for a Young Mare.—D. Z. Mosher asks if some of the readers of the Rural New-Yorker will give instructions as to the care to be taken of a young mare just previous to foaling.

Inquiries for Horsemen.—A subscriber asks some one to give a remedy for curb on a horse's kind knee joint....What will cure a whistling horse, when driven fast? Is it an affection of the bronchial tubes?—* *.

Industrial Topics.

GOOD EXAMPLE FROM THE SOUTH.

EDS. RURAL NEW-YORKER:—Having been much interested by conversation with an old friend, now resident here, about agricultural movements in Virginia, &c., I think it may interest you and your readers to learn something of his experience among the farmers of the "Old Dominion," who often invite him to address them at their sociable meetings. I requested him to make a note of the way these meetings are got up, as farmers in other regions, through your wide-spread "RURAL" parish, may be interested thereby, and may be tempted to try how similar meetings may promote improvement (socially and agriculturally) in their respective neighborhoods. He was an efficient cavalry officer in the late war, on the Union side—a Major in command, and since brevetted as a Colonel for his gallantry. He has "converted his sword into a reaping hook," and now meets, on cordial terms, with many whom he formerly met in the battle-fields of Virginia. His example, and the example of those Virginia farmers who now welcome him at their "Agricultural Sociables," are worthy of special commendation in these days, when we all should try to let "the dead past" be buried, and try harmoniously to profit by its sad lessons, in our efforts to promote the common welfare in the "living present," with the hope of a "better future." Here is a short communication he favored me with, and it is at your service if you will print it.

POTOMAC.

Washington, D. C., April 29, 1872.

Farmers' Clubs in Virginia.

ONE of the pleasing and hopeful signs of the times in the "Old Dominion" is the numerous live Agricultural Societies which are springing up among them, such as Town and County Clubs, "Patrons of Husbandry," and others. They are well calculated to enlarge and give play to the social feelings, and bring those who would otherwise seldom meet, into social relations. Then, also, information and instruction will be enjoyed and disseminated by a free comparing of notes and views, and in relating various experiments and results. This is one of the great wants of the farmers—the cultivation of greater sociability among the families, and more mutual instruction, by freely and frequently interchanging ideas and facts in regard to their common avocation and interests—by "glinting of mental blades."

The common mode and custom now, in this State, is for farmers in a neighborhood to form a society, and meet, from month to month, at the residences of the different members, where friendly greetings are exchanged, business transacted, and projects discussed, and a good farmer's dinner enjoyed: and as the hospitable and thrifty matron, at each farm, in turn, gets up this pleasant entertainment, of course there is a proper ambition and rivalry, with all, to be as good as any, which stimulates taste and tidiness. Then, at each meeting there is a "Critical Committee" appointed, whose duty it is to carefully examine the farm and premises where they meet, inspecting everything about it—crops, stock, buildings, orchard, etc,—and read a report thereof in open meeting; and this, of course, has its good effect, in stimulating the owner to have all his affairs in creditable order, that the "Critical Committee" may have little to condemn and much to approve. Order, system, and neatness, are enhanced by this pleasant custom. Often, if the committee happen to have a warm vein of the humorous, these reports are very amusing.

Then, to facilitate getting home comfortably, the meetings are always appointed to be held about the time of the full moon, each month, that those who live at a distance may not have dark nights to drive in. A pleasant feature of these meetings is, that the women and children of the families attend, and enjoy the sociability and instruction as well as the "Lords"—which is right. Long may they prosper and improve, enjoying concord and growth.

D. S. C.

VEGETABLES FROM BERMUDA.

FOR the last twenty years Bermudans have been quietly but successfully growing a large quantity of potatoes, onions and tomatoes, which have been sent to the New York market, and have arrived so early in the season as to defy competition from our native growers. It is not unusual to receive their potatoes as early as the 10th of March, and the tomatoes much earlier, the onions ripening later than either. These potatoes are the product of the old and well-known Western red variety, which are sent to their island in the Winter and are planted in the latter part of December or the first of January. The appearance and quality of them is entirely changed from the original, making the best of all early varieties received in this market. A number of persons in this country have planted these potatoes, to see if this improvement in them could be retained; but, so far as I have ascertained, have met with no success. The quality and appearance of the onions are also changed, being lighter in color, quite soft, and much sweeter than the State or Eastern article.

The tomatoes are the small variety, round and quite smooth; they do not possess much flavor, but generally sell at high prices to the keepers of restaurants and hotels. They are picked before they are thoroughly ripe, wrapped separately in paper, then packed in small, slatted crates containing about six quarts each.

The plan adopted by the native Bermudans to ship their onions is a novel one. They take a large leaf, resembling the palm, cut or tear it in strips down to the main stems, then, with the aid of other strips, they form it into a bag, the top of which is made just large enough to admit the onions, which is closed when full. This plan works well, for it secures ventilation, which is a necessity for the safe transportation in the holds of vessels. The size of these bags varies according to the size of the leaf, ranging from eight to twenty pounds each when full, thus giving consumers an opportunity to buy a small quantity in the original package. They are sold by weight, except when they are sent in barrels.

NOW AND THEN.

Farm Implements.

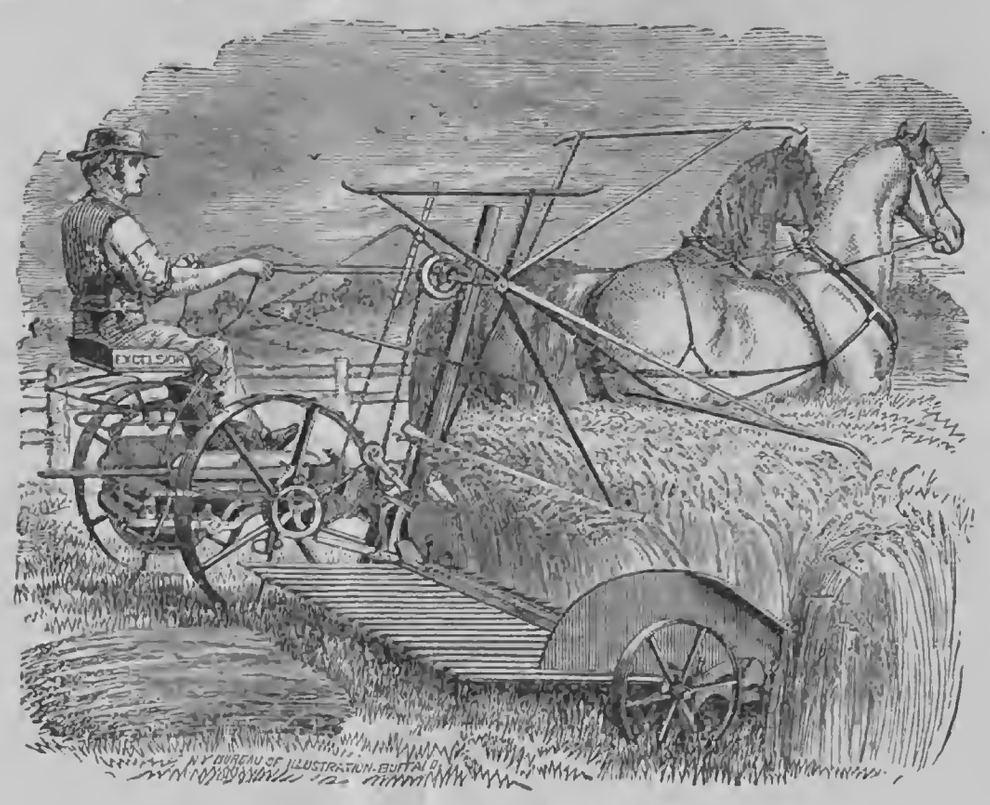
THE EXCELSIOR REAPER AND MOWER.

IT is a good thing to hit upon a good name, and then it is rather desirable to have a good thing to go along with the good name. When, in 1861, JOHN F. SEIBERLING, of Ohio, brought out The Excelsior Reaper and Mower he had a good thing with a good name to it; and, being a man of good common sense, as well as a skillful mechanic, he has since put the manufacture and sale of The Excelsior into the hands of faithful mechanics and reliable business men—as all people who have occasion to do business at the principal office, in Akron, can testify.

Mr. SEIBERLING is an *inventor* rather than a copyist, and when The Excelsior was first put upon public exhibition, all the old machine men scrutinized it closely, and comprehended that a new and strong competitor had entered the field—one which did not infringe any of the existing patents, but was capable of marching on to victory upon its own original principles.

The next great advance with The Excelsior was the invention of the Dropper, or Slatted Platform Attachment, for reaping, thus dispensing with the labor of the raker, or the expense of the costly self-rake attachments then in use. This Dropper was original with The Excelsior, and has since become so much of a necessity that most of the reapers in use have been obliged to attach it in some way, to meet the popular demand.

The gearing of The Excelsior is simple and effective. It has one large spur-wheel keyed to the main shaft, and with its ratchets and pawls, is protected from dirt or clogging. Both the ground wheels drive, or either one of them will drive, turning to the right or left. In backing, the machine is out of gear. A valuable and original feature of The Excelsior, is the cut-off rod, which, at the same time, and by the same motion of the foot which drops the slatted platform to discharge the gavel, arrests the falling grain from the sickle and holds it till the platform is again in place to receive it.



THE EXCELSIOR REAPER AND MOWER.

The Excelsior is an iron-frame machine, with a forward cut, which enables the driver to see his work without danger of being thrown before the sickle. The workmanship of The Excelsior is neat and honest, in all its parts, and the machine can be safely commended as one which will give satisfaction. As the establishment at Akron has jurisdiction of the State of New York, they would especially commend their Excelsior to the host of RURAL readers in the Empire State, as well as elsewhere. For terms of sale, &c., address J. F. SEIBERLING Co., Akron, Ohio.—S. D. H.

The Swine-Herd.

PIG-PEN PAPERS.

Swine-Herd Book.—JOHN B. TOLLMAN writes to the Farmers' Club of the American Institute as follows:—"Some one suggested the propriety of establishing a herd-book for swine. I think that suggestion the most sensible one that has been presented for the consideration of the Club for some time, and I hope the members of the Club will take immediate action on it, and have a book published as soon as possible to protect honest feeders and shippers against the unprincipled scoundrels who are shipping hogs all over the country represented as thoroughbred that are not good grade of the breed they are represented to be. I have known persons to get pigs from Chester county represented as pure Chester whites, and for which they paid a large price, and the progeny of those pigs were almost as black as a Berkshire or Poland China. Such deceptions by unprincipled men have got the Chester whites into disrepute in our section of the country. I would suggest to the honest breeders and shippers of swine to petition the legislatures of the different States to have a law passed immediately making it a felony, punishable with fine and imprisonment, for selling or shipping swine that are not thoroughbred of the stock represented."

Steamed Food for Hogs.—A farmer at Quasqueton, Ia., fattens his hogs on ground corn, steam cooked, saves from one-third to one-half the feed thereby, and has better pork and heavier hogs than he can get by feeding corn raw. He cooks his feed by burning cobs; 34 pounds of cobs will cook 2½ bushels of corn.

To Decoy a Pig, instead of driving him, some ingenious chap recommends tying the end of a strong cord to an ear of corn, drop it in front of the pig, 5 or 6 inches from his nose, and commence walking away with it slowly in the way you wish the pig to go. If he gets disheartened at the prospect of getting hold of it, allow him a slight nibble, and then proceed.

Field Crops.

ORCHARD GRASS.

A CORRESPONDENT in the Germantown Telegraph says:—"I have raised orchard-grass for several years, and like it better the more I am acquainted with it. I have never raised it in the shade or near trees, nor did I know that it was named because of its adaptability to orchards. I have raised it on common loamy soil and on meadow-bottom. Have very heavy crops, and find it to be the best of feed for cows, especially the rowen. I have always cut mine three times a year on good land. I am not ready to give up Timothy, but am sowing more and more orchard-grass every year. I would not advise one to have his whole farm in that or any other one kind of grass. Orchard-grass *must* be cut early or much of its value will be lost. All I took up my pen for was to say that it will grow well in the sun.

"I have no doubt but that many, perhaps the majority of those who try it, will be disappointed with it. It matures about four weeks earlier than Timothy, and our people who are not used to cutting hay in May or June, will let it stand till it gets hard, and thus lose much of the value of the first crop, and diminish the quantity of the next. But if cut very early, and well cured, and the next crops of rowen are cut and cured in season, it will produce more value of feed for a Winter dairy than any grass I ever raised. I have this winter been feeding *three* crops of it, grown from seed sowed the 11th of last April. It was cut July 1st, August 1st to 7th, and September 18th, and produced over three tons to the acre. The stoutest of the first crop weighed over two tons to the acre, by actual trial of measured sample."

FIELD NOTES AND QUERIES.

Alsike vs. Red Clover.—E. T. BRYAN, Calhoun Co., Mich., says:—"I think the Alsike far superior to Red clover, for the following reasons: 1. It will stand severe drought better. 2. It is not as liable to winter-kill. 3. It will flourish on both dry and moist land. 3. The hay and pasture are far superior. 5. The stalks and leaves are green when the seed is ripe. 6. Alsike clover-blossoms are richer in honey, and bees work on them equally as well as on the common white clover. 7. It will yield as much or more hay and pasture per acre. 8. The hay is no more dusty than Timothy, the stalks being smooth and without fuzz. 9. It will usually yield three times the quantity of seed per acre, the seed growing in pods like the common white clover. In fact, it is a mammoth white clover, and of the same nature, which all practical farmers understand.

Beets for Stock.—Prof. J. B. TURNER, Jacksonville, Ill., writes the Prairie Farmer:—"I think the White Silesian beet the richest, and the Red Mangel Wurtzel the best to stand drought, and most prolific of any I have tried. We sow our beets about the middle of May or first of June, according as the season and the ground may be. Sprout it before sowing, so as to get it up ahead of the weeds; and if we can, mix a few radish seeds, which will come up quick to show the drills more plainly; cover about one inch deep in fine soil, and roll if dry. We sow and weed with our hedge-drills, in drills eight and ten inches apart. But those who sow by hand had better sow twenty inches apart, so that a horse can cultivate them, and sow about eight pounds or ten quarts of seed to the acre, and thin out to six inches apart.

The Peerless Potato.—A. W. BRIM writes us, "There are two kinds of potatoes very different from each other, claiming to be genuine 'Peerless.' One kind resembles quite closely, in shape and color, the Early Rose; the other is large, round, and has a white skin. Can you give us through the RURAL NEW-YORKER a description of the genuine Peerless?" Yes. The Peerless has a dull white skin, occasionally russeted, shallow eyes, white flesh, mealy, oblong in shape, grows large, often weighing one and a-half to two pounds. It is very productive.

Lucerne, or Alfalfa.—S. M., Sugar Creek, Ill., is informed that *medicago sativa*, called by the Spaniards Alfalfa, and by the English Lucerne, is a perennial. We do not think it so valuable in his locality for any purpose as the common red clover.

The Poultry-Yard.

POULTRY NOTES AND QUERIES.

Gapes in Fowls.—In the RURAL NEW-YORKER of April 27, a contributor thinks he can master roup in fowls by the use of homeopathic remedies. Is "roup" the disease commonly called gapes? If so, I would like to know his success, for gapes is *certainly* produced by *live* worms in the wind-pipe. I did not believe it until this year, a *post-mortem* examination revealing the fact to me, in this wise:—I held a chicken in my hand when it died; was trying to relieve it by the use of a small feather inserted into the trachea. As soon as it died, I cut off its head, opened the trachea, and found five living, squirming worms; one was an inch long; they were as large in diameter as a No. 9 needle; all were as red as blood. How can homeopathy kill these worms, and remove them so that they shall not obstruct breathing?—that is the question.—MARY H. CALDWELL.

GAPES is a trouble very different from roup. To relieve a chicken attacked with gapes, take a small quill feather, strip it, except a half inch at the extremity, dip the feather end in spirits of turpentine, and pass the feather so prepared down through the small openings of the wind-pipe of the chicken, at the base of the tongue, give it one or two turns, which will generally bring up or destroy the worms. The turpentine at once kills the worms, and its application causes coughing, during which, those that are not drawn out by the feather are expelled.

Diseased St. Lawrence Co., N. Y., Chickens.—LYMAN SEARS writes us of his chickens, which we judge have been well taken care of; yet they are diseased. He says:—"The first symptoms are drooping and dumpishness; stand very erect when standing; appetite not very good; in about three days the crop will be distended and hard, the skin being generally black; in three days more a hole will appear in the crop, from which the food will come out—in one case the whole crop, skin and all, came out, leaving the breast bone bare. The flesh is black, with a very offensive smell; this one would pick up corn and swallow it, and it would drop out on to the ground. Six have died, or rather I have killed six within the last three weeks. Now if any one knows what is the trouble, and a remedy, they will confer a great favor by telling me?"

Game Fowls.—J. F. JOHNSTON writes: One of your correspondents says—"If we keep fowls for beauty, keep Hamburgs." Right, so far as it goes; but why not add the graceful and sprightly Game, Earl Derby, Sumatra Pheasant, Spangled, &c., &c., or the no less beautiful White-topped Poland? If one has no eye for beauty and wish bulk of carcass, then the Asiatics, unwieldy of course as they are, are the birds. But as for a fowl which is the best for all purposes, or which combines all good qualities—opinions, of course, vary—I choose the Game as approaching nearer than any other to a perfect bird. They are hardy, good layers, good mothers, not equalled for meat by any other, and for beauty—where is there combined in one bird of any other breed, so much grace of movement, beauty of plumage and symmetry of form?"

Buff Cochins as Winter Layers.—D. W. H. (page 297) asks "who have tried them to say if the Buff Cochins are good Winter layers, and why they are never recommended for profit?" Yes, they are good Winter layers; but they should be kept but one year; or if kept a second year the older ones should be separated from the younger ones and fed more sparingly, as they are liable to get too fat to lay well. They are never recommended for profit simply because they will recommend themselves. Defective poultry, like defective implements, require to have their strong points shown up and illustrated in order that their weak ones may be less visible. The Buffs are one of the few kinds of "substantials" which only require to be known to be appreciated.—FARMER, *Mystic Bridge, Conn.*

Silver-Spangled Hamburgs.—C. F. TYLER wishes to know what quality Silver-Spangled Hamburgs have to commend them except beauty. I can say, emphatically, they have every quality, except size. They are very hardy, will endure confinement well, and will lay more eggs than any other breed of fowls known. (I speak from experience and observation.) They are non-sitters. My largest weigh:—cocks, six pounds; hens, five pounds. They lay a medium sized egg. Their flesh (what there is of it) is full as good as the much-lauded Brahma. Could they be bred a little larger, they would combine all the good qualities. They might be bred larger if breeders would take the same pains with them in that respect they do with Brahmas and Cochins.—A. Y. VAN EPPS.

A Hen that Over-Lays.—I have noticed in the RURAL NEW-YORKER remedies for almost all diseases that poultry is heir to, with one exception. I have a pure-bred Partridge Cochin hen that a few weeks back took a notion to lay two eggs a day; since that time it has averaged three eggs in two days, some thereof being soft-shelled. I cannot account for it, but believe that it will eventually wear down the hen and cause it to die. My hens are constantly supplied with sand, lime, and broken bone. Will you please state a remedy, or at least the cause, and a preventive? The hen appears hearty and lively, and at the time of writing weighs ten pounds.—SUBSCRIBER, *Schoeneck, Pa.*

SOME attribute such results to over-feeding. We have no well established theory in relation to the matter, and shall be glad to hear from intelligent correspondents, in response to the above inquiry.

Egg-Eating Hens.—A writer in the Journal of Horticulture advises:—Any one who is troubled with hens eating their eggs, to break an egg and dust the contents with fine Cayenne pepper, turning the egg round, so as to get the pepper before the yolk, if possible, and leave the egg in the offender's nest. Or, if he catches her in the act of eating an egg, let him drive her away quietly, and place pepper in the remainder of the egg, endeavoring, as stated above, to get the pepper underneath. He will very soon see her running furiously about with distended beak. If one dose is not sufficient, administer another, a little stronger; but one dose has proved to be a perfect cure.

Hens Losing Feathers.—My hens are losing their feathers, and have done so for three years past. They begin to shed them in March, and get almost entirely naked during the summer. What will prevent or remedy it?—A RURAL SUBSCRIBER.

Do you give them any animal food and lime? If not, you should—plenty of it.

The Diseased Fowls in Texas.—(See RURAL March 30, page 212.) If your subscriber at San Antonia, Texas, will apply lard twice a day for two or three days, I will insure a cure.—A SUBSCRIBER, *Arkadelphia, Ark.*

Nest Building.—I should like poultry fanciers of experience to state the best method of nest-building for hens. Should they be elevated or made on the ground? In either case what are the advantages?—H. W. DEWS.

Gapes in Pennsylvania Chickens.—Sharon, Pa., subscriber, is informed that his chickens have the gapes. See articles on the subject in back and future numbers of the RURAL NEW-YORKER.

Partridge Cochins.—B. A. K. asks Mr. VAN WINKLE to give his experience with "Partridge Cochins" through the RURAL NEW-YORKER.

There's no use o' Talking.—We don't intend to advertise any body's Japanese Bantams, or any other fowls without pay for it.

Domestic Economy.

ODDS AND ENDS.

Egg Plants, or Vegetable Eggs—Are used in their green state—that is, while the seeds are soft and white. They will do as soon as they are large enough; but economy suggests that they be full size before pulling. Pare off the outside rind, cut around in slices one-quarter of an inch in thickness. Have on a dish equal portions of salt and pepper, which must be rubbed with the fingers on to each side of the slices; then roll in flour and fry on a buttered griddle. When brown on both sides they will be soft and ready to eat while hot. They make a nice breakfast dish, and are a substitute for meat.—MRS. C. BLAIR, *Crawfordsville, Ind.*

How to Put up Pickles for Market.—A lady at Neosho, Mo., asks some of our correspondents to tell her how to put up pickles for market well and profitably—all the ways of keeping them, what to put them in, etc., and if it will pay to put them up in salt in kegs or barrels at 40 or 45 cents per gallon. Where can she get cider vinegar? Is there a rule for making whisky pickles? How are peppers pickled? These are her questions.

The Apiarian.

REPLY TO MR. MOORE.

WE did not intend to make any reply to anything that Mr. MOORE might have to offer in regard to our answer to his attack upon us, in the RURAL NEW-YORKER of March 2d. But we find so many misstatements in his article published in the RURAL of April 27th, that we cannot pass them unnoticed. Let us examine the "facts" as submitted by him in said article.

1. In our article published in the RURAL of February 10th, in referring to the hive we had previously described, we said:—"It possesses more advantages, with fewer objections, than any patent hive we have ever seen, in our opinion. Remember, we always mean the latter, if we do happen to forget to say so." In the RURAL of March 2d, after asserting we had described a Langstroth Hive, he says:—"I then found he meant the *latter* (patent hive), though he *forgot* to say so." Yet he would make our readers believe that he quoted from our article as it was printed. Does Mr. M. want the credit of making us correct the printers' mistakes? It seems he would like to make it look as though we were not honest enough to do so.

2. In answer to his "query," we will only say that he has repeatedly *told us* that it was Mr. LANGSTROTH.

3. As a "clincher" he says the hive in question is described in the "Hive and Honey Bee," published in 1859. We know it is an easy matter to make assertions; but we demand the proof. We challenge Mr. M. to produce a word that describes the hive we delineated in the RURAL of Dec. 16th, 1871. Mr. M. makes a quotation from LANGSTROTH to show that this hive was in use thirteen years ago. Does the simple fact that Mr. L. mentioned a two-story hive prove it was in use then? The only illustration of a two-story hive in his work plainly shows Mr. L.'s idea of such a hive to be wholly unlike the one we described. Mr. M. will have to try again, for it don't *clinch* worth a cent.

4. To fortify his position he quoted from the pen of one who has an *ax to grind*. But do such assertions *prove* anything? Although friend M. infers that we know nothing of what we are writing about, we can inform him that the principle of the two-story hive was known and *described* more than twenty-two years ago, which was previous to the first issue of the "Hive and Honey Bee."

5. We had received many inquiries from the readers of the RURAL asking our opinion of a good hive; and we finally consented to give our views through these columns. We should not have said a word in regard to patent hives, had not our opinion been repeatedly called for. Mr. M. seizes the opportunity, occasioned by a typographical mistake, to make an ungentlemanly attack upon us; making assertions he can not sustain. We have no personal interest in the hive in dispute; but have ever given advice with a view to benefit the great mass of bee keepers who wish to learn how to make their bees a source of income; and, judging from the many letters of commendation we have received from our readers, we should say that our efforts have not been altogether unsuccessful.

HERBERT A. BURCH.
South Haven, Mich., May 2d, 1872.

"ARTIFICIAL SWARMS."

WHEN artificial swarms are made, as described by "M. C.," on page 282 of RURAL NEW-YORKER, the queen should be left in the lower hive, or new swarm, and the upper, or parent hive, supplied with a fertile queen, or, at least, a sealed queen cell, after being removed to the new stand. Unless this is done, one hive will be left without a fertile queen from fifteen to twenty days. If the parent hive is left queenless, the cells occupied with brood will be filled with honey as fast as bees hatch; and unless emptied, there will not be the room for brood there should be. Had a queen been given, eggs would be deposited in cells, and the honey stored in boxes. Should the new swarm be left queenless, all comb built, until they have a queen, will be drone comb; and it will not make a good stock hive. I prefer waiting until natural swarms *should* issue, then place half the combs, with adhering bees, in new hive, filling up both hives with empty frames placed between the combs, so as to secure straight combs on frames given. I give a fertile queen to a new hive, after placing it on stand. When a new hive is set up in the same apiary, or within range of flight of an old hive, combs should be selected so as to give the new hive two-thirds or more of the brood, as a good many bees will return to the old stand. I have hived natural swarms without having them cluster before hiving, as follows:—The queen's wings having been previously clipped, and a hive in readiness, as soon as swarm begins to issue, look for queen in front of hive. As soon as bees commence returning, put the queen on alighting board, and the swarm will enter the hive; after which, remove the hive to a new stand, and replace parent hive on its stand.

Rochester, Pa. J. E. MOORE.

Entomological.

ENTOMOLOGICAL NOTES.

Breeding or Hatching Butterflies.—I wish some Naturalist would inform me how to breed or hatch butterflies from the egg.—N. P. SANGBORN.

To breed butterflies successfully, one not only requires a thorough knowledge of the habits of each species, but a place in which to confine the sexes until the eggs are laid. The eggs must then be kept where they will not be injured by severe changes of temperature, or too wet or too dry. With our native butterflies it is not so difficult a matter as with foreign species, although some of them do not bear confinement very well. When the eggs are hatched it is not difficult to rear the larvæ, provided we know what kind of food they require, for they may be confined in fine wire or gauze cases, and fed until they change to chrysalis. By a little observation and a few experiments you can soon learn to manage the most common species, but there are thousands of species, and each has its own peculiar habits, all of which must be learned before you can become an expert in rearing butterflies from the egg.

Wire-Worm in Corn.—J. B., Tioga Co., Pa., asks for a remedy for wire-worm in corn. The best we know of is to dip the seed corn in diluted tar, when warm, and roll it in plaster to dry it, before planting. Another mode which is pronounced successful, but which we have never tried, is to put the corn in a strong decoction of copperas water—one pound of copperas to sufficient water to cover a half-bushel of seed—at noon, the day before planting. When ready to plant, take out the corn—say a peck—add one pint or more of soft soap, stir thoroughly, and then add plaster enough to dry it and keep it in condition for planting. It is asserted by a correspondent who has tried it, that this will not only prevent the ravages of the wire-worms, but "will increase the crop more than thirty per cent. on some kinds of soil." We are not prepared to believe the latter assertion, however.

Killing Minute Insects.—I wish to know the best manner of killing minute insects, without deforming them, so as to be examined with a microscope.—A FRIEND OF THE RURAL.

PLACE them in any vial, or where the fumes of ether or camphor can be introduced and confined for a few moments. Do not touch the insects with any liquid, for this is not necessary; a drop of ether or a lump of camphor can be introduced without coming in contact with your specimens. Mount them upon your glass slides with Canada balsam.

White Worms in Soil.—"VIOLET" writes that the soil in which her home plants are growing is filled with white worms, and wants to know the cause. Of course, we cannot tell without knowing more of the soil and circumstances, but would suggest watering the plants with tobacco water; and if it does not destroy the worms, stir a little sulphur into the soil about the roots of the plants. The worms certainly do the plants no good, and it is best to destroy them.

Killing Grasshoppers.—An Australian newspaper says that the practice has been very successfully adopted in gardens, of sowing rows of common larkspur, the leaves of which attract grasshoppers at once, and when eaten is certain death to them—and that thousands of grasshoppers have been thus seen lying dead—all of which may or may not be true. We cannot say that we believe it. Let some one try this season.

To Destroy the Cotton Worm, a correspondent of the Southern Cultivator says apply a solution of arsenic in water, sprinkled upon the plants by means of a common garden watering pot. Two pounds of arsenic to three pork barrels of water is the proportion, and this, it is said, will be sufficient for one acre of plants.

Arboricultural.

THE BRAZIL NUT.—(Bertholletia excelsa.)

THE *Revue Horticole* says the fruit of the *Bertholletia excelsa* is commonly called the "Monkey's Pot," which name is also given to the *Lecythis ollaria*. This arises from the fact that its form suggests that idea, and because the monkeys eagerly devour the seeds contained within it, drawing them out through an opening at the top of the fruit, which they enlarge if necessary. The fruit, which seldom reaches us entire, is surrounded by a kind of thin, green shell, at the bottom of which is an exceedingly hard woody covering, enclosing a number of irregularly triangular seeds not unlike a slice of a melon cut away a little on one end. These seeds are shut up in a woody, wrinkled, brown coat, which, though rather thin, is very tough. When fresh they are good to eat, having a flavor somewhat like that of the hazelnut or walnut; but as they become old the decomposition of the large amount of oil they contain causes them to taste rancid.

According to HUMBOLDT and BONPLAND the fruit is about the size of a child's head, being from 3 to 5 inches in diameter. Some are oval-shaped and others rounded but depressed above and below. The fruit consists of a woody capsule, valveless, covered with a thick, fleshy rind, which shows slight traces of four or five rounded angles that it had in its ovarian state. The lid at the top is very small, and unlike that of the fruit of the Lecythis, falls inside the capsule instead of outside. When the fruit is ripe, and the partitions of the cells have gone, there appear sixteen to twenty bony, wrinkled, kidney-shaped seeds, a little flattened on the inside. The kernel consists of a fleshy, whitish, inseparable, homogeneous substance.

In December, 1821, "I saw the *Bertholletia* flowering at Cayenne. This was the second time it had flowered, but no fruit arose therefrom, which was most likely due to the youth of the plant, although it was then twelve years old and 40 feet in hight. There are but few homes at Cayenne which have not some of these trees. The fruit which I have examined and drawn came from Brazil. The Portugese of Para send yearly a large quantity of the seeds of the *Bertholletia* to Cayenne under the name of Touka, and this name has been also given to the trees which have sprung from them. These seeds are sold at the Cayenne market. As long as they are fresh they are equally as good as our sweet Almonds, but they turn rancid very quickly." These fruits, which are called also Brazil Chestnuts, and to which the natives give the name of "invia," furnish a very large amount of oil for burning.

This is what M. BONPLAND has to say about it:—"We have been very fortunate, M. HUMBOLDT and I, in finding some of these kernels during our voyage upon the Orinoco. For three months we lived only on bad chocolate, on rice cooked in water, always without butter and often without salt, until at last we got a large number of the fresh fruits of the *Bertholletia*. It was in June, and the Indians had just made a harvest of them. These kernels are of a most exquisite flavor, especially when they are fresh. The tree came originally from Brazil, but it is also to be found in Spanish America, where it forms forests upon the banks of the Orinoco."

ARBORICULTURAL NOTES.

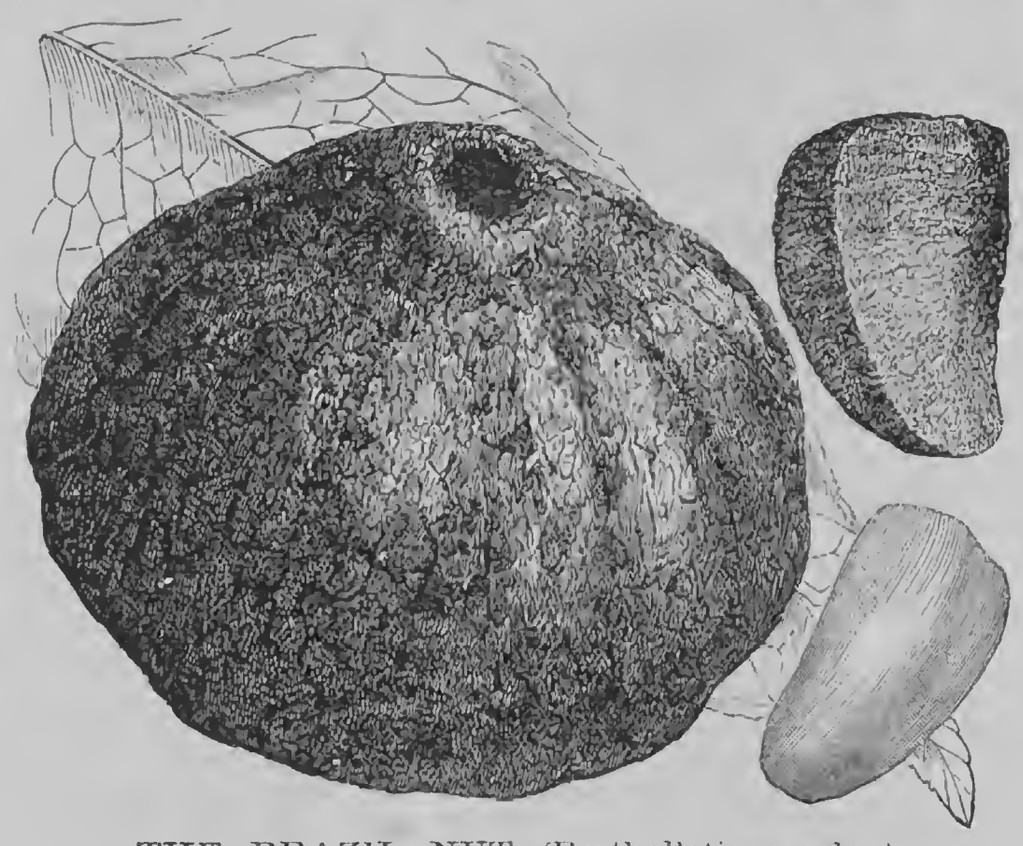
Flow of Sap in Maple Trees.—It would please a number of your readers, who have not had a very extensive education, but who, nevertheless, are wise in their own conceit, to have the following question answered:—"In tapping a maple tree, does the sap come from below or above?" Will you be so kind?—H. J. PAGE.

As soon as the earth thaws in Spring the roots imbibe water. This is carried upward, meeting in its course the elaborated sap of the previous season, which imparts to the crude sap the sweet taste observed in the maple and many other species of trees. Were it not for the presence of this elaborated sap of the previous season, we would get no sugar from it by boiling. Now the liquid portion of the sap certainly comes from the earth in Spring, but it may have passed far above the point where the tree is tapped, and then descended again at the time this operation is performed. We are well aware that many persons believe that the sap of trees descend into their roots in winter; but this is an error, there being no more sap, either crude or elaborated, in the roots at one time than another, unless we except the few days which may elapse between the thawing out of the roots before the stem and branches. The sap may liquify in the roots before it does in the stem, and *vice versa*; for it is a well known fact that a large amount of water (crude sap) is always present in the living tree, whether it be frozen or otherwise; but it is not so abundant as to insure a rapid flow from wounds except in early Spring. Of course we are now speaking of our northern deciduous trees. When a maple is gorged with crude sap in Spring, the flow will be in all directions into any wounds made. To prove that sap will flow crosswise of the grain we have only to cut out small sections of the wood alternately around the stem, and in such a manner that every continuous line of cells from the root upward is severed, and then we will find that the tree still has the power of sending up its crude sap to the leaves, where it will be assimilated and again returned downward, depositing organized matter in the form of cells as before.

The Uses of Willow Wood are thus stated by the Cabinet Maker:—In England, there is no wood in greater demand than sound willow; it is light, smooth, soft, tough, will take a good polish, and does not easily burn. It will bear more pounding and hard knocks, without splinter or injury, than any known wood, and hence it is used for cricket bats, and whenever it can be obtained, for the floats of paddle steamers, "strouds" of water wheels, brake-blocks for luggage and coal trucks, the sides and bottoms of carts and barrows, where wear and tear are greatest. To the wood-turner it is invaluable, and were it grown as timber, and obtainable, it would be used for many purposes to which foreign timber is now applied, and that, too, with considerable advantage both to producer and consumer.

Winter Apples in Northern Indiana.—C. C. B. has an opinion that it will be found profitable to plant eight or ten hundred choice fruit trees—apples of best winter varieties, cherries and pears best adapted to that climate. We do not apprehend that any less fruit is to be eaten hereafter than heretofore. And good winter fruit ought to be as valuable in Indiana as in any State in the Union.

Ants on Peach Trees are regarded by a writer in the Boston Cultivator as his best friends, he asserting that they destroy the lice that cover the young and tender leaves.



THE BRAZIL NUT.—(Bertholletia excelsa.)

Scientific and Useful.

IMPROVEMENT IN TELEGRAPHY.

Telegraphing Two Ways, Simultaneously, on a Single Wire.

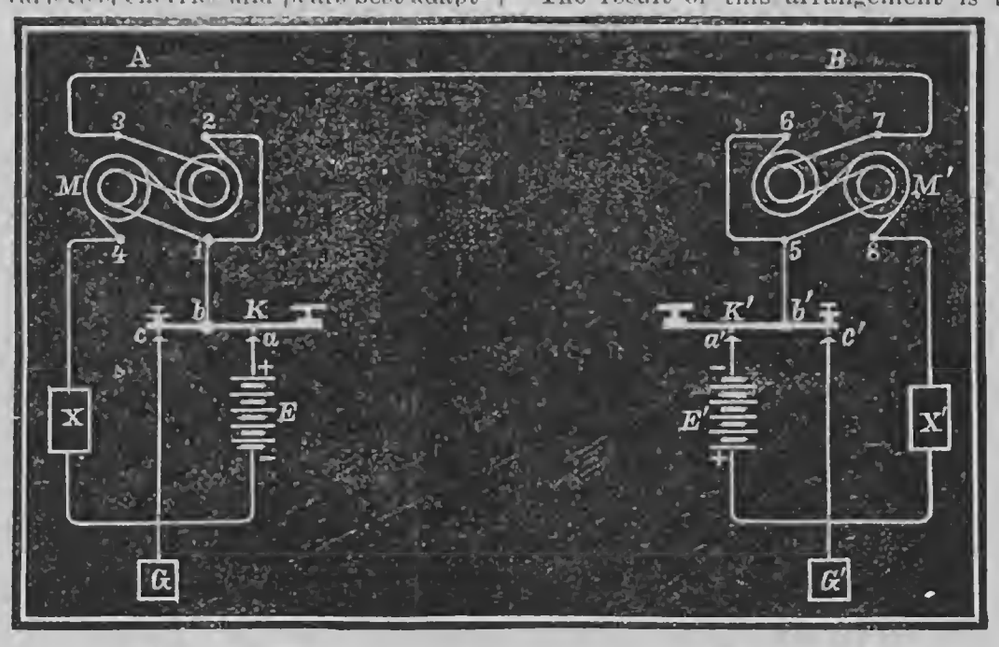
NOT long since we announced that means had been discovered and devices made whereby messages could be sent over a single wire, in opposite directions, at the same time, thus doubling the working capacity of present telegraph lines. We find in the Pacific Rural Press the accompanying diagram and description, showing how this is done:

In the ordinary manner of transmitting signals from one station to another, as from *K* to *K'*, as shown in the accompanying illustration, when the key at *K* is depressed and contact made at *a* with the *positive* pole of the battery, *E*, a signal is made to pass on through *b* 1, and the relay *M* to 3, over the line *A B*, through 7 and the relay *M'* to 5, to *b'* and the *negative* pole, *a'*, of the battery, *E'*. The ground wires *c G* and *c' G'* being adjusted to take the place of the return wire, which was employed, as above said, on the earliest telegraphs. On a main wire, so adjusted, a signal could be sent only one way at the same time. The modification of the device by which it is made possible to transmit signals both ways at the same time is as follows:

In the ordinary device the relays *M* and *M'* were wound with *single* wires in *one* direction; but in the double transmission system, which we will now describe, they are wound with *two* wires in *opposite* directions. The second wire passes from 1 through 2 around relay *M* to 4, thence through a "resistance coil," *X*, to the ground wire, *c G*.

A similar arrangement is connected with the opposite station at *B*, as shown, where, however, the positive pole of the battery is connected with the ground.

The result of this arrangement is that when a current is sent from the battery, *E*, it is divided at 1, one-half passing through the relay, *M*, by the wire wound, say from left to right, and *via* 1 and 3 to the main line of wire, *A*, and station at *B*; while the other half passes through the relay by the wire wound from right to left and *via* 2 and 4 through *X* to the ground wire *c*, *G*. The same connection and division of currents will be noticed by the corresponding lettering of the station at *B*—the half current passing thence to the station at *A*.



TELEGRAPHING BOTH WAYS, SIMULTANEOUSLY, ON A SINGLE WIRE.

It is by this *division* of the electric current—one-half going to the ground and the other over the wire—that it is found possible to send messages both ways at the same time, without any interference of the one with the other.

It must not be understood, however, that any portion of the signals are conveyed by the *ground current*. All the signals pass and repass over the one main wire. The philosophy of the thing is well understood by such electricians as have made the subject a matter of study; but it is rather too abstruse to be clearly defined to the ordinary reader.

In the practical working of the system two instruments are placed upon a table, at each end of the line, one of which receives, while the other simultaneously sends messages—a low partition being placed across the center of the table, between the receiver and sender, to prevent the sound of the instruments from interfering with each other.

Only one condition is requisite to the perfect working of the system, and that is that the current must be equally divided at 1 and 5. This result is secured by an ingenious adjustable arrangement at the two points of resistance, *X* and *X'*. It would be difficult to explain this principle, or the adjustable nature of this resistance, or "rheostat" as it is technically called; but the device is perfectly familiar to every electrician. If a wire, say 100 miles in length between two stations, is in perfect working order, the "rheostat" (*X*) must be equivalent in its resistance to the resistance encountered by a perfectly insulated wire of that length. But if by reason of unfavorable weather, or imperfect insulation, a greater resistance is encountered on the main wire, making it equivalent to say 150 miles in length, the extra 50 miles can be instantly applied to *X*, and the balance be thus kept constant and equal.

USEFUL AND SCIENTIFIC NOTES.

To Polish Oak.—Slightly oil the work with linseed oil, and then rub off; then make a paste of whiting and paraffine oil, colored with yellow ochre, or something darker if necessary for the color of wood. After the wood is well filled in with this paste, it must be well rubbed off clean, and let stand two or three hours before the polish is applied.

To Get Rid of Ants, the following mode is recommended:—"Place a fresh meat bone where the ants can get at it, and they will flock to it in large numbers. When they are on it, dip it in hot water; repeat it a few times and the ants will have disappeared."

Pomological.

POMOLOGICAL GOSSIP.

The Matthews Apple.—Dr. J. STAYMAN, Leavenworth, Kan., writes as follows to the American Agriculturist, concerning this fruit:—"This is an apple of great promise, being very beautiful and perfect. It originated in Nelson county, Virginia, on the farm of Mr. MATTHEWS, and was first introduced to the public by TYREE DOLLINS of Albemarle Co., Va., from whom we received specimens at the meeting of the American Pomological Society at Richmond, Va., September last. Tree, a stout, upright grower, with light-colored bark. Fruit, medium to average; weight, from six to ten ounces; form, round, slightly conic; skin, smooth, rich waxen yellow; dots, large, scattered, whitish or gray; stem, medium, slender; cavity, wide, deep, green; eye, small, closed; basin, rather narrow and shallow, furrowed; core, large, round, open; carpels, large, hollow; seeds, medium, ovate, plump, dark; flesh, yellowish, very tender, juicy, pleasant sub-acid; quality, good to very good; season, October to February."

Cranberry Culture.—In reply to the inquiry of T. M. ROBINSON of Colorado, in regard to the probabilities of successful Cranberry culture in that region of country, we must refer him to the authorities on that subject. See our book list.

Fig Culture in California.—W. H. HAYNIE, in the Sacramento Farmers' Club, said that the white Smyrna Fig could be grown and cured as well in that State as in Smyrna or any of the countries of the Mediterranean. They cannot be imported at less than 28c. per lb. He estimates that an acre of fig trees 10 years old will produce 30,000 pounds of figs.

Farm Economy.

WILLOW BASKET-MAKING.

CAN you not induce some of your German readers who know how to make willow baskets—such as are so useful in all domestic and farm affairs—to give instructions thereon through your excellent paper? It would be of great service to some of us, who have plenty of willows and occasional time, which we would gladly utilize.—R. M. HOPKINS.

WE shall be glad to receive such contributions from any practical basket-maker. Meantime, we copy the following, with accompanying illustrations, from one of Loudon's works:—One year's shoots of the common willow, or of some other species of that family, are most generally used. The shoots are cut the preceding Autumn, and tied in bundles, and if they are intended to be peeled, their thick ends are placed in standing water to the depth of 3 or 4 inches; and when the shoots begin to sprout in Spring, they are drawn through a split stick stuck in the ground, or an apparatus consisting of two round rods of iron, nearly half an inch thick, 1 foot 4 inches long, and tapering a little upward, welded together at the one end, which is sharpened, so that the instrument may be readily thrust through a hole in the stool, or small bench, on which the operator sits. In using it, the operator takes the wand in his right hand by the small end, and puts a foot or more of the thick end into the instrument, the prongs of which he presses together with his left hand, while with his right he draws the willow toward him, by which the bark is at once separated from the wood; the small end is then separated in the same manner, and the peeling is completed.

Every basket consists of two parts—the framework of the structure, and the filling-in or wattled part. The principal ribs in common baskets are two—a vertical rib or hoop, the upper part of which is destined to form the handle; and a horizontal hoop or rim, which is destined to support all the subordinate ribs on which the wands are wattled. The two main ribs are first bent to the required form, and made fast at their extremities by nails or wire. They are then joined together in their proper position, the one intersecting the other; and they are afterwards nailed together, or tied by wire at the points of intersection.

The operation of wattling is next commenced, by taking the small end of a wand and passing it once or twice round the cross formed by the points of intersection; after which one, or perhaps two, secondary ribs are introduced on each side of the vertical main rib. The wattling is then proceeded with a little further, when two or more secondary ribs are introduced; and the process is continued till a sufficient number of subordinate ribs are put in to support the wattling of the entire structure. The whole art, as far as concerns the gardener, will be understood from the following figures:

Fig. 1 shows the handle and rim of what is called the Scotch basket, made fast at the points of intersection.

Fig. 2 shows the same skeleton, with the ribs of one side added and the wattling or woven work commenced.

Fig. 3 represents the commencement of what is called the English mode of basket-making, in which three parallel rods of two or three feet in length, according to the intended diameter of the bottom of the basket, are laid flat on the ground, and single rods are tied around the whole, fastening them closely together at the center, as shown in

Fig. 4. Then the material is interwoven through these central rods, so as to make a complete star of them, as shown in

Fig. 5, which is the upper side of the bottom.

Fig. 6 shows the lower side.

Fig. 7 shows the bottom complete, the under side of it being uppermost.

Fig. 8 shows the bottom turned upside down, the points of some of the radiating ribs cut off, some of the rods which are to form the side ribs inserted, and the side weaving commenced.

Fig. 9 shows the basket nearly completed, with part of the rim finished, and the rod on which the handle is to be formed inserted.

Fig. 10 shows the rim completed and part of the handle plaited.

FIG. 10. FIG. 9. FIG. 8.

ECONOMICAL NOTES.

Dissolving Bones.—Mr. PATTEE, Warner, N. H., at a recent Agricultural Convention, gave the following formula for reducing bones:—Place them in a large kettle, mixed with ashes and about one peck of lime to a barrel of bones. Cover with water and boil. In twenty-four hours all the bones, with the exception, perhaps, of the hard shin bones, will become so much softened as to be easily pulverized by hand.

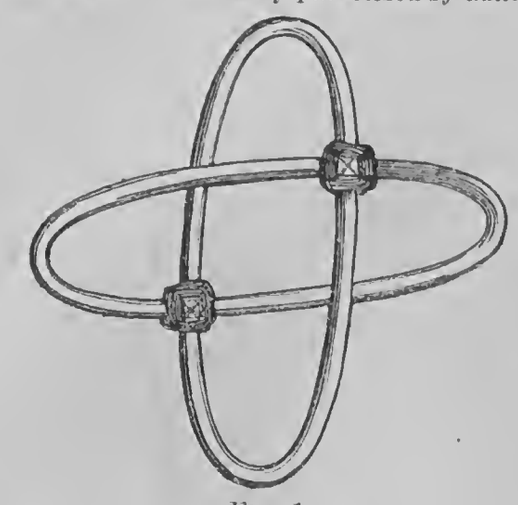


FIG. 1.

They will not be in particles of bone, but in a pasty condition, and in excellent form to mix with muck, loam or ashes. By boiling the shin bones ten or twelve hours longer, they will also become soft. This is an easy and cheap method of reducing bones. If the farmer will set aside a cask for the reception of bones in some convenient place, and throw all that are found on the farm

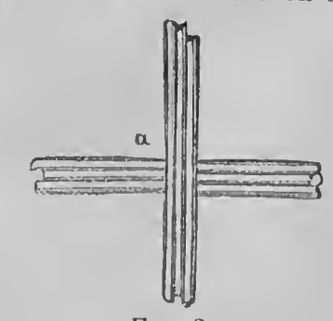

FIG. 3.

into it, especially if one or two dead horses come into his possession, he will be likely to find a large collection at the end of the year, which would prove a valuable adjunct to the manure heap.

Cotton Seed as a Fertilizer.—Mr. G. G. Zenor, a planter near Pattersonville, Louisiana, last year made 65 hogsheads of sugar from 35 acres of old prairie land. From 12 acres, fertilized with cotton seed at the rate of $15 per acre, he obtained 35 hogsheads, or nearly 3 hogsheads per acre. The remaining 23 acres produced 30 hogsheads, or less than 1⅓ hogsheads per acre. This surplus product of 1⅔ hogsheads, about 2,000 pounds per acre, involved an additional cost for fertilizers of about three-quarters of a cent per pound.

Decomposing Corn Stalks.—M. G. F., Conneaut, O. Treat your corn stalks and stable manure as follows:—Lay a layer of muck, then of corn stalks and manure mixed with lime, then muck, then lime and manure again, thus alternating and covering the whole with muck. In thirty days pitch the entire heap over, mixing it together, and do it once a month until it is ready to use.

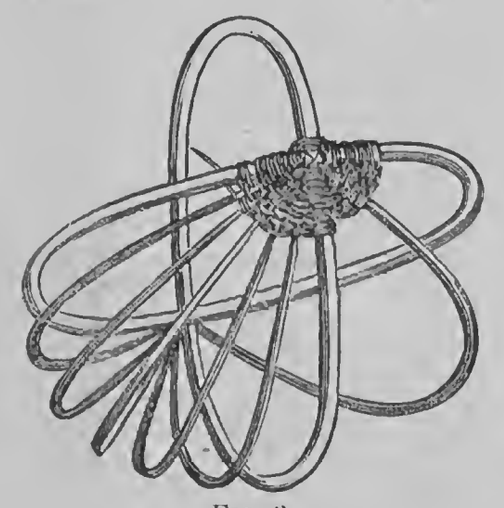

FIG. 2.

Thomas' Smoothing Harrow, B. C. WILLIAMS is informed, has 81 teeth made of steel rods one half inch in diameter, hardened and set in 2 by 2½ inch oak, slanting backwards at an angle of 25 degrees. The

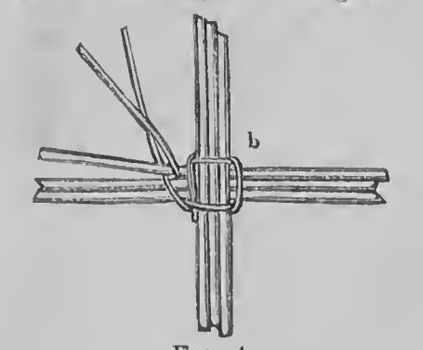

FIG. 4.

harrow is in the form of three gates fastened by hinges. The teeth are always bright and clean, never clog, cut through instead of pushing the lumps aside. It is an excellent implement.

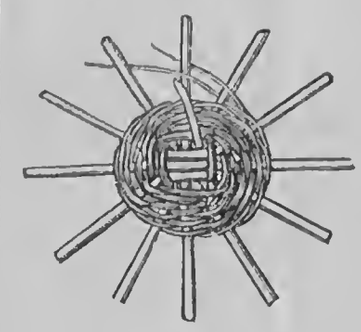

FIG. 5.

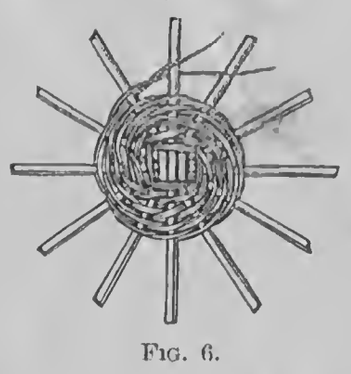

FIG. 6.

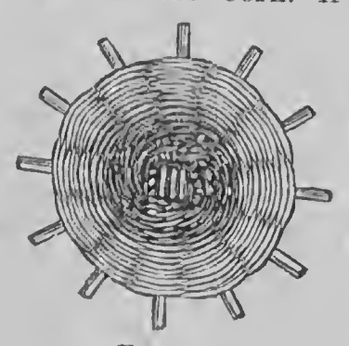

FIG. 7.

Fresh Horse Manure for Corn.—If we had fresh horse manure and desired to apply it to corn ground, and that corn ground was green ground, and a stiff soil, we should spread it on the land just before plowing and turn it under about four inches deep, following the surface plow with a sub-soil plow, of course. If it is old land we should apply in the same manner. We have seen excellent results, however, by spreading on sandy soils after last hoeing.

Industrial Societies.

INDUSTRIAL SOCIETIES.

Connecticut River Valley Ag. Soc.—Officers elect for 1872: *Pres.*—Capt. CHESTER PIKE, Cornish, N. H. *Vice-Pres'ts*—Hon. John G. Sinclair, Littleton, N. H.; Samuel Cratt, West Lebanon, N. H.; Robert Elwell, Langdon, N. H.; Alexander McLane, Fairlee; D. S. Pratt, Brattleboro; Thos. E. Hatch, Keene, N. H.; Wm. Clark, Claremont, N. H.; Daniel F. Tillottson, Orford, N. H.; Henry F. Arms, Springfield; Fenelon Arnold, Westminster; Samuel Walker, Charlestown, N. H.; D. E. Fisk, Shelburn, Mass.; H. A. Stockbridge, Hadley, Mass.; John Johnson, Bradford. *Treas.*—Chas. W. Pierce, Orford. *Sec.*—D. E. Willard, Orford. *Ex. Com.*—C. Pike, Samuel Cratt, Geo. H. Stowell, Alexander McLane. Fair, Sept. 17-19.

Kennebec, Me., Union Ag. and Hort. Soc.—Officers elect: *Pres.*—J. M. CARPENTER, Pittston. *Vice-Pres'ts*—N. Foster, Gardiner; W. P. Atherton, Hallowell; Z. H. Blinn, Dresden. *Treas. and Collector*—John Stone, Gardiner. *Sec.*—S. Smiley, South Gardiner. *Trustees*—J. M. Carpenter, Pittston; W. R. Wharff, Gardiner; D. Lancaster, Farmingdale; S. Lord, Hallowell; S. L. Boardman, Augusta; J. W. Robinson, Litchfield; John Knox, W. Gardiner; A. N. Douglass, Chelsea; J. D. Willard, Dresden; J. B. Beedle, Richmond; H. H. Northey, Whitefield.

Shawnee, Kan., Ag. Soc.—Officers elect for 1872:—*Pres.*—H. T. BEAMAN. *Vice-Pres.*—E. Carriger. *Sec.*—W. J. Stagg. *Treas.*—C. W. Jewell. *Directors.*—S. H. Johnson (at large); C. W. Higginbotham, Rossville; W. F. Johnson, Silver Lake; G. H. Macauley, Soldier; A. Washburn, Topeka; G. W. Spencer, Tecumseh; A. G. Miller, Monmouth; G. W. Berry, Williamsport; W. C. Hoagland, Auburn; E. G. Moon, Dover; Jas. Swan, Mission; B. B. Van Horn, A. M. Coddington, A. J. Ryan, and A. J. Huntoon, Topeka City.

Western Pa. Poultry Soc.—Officers for 1872:—*Pres.*—JOHN KENNEDY, Pittsburg. *Vice-Pres'ts*—E. Gregg, Pittsburg; Dr. A. H. Gross, East Liberty; Frank Ardary, James Lockhart, and W. A. Reed, Pittsburg; James Blythe, Robert Henderson, and B. F. Holmes, Alleghany City. *Treas.*—C. A. Stevens, Pittsburg. *Cor.* and *Rec. Sec.*—C. B. Elben, Lock Box 303, Pittsburg.

The Woolen and Cotton Manufacturers of the West will hold their annual exposition in Chicago in August 6-9. We hope to have a large gathering. We invite the wool growers, and trust a more cordial feeling may be inspired between the grower of wool and the manufacturers, by becoming better acquainted with each other; their interests are mutual.—G. S. B.

The Bureau of Agriculture of Tennessee consists of six Commissioners—two from each grand division of the State. They are appointed by the Governor. The appointees are:—Thomas Crutchfield, Chattanooga; Hunter Nicholson, Knoxville; W. H. Jackson, Nashville; J. B. Killebrew, Clarksville; R. B. Hurt, Jackson, and A. B. Haynes, Memphis.

West Somerset, Me., Ag. Soc.—Officers elect for 1872: *Pres.*—SAMUEL W. TINKHAM. *Vice-Pres.*—Luke S. Muntor. *Sec. and Treas.*—Asa W. Moore. *Marshal*—Wm. W. Waugh. *Trustees*—Wm. W. Waugh, Otis M. Hilton, David Stevens, 2d, David Elder, John Heald. Fair at North Anson, Oct. 1-2.

Pottawatomie, Kan., Ag. Soc.—Officers elect: *Pres.*—J. A. BEAL. *Vice-Pres'ts*—L. H. Crowl, Henry Short, G. A. Leland. *Treas.*—Thomas Huey, Louisville. *Sec.*—E. Walker, St. George. *Directors*—A. P. McMillan, L. R. Palmer, J. Collins, J. P. Shannon, C. C. Foot.

Republic Co., Kan., Ag. Soc.—Officers elect for 1872: *Pres.*—A. ODELL. *Vice-Pres.*—R. P. West. *Sec.*—I. O. Savage. *Treas.*—J. M. Ryan. *Ex. Com.*—W. P. Penke, John Bowersox, Abram Kindy, Joseph Booth, J. E. Van Natta, Fred. Collins, Sr., A. B. Wilder.

The New York State Ag. Soc's fair is to open Sept. 16. Utica, Elmira, and Watertown have presented their respective claims for it, which have been referred to a sub-committee of five of the Executive Committee, who are to decide May 21.

Adams Co., Ill., Bee Keepers' Ass'n.—Such is the name of a recently organized body, with the following officers: *Pres.*—W. A. BYRD. *Vice-Pres.*—E. F. Humphrey. *Sec. and Treas.*—T. Butterworth.

The Royal National Tulip Society of Great Britain holds its next exhibition in the Botanic Gardens, Old Trafford, Manchester, May 25.

The Vernon Co., Wis., Ag. Soc. holds its next fair at Viroqua, Oct. 1-4. *Pres.*—JOHN C. DAVIS. *Sec.*—G. W. Nuzum, Viroqua, Wis.

The S. W. Wis. Indus. Ass'n will hold its third annual fair at Mineral Point, Sept. 4-7.

The Adams Co., Ill., Ag. Soc. is to hold its next Fair at Quincy, commencing Sept. 2.

The Illinois State Fair is to be held at Ottawa, Ill., Sept. 16-21.

The Garden.

GARDENERS' NOTES.

Coal Ashes for Garden Walks.—The Germantown Telegraph says:—"We wish again to impress upon the readers of the Telegraph that nothing makes better garden walks than coal ashes. They are of more value for this purpose than any other that they can be applied to that we know of. Where the walk requires it, dig it out two or three inches—put the coarsest portion of the ashes at the bottom and the other on the top to the depth altogether of three or four or even six inches, and then roll well. These walks are always dry and pleasant to the feet, and are rarely troubled with weeds, and when they are, they can be readily removed."

To Exterminate Moles from a Garden a genius says:—"Dig a hole like a post hole across one of the mole holes, and in the bottom place some rags previously dipped in sulphur. Set fire to them, and, when once well on fire, cover up close with a board, and the mole hole acts as a pipe. The mole leaves."

Dairy Husbandry.

SUNDAY CHEESE MAKING.

A WAY OUT OF A GRIEVOUS BURTHEN.

SUNDAY cheese making has been very justly termed "an abomination." It is offensive to good morals and a stain which every Christian community must desire to see wiped out. The churches have from time to time appealed to the dairymen in convention to close the factories on Sunday, and take some means for doing away with what seems to Christians to be a heinous sin. These appeals have hitherto had but little force or influence, because the patrons of factories claim that no feasible plan has been presented to relieve them and the cheese makers from the difficulty.

The cows must be milked on Sunday and the milk cannot be wasted or lost. The farmers argue that there is less evil in compelling a half dozen persons to labor at the factory on Sunday than to subject the families of a whole neighborhood to work on this day. They are not provided with the necessary conveniences for making butter or cheese at the farm, and they cannot afford to employ the requisite skill for manufacturing in the dairy for this seventh part of the time. An experienced dairy woman commands high wages, and if the Sunday's milk cannot be managed at the factory, we may as well go back to farm dairying and close up our factories altogether. We admit, they say, that it is hard upon the factory hands to be tied down to work every day in the week for six to nine months of the year, but we see no way out of the difficulty. We pay a large price for manufacturing, and the relief from Sunday work on the farm is one of the compensations. We engage our factory hands with the full understanding that our Sunday milk is to be properly cared for by them. They are well paid for their labor, and it is useless to talk about keeping the milk over at the farm on Sunday. If we are forced into this measure, we shall abandon the factories, and this interest, in consequence, must perish.

We have discussed this matter with dairymen in the old dairy districts and find a very strong, and we might say, almost universal aversion against holding the Sunday's milk at the farm for any purpose. All kinds of excuses and arguments are used against it, and even though it may be clearly proved that a profit would result from turning the Sunday's milk into butter, still farmers utterly refuse to adopt the system. If the cheese factories are to be relieved, some other plan than that commonly proposed must be inaugurated.

After looking over the matter in all its bearings, we can at present see but one feasible way out of this abuse. Since the farmers insist upon hauling the Sunday's milk to the factory, that point must be yielded by the opponents of Sunday cheese making. But what shall be done with the milk after it arrives at the factory? We should advise that it be set for butter-making at the factory. It has been generally supposed that at cheese factories, as now constructed, it would be impracticable to receive milk and keep it over a day for butter-making; that the expense of erecting suitable apartments and fixtures for this purpose must preclude the idea of any such arrangement. We think this is not so. Indeed nearly every old factory, with an outlay of a few hundred dollars, could have a suitable milk room where the Saturday night and Sunday morning's milk may be received and set aside to cream. A simple "lean-to" adjoining the present milk room and communicating with it by a door, would in many cases suffice. Then the internal fittings may consist in a set of the JEWETT pans, or something similar; a simple arrangement being made to conduct the water provided at the factory so that it will have a constant flow under the pans.

With the usual spring-water constantly flowing under the pans, and with proper attention to cleanliness, the Saturday night's milk will keep sweet until Monday morning. The milk then being skimmed may be mingled with the whole milk of Sunday night or Monday morning, and a fair quality of cheese made therefrom.

Upon this plan it will be observed the factory hands on Sunday will have no work to attend to except receiving the milk as it comes in, and nearly the whole day is secured as a time for rest. We believe this system is entirely practicable and is almost wholly free from objectionable features. It is true a little more work will be required on Monday morning in skimming the milk and in churning, and in making the cheese; but as this comes but once a week, and after a day of rest, it will not be objected to by the factory hands. The making of butter one day at a factory will be of very great convenience to patrons who, under the present system, are often obliged to purchase their summer's butter at high prices, and not unfrequently have much difficulty in obtaining their supply.

In a pecuniary point the milk standing over on Sunday will be found to net better returns than for any other day of the week.

We have now more than a thousand cheese factories in the State of New York alone. Say that the number of hands to a factory, on an average, is four, and we have four thousand workmen, who, under the present system, have no day for rest or recreation during the cheese-making season. Leaving the question of morals and religion entirely out of the argument, it must be admitted by all that one day of the week is needed by the cheese-makers for restoration of muscular and nervous force. The labor at factories, as now conducted, is vexatious, exhaustive, and very hard to be borne. The cheese-makers have for years asked for relief, but could devise no way out of the trouble that would be satisfactory to patrons.

We have always been opposed to Sunday cheese-making, and have, from time to time, suggested methods by which it could be avoided, but there is no plan which so fully meets the views of farmers with whom we have consulted as that we have now proposed. We have submitted the plan to a large number of dairymen, and it meets their approval without an exception, and hence we call attention to it in this public manner.

Diary of a Ruralist.

DAILY RURAL LIFE.

FROM THE DIARY OF A GENTLEMAN NEAR NEW YORK CITY.

Ornamental Leaf Plants.—*May 7.*—I have been setting out bedding plants to form groups and borders, which, if the weather proves favorable, will make a splendid show during the summer. In the center of one large oval-shaped bed there are some strong plants of *Erianthus Ravenna*, a beautiful grass which grows ten or twelve feet high. Surrounding this there are a few plants of the "Striped-leaved Reed" (*Arundo donax striata*). The next row is entirely of strong tubers of *Caladium esculentum*, a plant with light green leaves three to four feet long and about two broad. The third row is made up of various varieties of Geraniums, which will be kept down to about one foot or a little more in hight. The fourth and last row is of Verbenas, as these answer well for a boarder. I have also planted other groups entirely of Coleuses, and think, upon the whole, we have few plants equal to them for decorating small gardens. They are easily propagated and grow luxuriantly in any good soil, making a splendid show until killed by the frosts in Autumn.

Groups made up entirely of ornamental leaf plants make a grand ornament, but I like to mix in a few with gay flowers, such as the *Geraniums*, *Salvias*, *Verbenas*, *Lantanas* and similar well known kinds, as the contrast between their bright flowers and the tropical foliage of other plants is quite unique. Among rock work the *Dracenas*, variegated *Yuccas*, *Begonias*, *Vincas*, and a host of other beautiful species and varieties may be employed to work up a beautiful picture, such as is never seen elsewhere except in the garden.

Ribbon gardening has been quite popular in England, but I think it will never make much headway in this country, as our climate is rather severe on many of the variegated leaved plants, and unless each line in the ribbon is perfect the effect is anything but pleasing. Grouping, or massing, is to my notion the best system, and with these forms one can "Come the Dolly Varden" sufficient to satisfy a pretty high style of decorative art.

A Few Beautiful Shrubs.—*May 8.*—After the long, dreary Winter, our admiration of beautiful flowers become somewhat intensified, and we hail the early Spring flowers with delight. The earliest of the flowering shrubs may not be any more beautiful than the later kind, but it is quite natural to study them more minutely, and thereby form a closer acquaintance with their merits. Among the most attractive of those in bloom at this time, I consider the following as indispensable:—*Cercis Japonica*, or Japan Judas tree. The flowers are produced in such abundance that the branches are hidden from view. The color of the flowers is a rich bright crimson. This shrub is not so rapid a grower as a native species, but it is far superior as an ornamental shrub or tree. *Pyrus Japonica*, such as the pink, scarlet or light crimson, double crimson, and other varieties, are certainly among the most showy of early blooming shrubs.

The Double Plum-leaved spirea (*Spiræa prunifolia pleno*) is the most showy of the white varieties at this season. The pink and white Dwarf flowering Almonds are old favorites, only excelled by the newer double-flowering plum (*Prunus triloba ta*). But when one begins to specify and describe the individual merits of plants, he is very likely to tell a long story; therefore, I will only name a few of the beautiful shrubs which are in full bloom, and in view from my library window:—*Andromeda floribunda*, *Cassandria calyculata*, *Caragana*, in variety; azaleas, hardy, early, Chinese sorts; Hawthorns in variety; Lilacs, many sorts; Rhododendrons, a few of the very earliest foreign species and varieties; Double Chinese apple (*Pyrus spectablis*); Double Chinese cherry (*Exochordia grandiflora*)—a grand shrub in all its proportions; *Viburnum lantanoides*.

The above may be considered as medium early, there being a few which bloom a few days earlier and are now out of flower.

Shearing Evergreens.—*May 9.*—A large pair of hedge shears is an excellent implement for shearing and shortening the small branches of evergreens, whether they are growing singly or in hedges. The past Winter has scorched so many of our choice kinds that considerable shearing is necessary to remove the dead twigs and leaves. The dry weather which has followed a dry, cold Winter, is rapidly annihilating the few plants which were alive at the opening of Spring. We have had, in this locality, but one good shower since the buds started, and all trees and plants that have been moved are suffering terribly. I have kept the shearing process in constant use, but fear that the ax will have to be applied to the roots of many fine specimens, unless we soon have more favorable weather. My lawn is so badly burnt up with drouth that no shearing is required, consequently the lawn mowers are lying idle. The drouth is even more severe than last year, as it commenced so early that we have had no chance to safely plant or transplant.

Yama-Mai Silkworms.—*May 11.*—A few weeks since I received some eggs of the *Attacus Yama-mai*, one of the Japan oak-feeding silkworms. I have kept the eggs in a cool cellar until three days ago when they were brought into my office, where they have already commenced hatching. Whether I shall succeed in rearing any of these worms is of course uncertain, but the experiment is worth trying, and I will report progress or failure from time to time. The introduced English sparrow has annihilated the much feared Ailanthus silkworm (*Attacus* [Samia] *Cynthia*, DRURY), and it is quite probable that they will do the same for any other that is reared in open air. These little pests, or friends, (it is doubtful which they will prove to be,) not only devour the worms as soon as they emerge from the egg, but also hunt the full-grown moths. A dozen sparrows chasing one moth is not an uncommon sight in our cities where these birds are numerous.

Hygienic Information.

HOW TO PURIFY THE BLOOD.

THE stomach makes blood, and the lungs give life to the blood. If an individual has two gallons of blood in his body, and the food taken into the stomach makes one pint of blood in twenty-four hours, in sixteen days he would have new blood. The human body, consisting of bones, muscles, sinews, blood-vessels, organs of reproduction, nutrition, respiration, and of thought, etc., is constructed, nourished and sustained in accordance with certain laws common to organized beings. It is made up of the elements that surround us, such as animals, vegetables, and water. These substances, taken into the stomach, undergo the process of digestion, and the chyle, or nutritive portion, enters into the composition of the blood, and by this means is brought in contact with all parts of the system. Our bodies are always undergoing change, constantly wearing and wasting away, and constantly supplied and repaired by food, drink, and air; particles are displaced and thrown off, and new particles are deposited in their places, so that, by this gradual but constant exchange of particles, it is estimated that the soft parts of our bodies become entirely changed in the space of about one year, and our bones in seven years; hence, all the flesh of our bodies at the present time, will, in the course of one year, pass away, and, by the combination of new particles, its place will be supplied; and in seven years a like change will take place in bones, giving us entire a different body from our present.

The atmosphere is composed of 78 per cent. of nitrogen, 21 per cent. of oxygen, and nearly 1 per cent. of carbonic acid. In it there is always mixed more or less of vapor. When pure, this is the air we breathe; and we are so constituted that we require a constant supply, or animal life is suspended. The venous blood in the body, through the lungs, is exposed to the action of the air we breathe, by which it is purified, and changed from a dark purple to a bright red color, when it again circulates through the system. In this action of the air upon the blood, about eight per cent. of the oxygen is exchanged for nearly the same amout of carbonic acid. The oxygen imported to the blood is a supporter of life, while the carbonic acid thrown off in exchange is a deadly poison.

It is estimated that an individual will breathe, on an average, one gallon of air in a minute; and if air was bottled up and sold at a certain price per breath, people would be particular about its quality, and the amount obtained at each inspiration. Why not be equally as particular when nature has provided a bounteous and free supply, and attached the reward of health to its proper use, and the penalty of disease for neglecting to use it freely?

There are many medicines advertised to cure all diseases; and there are men traveling over our country who promise a cure for so much money; many that are afflicted with chronic disease are trying one medicine and another, looking for a remedy—a secret something just discovered; not realizing that they have a better remedy within their own means. If they would breathe pure air as GOD has given it to them, and if each individual would pay special attention to the regulation of his own diet, avoiding all extremes, either of excess or abstinence, no medicine would be needed. The infinite variety of vegetables and animals with which we are blessed, is evidence that Nature has adapted them to the constitution and wants of an infinite variety of persons, and that each one should select the kind that is best adapted to his nature and his wants, and eat just the amount his system requires for nourishment, and not any more, of such kind of food as the stomach can easily digest. This will make healthy blood, and it will require but little medicine to cure all or nearly every one that is afflicted with chronic disease.

Rutland, Pa. D. S. ROBLYER.

HYGIENIC NOTES AND QUERIES.

Vegetable Spores in the Blood.—Prof. RICHARDSON of Philadelphia, several years ago, in the course of his experiments to determine whether bacteria (vegetable spores) pass from the stomach into the blood, swallowed 4 ounces of water which contained, according to his estimate, 27,000,000,000 of these minute organisms. In half an hour he discovered them in abundance in a drop of blood taken from the end of his finger. To swallow at a single gulp twenty times as many vegetable spores as there are human inhabitants on the earth, is but a small exploit for a modern scientist.

Cancers Cured by Jersey Tea.—In the RURAL NEW-YORKER of Feb. 24 you express doubts of the veracity of a correspondent who gives statement of cancer cured by "Wild Tea." I have, within the last few months, heard of several cases of cancer cured by the use of the leaves of *Ceanothus Americanus*, commonly known as Jersey Tea, Red Root, etc. Perhaps this may have been the plant used by your correspondent and not the Pipsisaway, as appears to be understood by another correspondent.—C. W. INGRAHAM, *Eastmanville, Mich.*

Remedy for Nasal Catarrh.—Make a weak brine, and snuff up the nostrils, and let it run down in the throat; also wet the head with the same. If persisted in a sufficient length of time, it will effectually cure nasal catarrh. It is said by a physician that the various mixtures sold as "Catarrh Remedies," in many cases, are only salt disguised so as not to be known. Wetting the head with salt and water will stop the hair falling out.—T. E. O., *Millport, N. Y.*

Hygienic Inquiries.—M. E. S., Cumberland, N. Y., asks for a cure for bunions.

Modes and Manners.

MINTWOOD'S CONVERSAZIONE.

Shell Frames, Etc.—"A. F." asks for "the best and prettiest way to make shell frames." Pretty shells, arranged artistically, will be sure to make a pretty frame. Perhaps some one of our readers may be able to give A. F. explicit instruction.

Photographing a Bride.—It is a mere matter of taste, whether or not a bride should be dressed in bridal attire when being photographed for a marriage certificate. If the space allowed is large enough for a full length picture, showing the costume, it would be in clever keeping with the conditions.

Miscellaneous Answers.—MARY C. H., Nelson.—Make the poplin trimming into frills of side plaiting, and stitch on an inch from the upper edge. Small, loose sleeves are worn. Black alpaca remains fashionable. Dresses are cut high at the neck, and finished with a cord or narrow band. When you wish to introduce "two girl cousins of the same name to a friend," address the elder as "my cousin, Miss SMITH, from New York," and the younger, "Miss JULIA SMITH, of Smithtown," or from whatever place she may be.

Swiss Muslin Graduating Dress.—SOPHIETTE, Ohio.—Your idea of making your "Swiss muslin graduating dress, with graduated ruffles nearly to the waist," is good. Make the waist a basque, separate from the lining, with small, open sleeves, and trim with ruffles; upright ruff of lace, or blonde, at the neck. Make the skirt with a demi-train; the petticoat worn beneath should be of the same length. Necktie, hair-ribbon, and sash of very pale, silvery blue, or lavender.

Fashions for Boys.—A simple, jaunty suit for boys from five until nine years of age, is the English sailor costume, and may be made of white linen, duck, or pique—duck preferred. The waist is blouse, falling loosely over the waistband; seam on the shoulder and under the arm; coat sleeves, and pants coming just below the knee, only loose enough at the bottom for the feet to slip through. A large sailor collar, with the points coming just back of the shoulder, and forming a rather deep square at the back, broad cuffs on the sleeves, and stripes down the outside of the pants, are cut from blue cloth, Chambre or French calico. About half an inch from the edge of blue, sew a narrow white cord or braid; flat pearl buttons an inch in diameter. The blouse is cut rather low at the throat, and should be worn with a shirt beneath. A blue cravat tied in a sailor knot, at the union of the sailor collar in front, a straw sailor hat with a blue band, blue and white striped stockings with button boots complete a very pretty summer costume for boys, that any housewife can make. They are pretty made of white flannel and trimmed with blue flannel; for boys less than five years of age, dresses with short sacques or jackets are worn. The skirt is plainly gored or laid in kilt pleats. The jacket is cut in Vandykes around the bottom, and bound with braid, the corners being left square, clipped or rounded. Plaited poplins make up stylishly, and for cool days velveteen or plush, with white shirt waist under the jacket; for hot weather, linen, pique, or calico. Boys over ten years of age, wear a full suit, coat, vest and pants of gray, drab, brown or blue cassimere or melton cloth.

Fashions for Young Girls.—Hair worn loosely or in braids; dresses nearly to the tops of the boots; no hoops worn; flounce on the bottom of overskirt trimmed with a ruffle, or scalloped and bound; short jacket or round cape for wrap. A pretty costume for a girl of ten or fourteen, is a petticoat of light-blue wool delaine, with a flounce, or alternate ruffles of blue and gray delaine; a polonaise of light-gray (or drab) delaine trimmed with the blue; a gray straw or silk hat with blue ribbons, two long ends falling below the waist at the back; ruffle in the neck, blue necktie, and gray gloves. Small checked poplins of black and white, blue and white, or pink and white, make up well for misses. Many are made with overskirts looped at the back, and basque waists.

Street Dresses.—Quite a marked feature of some new and elegant dresses, is the very deep skirt trimming. The skirt is cut off, half or three-quarters of a yard from the waist, and finished with a flounce laid in kilt plats. The overskirt is short in front, long behind, and looped. Frequently, the front of the skirt is trimmed high, with only a flounce of moderate width at the side and back. A skirt trimmed with a ruffled flounce, has the front width ornamented with perpendicular puffing or ruffles, with, perhaps, bows down the center. The fashion of varying the trimming in front is quite common. A stylish linen suit has the skirt, over-skirt and mantle (round cape) trimmed with fringe of the same shade, with parasol and hat of the same. Fringe does not wash well, unless great care is taken, so that flat braids, scalloped edges, etc., are to be preferred in all wash goods.

The Shirt Waists, of calico, etc., that were so popular last summer, will continue to be worn. They are made with plaits, and in length come well over the hips. A shirr string at the waist confines them, and is let out when the waist is washed or ironed. They fit much better than when made with a waistband. The sleeves have a little fullness at the top, and at the bottom are finished with a deep cuff.

How to Make a Black Alpaca, Etc.—AGNES H., Newark.—Make your black alpaca with a polonaise; coat sleeves, left open at the under-sleeve for a few inches; trim with two bias ruffles. Trim the front and side widths of the skirt with a deep kilt flounce, and ruffle the remaining widths to the same hight. You can add a round cape or mantle if you like. Make the sleeves of your Victoria lawn coat shape; shoot and finish with a kilt frill to match the skirt trimming. A Llama lace sacque, "good enough for anybody," can be had for $28. Those of guipure cost from $50 up.

In Summer Silks, narrow stripes are to be preferred—black and gray, blue and white, white with green, or lavender. A black and gray, with the polonaise trimmed with fringe to match, makes a serviceable and elegant costume. From twenty-five to thirty yards are required. It costs from $1 up. At present, the polonaise is the "most approved" style, although many prefer the basque and overskirt, which admits the wearing of a cotton or linen skirt waist.

Church Gloves, with a black suit, may be gray, straw color, or salmon. Gloves should harmonize with the other colors worn—not necessarily match them. In regard to linen suit, read elsewhere.

White Tucked Dress.—SUE L. W., South Butler.—You can wear your white tucked dress skirt as a looped tunic over a black dress; or wear a black (silk) polonaise over that; or ripping it up carefully, make a polonaise of it, to wear over a black silk suit.

Ella La Rue will find directions for her "little sister's dresses" in "fashions for girls." "Little" is an indefinite description.

DOMESTIC RECIPES.

Graham Bread.—There is but one way only to make Graham bread, viz:—Obtain first-class flour and make it *precisely* in the same manner as wheaten bread, with bakers' yeast. It is the most natural and wholesome of all breads. Some people fancy that with the addition of soda, molasses, steaming, etc., it becomes more palatable. This is all bosh; for the manner in which it is generally made renders it by no means healthy or digestible, while *au contraire*, the simpler it is prepared the better, like all other food. I have used it made according to the above plan for twenty years, only varying from the same when traveling, and then have been compelled, at hotels, to worry down trash, yclept Graham bread, made out of villainous compounds and prepared, no doubt, according to some of the "precious" recipes occasionally appearing in various newspapers.—P. I. C., *Vineland, New Jersey.*

Preserving Sweet Corn.—M. B. WADE, Fairfield, Co., Conn., prepares sweet corn as follows:—"We take the corn right from the hill, and take off some of the husks, but not all, and put it in the stove-oven, and leave it there to cook from twenty to thirty minutes. Then take it out, take off the rest of the husks, and with a two-tined fork take the corn from the cob, put on dishes, and return to the oven to dry. This is the Indian method, only instead of the oven they used hot stones, and burned the corn with with them until cooked, and then dried in the sun."

To Boil Eggs.—Who does not know how? Yet how few people know the way to boil them in order to retain all their delicious flavor. Allow me to tell you my method:—I put one half dozen eggs into a tin pail, and pour about two quarts of boiling water over them; then set the pail on the hearth, where the heat is not kept up, and let them remain from six to ten minutes, according as we like them cooked, hard or rare. By so cooking the white is always tender and delicious. Try it.—MONA, *Titusville, Pa.*

New Publications.

WILLARD'S PRACTICAL DAIRY HUSBANDRY: A Complete Treatise on Dairy Farms and Farming, Dairy Stock and Stock Feeding, Milk, its Management and Manufacture into Butter and Cheese, History and Mode of Organization of Butter and Cheese Factories, Dairy Utensils, Etc., Etc.

BY X. A. WILLARD, A. M.,

Dairy Husbandry Editor of Moore's Rural New-Yorker, Lecturer in Cornell University, Maine Agricultural College, Etc., Etc.

THIS is the most full, practical and reliable work on Dairy Husbandry extant; indeed the only one which describes the recent great improvements in the Dairy Business. It is highly commended by leading Agricultural and other influential journals, and must speedily become (in fact is already) the *Standard and Only Authority*. It will pay every one engaged in any branch of dairy business, or who keeps a single cow, to obtain and study this work.

PRACTICAL DAIRY HUSBANDRY embraces **546 Large Octavo Pages,** is handsomely and fully Illustrated, printed on superior paper, and elegantly bound. It is a Subscription Book, and a liberal commission is given Agents who canvass Counties, &c. The Agents of the RURAL NEW-YORKER (especially those in Dairy regions) will do well to try the sale of this work. To any person residing where there is no Agent, or who cannot wait for one, the Publisher will send a copy of the work, post-paid, on receipt of the price, $3—(or for $5 the book and RURAL NEW-YORKER one year.) Address

D. D. T. MOORE, Publisher,
5 Beekman St., New York.

RANDALL'S PRACTICAL SHEPHERD: A Complete Treatise on the Breeding, Management and Diseases of Sheep.

THIS Work, by the Hon. HENRY S. RANDALL, LL. D., (author of "Sheep Husbandry in the South," "Fine Wool Sheep Husbandry," &c.,) is the Standard Authority on the Subject. It is the most complete and reliable Treatise on American Sheep Husbandry ever published, and (as the New England Farmer says) "should be in the hand and head of every person owning sheep."

The PRACTICAL SHEPHERD contains 452 pages, and is Illustrated, printed and bound in superior style. Twenty-seventh Edition now ready. Sent by mail, post-paid, on receipt of price—$2. Address

D. D. T. MOORE, Publisher,
5 Beekman St., New York.

THE PEOPLE'S PRACTICAL POULTRY BOOK: A Work on the Breeding, Rearing, Care and General Management of Poultry.
By WM. M. LEWIS.

THIS is one of the finest gotten-up works on the subject on which it treats, for its size and price, of any publication of the kind in this country. It is finely and profusely illustrated, and printed and bound in extra style. Contains 221 large octavo pages. Sent, by mail, post-paid, for $1.50. Address

D. D. T. MOORE, Publisher,
5 Beekman St., New York.

ALLEN'S AMERICAN CATTLE: Their History, Breeding and Management.

EVERY breeder or owner of Cattle should have this work by Hon. LEWIS F. ALLEN, Ex-Pres't. N. Y. State Ag. Society, Editor of "American Short-Horn Herd Book," &c., &c. It is a handsomely illustrated and well printed and bound volume of 523 duodecimo pages. Mailed, post-paid, to any address in United States or Canada, on receipt of reduced price, $2. Address

D. D. T. MOORE, 5 Beekman St., N. Y.

20 PIECES OF MUSIC
FOR ONE DOLLAR.

Why buy high-priced Music when you can select from our Catalogue of over 600 pieces? Any 20 pieces of Sheet Music, printed on splendid paper, arranged for the Piano, will be mailed on receipt of $1. Catalogues free. Address BENJ. W. HITCHCOCK, Publisher, 439 Third Avenue, New York.

Fifty per cent. extra for unusual display.		
Special Notices, leaded, (by count)	2.00	"
Business "	2.50	"
Reading "	3.00	"

☞ No advertisement inserted for less than $3.

SATURDAY, MAY 25, 1872.

STIMULANTS.

There is no class of men who need to use stimulants more than farmers and horticulturists. We make this assertion deliberately and with the profoundest conviction of its truth. The nature of their vocation, and their relations to nature, prove it. Stimulants produce heat; heat is a means of motion; motion is essential to growth; growth is essential to production. No one will suppose, we hope, that when we say farmers need to use stimulants, we mean they need to pour them down their throats. We are led to commend stimulants in agriculture, because a gentleman said to us the other day that something ailed his soil; it seemed dead; did not appear to have vital force; was inactive; did not produce. We told him it needed stimulating. "Stimulating?" said he; "how is that done?" Firstly, drain it; then plow it deeply, turning under active, unfermented manures. It will lose its inertness, will exhibit vitality, will germinate seed and produce a crop. He had never heard of stimulating soil before!

Another friend of ours had been stimulated by something he had seen or read, to save all the manure made on his farm, and get all he could elsewhere. He told us after his first year's experiment that it had astonished him to find so much material that had before gone to waste. The very process of saving and applying had not only benefited his farm, but acted as a stimulant to himself. He had learned that with a bank of stimulating material to draw from, he could make every nook and corner of his farm pay. He did not confine himself to a crop of wheat, a field of corn and a patch of potatoes—leaving his meadows and pastures to take care of themselves. Now, added to excellent staple crops, he produced early and late peas, beans, and roots of all sorts; in fact, he did not cease to plant and sow from April 1st to August 1st. The sweet herbs he grew in out-of-the-way nooks, paid for his magazines, papers and books for the year. His pea crop fattened his hogs; his pumpkins and sowed sweet corn made his beef; his sowed corn kept up the milk of his cows during drouths, and his sugar beets and parsnips kept it up late in Winter; his melons, grown in fence corners, gave his boys all the pocket money they needed; his turnips, grown in his corn fields, kept thirty sheep through the Winter, with a very little hay and corn meal added; his crop of saffron bought the women their bonnets and shoes; he sold his neighbors spring and fall bulbs enough to pay for his two girls' wardrobes; he grew evergreens and young maples enough between his orchard rows to pay for his hired help; he always has seed corn, seed wheat, strawberry, tomato, pepper, celery, etc., plants to sell. And so he went through the list. Of course the production of all this involved labor. But it paid him to hire and pay good wages.

And this was all due to stimulants! He did not hesitate to buy ashes, leached or unleached, lime, refuse salt, livery-stable manure, coal ashes, bones, shells, etc., etc., wherever he could find them. He never went to town but he carried something to sell; he never left town with an empty wagon; he would not waste the time of traveling home unloaded. If his clays needed sand, he drew sand and mixed with them; if his sand needed muck, muck was incorporated with it. As soon as one crop was off he had stimulants to apply to the land, and planted it with a crop that he knew it would mature. In this complex husbandry he found not only profit, but the greatest pleasure. He said it was as good as a variety theater to him to watch these various crops grow; and as delightful a stimulant to his mind and body as any drinking bout could be to a bummer.

He believed in Agricultural Stimulants. So do we!

RURAL NOTES AND QUERIES.

The National Swine-Breeders' Convention, called to meet in New York city May 14, did meet and was organized by the selection of Henry Stewart for Chairman, and Chas. D. Bragdon Secretary. Col. Frank D. Curtis, on behalf of the Committee appointed by the Farmers' Club to inaugurate the movement, stated its object, read letters from prominent breeders in various parts of the country, endorsing the object, some of whom recommended the adjournment of the Convention to a point more central to the mass of swine-breeders, and to a time late in the fall, when it would be more practicable for them to attend. The propriety of so doing was apparent. Col. Curtis moved that a Committee of five, including the Chairman and Secretary of the Convention, be appointed to select and name a Committee of three for each breed of swine bred in America—the duties of these respective Committees to be to report at the adjourned meeting of this Convention upon the history, characteristics, and a scale of points for the respective breeds; also to name a Committee of three to report at the same time on the question, "What constitutes thoroughbred swine." Col. Curtis' motion was adopted, and Messrs. Curtis, Chase and Weld were named. This Committee was also instructed by the Convention to consult with breeders generally throughout the country, and to call another Convention, not earlier than November, at such point as may seem most agreeable to the majority of those interested.

It will be seen by the foregoing that the selection of Committees to report upon "the history, characteristics and points of excellence" of the various breeds, is the work the Convention has provided for accomplishing. This work, if done as it should be, involves the selection of the best posted and most impartial breeders of the different breeds of swine as committeemen. To make this selection is the duty of the Committee named, and said Committee desire the co-operation and counsel of all intelligent breeders, in order that the Convention, when it meets in the fall, shall have acquired, through the agency of these Committees, material upon which to have discussion and action, and from which may be crystalized information that shall be a protection to both breeders and buyers of swine.

Botanist of the Department of Agriculture.—Mr. Swank, who runs the Department of Agriculture at Washington—Mr. F. Watts drawing salary as Commissioner—has at last succeeded in finding some one to accept the position of Botanist. We see by our exchanges that Dr. George Vasey of Illinois has been offered the appointment. Should Dr. V. take the position from which Dr. Parry was ejected with so much indignity, it will be a source of regret to his botanical friends. We can only suppose that he is not aware of the circumstances of Dr. Parry's removal.—*Hearth and Home.*

We do not regard such talk as very wise. A Botanist is, or is not, needed in the Department. If one is needed, the country's interests are paramount to the feelings of Dr. Parry's "botanical friends." We do not see that Dr. Vasey, in accepting the position lately held by Dr. Parry, is doing anything that he ought not to do. Here is an opportunity for him to be useful to the country and earn his daily bread. It is plain that, under the present administration of the Department, Dr. Parry cannot re-occupy that position. If it is important, it should be occupied; why not by Dr. Vasey? If it is not important, why should Dr. Parry ever have been put there, and why should his friends have labored to secure his re-appointment? Why should public interests suffer because of personal quarrels?

Veterinary Vandalism.—There is a class of men who travel through the country professing to be Veterinary Surgeons, who are unknown and not likely to be known long in any locality. They do swindle farmers—there is no doubt of it. Our stock interests are becoming of such magnitude, and the diseases which effect stock so common, that nearly every thousand farmers who breed horses, cattle, sheep and swine, ought to support a skilled Veterinary Surgeon. There is need of such aid in domestic husbandry. But we ought to have laws which will properly punish mal-practice in the treatment of domestic animals as well as humans. This sort of protection should be afforded by law. Until it is, these itinerants will thrive on ill-gotten gains. It seems to us that country physicians ought to find it profitable—and it certainly would not be undignified—to combine with their practice for the salvation of human life, veterinary practice. There is a rich and useful field open before them in this direction; and the knowledge of the laws governing human health are not inapplicable in the treatment of dumb brutes.

Our Premiums are Appreciated—As is shown by the acknowledgments we are almost daily receiving from Agent-Friends of the Rural New-Yorker. To show how highly our Premiums are prized, and that they are, as we claim, genuine and valuable, we quote from several letters lately received:

U. M. Scott of Montgomery Co., Ind., thus tersely acknowledges and reports:—"The Boston Premium Organ came to-day. It is a much finer organ than I expected to get. Accept my thanks for the same. I shall still continue to add to my list of subscribers to the Rural."

Dell Morgan of Erie Co., N. Y., thus closes a business letter:—"I have received my premium, the Regulator Seed Drill, and am very much pleased with it. Please accept my thanks. I never did any work that paid better than getting up a club for the Rural New-Yorker."

Austin Jackson of St. Lawrence Co., N. Y., writes:—"Please receive my thanks for a very nice Watch which I have just received as premium for obtaining subscribers to the Rural New-Yorker for 1872. Also a half dozen Dessert Knives. This is the eleventh year that I have acted either directly or indirectly in circulating what I think the best family paper that I ever saw. I am thankful for the many substantial presents which you appropriately term 'Good Pay for Doing Good.'"

Frank Batchelor of Allegan Co., Mich., writes:—"My premium (one dozen hard-rubber handle dining-knives) arrived safely, and immediately after being ordered. In regard to them, I can only say that they, like everything else from the Rural Office, are first class, and just what they were represented to be. Let me once more extend to you my thanks and assurance that here the Rural New-Yorker has a warm friend and an earnest worker. The increase of my club over former years is the strongest proof I can furnish you of the appreciation of your late improvements in the Rural."

Strike Against Gang Plows.—The Yorkshire (Eng.) farm laborers have in several cases refused to work the two-furrow gang plows, which are drawn by three horses and controlled by one man, and thus save one man's and a horse's labor to the farmer. We suppose that this is an illustration of the intelligence of the English farm laborer, and it is a sample of the reasonableness of strikes in many cases.

THE SEASON, CROPS, PRICES, ETC.

Imlaystown, Monmouth Co., N. J., May 8.—Weather warm and dry. The 4th was very cold and blustering. Fruit trees all out in full bloom. Winter wheat and rye look bad. Grass short; two weeks behind time. Oats all sown. Corn planting going on. Wheat, $1.00; corn, 75c.; potatoes, 80c.; oats, 40c.; butter, 25c.—D. H.

Butler Co., Pa., May 3.—Morning frosty; 1 P. M., cold rain falling; all out-of-door business stopped; poor fall crops all over the county; land bare all winter, with very little snow or rain. Rain this week; grass starting in pastures. Fodder all gone. Hay sold at $20@$25 per ton; oats, 65c.; corn, 65c.; potatoes, $1@1.25. Stock healthy but lean; hired help, $1@1.25; oil labor, $2.50@3 per day.—P. B.

Frewsburg, Chaut. Co., N. Y., May 5.—This morning there was a very heavy frost, and yesterday morning the ground was white with snow. We have, however, had some fine weather, and a good many oats have been sown, and some potatoes, etc., put in the ground. Hay is scarce, and worth from $16 to $20 per ton. Young cattle get a fair living in the pastures, but cows and working animals have to be fed. Butter is worth 28@30c.; farm hands get $18@23 per month and board. We have had a great deal of high wind this Spring. Fences have been blown down, timber uprooted, and some buildings unroofed.—A. H. A.

Plainwell, Mich., May 10.—The Spring thus far has been very cold and backward, with extremely high winds; however, we have had a few nice, warm days, which were duly appreciated. Wheat was badly Winter killed, but what is left looks finely. Oats are up and looking well. Corn is about one-half planted; the balance will be put in shortly. Apples, cherries, strawberries, currants, etc., etc., give promise of an abundant yield, but the peach trees look sorry enough, and there is a fair prospect of *no crop at all.* Wheat is worth $1.80; corn and oats, 35@45c.; potatoes, $1; cows sell at prices all the way from $25 to $50.—F. B.

Fond du Lac, Wis., May 8.—Spring very late. Wheat and oats all sown. To-day it is raining, for the first since Spring opened. Snow passed off without rain. Ground being dry, was well tilled. Having much cold weather; ice formed half inch thick the 1st inst. Am experimenting, or rather testing, Ramsdell's Green Mountain Spring Wheat, and also White Australian. Quite healthy here. A few cases of small-pox and spotted fever in some of the neighboring towns. Wheat bringing $1.30; oats, 35c.; hay, $10@12 per ton; potatoes, 90c.@$1; butter, 20c.; eggs, 10c.; good horses, $300@400 per pair; cows, $25@40; sheep, $4@6, but none for sale, in consequence of the wool fever raging.—O. B.

Winslow, Stephenson Co., Ill., May 6.—We have had a very backward spring. But very little seeding done previous to April 15, and not much plowing, the ground remained so wet. Farmers in this vicinity are sowing more small grain this year than last, and will plant less corn, anticipating a cold, poor corn season; but I shall plant as much as I had intended to, and let it take its chance. There are a great many oats to be sown yet. I finished rolling my small grain the 4th inst. I think the use of the roller to be almost as indispensable as the use of the harrow, especially this Spring, as so much of the land was plowed pretty wet and has dried out and left it lumpy; but if it is rolled it is left finely pulverized and smooth for the reaper.—A. L. S.

Lyndonville, Vt., May 10.—Season backward. The sugar season, which was nearly a month later than that of last year, ended about a week ago, with not over two-thirds the usual yield. Quality of sugar made this season not super-excellent. Farmers just beginning their Spring's work; very little grain sown yet. Notwithstanding the past Winter was unusually long and cold, the great depth of snow kept the ground from freezing, and grass is looking finely; no thaws during the Winter to cause it to winter-kill. Hay is scarce and brings high prices—$20 to $25 per ton. Considerable Western corn is fed to stock; in many instances it has been their chief reliance. Good horses sell at sight for remunerative prices. Beef cattle are doing better than during the Winter; and sheep—mutton and store—are in demand, and held at high figures.—I. W. S.

Sangerfield, Oneida Co., N. Y., May 13.—The Spring is very backward, especially the work. Farmers were fully one month later in commencing operations than in 1871. The ground has been frozen to an unusual depth—upwards of four feet in many places—the frost not all out yet. Many hop yards have suffered severely during the winter, full one-third of the hills having died out in some yards, besides a good many of those standing being materially weakened. The price of hop roots has varied from $2 to $5 per bushel, commencing with the latter price, and are now selling in some cases even less than $2. The majority of those sold in this vicinity have gone into Otsego Co. The acreage will be increased here, probably on account of high prices. Winter wheat, as a general thing, looks well; grass backward on account of the absence of rain. We have not had a good, soaking shower this spring. It has been quite cold most of the time, a strong, northwest wind generally prevailing. Oats are worth from 60 to 65c. per bush.; corn, 85 to 90c.; potatoes, 50c.; hay from $15 to $20 per ton. Cows are worth from $40 to $60 per head.—C. G.

RURAL BREVITIES.

Milton Y. Hudson is informed that orchard grass will do well if sowed in the fall with winter wheat.

P. F. Richardson is informed that it is decided that after July 1, 1872, there shall be no import duties whatever on tea and coffee.

We notice that several Subordinate Granges of Patrons of Husbandry have recently been organized in South Carolina, and a State Grange in Mississippi.

Potatoes and Seeds are still needed by the sufferers by fire in Wisconsin. Contributions may be addressed to Capt. A. J. Langworthy, Green Bay, Wis.

We see it asserted that the town of Granby, Nicolet Co., Minn., has voted to buy $100 worth of strychnine, with which to poison its blackbirds. We cannot call that wise.

We notice the announcement of the death of J. B. Skinner, Rockford, Ill., the inventor of an excellent gang plow and a castor coulter for plows. Mr. Skinner was a useful man, and will be missed.

A correspondent asks if we would "recommend a young agricultural society, holding its first Fair, to offer prizes for fast trotting." No—not if it wants to prosper as an *agricultural* society, distinctively.

Seven hundred acres of beets have been contracted for by the Fairport, Ill., beet Sugar Factory at $4 per ton, which, it is expected, will furnish 50 tons per day for 300 days manufacture. The cost of the buildings and machinery for this factory is $150,000.

Samuel Brannan, Calistoga, Cal., has 8,500 mulberry trees ready to furnish food for silk worms, and offers 20 or 30 persons, skilled in silk worm culture, the free use of all his mulberry leaves, and to erect whatever buildings are requisite for the proper conduct of the business.

"A Subscriber," Berlin, Mich., says he wants 150 hay caps—that he knows of many others who want more or less—and asks where they can be procured. We believe R. H. Allen & Co., of 189 Water St., New York, supply hay caps, two yards wide, at $1 each.

PUBLISHER'S SPECIAL NOTICES.

The Rural New-Yorker is electrotyped, and hence Back Numbers can always be supplied. Copies for sale by all News Dealers; price Six Cents.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or more. A host of people are subscribing for papers about these days, and we hope our Agent-Friends will give everybody an opportunity to subscribe for the best.

THE MASSACRE OF CUBAN STUDENTS.

[SEE ILLUSTRATIONS.]

THE pictures herewith given represent places connected with one of the most brutal and awful incidents of the Cuban revolution; an incident which excited the whole civilized world. The tragedy is of such recent occurrence our readers will remember it. On the 25th of last November a number of students from the Medical College of Havana visited the cemetery of San Lazzaro, where the two heroes of the Loyalist Party, CASTANON and GROSMAN, are entombed. While there they were charged with disfiguring the tombs of these men, who had actively opposed the Cuban insurrection. The chaplain of the cemetery lodged a complaint against them, and they were arrested by the order of Gen. CRESPO, but after a trial before a military tribunal, were acquitted. Upon this a cry arose among the volunteers for their blood, and Gen. CRESPO, afraid of his own forces, consented to have them tried by court martial, the officers of the volunteer force constituting a majority. Two were acquitted, thirty-one were sentenced to hard labor in the galleys, and eight were shot within forty-eight hours in the Plaza de la Puorta. Their ages were from fifteen to nineteen. Within a week orders have been issued by the King of Spain for the release of the students who were sentenced to the galleys, and they have been put on board of a man of war, and will be sent to Spain.

Our engravings represent the cemetery and the tomb of CASTANON, where the alleged desecration took place. Cuban cemeteries differ from those of the Northern States, resembling those found in New Orleans. The dead are not buried in the ground, but shelved in dry niches built into walls of solid masonry, like the ovens or retorts of a gas house. The bodies are packed away in curiously-shaped coffins in the niches. A stone slab seals the mouth of the niche, and on it the names, etc., of the deceased are inscribed. In some cases these slabs are protected by glass projections, between which and the slabs are placed lamps, flowers, crosses, and immortelles, as shown in the picture. The only injury done to the tomb of CASTANON was a scratch on the glass, with a diamond ring. This fatal scratch, which caused the effusion of so much blood, is shown in the picture.

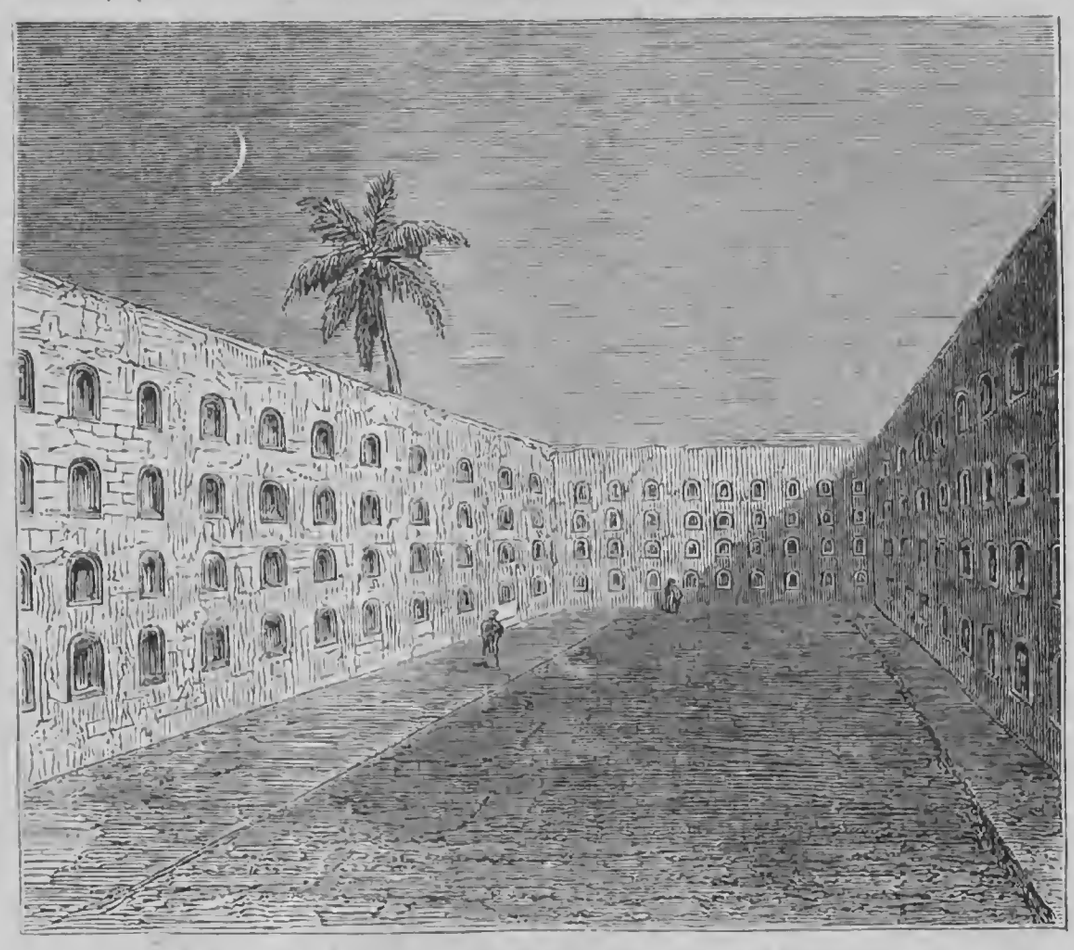
DUTY OF PLAY.

THE Christian Union has this very sensible article on the Duty of Play:

"As a people we do not know how to play. Of all arts, we are most backward in this. We can work, we can talk, we can fight—but we cannot play. We do not play. We are always intent on business. Our very fun flashes out as an incident in the midst of strenuous activity. We are forever DOING. When it is not our own business, it is the business of the church or of society. We stop long enough to eat and sleep, simply because we cannot help ourselves. But the eating and the sleeping are thrust in edgewise, as it were. They are intrusions; and we dispatch them at the highest speed, and carry our cares to our meals and into dreams. If we do profess to take amusement we so manage as to keep up the full tension of the system; we do it *hard*.

"We have spoken of this as peculiarly an American defect. Any one will find it so who looks at the European peoples. See the Germans,—the nation that just now shows best in the world's race. The true German has a side of life that the American knows nothing about. Go into a respectable German beer-garden or concert saloon, toward the close of the day. Here are the counterparts of our professors and business men, and mothers of families. Thing incredible to American ears, they are idle, and are happy in it. At intervals they listen to charming music. For the rest, they chat, they drink a glass of beer or a cup of coffee, they stroll about, they seem wholly purposeless and altogether at their ease. Their enjoyment is of a very simple kind, there is no excitement in it, it is just rest and play. We do not propose their way as a model for Americans; but it is one way, and in their case it proves most effectual, of letting the strained and wearied system refresh itself.

"Look again at the English, especially the upper and middle classes,—their field sports, their hunting, their long Summer vacations. The universities keep term hardly more than half the year. The professional man takes his months in the Summer and Autumn, for shooting excursion, or for a tramp in the mountains of Scotland or Switzerland. The life of Sir Henry Holland affords a good instance. Here was a hard-working man who reached the summit of his profession, and every year of his life took two solid



CEMETERY OF SAN LAZZARO.

months for pleasure travel. Nor is this an exceptional case. And what return these Englishmen get for their investment in rest and recreation and country life! What an amount of work they achieve! See Gladstone and D'Israeli, leading the Government and the Opposition, and meanwhile writing novels and theological essays, in an incidental way! To our nervous force these men add a solid basis of physical strength, that gives their best an advantage over our best in real capacity for work.

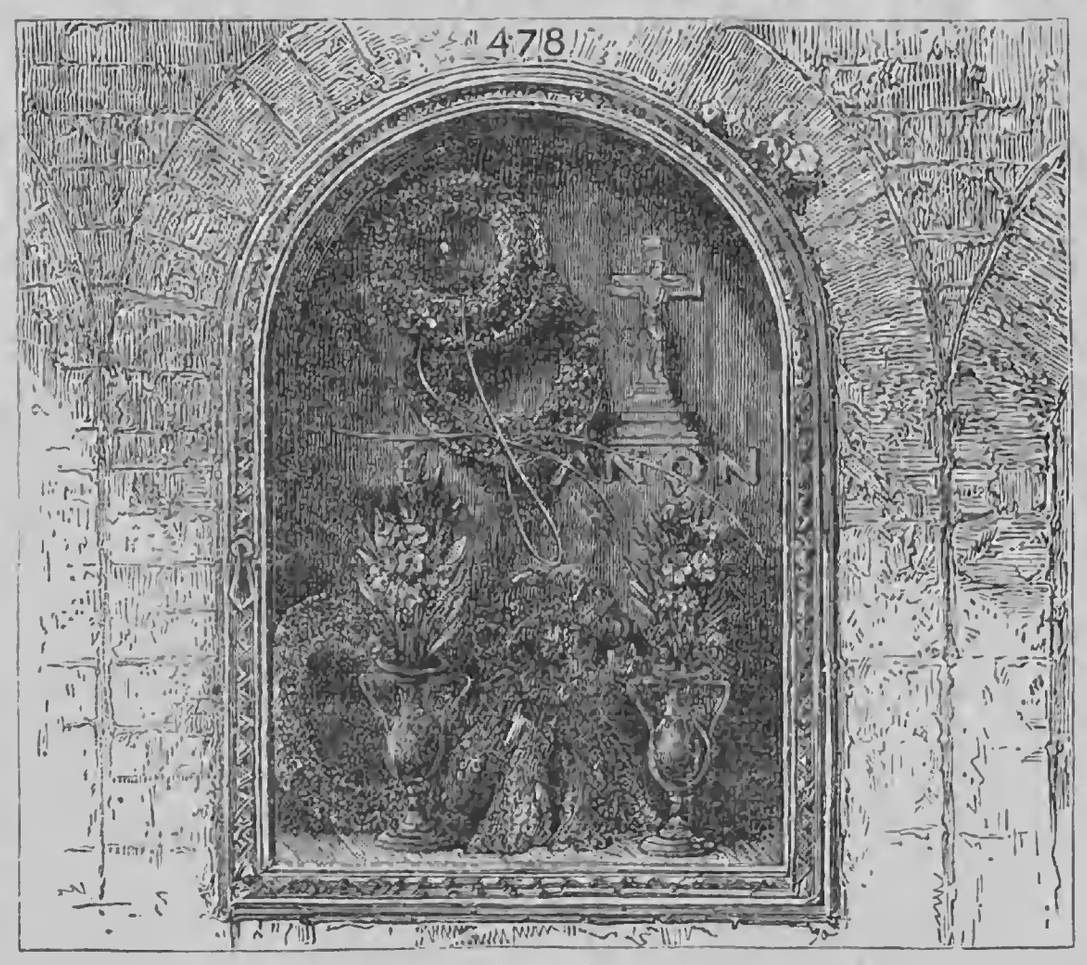
"It is idle to expect one people to copy its methods of recreation from another. Our people will not take their amusement as the Germans do or as the English do. they will rather grow into ways of their own, naturally developed from their character and circumstances. But it is high time that each one should for himself heartily accept and act on the principle, that play is just as much a necessity to him as food or sleep. Let it take what form he likes—social enjoyment or bodily exercise; gardening, riding, walking, rowing; public amusements;—anything that is innocent, that he enjoys, and that does not task the same faculties as his work. To have something of this kind is a religious duty. No man can be a strong and well man without it. And no one has a right before God to be anything but strong and well, so far as lies in his power."

CATO says, the best way to keep good acts in memory, is to refresh them with new ones.

WANT IN LIFE.

THERE is nothing more fortunate for moderate genius than to be born poor. The "silver spoon" class are a very comfortable people, no doubt, but the great trouble with them is, their education is mainly of this order, and if they don't become very great they are extremely likely to become the very opposite. There is no middle ground for them, for they were not taught to regard any, and consequently, they are, as a general thing, unfit for it. Poverty has helped men to solve some of the greatest problems of life. Half its brave deeds have been a necessity, and the most of its noble sayings have been born of a determined opposition. It does a man good to put him at his wits' ends. Emergencies make men. Any man can be a general or a pilot in a calm; but storms show the metal. Reputation is made more by boldness and will, than by ability and patience. Life is too short to wait for the tide whose ebb leads on to fortune. We must make the most of present opportunities, but we shall hardly do it, unless present opportunities are in the main present necessities. The man who works out these to the fullest extent is the most successful man.

MAN being not only a religious, but also a social, being, requires for the promotion of his rational happiness, religious institutions which, while they give a proper direction to devotion, at the same time make a wise and profitable improvement of his social feelings.—*Hosea Ballou.*



TOMB OF GONZALO CASTANON.

PERHAPS every one is not able to stem the temptations of public life; and if he cannot conquer he may properly retreat.—*Dr. Johnson.*

"THE DAYS THAT ARE NO MORE."

BY LILLIE E. BARR.

O LOVE, what golden days were ours
Among the corn and cotton flowers;
Under the trees so thick and cool,
And at the heron-haunted pool,
And by the river deep and quick,
In Autumn when the nuts lay thick.

What races o'er the prairie free!
What lingerings 'neath the vine-clad tree!
What fishing on the mountain lake!
What squirrel hunts in cedar brake!
What gatherings by the pine fire's blaze!
What pure, what Eden-tinted days!

And what remains of days so fair?
A Memory that is half a prayer;
A Love which owns immortal ties
And lifts its head above the skies;
A Hope which gilds with Heav'nly light
The darkest hours of earthly night.

[*Christian Union.*

Our Story-Teller.

THE SISTER OF CHARITY.

BY DE FORREST P. GUMMERSON.

I.—By the Lake.

"Alas! how easily things go wrong,—
A sigh too much, or a kiss too long,
And there follows a mist and a weeping rain,
And life is never the same again."

"Is it for all time, DALLAS?—forever and forever?"

"Yes, for all time. This love of yours, which I once believed to be wholly mine, I cast in the dust at your feet; tear its fibers, root and branch, from out my heart, wherein they have been interwoven; and for all time, ALICE."

"Oh, Heaven! Will nothing move the man to pity?"

"Pity! What had you to do with pity, ALICE DAY, when on bended knee I plead with you not to go with this man to the concert last night?"

"He was my cousin; there surely could not have been harm in that."

"But he was a gambler and a noted villain. I recognize no tie of blood which binds together the pure and good with the base and ignoble; besides, ALICE, the woman who becomes my wife, if she would be truly happy, must listen to my wishes more than you have yet been willing to do. I see plainly we were not made for one another, and it is better that we should part at the very gate of—rather than after we had entered into—matrimony. So, once more, ALICE DAY I say, 'good-by' for all time."

And he was gone. DALLAS! whom she loved—oh, how dearly! She was not strong, this woman, and could not always see plainly between right and wrong; and it had seemed such a funny thing to see her lover kneeling at her feet and begging a favor of her, that she could not resist the temptation to tease him—just a little—for this once, by going. It was her cousin, too, with whom she was to go, and he had always been very kind to her. I think she might not have known how bad he really was, and therefore was not so very wrong, after all; at least she thought so.

DALLAS REEVES was gone. Out from the heart that loved him even better than he knew, he had torn himself forever. In one month more he would have married ALICE DAY; now, never!

Alas! how little does the happiness of one's whole life depend on! An angry word, and the joy within our homes is gone. A careless action, and the wreck of a life is all that is left, and the sun is hidden in darkness evermore.

ALICE DAY wandered out from the grove in which she had parted with DALLAS REEVES—somewhere, I do not think she knew; and with only the soft pale moon looking down from its eyrie in the sky, reached the lake. How cool it looked to her fevered gaze. Here she could still the beating of her aching heart. How it rippled and danced 'neath the moon's soft rays. After all, life was sad—hardly worth the struggle it cost—and the sorrows were greater than the joys. Perhaps true happiness could only be found beneath these laughing ripples that, in spite of her sad heart, went dancing on and on. Should she try it?

She carefully untied the fastening of her bonnet and laid it upon the ground; then her cloak was laid beside it. This done, she knelt, and prayed that GOD would forgive her for the rash act she was about to commit. She knew that she was wrong; but what was life to her without the love of DALLAS REEVES? Better, far better that she should sleep beneath the still, cool water, than live through years of untold agony alone!

Her prayer finished she arose, and, looking not back nor faltering, she reached the bank of the stream, and would have plunged therein had not a strong arm held her back, and a low, sweet voice whispered these words in her ear, "Not thus, sister! Take not thy life into thine own hands, lest GOD, who gave it thee, be angered."

Turning quickly, ALICE DAY stood face to face with one of those good angels who suffer with those who suffer—a "Sister of Charity." Clad in the garb that is usually worn by those who have adopted this holy calling, a soft smile stealing over her face, betokening peace within, she did indeed do honor to the name she bore.

"Who are you, and by what right do you hold me here? I do not wish to live. Far, far better you had let me go. It had been over then."

"Ah, my child, I once thought as you do now. The scene was much the same as this; perhaps our sorrows have been alike, too. Ten years," she said, musingly, "ten years ago, and by this very stream, I, too, would have taken my life. But GOD sent a ministering angel to my side and stayed me from this sin. If you are homeless, come with me. In a few days you will think better of this and thank me for thus interfering with your plans."

ALICE DAY suffered the Sister of Charity to replace the cloak about her and arrange her bonnet without one word of remonstrance, and when she gently led her away from the scene of the last few moments she did not refuse to follow her.

Through pleasant paths and over beauteous hills the Sister wandered with the fair young girl whose life she had but just saved, until they reached a pleasant cottage which had been purchased as a home for the Sisters of Charity. That it would not be pleasant for this poor weak girl to see any of the inmates of this home until she had become more calm, the Sister felt and knew, and so she kindly took her to her own room, and throughout the silent hours of the night sought by prayer and gentle words to bring back peace to this troubled soul.

When the morning had dawned Sister AGNES stole gently away from the woman she supposed to be calmly sleeping. But sleep had not come to ALICE DAY, and when she found that she was alone she arose and, having dressed herself, went out into the open air.

It was a favored spot whereon this cottage stood. The scenery all about it was of wondrous beauty. At the back stood a fine grove of chestnut trees, from out which the feathered songsters could be heard in one continuous roundelay. At the foot of the hill, facing the cottage, lay a calm and placid sheet of water, upon whose bosom no boat glided to ruffle or disturb its stillness. And far over the hills beyond the golden sunlight was struggling through partial rifts in the clouds, and shedding its rays in unbroken beauty upon the lake. ALICE DAY drank all this beauty in, as one in a dream. "What should she do here?" None but the pure and good should dwell in a place like this.

She was aroused from the reverie into which she had fallen by the same tender soul that had saved her by the water's side from self-destruction, asking her "To come into the house and rest."

"Rest!" she echoed, "Rest! Shall I ever rest again?"

"Yes, my child, when the excitement has gone you will find rest. 'He giveth his beloved rest,' and you are one of these. CHRIST came into the world to save *sinners*, not the good.'

ALICE DAY was too weak to return an answer to this. The excitement was fast wearing off, and utter prostration was taking its place. When the day had passed, and the soft moon came again with its pale splendor, struggling through the white curtains of the room which had been given her, its rays fell upon a group of women seated by the bedside of one whose look was more that of a spirit than "of the earth, earthy."

II.—In the Hospital.

THREE years have passed since the moonbeams fell upon the face of ALICE DAY, and the Sisters of St. Ursula watched by her bedside. The spot whereon their home had nestled like some white-winged bird, bore no trace of its former peace-like beauty. The fences were broken to the ground, its blinds hung by one hinge, and all around was the very picture of desolation. No Sister, in her simple garb, could be seen about the shaded grounds now, nor could the vesper song be heard at early eventide.

War, grim war, was in the land, and everywhere the grim monster Death rode his pale horse, and guided his steps with relentless hand. Sons, stricken down in the pride of their manhood, lay ghastly and dead upon many a battle-field; while in hundreds of households could be found mothers, like "RACHEL weeping for her children because they were not." The hospitals were filled with the wounded and dying, and throughout the length and breadth of the land the new-made widow's tears were falling, and hearts were breaking day by day. Those who were in the hospitals during the late war will bear me witness that I speak but truth when I say, that among all the throng of noble men and women who came to care for the suffering ones, none were more efficient, self-sacrificing, or utterly regardless of self, or fearless of danger by contagion with disease, than the Sister of Charity, who, with noiseless steps, glided in and out among the long line of beds, stopping to smooth a pillow here, or to apply cool water to the parched lips of some sufferer a little further on; who watched night after night without sleep, and fainted not at their work.

In one of the wards of the general hospital at Washington lay a young man, apparently about twenty-seven. He had been wounded at Spottsylvania, in the left knee, and in such a manner as to cause intense pain, from which he was not free a moment. So the surgeon in charge had ordered that an opiate should be given him, in order that he might obtain rest, without which it was impossible for him to recover. It was necessary that this opiate should be administered frequently, as the intensity of the pain was such as to overcome even a much stronger opiate than the surgeon had deemed it advisable to give, in the weak state of the young man. Hence some one must be found who could remain by his bedside during the whole day, and, if necessary, the night. All the men were needed to carry upon stretchers to a building some half mile distant, a boat load of wounded soldiers who had that morning arrived, and for whom there was not room in the general hospital.

A Sister of Charity offered her services. She "had slept for over two hours," she said, "and would not require any more rest for some time to come." A beautiful face was that which belonged to this Sister of Charity—so beautiful that even the close folds of white linen that hid her hair could not rob it of even a tithe. She seated herself by the bedside of the wounded soldier, and busied herself in preparing lint from a pile of linen which lay at her side. The soldier slept well for some hours; then, as the opiate gradually lost its power, he opened his full blue eyes and met those of the Sister of Charity looking earnestly into his. As she felt that his gaze was full upon her, she gave a quick start, and would have left his side, had he not said, in words that sent a thrill through her very soul, "ALICE DAY, what do you here, and dressed as a Sister of Charity? Have you gone mad?"

"No, DALLAS, I am not mad," she answered, quickly, "though Heaven knows you once nearly made me so."

"Then why do you wear this garb?" he asked.

"Because, when you cast me from you, and I would have taken my own life, one of the Sisters of the Order to which I now belong saved that life, which, without your love, I considered worthless."

"ALICE!—ALICE DAY! I have repented of that mad fit of passion, and when the war had ended would have claimed you for my wife. Did you receive the letter which I wrote after my enlistment?" he asked.

"Too late, too late, DALLAS, comes this avowal to me. I have promised before GOD and man to renounce the world with all its pomp and vanities, and I will keep my word. The life that you once claimed I would have thrown away. The life that was saved belongs to GOD."

"And the letter?—"

"No, I did not receive any. I never went into the town again after that fearful day when you left me forever."

"But, ALICE, surely you are not lost to me forever. Cannot this Order absolve you from your vows?" He forgot his pain now, in his eagerness. "You must and shall be mine! I have learned that what you told me then was true. May GOD forgive me for my unjust treatment of you in the past."

"Oh, why do you tell me this now?" she said. "The time was when I could have been your wife; but now, never—never!"

And ALICE DAY lay on the floor, while DALLAS screamed for help. Help came in the person of Sister AGNES, she who had saved ALICE from the committal of that fearful crime. As she entered the room her eyes fell upon the name of DALLAS REEVES on the narrow board at the head of his bed, and then she knew all—for ALICE had told her the name of him she loved, and for whom she would have died.

Sister AGNES had ALICE conveyed to another part of the building, and at evening she found her better, and advised her to quit forever the roof that sheltered her lover. ALICE obeyed. She knew that in the future DALLAS REEVES was as lost to her as though he were dead. But she would bear this cross without one murmur, hard as it would be.

DALLAS REEVES never left that bed of pain alive. The excitement brought on a fever which terminated his life in a few weeks. His last words were, "ALICE, my beloved, meet me in Heaven."

ALICE DAY—sweet Sister ALICE, as she is called—still lives. Through all weather she may be seen wending her way upon some errand of charity, and there is scarce a poor family for miles around but blesses her name. She never mentions the name of DALLAS REEVES, now, even to herself. But in the innermost recesses of her heart is enshrined a pleasant memory of what she might have been had she not become a Sister of Charity.

CUPID ON THE WING.

ROMANTIC ELOPEMENT.

SHAKSPEARE must have had an intuitive impression of the character and requirements of the youthful heart, when he made the beneficient contribution of comfort and encouragement to the future generations of unfortunate lovers by coining that maxim of hope, that "All's well that ends well."

A very pleasant private reception at one of our principal hotels the other evening, was the result of a deep faith in this sentiment, aided, perhaps, by an application of woman's wit and a man's courage and perseverance.

Charlie R——ls a dashing, jolly young fellow, twenty-four years of age, a graduate of a Canadian University, and a general favorite. He sojourned in this city last winter, being connected with a prominent insurance company, and made many friends; but following an impulse, he emigrated south, and next turned up in New Orleans, where he met with flattering business success. But business success could not cure his heartache, which had been effected during a visit to New York city, where Cupid had penetrated his heart with an arrow dipped in the affection of one of the fairest Knickerbocker belles. The existence of an obnoxious guardian, who didn't see matters in that particular light, was the thorn in that young man's side, and to add to his discomfiture he received a touching appeal from the adorable, informing him that the obdurate relative was endeavoring to force her into a marriage with a rich old chap whom she detested, and bidding her Charles hie to the rescue. He hied, and landed in New York only to find the object of his passion immured in a boarding-school, and guarded by a big brother. But "Love laughs at locksmiths."

A skillful stratagem soon procured them an interview. A few hurried preparations were made, a reverend gentleman called into service, the residence of a mutual friend appropriated for the occasion, a ceremony performed, and the happy couple were off for the West and sunny South. Indignant relatives were violent at first, but finally became reconciled, and intercepted the happy party with a telegram of forgiveness, and an invitation to return. The culprits, however, are in no haste to conclude their tour, and will not return till after visiting New Orleans and other places of interest.

They have every reason to believe that "All's well that ends well."—*Cincinnati Post.*

THREE THINGS.

THREE things to love: courage, gentleness, and affection. Three things to admire: intellect, dignity and gracefulness. Three things to hate: cruelty, arrogance, and ingratitude. Three things to delight in: beauty, frankness, and freedom. Three things to wish for: health, friends, and a contented spirit. Three things to like: cordiality, good humor, and cheerfulness. Three things to avoid: idleness, loquacity, and flippant jesting. Three things to cultivate: good books, good friends, and good humor. Three things to contend for: honor, country, and friends. Three things to govern: temper, tongue, and conduct. Three things to think about: life, death, and eternity.

AN honest man lives not to the world, but to his own conscience.

Sabbath Reading.

RESURRECTION.

THERE is a rainbow in the cloud
That overhangs the grave; the shroud
Is tinged with its meek glory hues;
And for the dead there is good news.
The man is weary and weak and old;
His heart is drowsy and numbed with pain:
He falls asleep; he is still and cold;
He never will wake or rise again.

So sinks the sun; so falls the leaf;
So the flowers unfold and fade;
So the beautiful, frail and brief,
In the dreary, wintry grave are laid.
But do not weep; though the sun may sleep,
And dark and cloudy may be the night;
For the day will break and the sun shall wake,
And scatter the clouds with his morning light.

And so the leaf; and so the flowers;
Winter is drear and dark and cold;
But Spring will come, with her sun and showers,
And leaves and blossoms again unfold.
Then do not weep;—neither dark nor deep
The grave should be, to believing eyes;
The Lord hath risen; hath broken the prison;
And all that sleep in the grave shall rise.

"SHALL I TAKE HIM IN?"

THERE he lies—there in the snow, with the fierce winds howling around him. And so young, scarce twenty, and yet dead to all the world around him; killed by that demon Alcohol. Dead—killed, did I say? No, even as I look at him lying there in the snow, I can see that he breathes. But shall I take him in? No, he's drunk; let him remain! But then I think of a fond mother watching for her poor, erring boy—of some fond sister, whose prayers go up to the great Redeemer for her wayward brother. Yes, I'll take him in; and as he recovers from his drunken stupor, I'll offer him the pledge. I'll speak of CHRIST, the Redeemer of fallen man, to him; I'll try to raise him to a higher and nobler life. Perhaps I shall be able to make a man of him yet. GOD knows; I don't.

Christian reader, is there such an one in your quiet little village? Is there not some young man that you can give some word of encouragement to seek the narrow path again—that you can help to leave the bar room and the gaming table? MENZER B.

Whitney's Point, N. Y., 1872.

SIMPLICITY.

KRUMMACHER illustrates simplicity by the following fable:

The angel who takes care of flowers, and sprinkles dew over them in the still night, slumbered on a spring day in the shade of a rosebush. When he awoke, he said:

"Most beautiful of my children, I thank thee for the refreshing odor and cooling shade. Could you now ask any favor, how willingly would I grant it!"

"Adorn me, then, with a new charm," said the spirit of the rosebush, in a beseeching tone.

So the angel adorned the loveliest of flowers with simple moss. Sweetly it stood there in its modest attire, the moss rose, the most beautiful of its kind. So the costliest ornaments are often the simplest. There is no gold, nor jewel, nor sparkling pearl, equal to the "ornament of a meek and quiet spirit, which is, in the sight of God, of great price."

GOLDEN WORDS.

VERY near together are hearts that have no guile.—*Confucius.*

LET us have unspoken creeds, and these quick and operative.—*Alcott.*

THE gods themselves cannot help a man who loses opportunities.—*Chinese Proverb.*

PRAYER and religion are one and inseparable; as much as there is of one, so much of the other.—*Hedge.*

WHOSO would climb over a staircase of subjected men into a lonely happiness, will find it misery when he arrives.—*Alger.*

WE want more of the tribe of Issachar, men that had understanding of the times "to know what Israel ought to do;" and then we want men to teach Israel what to do, and stimulate Israel to do it.

PROF. PARK tells the ministers that whenever the Bible is read in the pulpit the looks and tones of a reader are far more appropriate than those of a declaimer. The *pastor* need not make gestures when the *apostle* is speaking.

IF the divine earnestness within us only shifts and does not die, it matters little what becomes of our mere theology; and deep-hearted, practical faithfulness is not separable long from true-thoughted, practical faith.—*Martineau.*

Ladies' Port-Folio.

THE LONG WHITE SEAM.

As I came round the harbor buoy,
The lights began to gleam,
No wave the land-locked harbor stirred,
The crags were white as cream;
And I marked my love by candle-light
Sewing her long white seam.
It's aye sewing ashore, my dear,
Watch and steer at sea;
It's a reef and a furl, and haul the line,
Set sail and think of thee.

I climbed to reach her cottage door;
Oh, sweetly my love sings!
Like a shaft of light her voice breaks forth,
My soul to meet it springs
As the shining water leaped of old,
When stirred by angel's wings.
Aye longing to list anew,
Awake and in my dream,
But never a song she sang like this,
Sewing her long white seam.

Fair fall the lights, the harbor lights,
That brought men into thee,
And peace drop down on that low roof
For the sight that I did see,
And the voice, my dear, that rang so clear
All for the love of me.
For Oh, for Oh, with brow bent low
By the flickering candle's gleam,
Her wedding gown it was she wrought,
Sewing that long white seam.

[*Jean Ingelow.*

A MAY RAMBLE.

BY ALIQUA.

THIS pleasant May morning seems to take you by the hand and lead you away along the grassy country roadsides and over the sunny hills. You pause now and then to listen to the song of oriole or blue bird, or gather from some sheltered fence corner a cluster of fragrant violets.

And so, wandering in the warm sunshine that seems the kind hand of the smiling sky resting in blessing on the earth, you come to a green wood and enter in under the arching branches. Ah! this sweet May morning has led you in familiar pathways. It was here you came in the bright spring days of your childhood, hurrying away from the school house with little companions when the bell rang for nooning.

A little brook, escaped from the forest shadows, runs singing through the lane; a shallow brook with a low voice that murmurs of pleasant things, with little trout skimming through its clear waters and disappearing in the shadow of the foot bridge, with grasses bending over it, and wild birds sweeping down to drink. As you waded with your shoes and stockings hung over your arms in those days agone, the rippling waters kissed your feet, but told no tales of any rougher pathways that they might find to tread in coming years. And just within the wood what comfortable mossy banks and fallen trees whereon to rest, while the brook rippled on and took no rest, and MARIE with the flute-like voice sang till all the birds and all echoes answered. The delicately-tinted spring beauties smile up at you to-day with their unchanged faces, though the faces of all the old playmates are changed and gone. The tall trees look down and shake their heads gravely in seeming wonder if this be one of those merry children. Their trunks are disfigured here and there where the letters of your names were cut in the bark years ago, and the breeze whispering all about you seems to sigh that some of

"The names you loved to hear
Have been carved this many a year
On the tomb."

Where that high board fence keeps guard to-day there used to be one of mossy rails; you remember how like a flock of partridges you children scrambled through it and over it, with now and then a rail following after; how blue the violets were in its mossy corners at the feet of the sweet-brier bushes that nodded their pink blossoms at the rustling corn in the sunny fields beyond. You smile to think how reverently you used to pass around each mossy mound, thinking them all to be the graves of Indians who had passed to the Happy Hunting Ground. You pause where the swing used to be,—scene of many a fall when your little hands slipped from the rope and you came down into somebody's arms, or to find that earth was hard under all her matted leaves.

A little further on you come to the brook again, dark and silent here under the evergreens, and the log that serves as a bridge sways as you pass over. Ah! here are the old mossy nooks, the shadow and the silence. Here grow the scarlet berries and the long mosses you wove into such pretty wreaths and baskets, and the fadeless ground-pine you carried home to place about the picture of little FRED, who died. Here ELLA would throw herself down, oblivious to you all, with a far-away look in her dreamy eyes; fair ELLA, of whom a friend writes that she is passing rapidly into the shadow of death this sweet May-time. Just over there stood an old tree you called the Indian, because in your school-reader there was a speech of an ancient chief who pronounced himself like a dying hemlock, "dead at the top." This old tree was dead at the top and leaned eastward and had a broken branch that creaked and sighed in the wind. But the old Indian has fallen, and his creaking arm is silent now.

You return through the maple wood, and all the wild flowers greet you as an old friend, while the squirrel races away before you, and the birds seem holding a perfect jubilee of song in the green arches overhead. You come back, happy-hearted and refreshed, to your busy life, and no one guesses you have been rambling with the May morning in a wood that is scores of miles away.

"THOUGHTS ON BEAUTY."

IN the RURAL NEW-YORKER of May 4, is an article with the above title; and, although it sets forth the most common and generally received opinion in regard to that beauty which is "only skin deep," another honest thinker may be allowed a slightly different expression. Not that the ideas are esteemed erroneous, for in general they are truth itself. However, we take issue with the writer's assertion that consciousness of beauty "gives the countenance an expression of vanity and self-conceit." It may, but there is no reason it should. We may, with all due propriety, admire the beautiful in the faces of others; then why may not a face see and credit each of its own points of beauty, with the same appreciative eye, far removed from petty vanity?

Beauty is a great gift from GOD—as much to be valued and recognized as the talents given. Then it has the appearance of ungratefulness in the possessor of it to be entirely unconscious, or to ignore it in mistaken self-depreciation. Much more fitting would it be for Beauty to recognize this, and, with a due feeling of thankfulness to the Giver, and a knowledge of the true use of the charms, there will be no room in the heart for silly self-conceit. Methinks, too, that sometimes the protesting *unconscious* beauty, will be found vastly more puffed up with vain glory than the one who can calmly study the merits of self, as she would the loveliness of a painted picture.

Akin to this is the custom of belittleing everything we may happen to possess when praised by another. We would honestly admire it if owned by some one else; yet as it is ours it is more proper and becoming to modestly deprecate it. It may be the proper spirit to manifest under the circumstances, but to me it is slightly bordering on the humbleness of URIAH HEEP.

Again—did the writer, in the last instance, alluding to the early death of a beautiful young girl, mean to sanction the old-time superstition that there are persons born into the world too good or too beautiful? GOD, we read, after the creation of earth, "saw it was very good." In His wisdom, then, He would plant no human flower in it which would be too beautiful to expand and complete the mission He gave it. It is an unworthy doctrine to believe of Him who has made flowers to bloom and come to perfection, even as "fair and fragile as a lily." JASPER.

HEART DISEASE.

THOSE ladies who suffer from the distracting grievance and disability of being treated too much as drawing-room pets, and shielded too carefully from the rougher blows of the battle of life, may possibly learn resignation, if they cannot derive complete consolation, from some dry but significant researches which Dr. Quain has made, and in which he stated the result in his first Lumleian lecture on disease of the heart, at the College of Physicians. Enlargement of the heart, one of the most distressing and fatal diseases, is more than twice as frequent in males as in females, the precise proportion being eight to three. This remarkable liability to the enlargement of men's hearts, as compared with those of women, is, he thinks, unquestionably due to the greater amount of work and anxiety which, in the present dispensation, falls upon men. Ladies may take this fact to heart, and reflect whether, in claiming the rights of women, they may not at the same time incur the risks of men, and with them a new and unexpected form of disability. They might do wisely to rest content for their sex, with hearts suffering, it may be, from those tender affections which often pain, but never kill.—*British Medical Journal.*

Reading for the Young.

THE OWL.

BY C. H. C.

THE owl has a nest in the sycamore tree—
The old, hollow sycamore tree;
I watch him sit there in the twilight air,
And he winks and he blinks at me—
That owl in the sycamore tree.

The owl sits alone on the sycamore bough,
The shady, old sycamore bough;
He hoots and he cries as the daylight dies—
"Too-hoo! Too-hoo!" I hear him now,
That owl on the sycamore bough.

The little birds sleep in the pine tree's shade,
In the whispering pine tree's shade:
They sleep without fear, though their foe be near,
I marvel they are not afraid—
Those birds in the pine tree's shade.

Beware! gentle warblers! your tyrant is nigh!
Your night-roving tyrant is nigh:
Hark! the rush of his wings—destruction he brings—
Awake! In a moment ye die!
Beware! for your tyrant is nigh.

Sycamore Villa, L. I.

LETTERS TO YOUNG RURALISTS.—VII.

FROM COUSIN JOHNNIE.

Now, my dear children, I want to say a few words to you this time about your letters. I saw Mr. RURAL, when in New York, the other day, and he said he did not think they were nearly as good as they were a year ago. Now shall I tell you what the trouble is? I think there is a little too much sameness about the letters. They seem to be modeled one after another, till we are almost certain before reading each that it will tell us, "I am so many years old, have so many brothers and sisters, go to school or not, as it may happen, and have a dog or a cat for a pet!" Now, why can you not strike out in a new direction? Give us incidents of your everyday life. Those who live in towns or cities describe the places of interest there. Those who live in the country, observe carefully the habits of the insects, birds and animals, and tell us about them; or tell us the name of any pretty wild flowers, and where and when we can find them.

Some of you are writing from almost every part of the United States, and as the habits, customs, and even the mode of speaking, are quite different in different States, it would be very interesting to hear about them. There is WILD ROSE, when she goes home to spend her vacation, could write us charming letters about life among the Indians. B. MAY C., the next time, might give us a description of the lighthouse, both inside and out. The Southern boys could tell us about rice and cotton growing. A good many of us know nothing about such things, and to see a field of either, common as it is to them, would be to us a real curiosity.

But, though many of your letters, my dear children, might be made a great deal better, some of them are very good indeed—far before the first one I ever wrote, which ran thus: "*Dear Grandma*—As I haven't anything to say I can't say much." This lack of contents, I thought, was fully made up by the elegant sheet of paper, with its wide border of green and gold, and a picture in the left hand corner of a young woman in a garden picking flowers, and the handsome wafer on the envelope inscribed with some such appropriate motto as "Strike while the iron is hot!"

PROUD OF HIS MOTHER.

"It was a cold night in winter. The wind blew, and the snow was whirled furiously about, seeking to hide itself beneath cloaks and hoods—in the very hair of those who were out. A distinguished lecturer was to speak; and, notwithstanding the storm, the villagers very generally ventured forth to hear him.

"William Annesley, buttoned up to his chin in his thick overcoat, accompanied his mother. It was difficult to walk through the fallen snow against the piercing wind; William said to his mother—

"'Couldn't you walk easier if you took my arm?'

"'Perhaps I could,' his mother replied, as she put her arm through his, and drew up as close as possible to him.

"Together they breasted the storm, the mother and the boy who had once been carried in her arms, but who had now grown up so tall that she could lean on his. They had not walked very far before he said—

"'I am proud to-night, mother.'

"'Proud that you can take care of me?' she said to him with a heart gushing with tenderness.

"'This is the first time you have leaned upon me,' said the happy boy.

"There will be few hours in William's life of more exalted pleasure than he enjoyed that evening, even if he should live to old age, and should in his manhood lovingly provide for her who, in his helpless infancy, watched over him."—*Well Spring.*

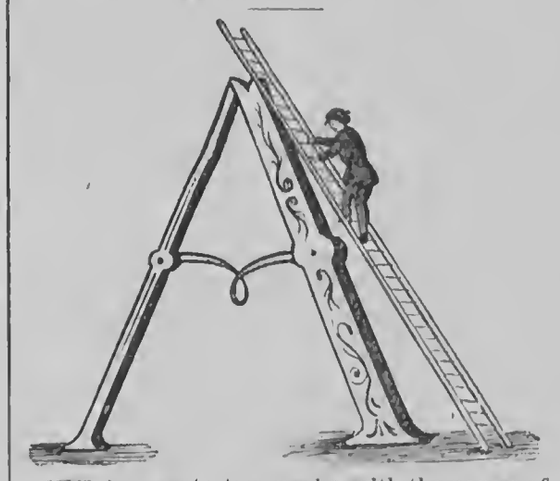
HOW TO ENJOY LIFE.

IT is wonderful to what an extent people believe happiness depends on not being obliged to labor. Honest, hearty, contented labor is the only source of happiness, as well as the only guarantee of life. Idleness and luxury induce premature decay much faster than many trades regarded as the most exhaustive and fatal to longevity. Labor in general actually increases the term of life. It is the lack of occupation that annually destroys so many of the wealthy, who, having nothing to do, play the part of drones, and, like them, make a speedy exit, while the busy bee fills out its day in usefulness and honor.

Let young people heed the above facts, and remember that industry—labor—is not only requisite to success in any calling, but also the great source of health and happiness.

The Puzzler.

ILLUSTRATED REBUS.—No. 21.



☞ Answer in two weeks, with the names of those sending correct answers.

BIOGRAPHICAL ENIGMA.—No. 1.

I AM composed of sixty-four letters:
My 2, 57, 9, 33, 6, 14 was a celebrated musician.
My 42, 51, 22, 51, 62, 44 was a famous English poet.
My 58, 6, 45, 4, 57, 58, 54, 3, 14, 53, 6, 49, 1, 35, 7, 16, 58, 50 is an American novelist.
My 11, 15, 58, 31, 5 was a famous Italian poet.
My 37, 63, 6, 44, 61, 14, 54, 61 first established the identity of lightning.
My 59, 36, 40, 26, 46, 1, 52, 43, 61, 3, 10 is called the prince of orators.
My 4, 26, 24, 6, 13, 3, 21, 21, 43, 3, 14, 25 is a New York editor.
My 55, 8, 32, 50, 13, 31 was a Roman philosopher.
My 1, 56, 29, 42, 6, 10, 28, 39, 3, 25 was a noted writer.
My 14, 12, 23, 58, 38, 30, 41, 10 was a celebrated king of Sparta.
My 22, 6, 21, 31, 60, 5, 45, 18, 3 was a noted general in the Revolutionary war.
My 6, 16, 15, 53, 54, 42, 48, 11, 20, 10 was a great mathematician.
My 13, 54, 13, 17, 63, 29 was a famous Roman orator.
My whole is a verse in the Bible.

New Hackensack, N. Y. JOSIE WOOD.

PUZZLE.—No. 4.

My letters five I'd like to see
How you'd arrange, and what I'd be.
One way, in me, resthetic grace,
Beauty and comfort you may trace.

Another method brings to view
A noble race—to dare and do—
Who oft have shown, in Hist'ry's page,
How brave men Duty's conflict wage.

Read *backwards*, and I'll give you, then,
Among the foulest things we ken;
So words, misunderstood, not meant,
Fond ties have oft asunder rent.

Read *rightly*, and thy gloom I'll light
With heaven's shining beauties bright;
Most other things are better, too,
If *taken right*—*so try it*, do!

☞ Answer in two weeks.

PUZZLER ANSWERS.—May 11.

ILLUSTRATED REBUS No. 19.—Napoleon Fourth won't hinder a Hohenzollern prince from sitting on the Spanish throne. Correct answers have been received from H. A. Norton, Fred. Snell, E. G. Seekell, R. M. Bernhard, James M. Laing.

HOUSEKEEPER'S ENIGMA No. 1.—Many are the trials of a housekeeper. Correct answer received from Orin S. Moore.

ARITHMETICAL PUZZLE No. 1.—
Nine.
One.
Six.
Eight.

Correct answers have been received from Leona Woodward, W. G. Parker, Levi J. Whitlock, Frank E. Smith, H. A. Norton, A. Barlow, Ed. S. Marsh, Eva L. Reynolds, W. Van Sann, Mary Ann Hull, Fred. Snell, E. G. Seekel, Emma S. Frederick, Annie Reese, Emma M. Newton, Orin S. Moore, Wm. O. Hillman, Charlie Searles, Lizzie Rickenbrade, C. M. Hendershott, G. W. Crandall, Manly T. There has been a severe earthquake at Haswick, Iceland.

RED RIVER VALLEY OF MINNESOTA.

THE Red River section of country on the line of the Northern Pacific Railroad presents remarkable inducements to permanent settlers and to health-seeking tourists. the rich productiveness of the land yielding large returns to the farmer, and the steady, wholesome range of the temperature is of great curative benefit to the invalid. A private letter from a resident for several years at Oak Lake, Minn., gives some interesting facts on the above points. The soil is very rich, causing a rapid growth of the crops. For instance, corn planted the 23d of May was dry enough to take from the stalk and grind in September; tomatoes sowed May 3 were ripe August 15; watermelons were planted and ripened inside of twelve weeks; and potatoes, planted for an experiment on July 4, grew to one pound's weight. The writer refers to the heavily-timbered portion of the country and the numerous streams for the conveyance of timber to the Red River, and as he settled there before there was any prospect of the Northern Pacific Railroad being built, he knows of no such region for the man of energy or the invalid, according to their respective needs. The yield of hay in that section is from two to five tons per acre; wild fruit, such as plums, strawberries, currants, &c., flourish in great abundance; fish are numerous and excellent; wild fowl and game abound, and herds of moose, elk and deer are met with. The healthfulness of the climate is proved by his experience as a physician for twenty years; and no case of miasmatic disease or pulmonary disease has originated there; while among the natives born and reared there, functional derangements of the vital organs are less frequent than among the people of any other section of country, showing the benefits in the matter of health by long residence in that climate. Thousands of excursionists, engineers and others employed on the Northern Pacific Railroad, can attest to the beneficial effects of the climate in the Red River Valley.

SEMI-BUSINESS PARAGRAPHS.

The United States Watch Co., (Giles, Wales & Co.,) employ 500 hands in their works at Marion, N. J., and are turning out 250 of their celebrated time-keepers daily, or one watch per day for each two hands employed: their working time is ten hours per day, or 600 minutes, producing a fine watch complete every two and a-half minutes, and a little more, and even at that, are unable to keep pace with the constantly increasing demand caused by the extraordinary records the watches are making as accurate and reliable time-pieces, an instance of patient and persevering energy and enterprise, rewarded by prosperity which we are glad to see.

Facts for the Ladies.—Mrs. S. D. Joyce, Kingston, Mass., has used her Wheeler & Wilson Lock-Stitch Machine since 1867, in general sewing, sometimes changing her silk or thread twenty or thirty times a day, working as easily as with hand needle. See the new Improvements and Woods' Lock-Stitch Ripper.

Delicate Creatures.—There is a healthful and odoriferous toilet article, known everywhere as Hagan's Magnolia Balm, which literally transfigures a cloudy or sallow skin, suffusing the discolored face, neck, arms and bosom with a soft, pearly tinge, and imparting to the surface a smoothness and a gloss like that of polished marble.

Our sympathies would be given to the farmers who are wheedled into buying poor churns, if we did not know that there is no need of their being deceived. Buy an article proved by twenty years' use to be just what it is represented. Buy the Blanchard Churn.

Bores, in the guise of Traveling Agents, not employed by us. Thus we sell our scales at such low prices. Sold on trial anywhere in the United States. Free Price List, THE JONES SCALE WORKS, Binghamton, N. Y.

THE MARKETS.

MONEY AND TRADE AFFAIRS.

NEW YORK, Saturday, May 18, 1872.

GENERAL Trade begins to feel the approach of Summer dullness, but there is more doing than this time last year in Merchandise, by nearly or quite ten per cent. The great falling off is in the Cotton export (as well as receipts) at the Southern ports. This affects seriously our trade balances with Europe, and there is no present remedy, as the Cotton is not here to spare to the Foreign markets. The falling off in the crop receipts, already 1,100,000 bales, will be 1,250,000 bales, as compared with the last crop, and in place of 3,100,000 bales marketed abroad, we shall scarcely be able to spare 1,900,000 bales. The difference in price, however, in favor of the present crop, will nearly make good the deficiency in quantity. The accounts of the new crop, recently planted, are generally promising, and the extent of land under Cotton cultivation is believed to have been materially increased.

The Treaty has come up for discussion at Washington in a new shape, and the suspense as to the ultimate result has not yet been removed, nor the adverse influence upon financial affairs diminished. Gold keeps firm at 111 per cent., and while the Government Stocks keep pace within ¼@1 per cent,—with the price of Gold, other American Stocks, and especially new Railroad enterprises suffer, for the time, in the markets abroad. Our present impression is that the Senate will, by a two-thirds vote, advise the President to accept a supplementary article to the Treaty on the question of indirect damages.

The City Bank movement is expanding in Call Loans and Deposits, and the lawful Money basis in Gold and Greenbacks is also better than in the previous return. Money is 7 per cent. to the Stock Brokers, and 7@8 per cent. on prime Merchant paper.

The following are the comparative movements of the City Banks for the past fortnight:

	May 4.	May 11.
Capital	$87,155,500	$87,154,000
Loans	279,409,000	285,202,800
Gold and Greenbacks	65,732,800	67,310,700
Deposits	211,936,400	217,267,500
Circulation	27,899,500	27,714,200

PRICE OF STOCKS AND BONDS.

American Gold	114	N. Y. Central Scrip	92
U. S. 5-20's of 1867	116¼	Rock Island	111
U. S. 6s of 1881	118¾	N. West.	75¼
U. S. 10-40s, 5 ₱ cts	111	Do. Preferred	93
U. S. New Loan	112	St. Paul	59¾
N. Y. Bounty Loan	103¾	Do. Preferred	73¾
Tennessees	71	Lake Shore	95¾
Virginias, new	53	Ohio and Mississippi	27¾
Missouri Bonds	96¾	Toledo & Wabash	35
U. S. Currency 6s	116¾	Erie	69
Central Pacifics	103	Union Pacific Stock	85¼
Union do	93	Adams Express	99
Western Telegraph	75¼	American Express	76
Pacific Mail	82¾	United States Exp's	79
N. Y. Central Stock	97¾	Bills on London	109¾

The advance in Pacific Mail Stock is the only important change in our present table from last week. The business in the stock (almost wholly speculative) has been immense, and the excitement continued to the close of the week. The fluctuations have been 75 up to 87¼, then down to 79¾ and up again to 82¾ per cent. Congress is about to grant an extra subsidy of $500,000 per annum to the Company for semi-monthly mail service to China and Japan, making the whole mail subsidy one million dollars a year. The State Legislature has authorized a reduction of Capital Stock from $17,200,000 to $10,000,000. The speculation in the Railroad Stocks has been fairly active, but the fluctuations comparatively moderate.

PRODUCE AND PROVISIONS.

NEW YORK, Friday, May 17, 1872.

Receipts.—The receipts of the principal kinds of produce since our last embrace 7,331 bales of cotton; dried fruits, 202 pkgs.; eggs, 20,529 bbls.; flour, 45,203 bbl.; wheat, 195,075 bush.; corn, 498,000 do.; oats, 77,102 do.; barley, 40,216 do.; grass seed, — bags; hops, 21 bales; beans, 240 bbls.; pork, 2,575 pkgs.; cut meats, 6,671 do.; lard, 5,956; kegs do., 173; butter, 11,107 pkgs.; cheese, 10,587 do.; peanuts, 2,554 bags; 1,572 hhds. tobacco; 9,141 pkgs do.; 3,697 bbls. whisky; 846 bales wool; corn meal, bbls, 6,552; do. bags, 2,211; rye, bu., 8,150; malt do., 9,185; beef, pkgs., 68.

Beans and Peas.—Stocks are very light, and prices have been steadily advancing. Prime mediums, $3.35@3.40; fair lots do., down to $3.30; pea, $3.40@3.60; kidney, $3.40@3.50; red kidney, $2.25@3.00; prime marrowfats, $3.40@3.50, with fair lots at $3.30@3. Canada peas $1.22@1.25; green do., $1.90@2.

Beeswax—Is coming in more freely, but the supplies are higher comparatively, 40½@41c. obtained for Southern.

Butter.—There is a fair demand, still market buyers are beginning to purchase State cautiously, with a view to the use of Western, which will soon assume commercial quantities. There is, however, no surplus of moment left from the grade of butter now arriving. Packages are small at this season, and in actual stock represent only about one-half of later supplies in similar reported totals. White butter is now pushed one side, and the best of it will not exceed 25c. The remnant of California, including another recent arrival of 100 packages, is being put up for Southern use on account of its rich color. Exports past week 549 packages, chiefly grease. We quote State pails, fine, 33@35c.; do. common to fair, 28@31c.; State half tubs, fine, 30@31c.; selections, 32c.; Welsh, packages, fine, 29@30c.; common State, 26@26c. Western ranges at 25@28c. for nice Western reserve; common Western, 22c. Grease and inferior, 7@15c.

Cheese.—The Cable quotes a weak market in Liverpool, but this has been offset by the advance in good. Shippers are disinclined, however, to work freely and prices are not settled. The stock of old is reduced to about 3,000 boxes. Sales of new to shippers have been at 14@14½c. for prime factory, the latter price obtainable only for one lot, a small factory. We quote prime factory 13½@14c., fair do. 12c., skimmed 8@11c., Ohio factory fine 13@13½c., farm dairy good to fine 12@13c.

Cotton.—The demand has been almost entirely from spinners. Prices are about the same:

	Uplands.	Alabama.	N. Orleans.	Texas.
Ordinary	19¾	19¾	20	20¼
Good Ordinary	22¼	22¾	22¾	22¾
Low Middling	23¼	23¾	23¾	23¾
Middling	24	24¼	24¾	24¾
Good Middling	24¾	24¾	25¼	25¼

For forward delivery latest sales on the basis of low middling are at 23 9-16 for May, 23 11-16 for June, 23 15-16 for July, 22 for Sept., 20¾ for Oct., 19¾ for Dec.

Dried Fruits.—Apples are unchanged, though it is thought the late attention given to peaches will shake them from their position. The sales of 150,000 lbs. quarter peaches are reported in N. Y. at 6c., and 200,000 lbs. at Philadelphia at 7½c., all in a speculative way. Blackberries are now released to the trade with a stock of 1,300 lbs.; small sale 13½c.; other small fruit same.

Apples—Old State, qrs., 6@7c.; Western, new, 10@10½c.; Southern, new, qrs., 9@9½c.; do. fine, sliced, 12@13c.; new State qrs., 11@11½c.; do. sliced, fine, 13@14c.; Peaches, peeled, new N. C., 17@18½c.; do. Ga., 15@16½c., peeled E. Sh. Va., 16@17c.; new unpeeled halves, 7½; do. quarters, 6@6¼c. Plums, 27@28c. Cherries, new, ₱ lb., 33@34c. Blackberries, 15@13½c. Raspberries 33@35c.

Eggs.—The market has been very much depressed. The arrivals are the largest known for this season of the year. Stocks have accumulated to an extent that lead holders to accept anything like fair prices. Sales of Western at 13½@14½c.; State at 15@15½c.; Southern at 13@14c. There is more than the usual difference made now in prices of parcels from distant points on account of the warm weather.

Flour.—The market has been steadily advancing under a good call from the home trade, small arrivals and firm foreign markets. $7.20@7.40 for superfine State; $7.65@7.85 for common extra do.; $7.90@8.00 for good to choice do.; $8.05@8.65 for fancy do.; $7.20@7.40 for superfine Michigan, Indiana, Ohio, Iowa, &c.; $7.65@8.20 for extra no.; $8.25@9.10 for choice extra do., including shipping brands of round hoop Ohio at $8.15 @8.70, and trade brands of do. at $8.75@10.40; good to choice white wheat extras at $9.10@10.55; Minnesota, fair to very choice extra, at $8.50@11.00; St. Louis at $9.60@11.00 for common to fair extra, and $11.10@13.50 for good to choice. Southern at $8.75@11.20 for extras and $11.25@13.50 for good to choice. Rye at $5.25@6.25, for common to fair.

Fresh Fruits.—Strawberries are now in from Charleston and Norfolk. The quality of the picking is poor, showing the defects of a heavy rain storm South. They range at 50@75c. per quart. Apples have little more than a cooking demand, the retail trade running on bananas, which are now very abundant. Few prime peanuts now remain in first hands. Russets range at $2.50@3.50 for golden and Roxbury. N. C. peanuts, prime, $1.90@2.25; Virginia, $1.75@2; common, $1@1.25.

Grain.—Prices of wheat show a marked advance, mainly owing to reports from abroad.

We quote No. 2 spring, in store, $1.70@1.72; No. 1 do., $1.76@1.77; winter red Western, $2.00@2.08; amber Western, $2.00@2.10; and white Western at $2.10@2.25. Rye is dull and lower, State sold at $1.15; Western, in store, $1. Oats have advanced but closed weak; sales at 54@56c. for Western, 56@60c. for Ohio, 56½c. for State. Barley is active, at $1.05 for Canada West. Corn has been in good speculative demand, and is higher, closing at 75@75½c. for Western mixed, afloat, 80c. for prime white Western.

Hay and Straw.—There has been a little more stock coming in, some parties showing some disposition to realize at the unusually high prices, but a number of holders are not anxious, as with the drouth there is some apprehension about the crop. Sales at $1.80 for shipping, and $1.90@2.25 for retail qualities. Clover $1.40@1.50. Salt 75@90c. Straw at $1.25@1.35 for long rye; $1@1.10 for short rye; 80@90c. for oat; 70@75c. for wheat.

Hops.—There is a moderate trade in choice stock at steady rates. There is scarcely any domestic here that will suit buyers. We quote best grades 60@65c.; common lots 25c.; English, 60@65c.; Bavarians 65@75c.

Maple Sugar.—Quoted at 12@16. Receipts about all here.

Milk.—Receipts are heavy, averaging 8,650 cans per day by the various roads. This is above last week, but the demand has used it up, with some days showing room for more. The average price is quoted at 2¾c; the range was $2.50 up to $5 per can.

Poultry and Game.—Dressed fowls near points quoted at 25@30c. for turkeys, 20@25c. for fowls, and $1.25@1.50 for Spring chickens. Poultry from all points should now be packed in ice. Live, State and N. J. fowls and chickens, 19@21c.; do. Western 17@18c.; roosters, 12c.; turkeys, 23@25c.; ducks, Western, per pair, $1@1.25; Geese, Western, $1.62@1.87.

GAME.—English snipe and plover, per doz., $2@3. Wild pigeons are scarcer, and quoted at $1.75@2 per doz.

Provisions.—In pork there is an improved feeling based upon reports from the West. Mess $13.87 for spot, $13.90 for June, $14 for July, extra prime $11, prime mess $13. Dressed hogs are firm at 5¾@6¾c; middles meet with a good demand from shippers at full prices; short rib 7¾c., long clear 7¾c., short clear 8@8¾. Cut meats are selling freely to shippers; dry salted shoulders 5¾c., pickled hams 9¾@10c., smoked meats are steadily held at 10½@11c. for hams, 6@6¼c. for shoulders, 8@8¾c. for clear rib. Lard is weak at 9¾ for prime Western steam, 9¼c. for June, 9¾c. for July. Stearine at 10c. for prime. Beef is dull at $7.50 @9.50 for plain Western mess, $10@12 for extra mess. Beef hams at $22@27. Tierce beef at $15@17 for prime mess, $19@21 for India mess.

Seeds.—There is only a small home trade. Clover at 9½@9¾c. for Ohio; 9¾@10c. for Indiana and Michigan. Timothy at $2.50@3.

Tobacco.—The business in seedleaf is is unusually brisk, the trade almost entirely from shippers, with now and then a lot taken by speculators. Prices are very firm. Leaf is quiet. Latest sales of Kentucky leaf at 8¾@14c. Seed leaf 21@22c. for old Conn. wrappers; new crop Connecticut and Massachusetts fillers, 13@16c.; do. for seconds 25@30c.; Ohio, 10@12c.; Pennsylvania 15@18c.; New York 11@12c.; Wisconsin 9@9¾.

Vegetables.—Holders of potatoes begin to find the stock most too heavy, and have been pressing their goods for sale more or less, and the consequence is a lower range of prices. The opening of the canals has thrown some little stock on the market that has been locked up all Winter. Russian turnips are scarce, and for the few lots here advanced prices are obtained. Asparagus is coming in from all directions, and prices are much lower. Green peas vary in quality, with parcels from Norfolk selling much higher than those

from Charleston or Savannah. A few lots of cucumbers have come in from Charleston.

Potatoes, Early Rose, bbl., for seed, $1.75@2.00; P. Blows, $2.00@2.50; Prince Albert, $1.75@2; Monitor and Goodrich, $1.25@1.50; Jackson, $1.50@1.75; Dyright, $1.50@2; sweet Del., $1.00@4.50. Onions, red and yellow, $1.00@1.50. Garlic, per 100 bunches, $22@24. Turnips, Russia, bbl., $3. Cabbages, per 100, $6@8. Beets per 100, $1.25. Carrots, per 100, $1.50. Bermuda potatoes, $8.50@9; do. tomatoes, 5-qt. crate, 90c.; do. onions, per crate, $1.50@1.75. Asparagus, N. J., per doz., $1.; do., Oyster Bay, $2@2.25. Peas, Va., bushel, $8. String beans, per crate, $6. Cucumbers, S. C., crate, $3@4.

Whisky—is firmly held at 90¼c. for Western.

Wool.—Business is slow and prices are much the same. Sales at 57@59c. for medium unwashed fleece, super pulled 75c., Texas at 47½c., Fall clip California 32@35c., East India 42, Montevideo 52, Australia 73.

COUNTRY CHEESE MARKETS.

Little Falls, N. Y., May 18, 1872.

THE market at Little Falls for the week ending May 18 was brisk with large offerings, nearly all of which were taken. The delivery of farm dairies was about 1,183 boxes, and prices ranged from 10@13c. A large proportion of the lots was more or less skimmed. Factorymen were present in considerable number, and the offerings amounted to nearly 3,000 boxes. Full milk brands, well cured, went as high as 14c., and prices generally ranged lower in proportion to the qantity of cream removed. We give quotations of leading factories as follows:—Manheim Turnpike, 13¾c.; Middleville, 13¾c.; Mohawk Valley, 13¾c.; Norway Association, 13c.; Palns Hollow, 13¾c.; Ladueville, 13c.; Reydon, 13c.; Shells Bush, 13¼c.; Snells Bush, 13¾c., Smith, 13c.; Zimmerman Creek, 13c.; Brockett & Foster, 13c.; Bellinger, 13c.; Cook & Ives, 13¾c.; Cold Creek, 13¼c.; Columbia Center, 13½c.; Christman, 13c.; Dairy Hill, 13½c.; Eatonville, 13½c.; Old Fairfield, 13¾c.; Cold Brook, 13¾c.; Henderson, 13¾c.; Herkimer Co. Central, 13¾c.; Hill, 13¼c.; Herkimer, 13¾c.; J. D. Ives, 13¾c.; Keys, 13¾c.; Klock & Nellis, 13½c.; Avery & Ives, 13c.; Manheim, 13¾c.; St. Johnsville, 13¾c.; A. Smith & Co., 13¾c. The delivery of butter has fallen off, the whole amount in market being less than 100 tubs. Prices ranged from 24@27c., the bulk going from 24@25c.

The weather is pleasant, but dry, and the country is suffering for want of rain.

ROCHESTER, N. Y., May 16.—Flour is decidedly higher. Best wholesales at $10.50 and second at $10 per barrel. Wheat $1.95@2 for red winter, $2@2.20 for amber to white. Corn, 75c. Oats, 52c. ℔ bush. Beans scarce at $2.25@2.75 ℔ bush. Rye 95c@$1. Butter 1@2c lower, selling at 25@28c. Wool is nominal at 60@65c., a decline. No sales made yet. Sheep pelts $2.50@4 each. Potatoes are lower. Peachblows bring $1.50 per barrel; other kinds $1@1.25 per barrel. Hay scarce, $17@25 per ton. Dry weather continues, and wheat and grass must be very light crops.

LIVE STOCK MARKETS.

NEW YORK, May 16, 1872.

WITH cool weather again, there is a good demand for meats of all kinds, and the markets generally show an upward tendency. Cattle are coming forward more sparingly, and sheep run light. Lambs are increasing in numbers, but the demand uses them up quite as fast as they arrive. Hogs are still plenty and cheaper, but they are improving a little under lighter arrivals. The demand for pork is very light, so far as the fresh trade goes, but cutters are actively at work curing large quantities for shipment abroad.

Beeves. Total for the week just ended, 7,548, against 8,189 for the previous week. Of this number, 4,511 were on sale last Monday—161 car loads at Communipaw, 117 at 100th St., and 7 at Weehawken. There was very little change in price, but a few lots held over for want of purchasers. Since then the arrivals have been moderate, only 2,200 coming forward, and the market shows a little firmness, with an attempt on the part of dealers to shove them up again. So completely is the trade in the hands of a few speculators, that they immediately check the arrivals when the market shows signs of being overstocked. Feeders of distillery cattle are now hurrying them off before the hot weather sets in. Most of those sent in of late were fat, and sold close up to the prices of corn-fed steers. Texans are scarce. They are worth 11@11¼c. One drove, fed in Missouri, 7 cwt., good flesh, sold at 11¼c., 56 lbs. per cwt. Of the Illinois cattle—and four-fifths of the stock now hail from Illinois—137 stillers, 6¾ cwt., sold at 12½c., 58 lbs. per cwt., with 47 corn-fed, not as fat, 7 cwt., at 12¾c.; 153 or 7¼ cwt. at 12@13c., with 222 Indiana stillers, 7½ cwt., at 11¾c. Bulls sell at 5¾@5½c. ℔ lb., live weight. The dry weather begins to frighten the farmers, and some of them incline to reduce their stock of cattle as a precaution. From all we can learn, it does not look like having a glut of cattle this spring, save in an exceptional market. Most of the droves sent in during the past week made their owners a little money.

The following are the closing prices for the week in comparison with what cattle brought one week ago, for net weight of beef:

	This week. Cents.	Last week. Cents.
Choice beeves, ℔ lb	12¾ @ 13	12½ @ 12¾
Good to prime	12 @ 12½	11¾ @ 12¼
Ordinary to medium	11½ @ 11¾	11 @ 11½
Lowest grade	10½ @ 11	10 @ 10½
Average sales	11¾ @ 12	11½ @ —

Hogs.—Total for the week 39,731, against 41,831 one week ago, with lighter receipts, and a strong movement on the part of dealers to check the heavy losses they were sustaining. Cooler weather aiding, the downward course has been checked, and an upward turn begun. Dealers lost more than $100 per car-load last week, while one or two hot days caused a great mortality among the hogs themselves. Live are now worth 4½@4¾c., after selling down to 4¾@4½c. City slaughtered sell at 5¾@6¼c.

Milch Cows.—Receipts for the week 113 head. Cows are in good demand, milk having advanced. Fresh cows are coming forward somewhat freely, but all the good ones are soon taken, mostly by dealers, who peddle them out among milkmen. A fancy cow is sometimes sold close up to $100, some gentleman, going out of the city to spend the summer, taking her to his rural home. Poor cows have been sold at $30@35 each, with ordinary to medium at $45@65, good to prime $70@80, very few going above $75.

Sheep and Lambs. Receipts for the week 13,333 against 13,798 the previous week. Under continued light arrivals the market is rather stronger, only farmers begin to send in poor stock, mostly clipped. Some of these thin sheep have been sold down to 5½c., and so up to 7c. for medium and 7¾@7¾c. for prime to extra stock. A car extra fat 154 lbs. Ky. sheep were sent in and only brought 7¼c., being too heavy for warm weather. Farmers should bear in mind that heavy sheep ought to be marketed in cool weather. Those same sheep would have sold for 8¼c. a month ago. Lambs are in good request, and many of them now sell by weight, viz., at 11@16c., so variable is the quality. By the head they went at $1.25@9.

Veal Calves.—Total for the week 1,370. The veals are doing better, both cool weather and a lighter supply aiding the dealers. Buttermilk calves have made their appearance. They are worth 5@5½c. Some choice milk veals sold up as high as 8¼c., but they were very fine. Live calves are quoted at 5¾@6¾c. for ordinary, 6¾@7¼c. for fair to good, and 7¾@8¼c. for choice.

PRACTICAL DAIRY HUSBANDRY, by X. A. WILLARD, A. M., is issued by D. D. T. MOORE, containing a comprehensive survey of the routine of dairy farms, management of grass lands, selection and management of stock, milk, and the manufacture of butter and cheese. An interesting chapter is devoted to an account of associated dairying, its progress in this country, and its industrial and financial results. The volume is remarkable for its completeness, and the clearness and accuracy of its details. No important point connected with the subject appears to have been overlooked, and the style is a model of simplicity and compactness of statement. There are few volumes, indeed, of the farmer's library that contain such a variety of practical information, and in which the method is so well adapted to the nature of the subject.—*New York Tribune.*

SPECIAL NOTICES.

CAYUGA LAKE RAILROAD.

SATAE OF NEW YORK

Seven Per Cent.

FIRST MORTGAGE

GOLD BONDS

AT 90 AND ACCRUED INTEREST IN CURRENCY.

THIRTY YEARS TO RUN, AND ISSUED FOR $20,000 PER MILE.

This road forms the shortest and most direct route from the great Anthracite and Semi-Bituminous **COAL** fields of Pennsylvania into the central part of this State, and will run in connection with the New York Central road, which it crosses at Cayuga Bridge. Traversing as it does the finest and most populous agricultural district, generally known as the "Garden of the State," its local traffic will be large, but its greatest source of revenue will be from its **COAL** business. The road is being rapidly built, Iron is now being laid on a section covering more than one-quarter of the distance, and work on the whole line being pushed with great vigor, so that it is expected to have Coal trains running by the 1st of November next. From our knowledge of this enterprise, and after the most thorough investigation, we most confidently recommend the Bonds as a safe investment. We offer for the present the Bonds at 90 and accrued interest in currency.

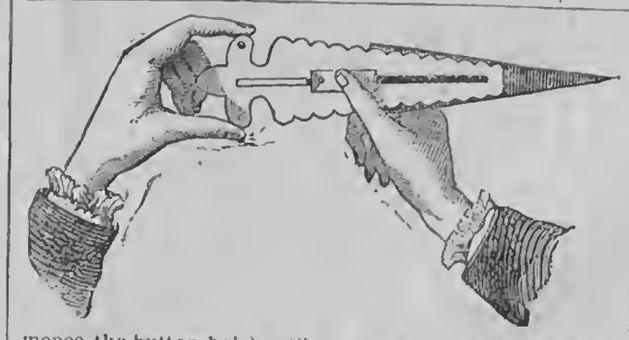
I. N. SOPER & CO., 27 City Hall Square, N. Y.

THE PROTEAN LANCETTE.



Experience teaches that to secure for an article the favor and patronage of the LADIES, it must combine beauty and elegance of design, with practical utility. The favor with which our modification of the **BUTTON-HOLE CUTTER** has been received predicts that no Lady's Work Basket will be regarded as complete without it. It is also an admirable Envelope, Leaf and Paper Knife.

DIRECTIONS.

To extend the Lancet, hold the instrument as illustrated by the engraving; then holding it as you would a pen, with the cutting edge from you, insert the point (where you wish to commence the button-hole) until you are stopped by the gauge. Be careful not to extend the point too far at first, but cut and try until the hole is a sufficient size to allow the button to pass through; then observe at what point the slide is on the scale, that you may be able to retain the size.

The Lancet can be sharpened like an ordinary knife. Samples mailed post-paid on receipt of 50 cents.

CARHART'S
PATENT TWO-HORSE
Pulverizing Cultivator
Was Awarded the First Premium at State and County Fairs in 1870 and '71.

It is superior to the best Wheel Cultivator.
The price is only Twenty Dollars.
The draft is reduced nearly one-half.
The depth you wish it to run is regulated without the use of wheels.
It can be drawn close to a tree or plant without injuring it.
It is not disturbed by short undulations of earth, like the Wheel Cultivator, but pulverizes, levels and fits the ground for the Mowing Machine better than any Cultivator in use, and can be used for more purposes than any other implement on the farm.

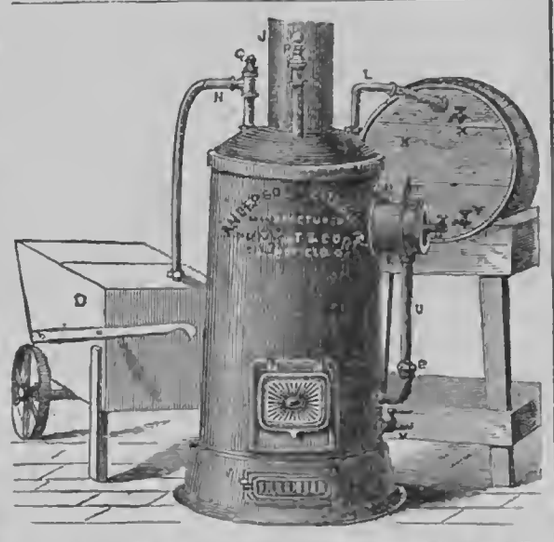
ENGINE COMPANY, 124 Chambers St., N. Y.

Implements, Machinery, &c.



ANDERSON'S AGRICULTURAL STEAMER, for *Steaming* FEED FOR STOCK, Heating Cheese Vats; Tannery Vats, Conservatories, &c. This Steamer is made of Wrought Iron, thoroughly riveted and finished in good style. It has a reliable Automatic or Self-regulating Water Feeder, Safety Valve, Vacuum Valve, Water Gauge Cocks, Whistle, &c., all complete. The boiler is peculiar in construction, being ONE COMPLETE DOUBLE BOILER WITHIN ANOTHER, the two communicating one with the other. It has an extraordinary amount of fire space for the size of the boiler; No. 3, a medium size, having 3,855 square inches of fire surface; consequently, it requires but little fuel to run it. Either wood or coal may be used for fuel.
It will cook more feed, or heat more water, in a given time, than any other Steamer of the same size or cost. It is more durable than any other, for the reason that the fire-box is made of wrought iron, and is *entirely surrounded with water*. We are also manufacturing:
Anderson's Low Pressure Steam Heater, for Heating *Private Dwellings, Stores, Churches, Conservatories, &c.* We manufacture for all the territory east of Illinois.
For further particulars address

FARMERS, DAIRYMEN AND BUTTER BUYERS!
PACK YOUR BUTTER
IN
WESTCOTT'S
RETURN BUTTER PAIL

Approved and recommended by the leading authorities of our country on dairying, and acknowledged by all butter dealers to be the very best package in use. Butter packed in this Pail brings **5 to 10 cents** more a pound in the New York City market than the same quality in any other package.

READ THIS:
NEW YORK, Nov. 15, 1871.
We, the undersigned, Produce Commission Merchants of the City of New York, consider Westcott's Return Butter Pail, manufactured by Silsby Bros., Belmont, N. Y., *the best package in the market*. It is our experience that Butter packed in this Pail *sells more readily and commands a higher price* in this market than in any other package, and we heartily recommends its general use by the dealers, dairymen and butter buyers who ship to this city.
Respectfully,
(Signed by 45 leading Commission Merchants.)
The Westcott Return Butter Pail meets my approval as a good butter package. It is one which I always feel safe in recommending.
X. A. WILLARD,
Dairy Editor Moore's Rural New-Yorker.

CHEAP CORN CULTURE
THOMAS' SMOOTHING HARROW.
81 SLANTING TEETH OF TEMPERED STEEL. $25

LATE SPRING! CROWDED WORK!
This year a large amount of work must be done in a very short time. With our wide Harrow more than twice as much ground can daily be prepared for seed as without it, and all crops *cheaply cultivated* through the season in a *superior* manner.
ALLEN HIGLEY, Windsor, Ohio, says:—"I saved one-half month's labor in two days, getting a much better crop without using a hoe."
ANDREW RAESSLER, Shelbyville, Ill., says: I can harrow twice as much ground with it as with other Harrows."
EDWIN THORNE, Millbrook, N. Y., says:—"We can dispense with cultivating once each way, saving a vast amount of labor."
E. F. SMITH, Morning Sun, Iowa, says:—"It was much easier on the team, though one-third wider, doing more work."
L. R. AUSTIN, Coldwater, Mich., says:—"I have a 40 and a 30-tooth square drag, but with *your* Harrow can do twice the work in half the time."
IRA BEARD, Cahoka, Mo., says:—"I think it equal to three common Harrows."
F. PETITT, Salem, N. J.:—"My brother says his does the work of three old Harrows; mine I think saved me $5 in one and a-half hour's work."
BOYS RIDE AND DO ALL THE HARROWING.

Paints, Oils, Blacking, &c.

ARE YOU GOING TO PAINT?

MORE THAN

100,000 HOUSES

HAVE BEEN PAINTED WITH THE

AVERILL CHEMICAL PAINT

IT IS THE BEST

In the world for exterior work upon Cottages, Villas or Buildings of any kind, whether built of brick, wood or iron. It is a liquid, *ready for use*, and requires no oil thinning or drier. Purest white, and any desired shade can be had in packages from one gallon upwards.

EXTRACTS FROM OUR LETTERS:

CHAS. HALLETT, Esq., of Riverhead, L. I.:—"Years ago I had your paint applied by the side of the best white lead. The lead requires repainting, but the Averill Chemical is yet looking well."

Gen. DAVID H. STROTHERS:—"Your Paint fulfils your representations."

Rev. S. C. ALEXANDER:—"Our Institute has saved $150 by using your Paint. It is splendid."

PETER HENDERSON, Esq.:—"I find the Chemical Paint retains the colors and gloss far superior to that done by the lead and oil at the same time."

Gen. JAS. NEGLEY, M. C.:—"I find it the cheapest and best."

SETH THOMAS, Esq.:—"It gives better satisfaction than any paint I ever used."

Sample card of beautiful colors, and recommendations from owners of the finest residences in the country, furnished free by the
AVERILL CHEMICAL PAINT CO., 32 Burling Slip, New York, or 118 Superior St., Cleveland, Ohio.

P. S.—The superiority of these Paints has already brought numerous *worthless* imitations in the market. We caution the public against using them.

The Season for Painting

HAS COME AGAIN.

If you propose to paint, first send stamp for a book called "Plain Talk with Practical Painters, with Samples of Colors." The book is worth a dollar, and costs nothing. JOHN W. MASURY, 111 Fulton St., New York. Specially in Pure Paints and Colors. Masury's Ready-Made Colors are the only ones which stand the test of time. Do not be deceived.

Musical Instruments.

DUNHAM & SONS,

(ESTABLISHED IN 1834),

Manufacturers of

PIANO-FORTES.

MOORE'S RURAL NEW-YORKER of November 18, 1871, says:

"Having used one of their instruments in our family for twenty years, we can confidently commend them to our readers as being first-class in every respect. Both professional and amateur players on the piano pronounce our DUNHAM very superior in tone. An instrument that has retained its brilliancy and sweetness of tone for a score of years needs no further commendation."

17 Union Square,

A Railroad Watch.

Travelers by Railroad frequently find their Watches completely demoralized by the continuous jar of the train. To overcome this difficulty has long been a problem with watchmakers, and it is now successfully accomplished in the new grade made by the

American Watch Co. of Waltham.

This Watch is made in the most substantial manner, on the most approved principles, and combines all the recent improvements. It has a new micrometrical regulator, by which the slightest variation can be easily corrected. It is carefully adjusted, and may be entirely relied on to run accurately, wear well, and ENDURE THE HARDEST USAGE, without any derangement whatever. We confidently recommend this Watch to the trade and the public as the BEST WATCH FOR THE PRICE IN THIS MARKET.

The full trade-mark engraved on the plate of each Watch is

"American Watch Co., Crescent-St., Waltham, Mass.,"

and it is distinctively known as the CRESCENT-ST. Watch.

For sale by all leading Jewelers.

A STANDARD SECURITY.

BANKING HOUSE OF JAY COOKE & CO., 20 WALL ST., NEW YORK.

We are offering and selling rapidly the NORTHERN PACIFIC 7-30 GOLD BONDS at Par and Interest in currency. They are issued in denominations of from $100 to $1,000 Coupon, and $100 to $10,000 Registered, and are at all times interchangeable, at the pleasure of the holder, without charge.

They are secured by a First and Only Mortgage on the Road, its Equipments, Earnings and Franchises, and also on a Land Grant which, on the completion of the Road, will exceed 23,000 acres to each mile of track, or 500 Acres of Land to secure each $1,000 Bond.

These Bonds are at all times receivable by the Trustees, at Ten Per Cent. Premium, in payment for any lands purchased from the Company.

Holders of United States 5-20 Bonds can now convert them into NORTHERN PACIFIC 7-30s, realizing an immediate handsome profit, and an INCREASE OF ABOUT ONE-THIRD on their annual income.

The semi-annual interest on the Registered Bonds is paid with GOLD CHECKS, sent to the Post-Office address of the holder.

With the same entire confidence with which we recommended the Government Loans to Capitalists and People, we now, after the fullest investigation, recommend these Northern Pacific Railroad Bonds to our friends and the general public.

All marketable securities received in exchange, without expense to the Investor, at their highest current value.

JAY COOKE & CO.,
New York, Philadelphia and Washington.

☞ For sale by Banks and Bankers generally throughout the United States and Canada.

"FAMILY FAVORITE!"

THE

WEED. WEED.

The most perfect, reliable and generally useful machine in existence. For the family of the farmer or mechanic, where the work required of a sewing machine ranges from the heaviest garments of men's wear to the most delicate and ornamental fabrics for ladies and children, it has proved itself thoroughly efficient and entirely satisfactory. Of unequaled simplicity and compactness of construction, capable of being learned and operated with one-fourth the usual expenditure of time and labor, with a capacity for quantity, quality and variety of execution beyond its competitors, and a reputation for durability and reliability known and appreciated by thousands, it is offered to the people for the most critical inspection and comparison, with confidence that its obvious merits cannot fail to convince the careful examiner of its superiority. Manufactured by the

MOORE'S RURAL NEW-YORKER.

RURAL AND HOME AFFAIRS, ARTS, SCIENCE, LITERATURE, NEWS, MARKETS, ETC.

VOL. XXV. NO. 22.
WHOLE NO. 1166.

NEW YORK, AND ROCHESTER, N. Y., JUNE 1, 1872.

PRICE SIX CENTS.
$2.50 PER YEAR.

[Entered according to Act of Congress, in the year 1872, by D. D. T. MOORE, in the office of the Librarian of Congress, at Washington.]

Floricultural.

DRACÆNA SURADOSI, VARIETY MACULATA.

THE Dracænas are all beautiful tropical plants, well suited to house culture. The best known, perhaps, is the *D. terminalis*, with its long, bright red or purple leaves. It is largely used by our florists for vases and as a center figure in hanging baskets. Among the many species known there are few which would not be an ornament to any conservatory, the foliage being more beautiful and attractive than the flowers. Africa has given us the best and most showy species, among which the one shown in the accompanying illustration is exceedingly rare as well as beautiful. It was found on the banks of the Old Calabar River, in 1863, by G. MANN, but afterwards sent to the Glasgow Botanic Gardens by Mr. CLARKE. It is a shrub six to eight feet high, throwing up copious, stout, erect, rod-like surculi from the roots. Leaves in scattered, opposite pairs, and whorled in threes, spreading, flat, four to six inches long, one to two inches broad, beautifully blotched with golden yellow. Flowers in a globose corymb; greenish-white. A beautiful shrub for the conservatory or the parlor, readily propagated from cuttings.

TROUBLE WITH HYACINTHS.

WHAT is the matter with my hyacinths? The flower spike does not push up far enough, but begins to bloom in a poor sort of way when close to the bulb and hidden by the leaves. Many of the buds blast, and look as if their edges had been gnawed off. I have tried raising hyacinths in the house for the past three years, and am nearly discouraged by my poor success. Have purchased the bulbs of different dealers, and have procured single and double and common, as well as the choicest named varieties; have tried them in glasses, in pots and in boxes. Have kept some six or eight weeks in a dark closet, others in the cellar; have covered with a board the box containing others until it interfered with their further growth. Have tried them in a warm room with a southern exposure, in a moderate temperature at a western window, and when it looked as if the old trouble was returning, removed them to a cool room with an eastern exposure. Have used common garden soil and one prepared with sand and the decayed refuse from under an old wood pile; have tried (with some little benefit) paper cones placed over the bulbs, to cause the stem to lengthen.

When using glasses, with some I changed the water frequently; with others only when it became foul; put charcoal in the water with some, and not with others. In fact, I have tried every expedient that suggested itself, in order to insure success, but all to no purpose. Two of the rooms in which my experiments were conducted were heated by direct hot air pipes, while the third was warmed by heat communicated from the hall only. The bulbs have never been frozen; there is no gas in the house, no indications of mice, and the bulbs were planted so the tops slightly projected above the earth; when grown in glasses, the water just touched their base.—J. Q.

YOU are certainly unfortunate, but we cannot tell why the bulbs fail to bloom. We have raised the bulbs ourselves, bought them at different seasons, and of various importers, but never experienced a failure in making them bloom either in water or earth. We have been forcing hyacinths all Winter, and have some at the present time with spikes of flowers eight inches long. They were potted singly, one bulb in a pot of fine rich soil. They have had no care, except being supplied with plenty of water and kept in a warm room.

BEST FLOWERS FOR A BRILLIANT SHOW.

Petunias.—If I could have but one kind of flowers, it should be Petunias. Seed sown in the open ground in May will produce flowering plants in June that will make a brilliant bed through the Summer and Autumn. The blotched and striped is the most showy variety. Sow the seed thinly in a seed bed, coveringly with fine soil, and when the plants are an inch or more high, transplant eighteen inches apart into rich soil, and they will completely cover the ground in a short time.

Phlox Drummondii.—Every one who cultivates flowers, should have Phlox. Some of the varieties are brilliant and dazzling, while others are very delicate in color, and when mixed in a bed, make a splendid display from June until hard frost. A foot apart is quite near enough to set plants. One of the most common mistakes with all kinds of plants is to set them too thick. This is especially so with Phlox Drummondii. Plants set thick will mildew badly, and the flowers will be much smaller than if set a good distance apart.

Portulaca.—This is one of the most brilliant low annuals in cultivation. A bed in full flower almost puts one's eyes out to look at it when the sun shines. The Double Rose-Flowered Portulaca, introduced a few years ago, is indeed a gem; the flowers, which are produced in great profusion, look like small roses, and are of many colors. Sow seeds in the open ground, and transplant six or eight inches apart into light, rich soil, fully exposed to the sun. A very good way is to put these kinds in one round or oval bed made full and rounding towards the center. In the center put Petunias; next Phlox Drummondii, with a border of Portulaca. Such a bed will commence to flower in early Summer and make a constant and brilliant display until frost. AMATEUR.

Amherst, Mass.

DRACÆNA SURADOSI, VARIETY MACULATA.

FLORICULTURAL NOTES.

Query About Plants.—1. Inclosed find a plant, which please name for me. 2. Also, please tell me how to propagate Crown Imperials. 3. Is the *Lilium Giganteum* quite hardy?—C., *Sherman, Texas.*

1. *Anemone Caroliniauum.* 2. Crown Imperials may be propagated from seed sown as soon as ripe. They are also propagated by division of the old bulbs or from the small offsets which are produced around the base of the old bulbs. Even the scales taken off from the outside of the bulbs, if planted in sandy soil and well watered, will produce small bulbs. It requires several years to produce large blooming bulbs from scales or the small offsets. 3. The *Lilium Giganteum* is not quite hardy in the Northern States, requiring a slight protection. But in Texas there would be no difficulty in growing this splendid lily, at least we think not.

Geranium Leaves are often made spotted by the rays of the sun striking on them when wet. This occurs indoors where air enough is not present to evaporate the moisture before the sun's power is felt.

The Flower Gardens cultivated by girls and boys ought to present a fine appearance this month. Do they?

Field Crops.

HOW TO KILL QUACK GRASS.

QUACK grass is one of the worst posts that a farmer has to contend with, I think, but where a farm is kept for grazing purposes, it is not to be dreaded as it is where it is used more particularly for raising grain. I have contended with a great many noxious plants, and consider quack grass worse than all others, Canada thistles not excepted. Some writers say that deep tillage will eradicate it; but as I have tried it, I can say from experience that it will not do it. A great amount of it can be destroyed by cultivating hoed crops, such as corn, potatoes and beans; but where it is as thick as it is in many places, it is very expensive and fatiguing to the farmer.

The way the most of the Western New York farmers manage to kill quack grass, is as follows, viz.:—As soon as corn planting is over, plow the field that you wish to rid of the pest, about four or five inches deep, and then harrow the ground thoroughly three or four times over; after which rake the field with a steel wire-tooth horse rake and you will be surprised when you collect the roots that have been pulled out by the harrow and rake. Where a field has been long seeded down, and there is any quack grass in it, it will be found matted only about four or five inches below the surface; this is why I do not advocate plowing any deeper the first time. When the roots are dry, gather them together and burn them and plow the field again, going through the same operation as at first, but one or two inches deeper every plowing, and my word for it quack grass will not be as abundant as it was before.—LEXINGTON, *Rochester*.

HORACE PIPER writes the Country Gentleman that the following method of destroying this grass, he knows, may be adopted with success:—Plow the ground late in Autumn, just before it closes. The grass will then have no time to grow and extend its roots before winter, and the frost will disintegrate the soil so that it may be easily pulverized. In the Spring cross-plow carefully and harrow with a long-toothed, heavy harrow till the ground is thoroughly mellowed. Then apply an implement which, for convenience, I will call the eradicator. It is made like an iron-tooth garden rake, the head being about five feet long, and containing strong steel teeth about fourteen inches in length four or five inches apart, and curving a little forward. To this handles are added for guiding it, and shafts for the attachment of the horse. This tool, when drawn over the mellow ground, extracts the long and fibrous roots of the grass, and collects them into heaps, which may be carted away and burned when dry. The roots generally extend into the ground about as deep as it has been previously cultivated, and if the land is found to be very full of them it may be advisable to plow it a second time in Spring, a little deeper than before, and to apply the eradicator again, by which the principal part of the roots may be removed the first year. If the land is green sward, it must be cultivated in the common way the first season.

While planting and hoeing, let each man keep a steel-pronged garden fork along with him, with which he may remove the grass roots in places where they are numerous, and also a basket in which they may be placed and carried away. This may seem to be a long and tedious process, but it is making haste slowly, and in the end will be found the quickest way to attain the desired result. Two seasons will generally be found sufficient to eradicate most of the grass, but the process should be continued from year to year till not a particle remains. If this grass grows in the mowing fields be careful to cut it early in the season before any seed can mature, and do not purchase any hay containing it, to be consumed on the farm; otherwise the seeds will be carried in the hay into the barn, and thence in the manure into the cultivated land.

WHEAT CULTURE.

I HAVE been employed in raising wheat and all other crops of grain common to the latitude of New York. I was employed from childhood till past fifty-two years of age, in the labor of clearing land and raising wheat on "new land." I saw the deterioration of wheat in Otsego County. It was not occasioned by the application of barn-yard manure. It was owing to the exhaustion of what is called "humus." Winter wheat did not give a good yield in Cattaraugus Co., except on a few favorably located spots. On those spots wheat did not do well after the first crop.

In Wyoming Co., wheat was, for many years, the leading crop. But, even there, it deteriorated. Its deterioration was not owing to the application of manure. The same causes that injured wheat in Otsego also injured it in Wyoming. Some varieties were attacked by the weevil.

I have raised wheat for 21 years in Wyoming Co., with varied results. It has been injured by rust. It has been injured by excessive wetness, and by a combination of causes. But the harvest of 1871 was one of our very best. I have not learned that any person met with a failure.

I have experimented, in the way of crops of all kinds, during the last nine years, and I think *experience* authorizes me to affirm that he who would *teach* must first LEARN!

I lay down a few rules as invariably necessary. *First:*—To secure good results in raising wheat, in my neighborhood, land must be under-drained. *Second:*—It must be so subsoiled as to prevent the possibility of water standing upon the surface 24 hours after the heaviest rains. *Third:*—The best manner of applying manure to wheat land is to use only well-rotted manure as a top-dressing. *Fourth:*—Wheat should be sown between the 10th and 20th of September. *Fifth:*—I have obtained the best results by the use of the drill in seeding.

On a piece of land containing a little over four acres, I underdrained nearly one acre for experimental purposes. That same acre I subsoiled. The subsoiled part I "top-dressed;" the balance of the field I heavily manured in the common way. The result has been this:—I have twice sowed it with wheat; I have twice planted it with corn; I have sowed it with clover, and mowed the crops, and every crop has demonstrated in favor of blind ditching and subsoiling. The improved part has given at least twice as large a crop as the unimproved.

In 1871 I plowed the whole field. The improved part, including a strip two rods wide on the west side, I planted with potatoes. The subsoiled part demonstrated, as in every other crop. I am now an old man, and can do but little more for the benefit of the world. I now most earnestly entreat all who cultivate land to "Prove all things, and to hold fast that which is good."

Castile, Wyoming Co., N. Y. RUFUS PEET.

DETERIORATION OF SOUTHERN SUGAR CANE.

THE Southern planters and papers are complaining of the deterioration of the ribbon cane, almost exclusively used by sugar planters; and to this deterioration the deficiency in the staple product is ascribed. This degeneracy is ascribed to bad cultivation, deficient labor and drainage, and to the inferior cane used in planting. It is asserted that the ribbon cane of to-day is almost wholly unlike the original cane imported by Judge BORRIN in 1810, from Java. It has entirely changed color, and its juice has lost its original aroma. It is more delicate and puny in its growth, more easily affected by frost, and more subject to decay in windrow or mattresses, put up for seed. The stubble will not keep sound after the first year, and the juice tastes like sorghum or corn stalk juice, requiring more boiling to make it granulate, and yielding less sugar and double the molasses it used to do. High cultivation and fertilizing has failed to restore it to its original vigor and quality.

This condition of things is likely to result in a combination of Louisiana planters to employ some experienced person to proceed to India, Java, or Sumumatra, to select and import enough of the best stock of that country to supply planters. The Department of Agriculture has also addressed a circular of inquiry to the sugar planters, with a view of eliciting the information necessary to securing a supply of the best kind of cane for planting. The importance of action in this matter is important; but we doubt whether the Department cannot safely leave it to private enterprise to supply what is wanted. For we remember that importations made under the auspices of the Department have hitherto profited few except the agent sent to select.

FIELD NOTES AND QUERIES.

The White Rose Potato.—Dr. HEXAMER having been reported as saying that "the White Rose potato," which it is claimed originated in Grant Co., Wis., "is the Harison under a fictitious name," denies having said so; but he did say "The White Rose looks so much like the Harison that I cannot distinguish one from the other."

Farm Economy.

CLEARING LAND.

THERE are three methods to be pursued in clearing land where the timber is to be burned on the ground. First, under-brush and pile all the brush close and cut up the old logs and down trees. Under-brushing means cutting every tree and bush under 8 inches. Then fall your large timber on, or as near as possible to, the brush heaps that you have already made; trim every limb close, and pile the brush on the heaps; cut the bodies from 14 to 18 feet long; leave the rail timber standing until you burn, because if you fall it when you fall the other timber you would be likely to burn it up. When there is sawing timber to be saved, under-brush in the fall and cut the saw-logs in the winter, and get them out of the way; then cut the other timber as above stated; burn in June or August, and then "log off." If you can, get it off time enough for winter wheat; plow with a shovel plow, if not too much sward, and seed with grass seed. This method is attended with the most labor, but you got the use of your land the first season. Many fail in clearing land by not taking enough pains in burning out and piling brush.

The second method is to windrow; that is, to under-brush and throw the small trees in windrows, five or six rods apart; then fall the large timber on the windrows and lop down the limbs and throw in the brush that does not fall on the heaps, and leave the bodies without cutting up. Let it lie about three years, then put fire in, in a dry time, and burn it; then throw poles across the logs where you want to cut them, and build a fire on them, and by attending to it, you can burn the logs off. In this way, however, the land gets foul.

The third method consists in under-brushing and girdling the large timber—that is, chopping through the bark around the tree. When the trees are dead and dry, cut and fall across each other as much as possible and burn. Trees should be girdled in June. In cutting up timber a cross-cut saw can be used to good advantage, if it can be kept in good order. To have the stumps rot the quickest, cut the timber in June.

Athens, Mich. JOHN MCLEAN.

FISH GUANO.

LARGE quantities of fish guano are used in New England. CHAS. W. DICKERMAN writes the New England Homestead that a Mr. HALL, fifty years of age now, and all his life a farmer, was the first man to manufacture fish guano in this country—twenty years ago. From a small beginning, the business has extended until now Mr. HALL is President of the Quinnipial Co. at Pine Island, which last year sold over 3,000 tons.

The season for catching the fish from which this guano is made extends from May to October. This Company receive from 1,000 to 300,000 fish per day during the season. These fish are unloaded into large tanks and steam forced into them until the mass boils; they are then subjected to pressure until the oil is expressed. This oil sells for about 50 cents per gallon, and it has sold as high as $1.30 per gallon. The amount obtained from one thousand fish, varies from three to twelve gallons, according to their fatness. It is suspected that large quantities of it are used for the adulteration of linseed oil. After the oil is expressed, the fish are dried, either on a platform in the open air or in a revolving dryer over artificial heat.

MANURE FOR CORN AND POTATOES.

SOME farmers handle their manure wrong, in my opinion—especially with reference to potato and corn crops. The mistake they make is in hauling out their manure for these crops in the Fall preceding the planting season, thereby losing one-third the strength of the manure. The plan of all farmers who give this a consideration is to not draw out their fertilizers until within a week or two of the time of planting—just long enough before to have the manure heat. Some may say they do not have time to do this; but it will pay, even if they have to hire help; for the manure rots away to such an extent that I can safely say that one-third is lost. I do not include small crops, for they need fine manure. If any one does not believe this theory, let him try it.

Rahway, N. J. F. P.

Saw to Cut Down Timber.—Farmers in Wood Co., O., cut down timber with a common cross-cut saw. They first cut a notch in the side of the tree toward which it is desired it should fall. Then they saw from the other side, inserting the saw as high, or higher, than the upper part of the notch in the opposite side. It will be found necessary to hold the saw firmly against the tree. Use a wedge to throw the tree over. —H. W.

Industrial Topics.

FARMER GARRULOUS TALKS.

The Eight Hour System, or any other system, on a farm, is objected to by a certain class of people, because it is said if it is recognized it would result in a total loss of a crop. This, Mr. Editor, is what some people would call "bosh." There is no more need that a man should lose his crop, when it is understood that a day's work means eight hours labor, than that the farmer is swindled because a bushel of corn must weigh fifty-six pounds in order to be a legal bushel. When I hire a man by the day, or month, I am specific in my bargain. If I pay him for a day's work—say $2—both he and I understand distinctly that he is to faithfully give me ten hours labor for that amount; and that if my needs are such that he works over-time, I pay him for such over-time *pro rata*. So when I hire a man by the month—say at $20—it is understood between us that he is to give me twenty-four or twenty-six days labor, of ten hours each, for that amount. If he makes over-time, I am to pay him *pro rata*. I have never found that I could not command the services of my men as many hours per day as it was profitable to me to have them work; and I have never yet found men so hired dissatisfied with the specific character of the bargain. I always took pains to be as just to them as I expected them to be faithful to my interests. And it is my deliberate opinion that when farmers recognize this business principle of paying for what they get, and getting what they pay for, there will be more successful farmers. There is nothing impracticable about it; and the recognition of the rights of laborers on farms will help to improve the class of labor that will be found available.

"Charge It."—I rode to town the other day with SAM STEWER. He said he was in "a deuce of a hurry." He had sold a tub of butter to be delivered at the station that day, and he had a field ready to sow with wheat. He didn't know how to spare the time, but he "needed the money," and so harnessed his team to deliver the butter. This he did, got his cash, and, returning from the station, stopped at a store to get two pounds of tea, a pound of coffee, a pound of allspice, five pounds of sugar, and a gallon of molasses. The packages were put up for him. He hustled them into the wagon, and, as he was untying the tie-strap, he shouted to the merchant, "Charge it."

After we had started home, I said:—"Why did you not pay that bill? You had the money in your pocket."

"Yes; but you see I had got to buy some clover seed of PETER JUNIPER, who only deals for cash—don't give credit. Then I have got a bill to pay at the milliner's. My wife wants a new bonnet, so does daughter SALLY, and last year's bill is not paid; and the women folks said they would not ask for any more credit there until it was, so I've got to give them fifteen or twenty dollars to pay up last year's bill so that they can get their head gear. The fact is, GARRULOUS, I'm behind time all the while. These middlemen do take the life-blood out of us farmers."

"Bah!" said I. "That is all nonsense. There are two words, STEWER, that you should never speak to a man or woman of whom you make a purchase; nor should you allow any one to say them for you. If you will agree not to do so, I will warrant that within two years you will be out of debt, a free, happy, and independent man; and that what you buy will cost you from seven to fifteen per cent. less than it does now!"

"What words?"

"Never say 'charge it!' Never allow any one to say 'charge it.' The man who does so has to pay a good round per cent. for the use of the money he thus borrows—more than any farmer can afford to pay. I've tried it, STEWER, and I know. You have often wondered how I manage to always have ready money. It is because I do *not* say 'charge it.' It is because I *will not* say 'charge it.' It is because I will not buy what I cannot pay cash for. And it is because when I do buy, I can get it cheaper than you can, because I do pay cash for it, and you say 'charge it.' That's what ails you, STEWER. And you'll always be a STEWER, and in a stew, as long as you say to anybody, 'charge it.'"

Sheep Husbandry.

RULES FOR THE CARE OF SHEEP.

A CIRCULAR issued by F. C. D. McKAY, the general agent of the American Emigrant Company, gives the following:—The company have already 10,000 sheep scattered among the farmers who purchased land of them, in flocks ranging in size from 50 to 200 head.

1. Keep sheep dry under foot with litter. This is even more necessary than roofing them. Never let them stand or lie in mud or snow.

2. Take up lamb rams early in the summer, and keep them up until December 1, following, when they may be turned out.

3. Drop or take out the lowest bars as the sheep enter or leave a yard, thus saving broken limbs.

4. Count every day.

5. Begin graining with the greatest care, and use the smallest quantity at first.

6. If a ewe loses her lamb, milk her daily, for a few days, and mix a little alum with her salt.

7. Let no hogs eat with the sheep, by any means, in the Spring.

8. Give the lambs a little mill feed in time of weaning.

9. Never frighten sheep, if possible to avoid it.

10. Sow rye for weak ones in cold weather, if you can.

11. Separate all weak or thin or sick, from those strong, in the Fall, and give them special care.

12. If any sheep is hurt, catch it at once and wash the wound; and if it is fly-time apply spirits of turpentine daily, and always wash with something healing. If a limb is broken, bind it up with splinters tightly, loosening as the limb swells.

13. Keep a number of good bells on the sheep.

14. Do not let the sheep spoil wool with chaff or burs.

15. Cut tag-locks in early Spring.

16. For scours, give pulverized alum in wheat bran; prevent by taking great care in changing dry for green feed.

17. If one is lame, examine the foot, clean out between the hoofs, pare the hoofs if unsound, and apply tobacco with blue vitriol, boiled in a little water.

18. Shear at once any sheep commencing to shed its wool, unless the weather is too severe, and save carefully the pelt of any sheep that dies.

19. Have at least one good work by you for reference. This will be money in your pocket.

PROFITS OF SHEEP FEEDING.

I THINK we may estimate that for sheep weighing about 100 pounds it takes about two pounds of hay per day, or its equivalent, to keep the sheep alive and healthy, without gaining anything in weight. Give them one pound of corn per day in addition, and a good sheep ought to gain two pounds per week in live weight. The account with 100 sheep would stand as follows:

Dec. 1st, 1871—	
100 sheep, 100 lbs. each, at $3.50	$350 00
10 tons of clover hay, at $18	180 00
180 bushels corn, at 50c	90 00
	$620 00
March 10th, 1872—	
100 sheep, 120 lbs. each, at $6.50	$832 00
Manure from 10 tons clover hay, at $9.64	96 40
" " 5 tons corn, at $6.65	33 25
	$961 65

This shows a very fair profit. On farms where there is plenty of good wheat straw, the sheep can be wintered at less cost. The profit does not come from the increase of weight of sheep so much as from the increase in price, and provided the sheep are fat enough in the Spring to bring the highest price, a few pounds less tallow on each sheep will make little difference in the result—certainly nothing like as much difference as that between the cost of hay and straw. So far as the amount of nutrition is concerned, corn at 50 cents per bushel is far cheaper than hay at $18 per ton. The most prevailing folly is in wintering sheep on straw alone. A little corn in addition to the straw, will keep the sheep in good health and vigor, and pay better than most agricultural operations with which I am acquainted.—*J. S. Bowles, in American Agriculturist.*

NOTES AND QUERIES.

Covering Grain with Sheep.—In reclaiming what is known in California as the 'Tule Lands,' the system adopted is to burn off the tule, which leaves a bed of ash soil, several inches deep. Crops—usually barley or wheat—are sowed in this soil, and covered in by sheep that are driven several times across the ground seeded.

We have repeatedly adopted the same course in seeding to small grain in standing corn. A well-trained flock of sheep can be herded back and forth through a field of standing corn, and will thoroughly cover the seed without at all injuring the corn, and will greatly benefit the subsequent crop, by eating out many of the weeds that would otherwise remain to scatter their seed far and wide over the farm.

The packing the ground gets from such treatment, we have found greatly assists in avoiding the freezing out that proves so injurious to sections that are unprotected by snows through a large portion of the Winter.—*Western Rural.*

Hoof-Rot in Sheep.—I have used the following remedy with great success. I never knew it to fail if judiciously applied: Prepared Alumine, 1 ounce; pulverized Sulphate Copperas, 1 ounce; pulverized Sulphate Zinc, 2 ounces; Oil Tar, 3 ounces; pulverized Alumin, 2 drachms; mix. The remedy should be applied every third or fourth day in bad cases. When the sheep are treated, every lame sheep should be taken from among the sound ones and put in separate fields. The unsound sheep should have several applications after they are sound and well. When the horn is separated from the fleshy sole it must be shaven down to the live or sound flesh with a sharp knife. No permanent cure can be performed without this. Every flock-master should have a copy of Randall's Practical Shepherd to become thoroughly acquainted with the pathology of the feet.—G. W. S., *Brownsville, Fayette Co., Pa.*

New Disease Among Sheep.—In California sheep are said to be dying of what is supposed to be lung disease. When first attacked they froth at the mouth. The froth at first is white, but gets bloody when the sheep is dying. In that section an occasional loss has heretofore been observed in sheep when affected in this manner, but havoc recently made led to examination, from which the conclusions arrived at was, that lung disease and not poison, is doing the work.

Angora Goat.—WILLIAM H. LEASE is informed that we do not know that any one in this country has got rich by selling the fleece of the Angora goat. Many who have had the animals for sale have figured out fortunes on paper—but that is all. We do not know who has them for sale.

Turn Lambs into Corn Fields.—Tell your subscribers to turn the lambs into the corn field on taking them from the ewes. They will do the corn no injury, and find there plenty of the best of food. I never saw lambs do as well as when treated in that way.—A SUBSCRIBER.

The Swine-Yard.

PIG-PEN PAPERS.

What is the Matter with my Pigs.—I have three Poland China pigs, all of one litter, that at times lose the use of their hind legs. First the joint just above the toes seems to take the cramp and they stand on the points of their toes. Next the hock-joint cramps, and their legs become straight and stiff. Then the cramp seems to take them in the hips. They cannot move forward, and after standing a while they gradually settle back upon their haunches, with legs wide apart. They remain in this position a few minutes, when the cramp appears to leave them, and they get up and walk off, and in a few minutes they are down again. I have kept and bred hogs pretty extensively for the past thirty-five years, and never had any thus afflicted before. Can you, or some of your readers, tell me what ails my pigs, and what will cure them?—LYSANDER W. BABBITT, *Council Bluffs, Iowa.*

Swine Frothing at the Mouth.—Can any of your readers tell me if it is an indication of any serious disease, for a hog to foam at the mouth?—E. P. A.

Healthy hogs—especially males—often froth at the mouth when excited. We do not know that it is necessarily an indication of disease. Diseased animals sometimes froth at the mouth; but in such cases there are other and surer indications of disease.

For Kidney Worms in Hogs, feed them corn soaked in weak lye.—R.

Diary of a Ruralist.

DAILY RURAL LIFE.

FROM THE DIARY OF A GENTLEMAN NEAR NEW YORK CITY.

Packing the Soil.—*May* 13.—In setting out plants on newly plowed light soils there are few persons who fully appreciate the importance of making the soil compact about the roots. More than two weeks since I had several hundred strawberry plants set out in light, loamy soil, only slightly moist at the time; and although the planting was carefully done, I concluded to try the experiment of rolling the entire surface over, plants and all, with a heavy iron roller. My head gardener thought this was useless; but I had it done, leaving three rows untouched. The result shows the benefit of compressing the soil; for those in the rolled portion of the bed are alive, while the others are dead, there having been no rain since planting. During my entire experience in gardening I have found that this packing the earth about the roots of recently planted trees and shrubs one of the most important, but usually most neglected, operations. It is very difficult to make workmen do this; but it should be insisted on by every one who is setting out choice plants. If farmers would use the roller more on their meadows and grain fields, they would find their crops increased far more than the cost of application. Wherever the soil is light the roller is needed to make the surface more compact, keep out the drying, hot winds, compress the earth against the seeds and roots of small grains, and, in compact, clayey lands the roller should be used to break up the lumps and pulverise the surface soil, thereby allowing the young plants an opportunity to grow. The proper manipulation of the soil is one of the operations belonging to successful agriculture and horticulture, of which very few persons seem to know anything. To tell a man that he must make his soil deep, rich and light, and then roll it down, seems to be contradictory advice; and so it is to those who have had no experience in such matters; but it is no more unphilosophical than beating cream to make one portion more compact and the other a thin liquid.

The Foreman Strikes.—*May* 14.—My foreman struck for higher wages to-day; or, in other words, he had a call to another parish, for a bigger salary than he could obtain in his present one. Of course, this is a legitimate transaction, and in accordance with the custom of the day, and I had no other alternative than to pay advance wages or let him go. I chose the latter, and I have been acting as foreman myself. Repotting plants in the greenhouse, and directing the planting of small stock, is no new business for me, and I have been digging in the dirt to-day with a will. Of course I am a little tired to-night, but there is a compensation for it in sound sleep and a glorious appetite. Sometimes I almost wish that I was obliged to work as hard, physically, as I did twenty years ago; for then I had no dyspepsia, slept soundly, and had splendid dreams of happiness in the good time coming, when I should be able to rest occasionally.

Plunging Potted-Plants.—*May* 15.—There are many kinds of greenhouse plants that should be kept in pots during Summer, in order to secure an abundance of flowers the next Winter. I have had a plunging bed made for this purpose, in a half-shady situation, under some large trees. *Camellias, Azalias, Begonias, Bouvardias*, and similar plants, should be repotted as soon as they have finished blooming in Winter or Spring, and then plunged in such a bed as I have described. The pots should be plunged up to the very top, and placed as near together as the branches of the plants will allow. Roses and fuschias that are wanted for Winter blooming, should also be kept in pots, and all buds that appear during Summer removed as soon as they appear. In dry weather the plants should be frequently watered overhead, and the earth in and around the pots kept moist. If ladies who keep many window plants would try this plunging system during Summer, they might save many choice species that are otherwise lost. Camellias in particular, are very likely to be injured if the pots are exposed to the hot, dry winds in Summer, the plants making a feeble growth, and the buds drop long before the usual time of blooming.

Utilizing Waste Water.—*May* 16.—This long and severe drouth which is now upon us should awaken the people to the importance of utilizing the waste water to be seen on every side in small brooks and rivers, where it flows, unused, to the great oceans. In these streams there is a source of untold wealth, requiring not a large expenditure of capital to put it into use. The products of our lands might be nearly doubled in the aggregate by the free use of water alone, to say nothing of being certain of a crop every season. We seldom suffer loss in this country from too much rain; but there is scarcely a season that does not bring its drouth to one or more States of the Union. Wherever there is a few feet of fall in a stream the hydraulic ram can be employed to throw water to the proper elevation to irrigate a farm. Water-wheels may also be used for power to work a pump; or a hundred dollar windmill will answer the same purpose. In fact there is no lack of machinery to do this kind of work cheaply; and now that water pipe, made of wood and tarred to prevent decay, can be purchased for a dollar and a quarter per rod, (one inch bore) the conveyance of water even to a considerable distance is not a very expensive operation. I do not believe that there is a farmer or gardener within a hundred miles of New York city who would not have saved enough already this season, in the increased growth of his crops to have paid for all the machinery necessary to have supplied his place with water. Hay is likely to be very scarce this season all for the want of water; and the same is true in regard to other crops; still I fear that few will try to avoid these losses in the future by erecting the necessary apparatus for irrigating their lands.

The Sportsman.

NOTES FOR SPORTSMEN.

The Best Breech-Loading Rifle for Target and Sporting.—I saw an inquiry in the RURAL NEW-YORKER of April 13, from F. A. C., wishing information respecting the best rifle for target and sporting purposes. I will briefly give him the benefit of my experience, having used many breech and muzzle-loaders, and thoroughly tested them at long ranges. I have long since given my preference to the Maynard, as regards accuracy and force at long range; also for simplicity and ease of manipulation, this gun takes the lead. A serious objection to a breech-loader using the metallic cartridge, is the inferior quality of powder that is often used; also, in many instances, the shells are not evenly charged; consequently, the result would be unsteady shooting from either cause. Whereas, the shells used in the Maynard rifle are loaded by yourself; the powder used is subject to your own inspection; and, by a simple process, every shell can be evenly charged. The wear of the Maynard is less than any other breech-loader. I have used one of these rifles six years, and it is as good now as when new. The size used by me for sporting is 26 inch barrel, 35 calibre; for target, the 32 inch, 44 calibre. As regards muzzle-loaders, I consider them as accurate as breech-loaders; but the superior advantages that the breech-loaders possess over them will soon do away with them.—C. C. OWEN, *Grand Blanc, Mich.*

A Woman Catches the Largest Speckled Trout ever caught in America.—A Plattsburgh (N. Y.) correspondent of the Sun states that Mrs. WILLIAM C. RHODES, an expert angler, caught in Chazy Lake, Wednesday, May 8, a speckled trout weighing *twenty-two pounds and one ounce.* She was out trout fishing, two miles from the hotel, had caught nine trout, averaging about two pounds in weight, when her bait was struck with such force as to nearly pull her out of the boat. Feeling that she had him securely fastened she began playing him. She had no gaff-hook, and was compelled to tow him two miles. She was engaged in her struggle with the fish a little over two hours. When near the hotel she called for help and gaffs. No landing-hook was at hand, but parties went to her assistance with boats and met her a few rods from shore. The water was getting shallow, and the fish began to struggle and lash the water into a foam, and it was feared he would break his hold on the line and escape. Finally two men jumped into the water and seizing the fish by the gills landed him on the lawn. As above stated it proved to be a speckled trout weighing 22 lbs. 1 ounce. It was immediately dressed, packed in ice and sent to Gov. HOFFMAN. It weighed 19 lbs. 1 ounce dressed.

How to Trap Fish in a Moss-Grown Lake.—A correspondent at Muscatine, Iowa, asks how to make a trap to catch fish in a small lake where there is so much moss that a net is of no use.

Entomological.

CABBAGE PESTS.

I HAVE mailed you a tin box containing some worms, which I would like to know the name of. They look something like the "cut worm," but they do not work in the same way. We set out a lot of early cabbage plants, and they, and the other insects at work at them, bid fair to destroy them. There is a very small bug (spider, I call it,) on the leaves; there are thousands of them—I should think as many as fifty on some of the leaves. They appear to suck the substance all out of the leaves, leaving them dry and white. I never saw anything like them before that I know of. The plants were bought of Mr. PETER HENDERSON, and I think these insects were imported with the plants, as I have not seen them except in that field.

The cabbage butterflies are here also, laying their egg on the plants; so between them all, and the dry, cold weather, I think it will be a wonder if I succeed in raising any cabbage. I neglected to say that these worms feed upon the beans—in the night, I suppose—as I find them in the yard near by the plants. The cut worm would take the plant off near the ground; these are not particular about the tenderness of the leaves; but from the appearance I think they take the first they come at. There is something eating off the strawberry bean, and think it is the same worm, but do not know. If you can give me a remedy for any of these pests it will be thankfully received by—A. S. NASH, *Westport, Conn.*

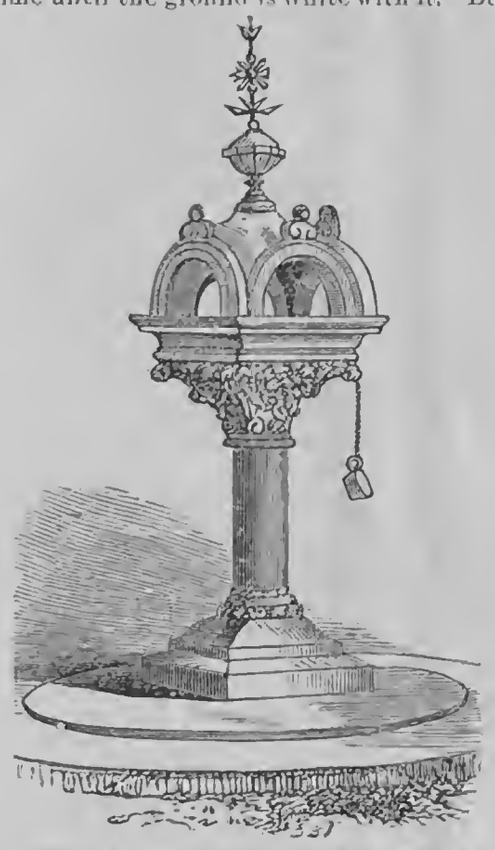
WE accidentally lost the worms before having an opportunity of a close examination. There are several species of these worms, the habits of which are somewhat similar, although varying in their mode of attacking plants. Some attack the plants close to the surface, or just beneath it; others climb up several feet, frequently cutting the leaves from plants that grow quite tall. They are all the larvæ of some kind of a moth, most of them having been figured and described in our entomological works. How to destroy them is quite another subject; and as they usually work at night they escape the birds, and many other natural enemies. If you will use a lamp and spend an hour or two every night hunting them, you may save your cabbages. Or by careful search many may be found during the day time in their hiding places just under the surface of the ground. For the aphides, use freshly slaked lime dusted on the affected plants while wet with dew, or just after a rain. Lime will also aid in keeping off the cabbage worm, as the white butterfly (*Pieris rapæ*) is not so likely to frequent cabbages that are dusted with lime as others. Scores of substances have been recommended for killing the cabbage worm, but we doubt if any of them are really practical on a large scale. There is a little parasitic fly which has already commenced its work of destruction upon this pest, and it will probably soon reduce their numbers to such an extent that we shall not have to fight them ourselves.

ENTOMOLOGICAL NOTES.

To Destroy the Aphis on Single Plants, an English writer recommends the following mode:—If the infested plant is small and short, take three or four Laurel leaves, beat them all over with a hammer so as to thoroughly bruise them, then place them round or under the plant, and cover. A bell glass does best. Let all remain closed for a few hours, and the aphides will be found dead, each hanging by its proboscis only. If this process is repeated within a day or two to make sure, the plant will be perfectly freed, and in some cases is not again attacked. This way of killing aphides may be acceptable to those who dislike tobacco smoke, all danger arising from an overdose of it to a very tender plant is avoided; and the Laurel is so generally grown that it must be almost everywhere at hand for the purpose.

Colorado Potato Beetle.—A correspondent asks how to destroy this beetle without injuring the potatoes. The means most generally adapted in the West is dusting the vines on which the beetles are at work with Paris Green. Some dust it on pure; but if mixed with ten or fifteen times its weight of calcined plaster, or common flour, and thus dusted over the plants it is said to be effectual. It is a poison, and in dusting it over the vines through a perforated tin pan or dredging box, care must be taken to keep on the windward side of it so as not to inhale the poison. It in no wise injures the crop or affects the quality of the potatoes.

Worms on Currant and Gooseberry Bushes.—Mrs. C. E. KEAT asks how she can keep the worms off of currant and gooseberry bushes. One of our correspondents does it by the use of a pint cup, the bottom of which is punched full of holes; after a rain or heavy dew, he fills the cup half full of air or water-slaked lime, and with the cup in his right hand, lifts the bushes and peppers the worms with the lime until the ground is white with it. But



DRINKING FOUNTAIN IN CENTRAL PARK.

the best remedy we know of is to sift on the bushes infested powdered *white* hellebore, which may be obtained at most drug stores.

Will Nitrate of Silver Kill Bark Lice?—So asks G. W. GRANT. He says an old lady says if nitrate of silver is put into the body of a tree, it will kill the lice without injuring the tree. We have never tried it, but have not the least faith in it. The best way we have ever found to kill bark lice on apple trees is to manure and cultivate them well; top-dress the ground over the roots with ashes, leached or unleached, and wash the trees thoroughly in spring, two or three times, with strong soap suds. It is a good plan to whitewash the trees *late in the fall*, with the same object.

Scientific and Useful.

THE TRAPPING OF VERMIN.—I.

FEW people have any idea of the amount of damage done by those animals usually denominated vermin, such as the mouse, the rat, the fox, and others. The extent to which rats and mice destroy grain is something astonishing, while the fox, the mink, and the skunk, do more or less damage to the farmer's poultry yard. Almost every housekeeper is, at some time or other, tormented with these pests—rats and mice—and numberless are the methods adopted for the purpose of getting rid of them. Traps, cats, poison, and numerous other schemes are called into play, but too often without success. A really good cat is one of the simplest and best agents for destroying rats and mice, but, unfortunately, a really good cat is not readily found. Poison, if judiciously managed, is, perhaps, the most efficient means of getting rid of them, but to it there are the serious objections of danger, and of the possibility of our being afflicted with the horrible odor of decaying bodies; so that, on the whole, traps are the best, safest, and most efficient, provided they are properly used.

We would say here, however, that it will, in many cases, be found that prevention is better than cure in this matter, as in many others. In houses in which food is left liberally scattered about, mice and rats will abound; but if we are careful to lock up every scrap of eatables, we can soon starve them out, and drive them off to more hospitable quarters. In some cases it is, of course, impossible to adopt this plan; but wherever it can be put in operation it will be found most successful.

The mouse is the most common, and fortunately the most easily captured, of all the household pests. It is so silly that it will go right into a trap that already contains a dozen of its dead companions, and we have never found the slightest difficulty in capturing every individual on the premises. The best trap is the old-fashioned spring-wire trap, which is sold in the hardware stores for four or five cents per hole. It is not a good plan to purchase a trap with too many holes, for after a time the trap becomes offensive, and had better be thrown away. It is better to buy several traps with not more than two holes each; the traps cost less, and they can be distributed over a large space. Contrary to the practice in all other cases, the mouse-trap ought to be baited, and almost anything will serve for this purpose. Cheese is good, and so is fish, though meat or bread will answer well. No difficulty need be apprehended, for unless the mice are too well supplied with food *outside* the trap, they will be sure to go into it.

As it may sometimes happen that our readers will have occasion to capture a mouse when no regular trap is at hand, we give the following plan, which is very old, very simple, and for which the materials may be found in every house. Take a common thimble and stuff a little cheese into it. Upon this thimble support a common bowl in the manner shown in the engraving. When the mouse attempts to get the cheese out of the thimble he pushes it from beneath the bowl, and is himself captured. By means of this simple contrivance we have caught dozens of mice, but it is not so convenient as the wire trap. We may add that the bowl ought to be set on a piece of loose board so that the board, bowl and mouse may be lifted up at once and the little prisoner dropped into a pail of water.

Another contrivance, which is easily extemporized, and is very effective, is a simple dead-fall made of a tile, a flat stone, or even a common brick, though the latter is rather too narrow. The tile, or its substitute, is supported on a figure-four, as it is called, which is made of three pieces of wood arranged in the form of the figure 4, and placed together so ticklishly that the slightest touch of the bait, which is fastened to the projecting end of the horizontal piece, will bring the whole affair down.—[To be continued.

SCIENTIFIC AND USEFUL NOTES.

The Central Park Drinking Fountains are among the many attractive and ornamental comforts to be found in the Park for the convenience of visitors. We give an illustration of one herewith, which shows that even in their construction regard is had for beauty of form. Some of these are of iron; others of cut stone; all are adapted in form so as to harmonize with their surroundings.

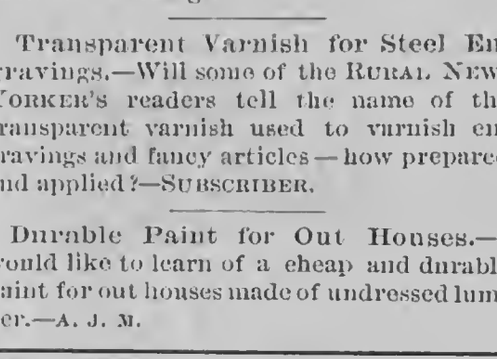
Transparent Varnish for Steel Engravings.—Will some of the RURAL NEW-YORKER's readers tell the name of the transparent varnish used to varnish engravings and fancy articles—how prepared and applied?—SUBSCRIBER.

Durable Paint for Out Houses.—I would like to learn of a cheap and durable paint for out houses made of undressed lumber.—A. J. M.

Hygienic Information.

HYGIENIC NOTES AND QUERIES.

To Remove Hoarseness.—A lady inquires for a remedy for hoarseness. A little horseradish root, grated and eaten with the food, will usually effect a cure. But it must only be eaten in small quantities at a time, as it is liable to create inflammation when partaken in large quantities. When hoarseness has existed for a long time, it may take some time to remove it. In hoarseness, the bronchial tubes are obstructed, and the horseradish has a tendency to promote secretions of the system and gradually remove the obstructions. I



MOUSE-TRAP.

speak from experience, having formerly been a sufferer from this complaint. In such cases boiled wheat, mush and milk, fruits and vegetables should form a principal part of the diet.—H. E. S.

Exposing the Arms of Children.—A very distinguished Paris physician says: "I believe that, during the twenty years that I have practiced my profession, twenty thousand children have been carried to the cemeteries, a sacrifice to the absurd custom of exposing their arms. Put the bulb of a thermometer into a baby's mouth and the mercury rises to ninety degrees. Now carry the same to its little hand; if the arm be bare and even cool, the mercury will sink to fifty degrees. Of course, all the blood that flows through these arms must fall from ten to forty degrees below the temperature of the heart. Need I say, when these currents of the blood flow back to the chest, the child's vitality must be more or less compromised? And need I add that we ought not to be surprised at the frequently recurring affections of the tongue, throat, or stomach? I have seen more than one child with habitual cough or hoarseness entirely relieved by simply keeping the hands and arms warm."

Rheumatism Remedy.—Rheumatism is said to result from want of acid in the system; therefore, take lemon juice, with as little sugar as possible—at least one lemon a day. Another:—A tablespoonful of mustard every morning, for three mornings; then skip three, and so on, until you have taken it nine mornings.—H. M. G.

—I never was troubled with rheumatism myself, but my mother and grandfather have been greatly relieved by using lemons freely. Mother used several dozens. Slice the lemons and sprinkle on sugar.—G. F. R.

To Prevent the Odor of Perspiration.—I saw in RURAL NEW-YORKER, May 9, on page 294, an inquiry made for something to prevent the unpleasant odor arising from excessive perspiration. It is only necessary to procure some of the compound spirits of ammonia, and place two tablespoonfuls in a basin of water, washing the face, hands, arms, and under the arms, with this. It leaves the skin as fresh and clean as one could wish. The wash is perfectly harmless, and very cheap.—DOR.

Small-Pox Remedy.—Apply raw onions, halved, under the arms, in the hands, and on the bottoms of the feet; change several times a day; diet, chicken broth. It has cured several without leaving a scar, and without having medical assistance.—W. M. M., *Mississippi.*

Ringworm Remedy.—Some years since I had two severe ringworms, one of them passing entirely through my beard. After having suffered with them for several months, I procured a pint of dried elder berries, which I stewed and ate. The ringworms disappeared within a week.—F.

"White Moles" in the Forehead.—Can some one tell me some safe method of removing small white protuberances from the forehead—called by some white moles?—MRS. H. E. S.

T. L. O. asks "what is the cause of the disease known as 'Hay Fever' or 'Harvest Tilthina,' and what remedy should be applied?"

Arboricultural.

ARBORICULTURAL NOTES.

Tropical Plants and Trees at Amherst.—The plant house at the Amherst, Mass., Agricultural College has been enriched by a present of 67 new plants, mostly tropical, from the Government botanical garden at Washington. There is a mahogony tree, about a foot high, in the collection, and an unknown plant has been received from Hayti. The banana plant has a large cluster of first fruit, which will ripen in about two months, and the sago palm has its first bud, although it has been at the College four years, and was owned by President CLARK some time before.

Planting Evergreens in Barn-Yard Manure.—T. C. BAHELIEN, Huntington Co., Ind., writes us he received a lot of White Pines and Arbor-vitæ, the first of April; dug large holes, filled the holes half full of barn-yard manure; set the trees on the manure, and filled the holes with good, rich soil. Of course the trees died, and our correspondent wants to know why? Because they were planted in manure instead of the good, rich soil. If you had used no manure probably every one would have lived. Verdict—"Killed by kindness."

To Protect Orchard Trees from Hogs.—A. A. HULL, Frederick Co., Md., pronounces the following "a sovereign remedy:"—"A strong solution of assafœtida, made by pouring on hot water and then grinding it thoroughly with an iron bolt or bar. Apply to the tree with a whitewash-brush."

The Poultry-Yard.

PROFITS OF POULTRY KEEPING.

Report Made to Farmers' Club of New Brunswick, N. J., by Frank G. Hart.

POULTRY ACCOUNT FOR 1869, 1870 AND 1871.

In 1869 we first commenced keeping an account with our poultry. We had about sixty fowls—forty hens and twenty cocks; some of the latter being small, were sold soon, leaving about fifty for breeding. Every egg laid and every pound of poultry sold or used were credited to them at market prices; every egg set and all the feed consumed were charged at ruling prices. At the end of the year they stood as follows:

	Dr.	
To 60 fowls, at 50c	$30 00	
" feed, and eggs set	84 61	
		$114 61
	Cr.	
By 115 fowls, at 50c	$57 50	
" eggs laid, 2,784, (about 70 each) and poultry	126 49	
		$183 99
Balance		$69 35

Average per fowl, $1.38.

The fowls occupied a plum orchard of about three-quarters of an acre—room enough for one hundred fowls or more—and a small building for laying, roosting, &c.

In 1870 we tried again, starting on a larger scale, 115 head in all—85 hens and 30 cocks. Killed off some cocks, leaving about 100 for breeding. Kept them in the same condition as last year. At the end of the year their debit and credit was as follows:

	Dr.	
To 115 head, at 50c	$57 50	
" feed, and eggs set	126 27	
		$183 77
	Cr.	
By 215 head, at 50c	$107 50	
" eggs laid, 7,458, (about 88 each) and poultry sold	243 57	
		$351 07
Balance		$167 30

Average profit per fowl, $1.07.

In 1871 we tried it on a still larger scale, having three yards to confine our poultry in. Started with 215 old fowls—190 hens and 25 cocks. We ran mostly on chickens, not trying to get eggs; consequently the average number of eggs to the hen is smaller. We sat in all 3,200 eggs, mostly Dunghills, some pure stocks, and a few ducks and turkeys. We hatched about 2,000 chicks and will probably raise about 1,000 head in all; at one time 59 hens were sitting on 767 eggs, and 25 or 30 hens were hovering several hundred chickens. The season was very poor for raising poultry—so many heavy storms; in one storm we lost over 70 birds. We also find that *crows* are very fond of chickens, over 300 being charged to them; a *real man* is the only "scarecrow." Our stock generally consists of Dunghills, but we are running into pure blood some—Brahmas, Leghorns, White Cochins and Houdans. Our account runs as follows for 9 months:

	Dr.	
215 hens and cocks, at 50 cts	$107 50	
Feed	201 59	
2,920 set (common)	48 83	
250 duck eggs	6 00	
Guelder W. Cochin and Houdan eggs	15 00	
Pepper and alum	5 00	
		$383 92
	Cr.	
9,573 eggs (about 50 each) at 19½c	$187 01	
Old fowls sold	22 10	
Young fowls sold (157)	80 74	
194 chicks at 8c	15 52	
35 ducks	22 04	
Ducks' feathers	1 50	
STOCK ON HAND.		
146 chickens, fattening, at 60c	$87 60	
100 Pure Brahmas	150 00	
Two pairs Houdans at $10	20 00	
Two pairs Cochins at $10	20 00	
400 chickens (Dunghills)	200 00	
150 old fowls at 50c	75 00	
35 ducks at 50c	17 50	
15 turkeys	10 00	
		$909 01
Balance		$525 09

Average per fowl, about $2.50

We set our hens in boxes that have covers, so one hen cannot bother another. They are placed along the house in rows of fifteen or thereabout—some on the floor, others about three feet from the floor. When a hen wants to set, we put 13 eggs in one of these boxes, sprinkle a handful of wood ashes over them—sometimes we put in a stalk or two of tanzy—put her in, shut down the cover, and bid her good-by for two days. Then we raise the cover and take her out (she would stay on longer if permitted). See that she has plenty of feed and drink, put another handful of ashes on the eggs, put the hen on again, and cover her up. In this way we succeed in keeping a hen sitting for two or three months. Our nests are placed in dark places, which, we think, makes it easier to accomplish the above.

The tanzy and ashes placed in the nest tend to keep off lice, but are not warranted. Eight days before the hen is to come off, we sprinkle the eggs with cold water when she is off the nest feeding; this prevents the eggs getting too hot and the chicken dying in the shell.

We are not bothered much with the gapes. We have lost but one chicken with them, and his head was cut off to help him along, so he did not die of gapes. We try to prevent, but not to cure. Large quantities of black and red pepper are mixed with their food two or three times a week.

During 1870 we were troubled with cholera in our fowls, losing some twenty; this year we have lost none. Our preventive is alum, two or three times a week, in their drink. Our chickens sometimes get crop bound; we succeeded in curing one very valuable one, by cutting open his crop, taking out the hard mass, sewing the wound, and feeding on soft food for two or three days.

One word about ducks, as everybody declares that they eat their heads off. We commenced on a small scale, not having any old ones. Result:

	Dr.	
To 250 eggs	$6 00	
" Feed	20 25	$26 25
	Cr.	
By 35 ducks sold	$22 01	
" Feathers	1 50	
" 35 ducks on hand	17 50	$41 04
Total profit		$14 79

We have had what we consider bad luck; we bought 250 eggs, nearly three-quarters of which were bad and did not hatch.

The feed for our 900 chickens, and the eggs for hatching the chicks have cost $157—

SEVERE ATTACK OF DISTEMPER.

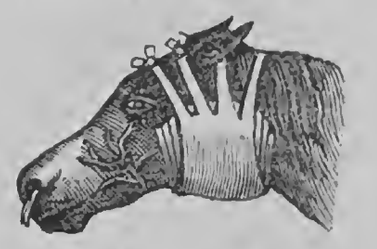
about 17½c. each. We generally calculate that their manure will pay for all the labor in hatching and rearing. We have also tried an experiment in fattening fowls. We put 60 chickens in our corn-crib and fed 8 days on corn. Result:

Weight when taken out	250 lbs.
" " put in	227 "
Gain on the 60 fowls, at cost of 7c. per lb.	23 "

New Brunswick, N. J.

POULTRY NOTES AND QUERIES.

Cholera in Poultry.—A New York city reader asks for a remedy for cholera among poultry. The following are said to be remedies:—When the fowls begin to droop and look sleepy, give three or four tablespoonfuls of strong alum water, and repeat the same the next day. Mix their feed with

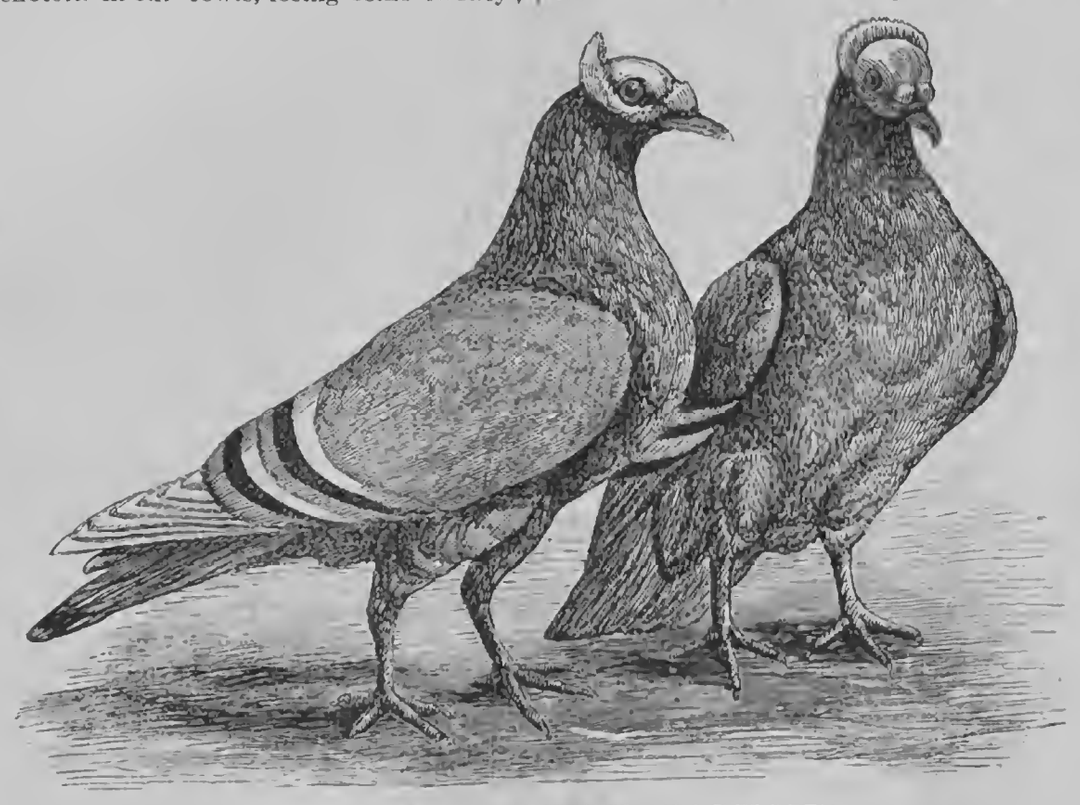


APPLYING AN EIGHT-TAILED BANDAGE.

strong alum water, feeding twice a day for two or three days—afterwards once a week. Another is, to feed cooked Indian meal, red pepper, gunpowder and turpentine, mixed together; for a dozen fowls put, in a day's feed, a tablespoonful each of these ingredients, well mixed with the meal. Give this food every other day for a week.

Japanese Bantams.—We still have inquiries for these fowls. We have also considerate correspondents who have them and are willing to advertise them—*at our expense!*

Blue Brunswick Pigeons.—We give herewith a copy of portraits of a pair of so-called Blue Brunswick Pigeons, by HARRISON WEIR. These pigeons belong to a class known as "German Toys." This class



BLUE BRUNSWICK PIGEONS.

includes a very large number of pigeons of different varieties, characterized almost entirely by mere variations in the color and disposition of the feathers. They generally closely resemble the wild blue dove in form and arrangement of plumage, though some are characterized by feathered feet, others by turned crowns and tufts over the upper mandible, and some combine all these peculiarities. The variety Blue Brunswicks have flight feathers, wing bars and heads white, the rest of the plumage being blue. Our illustration sufficiently indicates their form.

To Prevent Hens Breaking Eggs before Laying.—Feed boiled wheat and pulverized egg shells, and keep coal ashes where the hens run.—J. L. C.

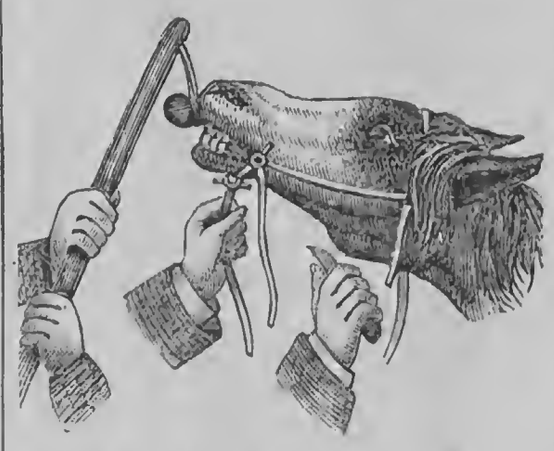
The Garden.

GARDENERS' NOTES.

To Destroy Weeds in Garden Walks.—W. F. R. asks the best mode of destroy-

EIGHT-TAILED BANDAGE.

ing weeds in garden walks. We have used salt with satisfaction, finding that a liberal use of it makes the walk harder and pleasanter to walk upon. Another method we have seen recommended is, to procure the darkest, cheapest sulphuric acid, and mix in a glazed pan with about twenty times its bulk of water. Have a copper can pierced at the bottom, or a copper water can and rose [one of glazed earthenware would be still better if it could be obtained], with which apply the liquid till the ground is just wetted all over, and no more. Don't go within six inches of the edgings, nor make any spray fly, as it kills whatever it touches, and so makes nasty spots on leaves of plants. It kills every seed in the walk; and weeds mostly come from the store of seeds. First



OPENING THE ABSCESS IN DISTEMPER.

let the walk be roughly hoed up, and the bulk of the weeds picked or raked away, and the liquid will kill all the rest completely. In a day or two roll the walk, and it will be as bright and nice as if it were freshly gravelled. The acid, if applied in the spring, will last all the summer well.

The Horseman.

STRANGLES OR DISTEMPER.

[SEE ILLUSTRATIONS.]

WE have several inquiries as to the best mode of treating horse distemper. In response, we copy the following from Prof. MAGNER'S work on "Educating Horses." He says:—This is another form of sore throat familiar to every one. Its design seems to be to throw some poisonous matter from the system, and the object should be to keep the strength of the animal up and hasten suppuration.

The horse is out of sorts; the neck becomes sore and stiff; an enlargement appears, which is first hard and tender; there is some discharge from the nose. The case usually grows worse, if very severe, often threatening to cause suffocation; horse unable to eat or drink but little, and strength is lost rapidly.

Use freely a poultice made of wheat bran and warm vinegar, changing as often as the poultice becomes dry, using the eight-tailed bandage, until the enlargement becomes soft and can be opened, when relief will be prompt. Or the following treatment may be adopted, which is similar, and if the alteration is not good, is preferable:—Take spirits of turpentine, two parts; spirits of camphor, one part; laudanum, one part. Put this on the neck with a brush, if convenient, or any way to apply it without exciting pain, three or four times a day, until soreness is caused. After each application, have ready three or four pieces of flannel, which should be a thick article; put these over the parts and bind on with the eight-tailed bandage. When the tumor points, open it, and be sure that the matter has a thorough outlet. Sometimes the inflammation is so deep as to cause serious soreness and swelling of the throat. In this case the horse must be nursed carefully, by feeding with warm gruel; the drink should be warm; grass, or anything that will tempt the appetite, should be given. Simpler treatment would be rubbing on the enlargement an ordinary fly-blister, to bring the enlargement to a head. Physic must not be given.

NOTES FOR HORSEMEN.

A Sick Mare.—I wish to inquire through the columns of your paper for a remedy for a sick mare, which the doctor I employed pronounced farcy. The mare is with foal; she commenced making bag until it got quite hard; then it commenced swelling in front of the bag and extended to the chest—a hard swelling; when the finger is pressed on it the dent remains some time. The doctor bled and roweled her and gave her a dose of aloes; but she does not seem to get any better. If some of your RURAL readers would give a remedy and the name of the disease they would confer a favor.—JOHN MCMULLIN, *Oswego Co., N. Y.*

IF your mare has the farcy, as we judge she may have, from your description, she is as near worthless as she can be and be good for anything. We never saw an animal so diseased made sound or valuable by any remedies, nor have we ever heard of one being so cured.

After a Mare Aborts.—Can you, or some of the readers of your paper, tell me how a mare should be treated after aborting, or slinking her foal, as it is commonly called. I have noticed, and heard it remarked by others, that a mare does not thrive well for several months after slinking her foal, especially if she is half way along or more. She seems to have irregular and prolonged heats, looks bad, is weak, and oftentimes will not get with foal the succeeding year. If you would give the mode of treating such cases in your valuable paper, it might be of much benefit to horse raisers, as such cases will happen, even among the most careful.—J. A., *Cass Co., Missouri.*

WE have had no experience in such a case, and must ask some of our readers who have, to respond.

Condition Powder for Horses.—The Turf, Field and Farm says those keeping horses should twice a week throw in a handful of salt and ashes. Mix them by putting in three parts of salt to one of ashes. Horses relish this and it will keep their hair soft and fine. It will prevent bots, colic, etc. A little ground sulphur mixed with salt and ashes, and given once in two or three weeks is also beneficial. All domestic animals will be thus benefited.

Dead Pulling Horses.—The Country Gentleman says it is a characteristic of the breed of horses known as Suffolk Punches to continue pulling at a dead pull, longer than any other horse.

Dairy Husbandry.

THE MILK QUESTION AGAIN.

In the New England Farmer is a statement of the cost of the necessary buildings and machinery, with the partial explanation of the process of condensing milk, together with a statement of the cost and profits of the business per day, with the milk costing 12½ cents per gallon. Now, the farmers of this section are completely at the mercy of the contractors in selling their milk, and for seven months of the year receive only this price for their milk, and are liable, even at that, to have their milk returned on their hands as sour; or if they have more than they want, not to be taken at all, thus leaving it on their hands; and as they have not made preparations for utilizing it in any other way, it is a complete loss in many cases. If the statement is correct, I think it will be a good way out of the difficulty, as it would not only be a good operation for those most immediately concerned, but by taking so much milk out of the market, it would make a better price for that left (by reason of smaller supply). If, therefore, you can give me any information in regard to the matter, you will confer a great favor, as well as help settle the question of how best to market the milk.—James M. Riley, *Boston, Mass.*

We are glad to see public attention directed to the subject of condensed milk. The city milk consumer has been subjected to frauds in milk dilution and adulteration year after year, with no hope of redress. Farmers in the country, who send their milk by rail to the city, are often at the mercy of the middlemen, while the difficulty of keeping milk sound and in good order until it is delivered to the consumers, seem to demand a radical change in the way milk is usually put upon the market. Again, milk as it comes from the cow, as is well known, contains 87 per cent of water. To transport this water over the railway for long distances, and in carts, to the door of the consumer, entails a heavy expense, which must either be taken from the producer or charged to the consumer. We see no ready way of obviating the difficulty of putting pure, healthy milk upon the city and village markets, except it be by the establishment of milk condensing factories, and the substitution of condensed milk for the vile fluid under the name of milk now generally sold in cities.

As a sanitary measure the use of condensed milk, in preference to the crude article as sold in the cities, can hardly be over-estimated. There can be little doubt but that a vast train of diseases is induced or aggravated by the use of crude milk as it comes to the city consumer. Even in the country and upon the farm milk not unfrequently contains germs of disease and is unwholesome, though perhaps unsuspected by the dairyman who produces it. Now the process of condensing destroys these germs or living organisms while the milk is fresh, and before they have time to multiply and spread their accumulative poison throughout the fluid. Hence condensed milk may be regarded as more reliably healthy than any ordinary specimen of crude milk.

Condensed milk has been approved by the most distinguished chemists, medical and food authorities, and the general adoption of this milk for infants would contribute largely to decrease the terrible mortality arising from unhealthy food given to children.

Plain condensed milk—that is, milk manufactured without the addition of sugar—will keep sound and in good order for several days. It is simply crude milk eliminated of 75 per cent. of its bulk in water, and is sent to the consumer in large cans, and sold by the quart in the same way as crude milk. We do not see why a certain number of these establishments could not be made profitable to milk producers.

The cost of transportation and the handling of the milk would be seventy-five per cent. less than for crude milk, while its longer keeping qualities and uniform character ought to render it popular with the consumer.

It must be remarked, however, in this connection, that condensed milk manufacture requires skill and experience in its operators and much attention to details. Provision must be made that only good, clean, healthy milk be received at the factory; and unless this matter is thoroughly attended to and a good reliable article manufactured, the condensing business will be liable to turn out a failure. As has been stated before in these columns, a factory and its appliances will cost from $10,000 to $20,000, according to its size and the machinery with which it is furnished.

DAIRY NOTES.

I have commenced putting up a dairy house or creamery, and want to ask you a batch of questions, and wish you would answer through the Rural New-Yorker.

1. I want to know what is the most approved method of setting milk, (my purpose being to make butter and skim cheese,) having plenty of cold spring water; and by piping thirteen rods we get nine feet fall.

2. What is the suitable kind of pipe to use for such purpose?

3. What kind of apparatus is necessary to make cheese for fifty cows? Please answer in detail.

4. What is the usual price paid for milk when sold to factorymen—say in Western New York?

5. What does sweet cream butter bring in market as compared with other kinds, also skim cheese?

6. Is it difficult to churn such cream?

Why don't all of these dairy apparatus manufacturers advertise their fixtures in the Rural; they must know that all dairymen take that paper, or should.—Austin B. Culver, *Westfield, N. Y., May* 10.

1. The most approved method of setting milk for cream is to have cold spring water constantly flowing about the vessels containing the milk, so as to keep it at uniform temperature of about 60° Fahr. There are two methods for effecting this object, viz., by having tanks or pools sunk in the earth, which are to receive the water. In this case vessels of tin, 20 inches long and 8 inches in diameter, are used to hold the milk. They are filled within 3 inches of the top and immersed in the water to the depth of the milk. This is termed "deep setting," and is very extensively practiced at the butter factories where large quantities of milk are manipulated.

A less expensive method, and one very much liked by some, is to use the Jewett pans. They are constructed to hold the entire mess of milk from a herd of 20 up to 100, or more, cows. The pans are arranged so as to allow water to flow under the milk, and four pans are sufficient. The milk is set from three to four inches deep in the pans, and the flow of water under the milk holds it at uniform temperature. There are a number of butter factories in Franklin Co., N. Y., where this apparatus is used, and they report a good yield of butter.

2. Good pine logs are suitable for conducting the water, and perhaps, on the whole, are as good as anything. Cement, piping, lead and iron are used. In the matter of piping we should be governed somewhat by the expense.

3. There are so many kinds of cheese making apparatus, all good, that it would seem almost invidious to designate any particular one. We should advise our correspondent to consult "Practical Dairy Husbandry," published at the Rural office, which describes pretty fully several kinds of apparatus in use among dairymen. We may remark, however, that for a small quantity of milk—say from fifty cows only, and for making only the cheese—the "self-heaters" as they are called, or vats that have heaters underneath, or attached, are in all respects efficient. But in butter and skim cheese manufacture, the vats may be supplied with heat from a steam boiler, while an engine to supply power for driving the churns will be found convenient. Of course, the expense is greater for this than for the other; but when there is much cream to churn, we should prefer it.

4. There is no stated price for milk when sold to factorymen. The price is usually regulated in accordance with the price of cheese, less the cost of manufacturing and furnishing. Thus, for instance, if ten pounds of milk, on an average, is taken for one pound of cheese which sells for 14c., and if two cents per pound be charged for "manufacturing and furnishing" the cheese for market, then the ten pounds of milk is worth 12c. In other words, ten pounds of milk is worth at the factory two cents less than the average price of a pound of cheese as sold from the factories.

5. A fancy article of butter, whether from sweet or sour cream, brings the highest price in market. The butter will be ranked in market according to its quality. We do not understand that there is any premium for "sweet cream butter." Skimmed cheese also commands a price in accordance with its quality. As a general thing, skim cheese of fair quality brings from two to five cents less than whole milk cheese per pound. We have known instances where small, fancy-shaped "skims" sold as high as whole milk cheese.

6. Cream churns more readily when it goes to the churn slightly acid; it is said also to give the best yield when churned in this condition, and we should so recommend.

Domestic Economy.

BILL OF FARE FOR A WEEK.

Monday's Dinner. — My Monday's breakfast was published on page 214, Rural New-Yorker, March 30. Here is my dinner. As it is wash day, I shall have to make arrangements accordingly. I have baking to do (which I do not mean shall happen again on Monday as long as I do my own work). First of all, my sponge for my bread is light; I must mix that, and while it is rising, I will make some mince pies. I keep the mince all prepared, and then it is handy. I will bake two or three, for they will keep a few days, and other pies, or almost all others, are better to be eaten the day they are baked. I will bake cookies, ginger snaps and fruit cake, as they will all keep, if made good. I contend it is economy to make anything so it will keep, if not eaten at once. I like to keep fruit cake on hand, for it makes a very good dessert with a cup of coffee, in case of unexpected company.

Now that I am done baking, I am going to have roast beef for dinner. The roast weighs six pounds; we have to roast a piece as large as that, in order to have it good. We have dinner at one, and, as it takes fifteen minutes to a pound for it to bake, it is time it was in the oven. The oven wants to be quite hot, I think, for the meat retains the juices better to have the oven hot at first. I do not season my roast until a few minutes before it is done. I will have potatoes, turnips and baked squash; and while they are cooking I will set the table. I want plates, glasses, napkins, &c. I will have tea, so I will put on the tea service. I will have grape jelly and pickles, as they are both good with a roast; also, brown bread, white crackers and ginger snaps, as it will not injure the crackers or ginger snaps if they are not eaten. For a dessert I will have mince pie, cheese, and some apples. I like to see fruit on a table. It always tastes good, too, to most people, after dinner, and it is, I believe, considered wholesome.

I will now take up my dinner, as it is done. I will mash the potatoes, turnips, and squash; put them in vegetable dishes and smooth them nicely down; take up my meat, which is done just right. I have just tried it with a fork, and the juice looks right. I will put the roast on a platter—not too big a platter nor too small; I dislike to see a small roast on a large platter. Now my dinner is ready, and good enough for any one who likes it. One gets accustomed to what our family likes, and we must cook accordingly. I think in a family of five or six, if they all like one kind of meat, there's no sense in getting more than one kind—if you have soup, especially. I intended to have had soup to-day, but could not get around to it; but if you are all well and hungry, you will make out, I think, quite a good dinner. In my next I will tell you what I had for tea. M. N. R.

Union Springs, N. Y.

FLAVORING WITH LEAVES.

D. Bury, in The Garden, says:—Leaves are more or less popular for garnishing, but it has often surprised me that they are so little used for flavoring. With the exception of sweet and bitter herbs grown chiefly for the purpose and parsley, which is neither bitter nor sweet, but the most popular of all flavoring plants, comparatively few other leaves are used. Perhaps I ought also to except the sweet bay, which is popular in rice and other puddings, and certainly imparts one of the most pleasant and exquisite flavors. But, on the other hand, what a waste there is of the flavoring properties of peach, almond, and laurel leaves, so richly charged with the essence of bitter almonds, so much used in most kitchens! Of course, such leaves must be used with caution, but so must the spirit as well. An infusion of these could readily be made, either green or dry, and a tea or table spoonful of the flavoring liquor used to taste.

One of the most useful and harmless of all leaves for flavoring is that of the common syringa. When cucumbers are scarce, these are a perfect substitute in salads or anything in which that flavor is desired. The taste is not only like that of cucumbers, but identical—a curious instance of the correlation of flavors in widely different families.

Again, the young leaves of cucumbers have a striking likeness in the way of flavor to that of the fruit. The same may be affirmed of carrot tops, which are as like carrots in taste as may be. In most gardens there is a prodigious waste of celery flavor in the sacrifice of the external leaves and their partially blanched footstalks. Scores of sticks of celery are cut up into soup, when the outsides would flavor it equally well or better.

The young leaves of gooseberries added to bottled fruit give a fresher flavor and a greener color to pies and tarts. The leaves of the flowering currant give a sort of intermediate flavor between that of black currants and red. Orange, citron, and lemon leaves impart a flavoring equal to that of the fruit and rind combined, and somewhat different from both. A few leaves added to pies or boiled in the milk used to bake with rice, or formed into crusts or paste, impart an admirable and almost inimitable bouquet. In short, leaves are not half so much used for seasoning purposes as they might be.

ODDS AND ENDS.

New Mode of Washing.—The ill effects of soda on linen have given rise to a new method of washing, which has been extensively adopted in Germany, and introduced into Belgium. The operation consists in dissolving two pounds of soap in about three gallons of water as hot as the hand can bear, and adding to this one tablespoonful of turpentine and three of liquid ammonia; the mixture must then be well stirred, and the linen steeped in it for two or three hours, taking care to cover up the vessel containing them as nearly hermetically as possible. The clothes are afterward washed out and rinsed in the usual way. The soap and water may be reheated, and used a second time, but in that case half a tablespoonful of turpentine and a tablespoonful of ammonia must be added. The process is said to cause a great economy of time, labor, and fuel. The linen scarcely suffers at all, as there is little necessity for rubbing, and its cleanliness and color are perfect. The ammonia and turpentine, although their detersive action is great, have no injurious effect upon the linen; and while the former evaporates immediately, the smell of the latter is said to disappear entirely during the drying of the clothes.

Home-Made Candy. — Use a new tin basin; put into it four tablespoons of water, one pound of "coffee A" sugar, one teaspoonful of good cream tartar; boil, stirring constantly to avoid burning. After it begins to have a soapy appearance, try it often, by dropping a little into cold water, and if done, it will at once become brittle. Butter an earthen dish, and pour the hot candy into it, that it may cool just enough to handle. Flavor to taste with oil of peppermint, wintergreen, sassafras, or lemon. Two drops of oil will flavor it strong. For variety, divide into three or four parts, and flavor differently, by touching one kind of oil to each; work in the hands at once; the more it is pulled the whiter it will get.

Hoarhound Candy is made, in every respect, like the other, except after it is cooked enough, add to the same quantity, while boiling, one tablespoon of the fluid extract of hoarhound; then pour it into a dish large enough that it may flow out thin; butter the edge of a case knife, and indent the candy on top, while it is yet soft, in shape of sticks, or in squares; after it is cold, it will follow these indentations in breaking.—Mona, *Titusville, Pa.*

How to Mix Mustard.—Mustard should be mixed with water that has been boiled and allowed to cool; hot water destroys its essential properties, and raw cold water might cause it to ferment. Put the mustard in a cup, with a small pinch of salt, and mix with it very gradually sufficient boiled water to make it drop from the spoon without being watery. Stir and mix well and rub the lumps well down with the back of a spoon, as mustard properly mixed should be perfectly free from these. The mustard pot should not be more than half full, or rather less, if it will not be used for a day or two, as the mustard is so much better when fresh made.

Stamp for Stamping Butter.—Mrs. C. E. Keat asks "how can I get a nice stamp for stamping butter?" Most dealers in wooden ware keep them. If those near you do not, take a piece of hard maple, mark on one side of it the outlines of the figure you desire to produce on the butter, and ask your brave husband or noble boys to carve out these figures for you, so that when you press it upon the butter ball it will leave just such a device—say your own name—as you want. It is easily enough done.

Domestic Inquiries.—S. A. H. asks for a recipe for preserving eggs in lime water and brine.

The Literary World.

NEW PUBLICATIONS.

The Science Record for 1872. By ALFRED E. BEACH. New York: Munn & Co.

THIS book is a compendium of scientific progress and discovery during the past year, fully illustrated. It has portraits of R. G. GATLING, Gen. M. G. LEGGETT, the Commissioner of Patents; Sir. FRANCIS PETTIT SMITH; SEVERINO GRATTONI, the engineer of the Mont Cenis Tunnel; MICHAEL FARADAY, Sir RODERICK MURCHISON, JOHN A. ROEBLING, Sir JOHN F. W. HERSCHEL, Prof. MAHAN, LOUIS AGASSIZ, Prof. DARWIN, and others. The letter press of the book is devoted to accounts of recent inventions and great works in progress in various parts of the world, most of which are amply illustrated. We have seldom seen a more valuable or interesting work. Young men will find it more entertaining than any romance they ever read.

Window Gardening

Is the title of a new work of 300 pages, edited and published by HENRY T. WILLIAMS, 5 Beekman street, N. Y. City, which is devoted especially to the culture of flowers and ornamental plants for in-door use and parlor decoration. It is profusely illustrated. An examination proves it to be full of practical information and suggestions adapted to meet the wants of those who delight to decorate their homes with plants and flowers. It not only furnishes lists of plants adapted to the various modes of in-door culture, but gives details for their treatment which will greatly enhance the pleasure to be derived from this delightful mode of Home Decoration. Its price is only $1.50.

My Hero; or, Contrasted Lines. By Mrs. A. E. PORTER. Boston: D. Lathrop & Co.

A STORY of considerable interest intended for children. In the main it is readable, but the effort made to point a moral is painful and absurd. Such a passage as the following, on page 41, is not the thing for a woman to say to a man in a children's story: "Go, infidel! atheist! blasphemer! I will not drink of your cup nor eat of your meat. Give me back my child, and the wealth which I brought to you, and let me never see you more." This remark was called out because the husband did not believe the Scriptures inspired! The book increases in interest as the story develops, and the little hero proves to be a hero indeed.

The Life and Times of the Rev. John Wesley, M. A., by the Rev. L. TYERMAN. New York: Harper & Brothers.

THE last and third volume of this great and exhaustive work is out, and completes what proves thus far to be the most satisfactory life of the founder of the Methodists ever published. A life of 88 years, full of labor, has been concisely narrated, and three great books are the result. We hope some day to see a more general view of his life written, better adapted for popular reading. Many will find these books tedious, they are so spun out. As a cyclopedia of the life of JOHN WESLEY, nothing could be better. It will ever be a standard work.

The Life and Times of Henry, Lord Brougham, written by himself. Vol. III. New York: Harper & Brothers.

THE concluding volume of the life of this eminent English statesman is out, and all who have commenced the work will be sure to complete it. This book is valuable to students of history, and gives us an insight into the workings of the English Government. It is a peep behind the scenes, and explains the motives which prompted certain members of the Government at the time of Lord BROUGHAM'S administration to do as they did. The book is mostly composed of letters, many of which are quite interesting.

Salad for the Solitary and the Social. By an Epicure. Redressed and Compounded. New York: DeWitt C. Lent & Co.

A READABLE, popular, toothsome book, containing 52 illustrations by American artists. This book has had a sale of over 30,000 copies in England, and will, doubtless, be as popular in this country. It contains pleasantly written essays on a large number of delightful subjects, such as Matrimony, Book Craft, the Mysteries of Medicine, the Shrines of Genius, the Humors of Law, etc. A volume of over 500 pages, it is filled with rare bits, sure to please all tastes.

Cyclopedia of Biblical, Theological and Ecclesiastical Literature. By Rev. JOHN MCCLINTOCK, D. D., and JAMES STORY, L. T. D. Vol. IV.—H. T. J. New York: Harper & Bros.

WE only need to call attention to this great work as it is passing through the press. Since the death of Dr. M'CLINTOCK, Dr. STORY has had the entire editorial charge, but he has been assisted by Prof. SCHEM, and a large number of clergymen of all denominations. The articles in this Cyclopedia are concise, comprehensive and readable as well as reliable. Nothing we can say will add to its value.

A Brave Lady. By the Author of "John Halifax, Gentleman." New York: Harper & Bros.

ONE of those quiet, home-like stories of English life, so pleasant to read in this great, bustling, busy, American world. The author is no commonplace writer, and attempts to picture every-day trials in an interesting manner, pointing out the short comings of both men and women. This she does in admirable spirit and manner. Marriage and love run through the book like a golden thread, and help to keep up the interest.

The Inland Monthly Magazine is the name of a popular and deserving St. Louis publication, published by CHARLOTTE SMITH, and edited by MARY NOLAN.

THE May number has portraits of Mayor BROWN of St. Louis, and a Mrs. DAY, one of the handsome women of that city. Most of the articles are original, and very readable. The magazine is worthy of a liberal support.

Robert of Woodleigh, and other Poems. By PHILIP STONER. New York: James Miller.

A POEM of Virginia life, pleasing to read, and giving promise of better things by the same author. "Is it wrong to kiss?" is one of the best minor poems in the book, and is quite pretty.

New Publications.

WILLARD'S PRACTICAL DAIRY HUSBANDRY: A Complete Treatise on Dairy Farms and Farming, Dairy Stock and Stock Feeding, Milk, its Management and Manufacture into Butter and Cheese, History and Mode of Organization of Butter and Cheese Factories, Dairy Utensils, Etc., Etc.

BY X. A. WILLARD, A. M.,

Dairy Husbandry Editor of Moore's Rural New-Yorker, Lecturer in Cornell University, Maine Agricultural College, Etc., Etc.

THIS is the most full, practical and reliable work on Dairy Husbandry extant; indeed the only one which describes the recent great improvements in the Dairy Business. It is highly commended by leading Agricultural and other influential journals, and must specially become (in fact is already) the *Standard and Only Authority.* It will pay every one engaged in any branch of dairy business, or who keeps a single cow, to obtain and study this work.

PRACTICAL DAIRY HUSBANDRY embraces **546 Large Octavo Pages,** is handsomely and fully Illustrated, printed on superior paper, and elegantly bound. It is a Subscription Book, and a liberal commission is given Agents who canvass Counties, &c. The Agents of the RURAL NEW-YORKER (especially those in Dairy regions) will do well to try the sale of this work. To any person residing where there is no Agent, or who cannot wait for one, the Publisher will send a copy of the work, post-paid, on receipt of the price, $3—(or for $5 the book and RURAL NEW-YORKER one year.) Address

D. D. T. MOORE, Publisher,
5 Beekman St., New York.

RANDALL'S PRACTICAL SHEPHERD: A Complete Treatise on the Breeding, Management and Diseases of Sheep.

THIS Work, by the Hon. HENRY S. RANDALL, LL. D., (author of "Sheep Husbandry in the South," "Fine Wool Sheep Husbandry," &c.,) is the Standard Authority on the Subject. It is the most complete and reliable Treatise on American Sheep Husbandry ever published, and (as the New England Farmer says) "should be in the hand and head of every person owning sheep."

The PRACTICAL SHEPHERD contains 452 pages, and is Illustrated, printed and bound in superior style. Twenty-seventh Edition now ready. Sent by mail, post-paid, on receipt of price—$2. Address

D. D. T. MOORE, Publisher,
5 Beekman St., New York.

THE PEOPLE'S PRACTICAL POULTRY BOOK: A Work on the Breeding, Rearing, Care and General Management of Poultry.

By WM. M. LEWIS.

THIS is one of the finest gotten-up works on the subject on which it treats, for its size and price, of any publication of the kind in this country. It is finely and profusely Illustrated, and printed and bound in extra style. Contains 324 large octavo pages. Sent, by mail, post-paid, for $1.50. Address

D. D. T. MOORE, Publisher,
5 Beekman St., New York.

MONEY IN THE GARDEN: A Vegetable Manual, Prepared with a view to Economy and Profit.

THIS Work upon Kitchen and Market Gardening, and the Field Culture of Root Crops, is by P. T. QUINN, Practical Horticulturist, (Author of "Pear Culture for Profit,") and should be owned and studied by every one interested in Gardening. It is an able, practical, profusely illustrated work of 368 12mo. pages. Sent, post-paid, for $1.50. Address

D. D. T. MOORE, Publisher,
5 Beekman St., New York.

ALLEN'S AMERICAN CATTLE: Their History, Breeding and Management.

EVERY breeder or owner of Cattle should have this work by Hon. LEWIS F. ALLEN, Ex-Prest. N. Y. State Ag. Society, Editor of "American Short-Horn Herd Book," &c., &c. It is a handsomely illustrated and well printed and bound volume of 523 duodecimo pages. Mailed, post-paid, to any address in United States or Canada, on receipt of reduced price, $2. Address

D. D. T. MOORE, 5 Beekman St., N. Y.

FASHIONS FOR SUMMER.

943.

DOLLY VARDEN Polonaise is the charming novelty of the season, and becomes the decided favorite of all who see it, when Dolly Varden goods—much in vogue—or any kind of wash material is used. By unbuttoning the lapels at the side and back, and by loosening the belt, it becomes a plain pelisse without plait or gather; by readjusting again it is transformed into an elegant, tight-fitting polonaise. As this change can be made in less than THREE MINUTES, and as it requires only six yards of yard-wide goods, it is easy to see why it is so highly honored. All sizes. Price of pattern, including a CLOTH MODEL, which shows exactly how to make and put it together, and how it will look when finished, $1.

SPECIAL OFFER.—To any person who will cut this advertisement out, and inclose it with $1 to us before the first day of June next, we will mail to them this pattern, with the cloth model, and will send them SMITH'S ILLUSTRATED PATTERN BAZAAR FOR ONE YEAR FREE! NOW is the time to subscribe for the BEST FASHION MAGAZINE IN THE WORLD, AND THE ONLY FASHION PUBLICATION that Imports styles and furnishes patterns of them. We give a CLOTH MODEL with every pattern. Our regular subscription price is ONE DOLLAR A YEAR. We give every subscriber patterns of their own selection FREE to the value of HALF A DOLLAR.

Single Copy mailed for 25 cents. If you wish for something RARE in Summer style, send stamp for "SMITH'S ILLUSTRATED SPECIAL." Address

Paints, Oils, Blacking, &c.

ARE YOU GOING TO PAINT?
MORE THAN
100,000 HOUSES
HAVE BEEN PAINTED WITH THE
AVERILL CHEMICAL PAINT
IT IS THE BEST

In the world for exterior work upon Cottages, Villas or Buildings of any kind, whether built of brick, wood or iron. It is a liquid, *ready for use,* and requires no oil thinning or drier. Purest white, and any desired shade can be had in packages from one gallon upwards.

EXTRACTS FROM OUR LETTERS;

CHAS. HALLETT, Esq., of Riverhead, L. I.:—"Years ago I had your paint applied by the side of the best white lead. The lead requires repainting, but the Averill Chemical is yet looking well."

Gen. DAVID H. STROTHERS:—"Your Paint fulfils your representations."

Rev. S. C. ALEXANDER:—"Our Institute has saved $150 by using your Paint. It is splendid."

PETER HENDERSON, Esq.:—"I find the Chemical Paint retains the colors and gloss far superior to that done by the lead and oil at the same time."

Gen. JAS. NEGLEY, M. C.:—"I find it the cheapest and best."

SETH THOMAS, Esq.:—"It gives better satisfaction than any paint I ever used."

Sample card of beautiful colors, and recommendations from owners of the finest residences in the country, furnished free by the

AVERILL CHEMICAL PAINT CO., 32 Burling Slip, New York, or 118 Superior St., Cleveland, Ohio.

P. S.—The superiority of these Paints has already brought numerous *worthless* imitations in the market. We caution the public against using them.

The Season for Painting
HAS COME AGAIN.

If you propose to paint, first send stamp for a book called "Plain Talk with Practical Painters, with Samples of Colors." The book is worth a dollar, and costs nothing. JOHN W. MASURY, 111 Fulton St., New York. ☞ Specialty in Pure Paints and Colors. Masury's Ready-Made Colors are the only ones which stand the test of time. Do not be deceived.

Real Estate, Etc.

FOR SALE.—A Beautiful Estate in Maryland, of 185 acres of land, situated about four miles from Baltimore, between two turnpikes, and two miles from a city passenger railway. Churches and schools convenient in every direction, and the country around rapidly improving. Eighty acres in woods—oak and chestnut; land in high cultivation, a large proportion in grass; for seven years past has been occupied and farmed by the owner; everything about the place in perfect order; has a beautiful cottage house, with nine rooms, supplied with gas, bath room, hot and cold water, and range in the kitchen; has a building adjoining, with wash room and summer kitchen, and sleeping rooms for men servants; has large overseer's house, 53 feet front; has numerous outbuildings of all kinds, adapted to every purpose of a farm and gentleman's country seat; buildings furnished with improved copper lightning rods; dairy unsurpassed in the State, with abundance of water of the best quality; ice house, with forty tons of ice obtained from the place; abundance of fruit of the choicest quality; dwelling stands 450 feet above tide water, and in full view of the Patapsco River. The improvements on the farm could not be made for less than $25,000. The place is offered for sale at $225 per acre, and only $12,000 cash required; the balance can remain for several years on bond and mortgage. Address

GEN. GEO. D. WISE, Baltimore, Md., or
GEO. GUEST, 48 St. Paul's St., Baltimore, Md.

Cheap Farms! Free Homes!
ON THE LINE OF THE
Union Pacific Railroad.

A land grant of **12,000,000** acres of the best Farming and Mineral Lands in America.

3,000,000 Acres in Nebraska, in the Great Platte Valley, the Garden of the West, now for sale.

These lands are in the central portion of the United States, on the 41st degree of North Latitude, the central line of the great Temperate Zone of the American Continent, and for grain growing and stock raising unsurpassed by any in the United States.

CHEAPER IN PRICE, more favorable terms given, and more convenient to market than can be found elsewhere.

FREE Homesteads for Actual Settlers

The best locations for Colonies.—Soldiers entitled to a Homestead of **160** Acres. Free passes to Purchasers of Land.

Send for the new descriptive pamphlet, with new maps, published in English, German, Swedish and Danish. Mailed free everywhere.

" 5th, 7th, and 13 pages.....	1.00	"
Outside or last page.....	1.50	"
Fifty per cent. extra for unusual display.		
Special Notices, leaded, (by count).....	2.00	"
Business "	2.50	"
Reading "	3.00	"

☞ No advertisement inserted for less than $3.

SATURDAY, JUNE 1, 1872.

OUT-OF-DOOR NOTES.

An Editor Getting Fresh Air.

It is a good thing to find a sensible physician once in a while. The writer thinks he has found one. His breathing apparatus got out of order, and he was directed to visit Dr. ——, whom he had never seen before. The physician didn't look wise nor attempt to talk profoundly. But he went straight to work. He thumped and listened, and listened and thumped; made me inhale, exhale, and hold my breath. He finally decided that I did not need any medicine, but did need and must have fresh air and plenty of it. Believing that a sensible prescription, I at once decided to take large doses of it, and shall continue to do so. Meantime I shall not be idle. If I can learn anything I shall; if I do learn aught that I think will interest or benefit the Rural readers, I shall let them know it.

The Cost of Living.

Down New York Bay is Staten Island—20 to 30 minutes' ride on a ferry-boat from the foot of Manhattan Island. It costs ten cents to go there. One gets plenty of fresh air *en route*. Once there, if one starts before lunch, he gets an appetite which suggests food. On this imperative suggestion I actually ordered a dinner, got a good one cheap—compared with New York prices. I saw "the Philosopher" written over the face of mine host.

"How can you give me so cheap a dinner?" I asked. "It costs you as much for fruit, vegetables, meats, etc., here, as in New York?"

"Ya; but mine frau and minesel' do our own vork—attends to our own plzziness."

That's the secret! The drones who live without work increase the cost of labor and provisions. It makes a difference with a man's profits whether he and his wife work or not! So long as laborers are scarce and labor is high, so long will it pay men and women to do their own work! And the more labor they perform the more certainly can they compete with those who hire their labor performed.

Propagating Plants in Tan Bark.

Artist Hochstein, upon whom I called, invited me to look at New York Bay from the Stevens place, and I went with him. Once through the gate we came upon the gardener, Mr. Adam H. Henning. Looking through his admirably kept plant-houses, he said—

"I've made a discovery, accidentally."

"What is that?"

"You see those Coleus there in that hemlock tan-bark. I got that fresh from Newark not long since. I have found that that inch and a half of tan-bark is so much better than sand to propagate Coleus in, that I am using it altogether. In eight days I get cuttings well rooted, ready to pot. See!" and he pulled up several that he said he planted eight days ago. They were well rooted. He has experimented but little with other plants, but says he can root Coleus by the million in spent hemlock tan-bark.

Moss on the Walls of a Conservatory.

We went into the Conservatory. In the center stood The Three Graces. My friend Hochstein upbraided me for confining my attention to the plants, and especially to one side of the conservatory, the wall of which was covered with moss, and plants of various kinds growing therein. The moss on the wall was about an inch and a-half thick, held in place by a course net-work of wire which was so covered by moss as scarcely to be visible. In this moss were growing *Begonias, Lycopodiums, Ferns* (the smaller ones), in variety, *Saxifragas, Mimulus moschatus*, the smaller species of *Caladiums*, etc., etc.—plants that require little nourishment. They are planted in the Fall and grow through the Winter, thriving in this wall of moss, being watered with a syringe as needed. I have seen no more beautiful sight in a conservatory. Indeed the walls of living rooms might be so ornamented, I judge—especially where uniform heat can be kept up.

Tough Way of Getting a Living.

In one of my pedestrian excursions I came upon a farmer leaning over the fence by the roadside. His team was "blowing," he said. I said, "That is a pleasant business—plowing."

"Tolerable," was the reply; "but it's a mighty tough way of getting a living, I tell you. The fact is, sir, farmers, according to my notion, are about the worst abused class of people I know of."

"I suppose so; but did it ever occur to you that each class of men who labor think the same thing of themselves? I never have found any man who did not think his lot in life about as tough as any that could be devised. And yet, if you and I stop to think and compare our own enjoyments with those of others, we shall be apt to find something to congratulate ourselves for. This business of plowing seems prosy and dull. But it only seems so to a prosy and dull man. It is ourselves, not our environment, who settle the question of content, pleasure, joy. Some people are susceptible—very—to external influences; but if the external influences give color to their lives, it is because their inner life is not as strong, sturdy, independent and free as it should be—so as to give color and character to their environment."

My new-found friend shook his head doubtingly, but did not venture a word. He turned to his plow again, apparently thinking, "Well, my dear fellow, if you had to follow this plow day after day, turning over this soil, and wrestling with these plow-handles, it would wrench such nonsense out of you!"

But I had done it, and knew whereof I was talking. There is no need that any man's employment should dwarf him. Even the soil we turn over, the plants we see, the buds, insects, worms, may yield us nutrition for mental growth, and enrich our lives. But it is this vicious habit of seeking to look beyond our horizon, and straining our eyes to catch a glimpse of what we cannot see, that closes our eyes to what is present—is about us that is more wonderful, worthy of study, and full of compensation. We are all of us too apt to wish ourselves somewhere else—seeing, hearing and doing something else, when we should be content to stay and study and work at home. If I could only make people see that it is themselves, and not their circumstances, that are at fault, there would a great flood of content flow over them and irrigate and enrich their lives.

Mulching.

The evergreens have died by thousands during the past Winter. In almost every suburban yard, in Central and the other Parks, are dead evergreens. And to-day I saw scores of newly planted deciduous trees that will never start a bud because of the drouth. It is my opinion that most of these evergreens might have been saved, and that a large per cent. of these newly planted deciduous trees would have lived had they been properly mulched. Such a Winter and Spring as have passed, involve the necessity for protecting the roots of plants and trees as certainly as a moist, cold Winter makes the clothing of their stems necessary. The dry, cold Winter and Spring exhaust the vitality of roots beyond redemption. The roots must be protected in such cases; and thorough mulching is the best and cheapest mode of affording needful protection.

RURAL NOTES AND QUERIES.

The Volume Transactions of American Pomological Society, at its session, at Richmond, in 1871, has been received. It includes a magnificent steel portrait of the President, Hon. Marshall P. Wilder, and the detail of the proceedings at Richmond, including annual addresses, reports of committees, list of members, discussions, reports of the State Fruit Committees—which are very full and valuable—and finally, the Society's revised and most complete Catalogue of Fruits. This Catalogue, made by the Fruit Committee, consisting of Messrs. Wilder, Barry, Downing, Flagg, Manning, Elliott, and Berckmans, exhibits a vast deal of laborious care, knowledge, and the conscientious digesting and arranging of facts furnished the Committee from all parts of the country. The newly adopted arrangement of fruit tables has involved a change in the size and shape of the volume from the old one. This will be regretted by many, but seems to have been unavoidable, and indicates the rapid progress of fruit culture in this country, and the just recognizance of the fact by the Committee. The volume is admirably printed, and valuable as a historical record of the growth of American Pomology, and as a reference and guide to American fruit growers in their selection of fruits.

The Unveiling of the Shakspeare Monument, in Central Park, Thursday, May 23, was a notable event—notable for the loveliness of the day, the vastness of the concourse of the best people of New York and vicinity, the completeness of the arrangements, the music furnished (by Thomas and the Arion Society), the speeches of gift and acceptance, the scene when the veil dropped from the bronze revealing the effigy of "The Bard of Avon," the oration by the venerable William Cullen Bryant, and for the ovation to Edwin Booth when he mounted the rostrum to recite a poem by R. H. Stoddard. It was a day long to be remembered for its enjoyment and associations.

Don't Bet on Election.—A friend wants our opinion as to the probable result of the Presidential Election, and whether it is "safe to bet on Horace Greeley." We can't say as to the result, and reckon no one can prophesy correctly. Though Neighbor Greeley is getting a good start, he hasn't a "sure thing" yet, by any means. As to betting on the result, *don't do it*—but if you *must*, wait until all the horses (candidates) are entered; and even then it will be doubtful, for, as the unsuccessful speculator in the Petroleum oil regions said, "You can't most always tell until *after* you bet." So, don't bet.

Maine Agricultural College.—A correspondent of the Maine Farmer asserts that "of the whole Board of Managers, one possibly may be a farmer, while there are two lawyers, a merchant, a lumberman, and a U. S. Official, men not identified with, or even practically interested in Agriculture, who have the supervision and management of that school at Orono, wherein farmers' sons are to be taught what *they* 'know about farming.' The tendency of the whole matter is, as ex-Governor Chamberlain predicted, that the College would drift out of Agriculture into Literature."

Catalogues, Etc., Received.—From Briggs & Hill, Russellville, Ky., Catalogue of the Greenlawn Herd of Short-Horn and Jersey Cattle, Swine, and Sheep. From Marshall P. Smith, Baltimore, Md., pamphlet, descriptive of the "Baltimore Process of Progressive Pneumatic Evaporation in the Drying of Fruit and Vegetables." From Richard Lauer, 52 Cedar street, N. Y. City, L. Van Waveren & Co's Catalogue of Dutch Bulbs, for which Mr. Lauer is solo agent.

THE SEASON, CROPS, PRICES, ETC.

Dallas, Texas, May 10.—We have a very fine season. Next week the farmers will begin harvesting wheat. All the crops are very promising, and all the country is very inviting.—J. R.

Taylorsville, Hanover Co. Va., May 16.—Weather cool and very dry; no rain of any account since April 1st; wheat looks as though none would be made—too short to be saved. Corn comes up badly; early corn died in the hill for want of rain. Tobacco plants backward; all kinds of farm produce high, and prospects very gloomy.—H.

Blue Ball, Lancaster Co., Pa., May 18.—The long dry spell of weather we are having is blasting all hopes of more than a quarter of a crop of wheat. Many fields are bare as cornfields. Grass is well set, but the drouth will keep it short, and we can't expect much of a crop. Fruit prospects are good. Corn is coming up nicely. Price of wheat, $2.15; corn, 65c., oats, 50c.; potatoes, 35c.; butter, 22c.; eggs, 16c., lard, 8c.; bacon, 6c.; day's wages, $1. Good fresh cows, $40@50. Well water getting scarce.—A. G.

Barrington, Yates Co., N. Y., May 12.—A cold, dry Winter and Spring, so far. Cisterns dry, and well about played out. Plum and cherry trees in full bloom. But little gardening done yet. Wheat fields look bare and discouraging. Many fields have been plowed up and sowed to Spring grain. Stock, mostly, looks bad. Sheep scarce and high. Sheep have been so low that few farmers thought it profitable to raise lambs, and those who did have lost from two-thirds to all their lambs this Spring. Wheat, $2@2.25, corn, 60c.; oats, 45c.; eggs, 12c.; butter, 20c.; wool, 75@80c.—Old Subscriber.

Middleville, Barry Co., Mich., May 20.—The season is very backward and dry. We are now having gentle rains; vegetation is growing finely; grass is looking well; winter wheat rather poor; peach crop will be almost a total failure. Apple, pear, cherry and plum trees are in full bloom; the smaller fruits bid fair for a bountiful crop. corn planting is nearly completed. The Colorado beetles have made their appearance as usual. White wheat, $1.75; corn, 50c.; oats, 40c.; clover seed, $5.50@6; potatoes, $1; eggs, 10c.; butter, 16c. per pound. Farm labor rather scarce at $20@25 per month.—J. F. E.

Johnstown, Fulton Co., N. Y., May 19.—This is the first Spring I ever knew without having rain. But one light shower since the snow went off; continual cold west winds; on the nights of May 15, 16, and 17 there were hard frosts, but today there is a change; a steady hard and warm rain from daylight until two o'clock; everything looks refreshed, and if more rain follows in time, we may see good crops. Grass is very small yet; oats are small, and, owing to so much cold weather, do not look very good. Planting about half done around here. Pear and plum trees in full blossom; apple blossoms not quite out yet. There have been heavy fires in the woods around here, doing considerable damage in some places; but I think the rain to-day will check them. It looks at present as if we might get more rain.—R.

Westport, Conn., May 21.—Weather, since my last report, has been dry, until last Sunday, when we had a fine rain, making everything look fresh and green. The grass in some places was just about dead. Potatoes and Corn not all planted yet. Pasture very short, and will be so unless we get heavy rains, and if we do, it cannot be much on a great deal of the pasture lands, as the grass roots are not there. Apple trees have about all been loaded with blossoms, and bid fair for a heavy crop. Strawberries are coming on very slow; crop will not be large. Currants looking well. Cherries and peaches set well. Grapes looking well. Early cabbage not looking very well; full of lice, worms, etc. Plenty of wire worms in yard. Corn, 90c.; Oats, 68c.; butter 30@40c.; eggs, 18c.—A. S. N.

Caledonia, Livingston Co., N. Y., May 13.—Having occasion last week to pass through this town, and Wheatland, Chili and Gates in Monroe Co.—all noted for wheat—I observed the condition of the different fields and found many in which more or less of the wheat was killed by water freezing upon them. Early sown barley is up and looks well, but all crops want rain, and Spring crops will soon fall away if it is delayed. The showers this Spring have been light, and their good effect has in a measure been destroyed by being followed with frosty nights and cold winds. The cherry, plum and apple are opening in abundance of blossoms. The buds on several of my grape vines are mostly killed; the sap is circulating freely through the canes. They are large and old vines; other and younger vines are doing well.—D. L.

Toledo, Ohio, May 11.—Spring opened late, but is now about as forward as usual. Been very dry for a year and a half. Ground in the finest condition for Spring crops. Oats looking fine; corn and potatoes being planted; wheat, very poor show; apples, pears, and cherries, blossoming very full; peaches all killed. The thermometer indicated 21° below zero Dec. 21st, at nine o'clock A.M., and from 6° to 15° below the first week in February. The wood being so thoroughly ripened, and the air so dry, we thought some peach buds would live, but out of 3,000 trees have not seen a blossom. The farmers have been buying great quantities of the oats and corn that were burned in the elevators (April 13th), to feed cattle and hogs, at from one cent to ten cents per bushel, according to quality. It proves a very *good* and cheap feed. Much of it is only a little scorched.—Francis Granger.

RURAL BREVITIES.

Two steam plows are entered for a trial at the Fair of the Adams Co., Ill. Ag. Soc.

Alfalfa or Lucerne seed can probably be obtained at any first class seed store.

A. D. Moore is informed that we do not know of any work upon teazle culture.

A ton and a-half of sorghum seed was recently shipped from St. Louis, Mo., to Milan, Italy.

Prof. Manly Miles has been selected as umpire to locate the Agricultural College of Ontario.

C. V., Elmira, N. Y., asks for a cheap and good walnut stain, to be applied to the wood work in a dining-room. Can any of our readers give a recipe for one?

Gleason F. Lewis, Cleveland, O., is reported to have purchased the Agricultural College scrip of Virginia—300,000 acres—for which he paid $285,000, or 95c. per acre. He also paid 90c. per acre for the Alabama scrip.

The girls in the Iowa Agricultural College are not only keeping up with the boys in the classes, but doing all the housework under the superintendence of the matron. Good! We need practical women as well as men.

There is only one lady student in the Michigan Agricultural College, because there are not accommodations for more. But there should be, and Michigan farmers should insist that their daughters be educated practically, as well as their sons.

PUBLISHER'S SPECIAL NOTICES.

The Rural New-Yorker is electrotyped, and hence Back Numbers can always be supplied. Copies for sale by all News Dealers; price Six Cents.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or more. A host of people are subscribing for papers about these days, and we hope our Agent-Friends will give everybody an opportunity to subscribe for the best.

Show Bills, Specimen Numbers, Etc., of the Rural New-Yorker sent free.

BUSINESS NOTICES.

Sooner or Later, a neglected Cold will develop a constant Cough, Shortness of Breath, Failing Strength, and Wasting of Flesh, all symptomatic of some serious Lung Affection, which may be avoided or palliated by using in time Dr. Jayne's Expectorant.

MINTWOOD'S CONVERSAZIONE.

Hats—Summer Styles.

We illustrate herewith a number of different styles of hats, simple enough in construction to be made at home. Fig. I. is a hat of gray straw, trimmed with a scarf of green silk and green and gray feathers, to match a costume of gray, with green silk piping. Fig. II. is much worn by little girls and misses. This is of brown and white straw, trimmed with brown ribbon and white roses. Fig. III. is a riding hat, with a long scarf of gauze—blue, violet, mauve, gray, green, or black. Fig. IV. is a girl's travelling hat, of straw, trimmed with silk or ribbon of the color of the dress. Figs. V. and VI., little girls' hats, of white straw, trimmed with blue and white striped ribbon and black velvet.

HATS—SUMMER STYLES.

DOMESTIC LIFE IN SCOTLAND.

A correspondent of the "Scottish American Journal," writing of a visit to Scotland, says:

Taking a general survey of the Old Land, socially, morally, and politically, the one word which would seem most logically to cover the whole ground is, solidity. Everything is solid, from a sole of a shoe to the leg of a "cutty-stool." Things are made to last, and there is a reality and intensity about the whole country and its surroundings which strikes an American as remarkable and unfamiliar. Sit down, for example, at a Scotch dinner table. The plates are huge; the muckle spunes would frighten the dainty mouth of a New York belle; the very table at which you sit and the chair you sit upon, are solid as a rock. Mark the broth; why, its very look is "stodgy."

The houses are substantial, and furnished more with an eye to comfort than to show. You find dining-rooms with crimson curtains, thick carpets, cosy sofas and the walls adorned with pictures—I speak now of houses of the middle classes—a large, perhaps elegant sideboard, suggestive of good wines and comfortable fare stands at one end of the apartment, while a hospitable looking fire burns brightly in the open grate. You do not dine in a cellar with four bare walls and a cheerless table. The Scotch people, in point of fact, do not cram all their glories into one gilded saloon; they disseminate them through the house, and they are to be found in the bedrooms, bathrooms, and plumbing arrangements, down to the minutest particular.

With regard to social happiness, it appears to me that the Scotch people are happier in their own country than they are abroad, for the reason that business and pleasure are more equally divided, and politics do not permeate so completely the social system. Social pleasures there, are more in doors than out. One old friend takes dinner with another old friend; they speak of things, of people, and of books; they crack jokes and tell stories. Dinner parties are much in fashion in the larger cities, but in the heart of the country the old-fashioned tea-party still is held. There is comfort in these Scotch tea-parties, after all. The cosy room, the closed curtains, the open fire, the hissing urn, the pleasant interchange of thought, the music in the drawing room, the little supper afterwards, the tumbler of toddy, the jokes of the old folks, the flirtations of the young ones—in short, hospitality with comfort. I do not call it comfort to go to a man's house and sit in a cold-rife parlor like a sentimental owl or a stucco image, and exhaust one's conversational protoplasm on ice water and hot air.

QUEEN VICTORIA IN CHILDHOOD.

Harriet Martineau says that in childhood the Princess, afterwards Queen Victoria, was usually met, even on cold and windy days, dressed and in exercise in good pedestrian style, crossing heath, perhaps, with her young companions, in thick shoes and stout duffle cloak—and that she was reared in as much honesty and care about money matters as any citizen's child. It became known at Tunbridge Wells that the princess had been unable to buy a box at a bazar, because she had spent her money. At this bazar she bought presents for almost all her relations, and had laid out her last shilling when she remembered one cousin more, and saw a box, price half a crown, which would suit him. The shopkeeper of course placed the box with the other purchases, but the little lady's governess admonished them by saying:—"No; you see the princess has not got the money, and therefore, of course, she cannot buy the box." This being perceived, the next offer was to lay by the box till it could be purchased; and the answer was:—"Oh well, if you will be so good as to do that—" and the thing was done. On quarter-day, before 7 in the morning the princess appeared on her donkey to claim her purchase.

TALK AND INSPIRATION.

Good talk is not a matter of will at all; it depends—you know we are all half materialists now-a-days—on a certain amount of active congestion of the brain, and that comes when it is ready, and not before. I saw a man get up the other day in a pleasant company, and talk away for about five minutes, evidently by a pure effort of will. His person was good, his voice was pleasant, but anybody could see that it was all mechanical labor; he was spurring for wind, as the Hon. John Morrissey, M. C., would express himself. Presently—do you—beloved, I am afraid you are not old enough—but do you remember the days of the tinder-box, the flint and the steel? Click! Click! Click! Ah-h-h! knuckles that time! Click! click! click! a spark has taken, and is eating into the black tinder as a six-year-old eats into a sheet of gingerbread. Presently, after hammering away for five minutes with mere words, the spark of a happy expression took somewhere among the mental combustibles, and then for ten minutes we had a pretty wandering, scintillating play of eloquent thought that enlivened, if it did not kindle, all around it.

If you want the real philosophy of it, I will give it to you. The chance thought or expression struck the nervous center of consciousness as the rowel of a spur stings the flank of a racer. Away through all the telegraphic radiations of the nervous cords flashed the intelligence that the brain is kindled, and must be fed with something or other, or it would burn itself to ashes. And all the great hydraulic engines poured in their scarlet blood, and the fire kindled and the flames rose; for the blood is a stream that, like burning rock-oil, at once kindles, and is itself the fuel. You can't order these organic processes, any more than a milliner can make a rose. She can make something that looks like a rose, more or less, but it takes all the forces of the universe to finish and sweeten that blossom in your buttonhole, and you may be sure that when the orator's brain is in a flame, when the poet's heart is in a tumult, it is something mightier than he and his will that is dealing with him.—*O. W. Holmes.*

Newspapers.—Dr. Johnson when in the fulness of years and knowledge, said:—"I never take up a newspaper without finding something I would have deemed it a loss not to have seen; never without deriving from it instruction and amusement." The newspapers in Johnson's time were meager enough compared with those of to-day. Now a yearly newspaper volume is a perfect encyclopedia.

LITTLE GIRLS' HATS.

TWO NAMES.

By Jean Floyd.

There were two who stood on the lone sea-shore,
As the tide began to flow;
One traced his name on the rock above,
And one on the sand below.

One idly glanced at the rising wave,
And the sunset skies aflame,
And one spake low—"I will have a place
On the shining rolls of Fame!"

Faster and faster the tide came in,
Like a living thing unchained,
And the name on the sand was washed away,
But the name on the rock remained.

Years passed away; and a gray-haired man
Came back to the lone sea-shore.
His place was bright on the rolls of Fame,
But the strength of youth was o'er.

And when, to the well-remembered place,
At last, the wanderer came,
Though marked with the wear of sea and storm,
The rock still held his name.

"The name on the sand is gone," he said,
"And the name on the rock is dim.
What matter my laurels, when at last
I sleep in the dust with him?"

Our Story-Teller.

GRIPPER'S MISTAKE.

A PRACTICAL STORY.

One of the first settlers in the Wild River region was Daniel Somerby. He was a quiet, well-meaning man, content to live upon the results of honest toil, and anxious to render unto every man his due. He bought his land when it was cheap, in fact, when the price had been merely nominal; and what with hunting and fishing and cultivating such land as he was inclined to clear, he managed to live very comfortably. Another of the early settlers was Jasper Gripper. But Gripper was a different sort of a man from Somerby. He was close and tricky, and could bear down very hard upon his neighbors in pursuing his own interests. He boasted to his friend that no man should ever overreach him.

Time passed on, and it became known to the lumbermen of the Massaquoit that the best pine in the country came from the Wild River region. One day early in Spring a gentleman came from the distant city and looked up and down the river on Jasper Gripper's land; and on the following day he was joined by two other gentlemen. Gripper had often thought what a splendid place that would be for a dam and mill. With a firm dam the power would be enormous. There was only one trouble; the extreme freshets to which the river was subject in Spring and Autumn would render it difficult to fix the dam. But then there were engineers who could overcome all such difficulties.

Finally the gentleman who had first visited the fall introduced himself to Mr. Gripper as Mr. James Bates, and frankly stated that he had been commissioned to examine the fall, and, if he thought proper, to purchase. Jasper Gripper was keenly and sharply alive. His eye teeth were cut. He knew that for several years the attention of the lumbermen had been directed to the Wild River pines, and that lately people had discovered that the land was of the very best quality. And, moreover, he knew that the fall on his land was the only site on the river, anywhere in that region, where the dam could be safely erected. There was another fall, six miles below, but it was of a wild, roaring, turbulent character, locked in the jaws of towering granite, where no mills could possibly be built.

"Of course," said Mr. Bates, "we cannot think of paying much for the water privilege, and but very little for the land which would be required for our buildings. The expense of erecting a suitable dam will be very great, and at best we run great risk. You will be the gainer in every way. Not only will it open a ready market for your lumber, but the value of all your surrounding land will be enhanced."

Mr. Gripper winked, and then nodded. He had his own interests to look after. If he did not look after them he was sure nobody else would. After a deal of thinking, he said he would sell the water privilege, together with ten acres of land adjacent, for two thousand dollars.

The agent was astonished. He considered the price ridiculous.

"Why," said he, "you did not pay so much for your whole territory."

It made no odds what he (Gripper) had paid. His price had been named, and the company could take it, or let it be.

Mr. Bates was not authorized to accept

such terms. He must confer with his principals. And he went away.

In a few days he came again, this time in company with three others. They went up and examined the water privilege, and then came back to Mr. Gripper's house, where they informed that individual that if he would throw in ten more acres of land they would accept his offer.

Gripper thought he had them. He had thoroughly digested the matter and had come to the conclusion that the water power would be of inestimable value to a company able to improve it, and that they were bound to have it.

"Gentlemen," said he, "my offer of two thousand dollars was made for your acceptance several days ago. I did not leave it open to your pleasure. I have since been examining the property more thoroughly, and have concluded not to sell for less than three thousand."

"Why, bless your soul, man," cried one of the company, "do you realise how our mills, erected on that site, would benefit you. The value of all the rest of your property would be doubled—aye, quadrupled—the moment our wheels are set in motion. We had supposed you would freely give the water-power to a responsible company who would improve it."

Mr. Gripper laughed scornfully. He knew his own interests better than that; they could take up his offer, or leave it, as they pleased.

After much discussion, Mr. Bates spoke thus:

"Mr. Gripper, we would like your final offer to remain open to our acceptance three days, at the end of which time you shall have our answer. Will you accommodate us?"

"When I said three thousand dollars," replied Mr. Gripper, "I meant to include only ten acres of land. If you want ten acres more, I must call it thirty-five hundred."

And with this monstrous proposition, which was to be open three days, the parties separated.

One of the gentlemen of Mr. Bates' party was Bento McIntosh, the most accomplished civil engineer of the day.

"You spoke of another fall below here," he said, after they had left Gripper's residence.

"Yes," answered Bates, "But you will find it utterly impracticable."

Still McIntosh desired to look at it, and thither the party bent their steps.

The fall was found to be a tumbling, dashing flood, pouring down a declivity of at least seventy feet in a distance of twenty rods, leaping and surging over the jagged shelves of rocks into a boiling chasm below, while on both hands arose perpendicular walls of solid granite, showing that at some period far remote the mountain torrent had literally cut its way through the adamantine ledge.

McIntosh examined the land below the falls, and at a point not far distant in that direction he found a shallow swell, or gully, overgrown with grass and shrubbery, but with a deposit of river sand upon its bottom. The appearance of the place attracted his attention.

"Probably," said Mr. Bates, "it is where the melted snow and heavy rain find their course from the hills."

"I think not," said McIntosh. "This sand is from the river—not from the hills—and you will observe that it could not have backed up by any rise from the water below. Let us follow it."

So they struck into the water path, and followed it up around the ledge, by an easy and gradual ascent, until it led them upon the river's bank nearly a quarter of a mile from the fall.

"Eureka!" cried McIntosh, clapping his hands, exultantly. "Here we have a water course, marked out and graded by Nature herself, which will yield a power immeasurably superior to the one above. And, moreover, all danger from flood is debarred."

The others quickly comprehended the value of the discovery. They saw that by cutting a canal along the old water course over which the river had poured a stream at its highest flood, they would be able to control the water at will, and use it over and over again for mills, set one below the other along the gracefully curved track. And two things more—the sites were more favorable for building than were those above, with better timber land surrounding, and the furious cataract would not be between their mills and the market.

The next question was, Who owned the newly discovered privilege? It belonged to David Somerby. They visited him and carefully opened their business.

"Look here, gentlemen," he said, after they had beaten the bush awhile—their experience with Gripper had made them cautious—"let us understand each other. Tell me plainly what you want, and I will tell you as plainly what I will do on my part."

Mr. Bates made up his mind that he had an honest man—a straightforward man—to deal with, and he stated his case plainly and frankly. He not only told how the company would develop the water power and erect their mills, but he went on to point out the advantages which would result to the owner of the adjoining land, both in enhancing the value of the land in itself and also of the magnificent pine and spruce timber with which it was covered.

Mr. Sombery listened attentively, and at length told them to call upon him on the following morning. He wanted to sleep upon it.

That evening Jasper Gripper called down to see his friend Somerby. He wanted to purchase five hundred acres, more or less, of the pine interval spruce upland adjoining his land. Gripper fought shy, and hung on, and Somerby only got rid of him by assuring him that he was not at present at liberty to sell.

"Aha!" chuckled Gripper. "Them 'ere mill folks have been here. They want the land. Well, well, let 'em buy it; I shall own the land between it and their mills, and they'll find it hard work to get their logs up without my consent."

And Gripper returned to his home, firmly persuaded that the company had resolved to purchase his water privilege. Oh! why had he not asked them five thousand dollars for it?

On the following morning Mr. Bates and his friends were punctual, and when Mr. Somerby had been asked what conclusion he had arrived at, he spoke as follows:

"Gentlemen, I have thought the matter all over, and have made up my mind. I have two propositions to make, and you can accept which you choose. All told, I own about fifteen hundred acres of land in this section, and the river cuts it nearly in halves. Full half of it is rich interval covered with pine, and the rest is upland and hill, with spruce, hemlock, and oak. First, I will give you the land for your course, and deed you the power, and also give you all the land necessary for your mill buildings, provided that you, on your part, will set at once about developing and improving the power and putting up the mills. Or, I will turn all my land into the stock of the company, at a fair appraisal, and become one of you."

Mr. Bates was authorized to accept the first on the spot, and to give bond, if necessary, for the performance of the company's part of the contract. But he liked the second offer best, though before accepting it, he must confer at headquarters.

Mr. Somerby informed him that the offer was open to him as long as he desired.

On their way back, Mr. Bates and his companions called on Jasper Gripper.

"Gentlemen," said Mr. Gripper, as soon as mutual salutations had been exchanged, "you will understand that when I offered the twenty acres of land, I did not intend, for the price named, to include the timber standing thereon."

"It makes no difference," returned Mr. Bates, with a smile, "we have concluded not to purchase your water privilege."

"How? Not purchase?" gasped Gripper.

"No. We do not want it." Mr. Bates didn't think it necessary to tell him of better power which they had discovered.

"But, gentleman, there must be some mistake."

They assured him there was no mistake at all. Mr. Gripper was in agony. He would take $2,000; he would take $1,500; he would take whatever they were willing to pay. He would give them the water and the land if they would only put up their mills thereon.

But they would not do it. In seeking to overreach them he had overreached himself. And they left him a prey to remorse and bitterness of spirit.

The company before whom McIntosh laid their report appointed a commission, with full power to decide and negotiate; and upon visiting David Somerby's section they concluded to accept his second proposition. So he surrended his land into the stock of the company, and became one of them; and we may here remark that six months later he was not a little surprised upon being appointed superintendent of the lumbering gangs, with a salary such as his wildest dreams of wealth had never grasped.

The water power was developed under the engineering of Bento McIntosh, and it proved greater than he had anticipated. The mills were erected—first mills for sawing lumber, and then mills for grinding grain, and in time other mills for making cloth and for fabricating various other articles necessary to the comfort of man.

The land of Jasper Gripper was, of course, raised in value; but it availed him not. The sight of David Somerby, wealthy and respected and honored with offices of profit and trust, while he was shunned and shut out from the public confidence, filled him with wrathful suffering. Verily, he had overreached himself in his narrowness and selfishness of spirit.

To-day a flourishing town is in sight of David Somerby's section, and the hum of thousands of busy spindles makes cheerful music for the happy and prosperous operatives; and from its tireless looms and clanging forges flows out the wealth of the nation.

AN OREGON ROMANCE.

HOW A YOUNG IRISH WOMAN WON A GOOD HUSBAND.

THERE were married in the city last evening a couple whose love-making and marriage furnish us a theme upon which to write a romance; but as we are not novel writing at present, we shall narrate the story as it comes to us plainly and concisely, leaving to some other one the task of writing the history for publication in book form.

During the Spring of last year there appeared upon the railroad a fair haired, smooth faced, muscular fellow, with a rich Irish brogue, who applied for work, expressing himself as willing to do anything. He had "an ould father and mother in the ould country that he wanted to help to America, and was willing to work hard for good wages." He was given a pick and shovel, and told to pitch in, which he did with a will. Although he was a little awkward at first, he soon mastered the science of handling the shovel, and came to be regarded as one of the best men on the work. He had a pleasant voice, told a good story, and made many friends among the workmen, who regarded him with special favor. After a while Mr. Hallett, the contractor, had his attention called to the new hand, and, finding him quick at learning, gave him command of a gang of men, and found that his confidence was not misplaced.

In the same camp was another foreman who was as lithe and active a young fellow as can be found in any part of the country. Between the two a warm friendship sprang up, and when not at work they were always together. The other men became somewhat jealous of Mike for occupying so much of Jimmy's time and drawing him away from their company, but of course could not say anything.

The summer passed away and the winter months, with their rain, came, and when work got slack and men began to drop off and come into the city, Mike proposed to Jimmy to go to Portland, take a room and live until Spring. The proposition, however, was rejected by Jimmy, who declared that he did not want to come to the city So the two remained at Eugene for several weeks, waiting for the recommencement of the work.

Somehow or other, during the winter, Mike made a discovery—and that was that Jimmy was not what he had represented himself to be. That instead of being a man he was a woman. An explanation was made and Mike's feelings soon underwent a change, and he found that Cupid had pierced his heart. He proposed to Jimmy to come to the city, where she would receive her proper habiliments, and then they would form a copartnership for life and in proper time return to work on the road as sub-contractors. The proposition was agreed to and last night saw Mike and Jimmy made man and wife. They have purchased a tent and gone down to Cowlitz River, for the purpose of assisting in the building of the North Pacific Railroad from Humphrey's to Olympia. During the coming summer "Jimmy" will preside over the culinary department unless Mike should get sick, when, she declares, she will go out and "boss" the men.

DEEP VOLCANIC CRATER.—Far back into the history of the globe, the volcano of Pichincha, the only one in Equador, formed for itself a chimney, funnel shaped, which is the deepest vent hole of the kind yet discovered on this earth. Its perpendicular depth is 2,500 feet, with a diameter at the bottom of 1,500 feet, expanding gradually all the way to the top, where the diameter is three-quarters of a mile.

SPEAK kindly at all times, it encourages the downcast, cheers the sorrowing, and very likely awakens the erring to earnest resolves to do better, with strength to keep them.

Sabbath Reading.

TRUST.

BY LORETTA E. KNAPP.

DEAR SAVIOUR, guide me in the right—
I cannot see,
But for the radiant lamp of light
You set for me.

There's many a flickering transient light
To lure me on.
Then leave me in the darkest night,
Lost and alone.

When storms with dark portentious mien
Gather on high,
I on Thy loving arm will lean;
For Thou art nigh.

What if the lightning's vivid flash
Terrors reveal;
And deafening thunders near me crash,
Peal after peal?

Above the storm Thy voice I hear,
Cheering me on;
Thy Lamp is showing, bright and clear,
The pathway home.

DIFFERENT CONCEPTIONS OF GOD.

A great many persons call the conception which they have, "Father." I have no objection to that. But, though they do not believe in Christ, if they should tell me what it was they called "Father," I should find that every bit of it was what they got from Christ under a new name. Men who disagree in regard to the name of the being whom they worship are looking at the same Saviour, with the same qualities and under the same circumstances. And though there may be jealousy among worshipers of different faiths, there is no jealousy in heaven between Father, Son and the Holy Ghost. Whoever approaches any conception or view of God with childlike faith, with yearning love, with a real desire to know the truth and to follow it, will be accepted. God will not stand upon the etiquette of a grace which requires that everything shall be done according to a prescribed method and in a certain way. He has a fatherly heart; and no father ever rebukes a child because it says "mother" instead of "father" when it rushes into the house after long absence from home. Mother is father, and father is mother, so that the child's love to either is love to the other in ordinary circumstances. And if it is so with us on earth, how much more is it so with God in the heavenly land!—*Beecher.*

LOOK UPWARD.

A YOUNG man once picked up a gold coin that was lying in the road. Always afterward, as he walked along, he kept his eyes on the ground, hoping to find another. And in the course of a long life he did pick up, at different times, a goodly number of coins, both gold and silver. But all these years that he was looking for them he saw not that the heavens were bright above him. He never let his eyes turn away from the filth and mud in which he sought his treasure; and when he died—a rich old man—he only knew this fair earth as a dirty road in which to pick up money.

THERE may be a knowledge without love. Did you never know any so cunning in the story of the Gospel that they could tell you the manner of Christ's life and death, from point to point, and yet have no more love of Christ in them than there is fire in a fish pond? The seat of knowledge is the head; of love, the heart. The sun may shine clear in a frosty day, yet for all his light, it may be bitter cold, and the face of the deep frozen. Our eyes may see when our bones shake. The beam of knowledge may fill our heads, and yet winter lie cold at our hearts.

A SCOTCH minister, of a most gentle nature and very reluctant to reprove, was traveling in the stage-coach between Stirling and Glasgow. A blustering fellow-passenger had, in the form of oaths, often mentioned the devil's name. By-and-by he began to take the name of the Deity in vain. "Stop, sir," said the minister, "else one or other of us must go out. So long as you used the name of your own master I was silent; but I shall not hear you speak irreverently of mine."

BE thankful for such mercies as you have, and if God sees it will be for your good and His glory, He will give you many more. At least, do not make yourself and others unhappy by your ingratitude and complaint.

WE cannot conquer fate and necessity; yet we can yield to them in such a manner as to be greater than if we could.

Ladies' Port-Folio.

LOVE LIGHTENS LABOR.

[If men only appreciated the helpfulness of loving words, they would certainly coin more for daily use. They are the best tonic in the world for tired hands as well as tired hearts, although we have full faith in the efficacy of helping hands. The following verses from "Poems of Home Life," tell a profitable story:]

A good wife rose from her bed one morn,
And thought with a nervous dread
Of the piles of clothes to be washed, and more
Than a dozen mouths to be fed;
Of the meals to get for the men in the field,
And the children to send away
To school, and the milk to be skimmed and churned;
And all to be done that day.

It had rained in the night, and all the wood
Was wet as it could be;
There were puddings and pies to bake, besides
A loaf of cake for tea.
And the day was hot, and her aching head
Throbbed wearily as she said,
"If maidens know what good wives know,
They would be in no haste to wed!"

"Jennie, what do you think I told Ben Brown?"
Called the farmer from the well;
And a flush crept up to his bronzed brow,
And his eyes half bashfully fell;
"It was this," he said, and coming near,
He smiled, and, stooping down,
Kissed her cheek—"'twas this, that you were the best,
And the dearest wife in town!"

The farmer went back to the field, and the wife,
In a smiling and absent way,
Sang snatches of tender little songs
She'd not sung for many a day.
And the pain in her head was gone, and the clothes
Were as white as the foam of the sea;
Her bread was light, and her butter was sweet,
And golden as it could be.

"Just think," the children all called in a breath,
"Tom Wood has run off to sea;
He wouldn't, I know, if he only had
As happy a home as we."
The night came down, and the good wife smiled
To herself, as she softly said:
"'Tis so sweet to labor for those we love,
It's not strange that maids will wed!"

ON WIVES OBEYING THEIR HUSBANDS.

Dear Rural:—That little sketch of mine in your issue of April 20, entitled "Fashion and Folly," but alluding to wives obeying their husbands, was not written for *criticism*. I merely dashed it off for a purpose of my own, having in mind some married women of my acquaintance who were in the habit of *domineering over their husbands*—men who were far their superiors in mental acquirements. A hen-pecked man is, to my mind, a *pitiful sight*, and a great many women *do* hen-peck their husbands, as everybody knows. Some men bear it patiently, for *reasons of their own*, and others are too noble-minded to retaliate. When I hear a woman ridicule the idea of obeying her husband, I always suspect her of being the kind that makes him "stand around," Xantippe-like. An amiable woman, who loves her husband, delights in obeying him in all things just and reasonable, if he be a sensible and not an exacting man. I do not think I would, myself, be willing to obey a too-exacting or a tyrannical man. I should certainly rebel if he went too far. It depends a good deal on the *kind of man* you get, my fair friends—remember that!—that is, provided you get one at all.

In the olden time a good wife was considered one who reverenced and obeyed her husband. St. Paul exhorts women "to submit themselves to their husbands—for," he says, "the husband is the head of the wife." And also, "as the church is subject unto Christ, so let the wives be to their own husbands, in everything." Husbands are exhorted to love and cherish their wives—but women to reverence their husbands. It is to be regretted that many women now-a-days neither believe in the Good Old Book nor regard its teachings. There are getting to be so many "woman's rights women" in this progressive age that, if they are allowed to go on as they have been going on, and as they will go on, if not stopped in setting a bad example, I am afraid there will be but few modest and amiable women left whom men may love and cherish. C. H. C.

Sycamore Villa, May 18, 1872.

EARLY DUTCH DAYS IN NEW YORK.

"Dinner parties" in these primitive days were unknown; but this seeming lack of social intercourse was more than made up by the well-known and numerous tea parties. To "take tea" out, was a Dutch institution, and one of great importance. The matrons arrayed in their best petticoats and linsey-jackets, "homespun" by their own wheels, would proceed on the intended afternoon visit. They wore capacious pockets, with scissors, pincushion and keys hanging from their girdle, outside of their dress; and, reaching the neighbor's house, the visitors industriously used knitting needles at the same time. The village gossip was talked over, neighbors' affairs settled and the stockings finished by tea time, when the important meal appeared on the table precisely at six o'clock. This was always the occasion for the display of the family plate, with the Lilliputian cups, of rare old family china, out of which the guests sipped the fragrant herb. A large lump of loaf sugar invariably accompanied each cup on a little plate, and the delightful beverage was sweetened by an occasional nibble, amid the more solid articles of waffles and Dutch doughnuts.

A model housekeeper rose at cockcrowing, breakfasted with the dawn, and proceeded to the duties of the day; and when the sun reached the meridian or "noon mark," dinner, which was strictly a family meal, was on the table. This domestic timepiece answered every purpose, so regular were the hours and lives of the people. At one time there were not more than half a dozen clocks in New Amsterdam, with about the same number of watches. But they were strikingly peculiar in one respect; they were scarcely ever known to go, and hence were of very little practical utility. No watchmaker had found it profitable to visit the settlement; and this was a period of two centuries before the invention of Yankee clocks. For a long while, time was marked by hour-glasses and sun-dials.

The Dutch ladies wore no bonnets, as is still the fashion with some of the German emigrants who now arrive at Castle Garden. At New Amsterdam the fashionable dress was a colored petticoat (rather short, for ease in walking,) waist jacket, colored hose of homespun wool, and high heeled shoes, suitable to a city destitute of pavements or sidewalks of any kind. The Dutch burghers wore long-waisted coats, with skirts reaching almost to their ankles, and adorned with large silver buttons. The wardrobe of a prominent burgomaster at the transfer of New Amsterdam to the British was as follows:—A cloth coat, with silver buttons, worth fifteen dollars; a stuff coat, ten dollars; cloth breeches, ten shillings; a cloth coat, gimp buttons, seven dollars and fifty cents; a black cloth coat, seven dollars; a black velvet coat, fifteen dollars; a silk coat, breeches and doublet, six dollars; silver cloth breeches and doublet, five dollars; a buff coat and silk sleeves, five dollars; three grass green cloaks, six dollars each; besides several old suits. To those also must be added, linen, hose, shoes with silver buckles, a cane with an ivory head and a hat. It may be doubted if our present mayors, with all their cloths and cassimeres, possess even one tithe of such an assortment of coats, pantaloons and vests as this official Dutchman, their predecessor, in "ye olden time."

BEAUTY OF OLD PEOPLE.

Men and woman make their own beauty or their own ugliness. Lord Lytton speaks in one of his novels, of a man "who was uglier than he had any business to be;" and if he could but read it, every human being carries his life in his face, and is good-looking or the reverse as that life has been good or evil. On our features the fine chisel of thought and emotion are eternally at work. Beauty is not the monopoly of blooming young men and of white and pink maidens. Theirs is a slow-growing beauty which only comes to perfection in old age. Grace belongs to no period of life, and goodness improves the longer it exists. I have seen sweeter smiles from a lip of seventy than upon a lip of seventeen.

There is the beauty of youth and the beauty of holiness—a beauty much more seldom met, and more frequently found in the arm-chair by the fire with grandchildren around its knee, than in the ball-room or promenade. Husband and wife, who have fought the world side by side, who have made common stock of joy or sorrow, and aged together, are not unfrequently found curiously alike in personal appearance, and in pitch and tone of voice—just as twin pebbles on the beach, exposed to the same tidal influences, are each other's second self. He has gained a feminine something, which brings his manhood into full relief. She has gained a masculine something, which acts as a foil to her womanhood.

A Good Wife.—The following sentences from Archbishop Secker's "Wedding Ring" are worth reading twice:

Hast thou a soft heart?—it is of God's breaking.
Hast thou a sweet wife?—she is of God's making.

Speak kindly at night, for it may be that before the dawn some loved one may finish his or her space of life for this world, and it will be too late to ask forgiveness.

Reading for the Young.

GRAMMAR IN RHYME.

We advise every little grammarian just entering on the study, to commit to memory the following lines. The author, whoever he is, deserves much credit. With one exception—"Thirty days hath September"—it is the most poetical effusion in its line we ever met with:

1. Three little words you often see,
   Are Articles—*a*, *an* and *the*.
2. A Noun's the name of any thing,
   As *school* or *garden*, *hoop* or *swing*.
3. Adjectives tell the kind of Noun,
   As *great*, *small*, *pretty*, *white* or *brown*.
4. Instead of Nouns the Pronouns stand—
   Her head, *his* face, *your* arm, *my* hand.
5. Verbs tell of something to be done—
   To *read*, *count*, *sing*, *laugh*, *jump*, *run*.
6. How things are done the Adverbs tell,
   As *slowly*, *quickly*, *ill* or *well*.
7. Conjunctions join the words together,
   As men *and* women, wind *or* weather.
8. The Prepositions stand before
   A Noun, as *of* or *through* a door.
9. The Interjection shows surprise,
   As, *Ah!* how pretty—*Oh!* how wise.

The whole are called Nine Parts of Speech,
Which reading, writing, speaking, teach.

HOMES WITHOUT HANDS.

BY MRS. SARAH A. GIBBS.

E—— was sick. Not confined to her bed, or even to her room, but on that debatable ground between sick and well that is sometimes ruled over by Giant Fretfulness and his brother Impatience. Dolls had lost their charm, and were thrust ignominously, face downward, under the lounge in her own room. The children's magazines and stories had all been read so many times there was no amusement in them. Slate and arithmetic were produced, but compound numbers and fractions proved unmanageable, and disappeared as suddenly as they came.

As day after day went by, and the new sled stood idle while the sliding was just "splendid," the question "What can I do?" became a serious one to us. "Little Women" and the "Old-Fashioned Girl" were just as charming as ever, but when one knew just what Jo, and Laurie, and Polly, and every one would do, what was the use of reading them again; and the Sabbath School books, where all good children die young, were not very encouraging, to say the least.

Natural History had not been tried, and when Wood's "Homes without Hands" was brought home, the problem of amusement and instruction combined was solved. These wondrous "Homes" were far more interesting than fairy stories, and the strange actions and wise thoughts of their builders a source of infinite pleasure. There is a funny picture of the Trapdoor Spider of Jamaica, which burrows in the ground, and lines the interior of its home with a soft white felt of its own manufacture, and closes the entrance of its house with a trap-door which is lined with the same felt-like substance as its house; but outwardly it so closely resembles the soil around as to be scarcely distinguishable. When Mrs. Spider is "not at home" to her friends, she has only to close her front door, and her privacy is undisturbed.

Then there is the Tailor Bird, doing its own family sewing without the aid of sewing machine or fashion plates, in a way that does credit to its bringing up. Choosing a convenient leaf, it pierces a row of holes along each edge with its beak, and procures a thread—a long fiber of some plant—and passes it along through the holes, drawing the sides of the leaf toward each other so as to form a cone, point downwards. This it lines with down, making a warm, light and elegant nest. The industrious little Tailor Bird may have suggested to Eve the possibility of sewing, when fig leaves became desirable. That a bird should sew, if it has been brought up to it, seems reasonable, but with a bower in every tree, is it not passing strange that any bird should build one for amusement?

Yet the Bower Bird of Australia, at a vast outlay of time and trouble, weaves a platform something after the fashion of a door mat. It then looks for some long and rather slender twigs and pushes their bases into the platform, working them tightly into its substance, and giving them such an inward inclination, that when they are fixed at opposite sides of the platform their tips cross each other and form an arch. When this arched alley is long enough to meet their views of what their ball-room or town hall should be, they proceed to ornament it after the fashion of the first families of Bower Birds. Scraps of colored ribbon, shells, bits of glass and china, feathers, anything gay suits them, and such articles are used in the greatest profusion.

The picture of the Water Hen is simply charming. Five little chicks, like puffs of black down, are floating among the lily pads, keeping close to the mother bird, while on the bank just above them is a nest containing seven white eggs which a sitting hen has just left.

One of the prettiest engravings is the home of the Coot. In the foreground is a grassy tussock, of which a pair of Coots, with four downy ducklings, have taken possession, while just beyond a mother Coot issues from a similar tussock, followed by her whole brood. In the background a pair of Swans float majestically along, one of which is carrying her brood on her back, after the fashion of her family.

The funny town of Prairie Dogs, and the wonderful nest of the Harvest Mouse are stories told by the illustrations more vividly than they can be narrated by words.

I have told you just these few things about the book, thinking some of the Rural girls and boys might not know of such an excellent help to a knowledge of these curious homes around them. If you could all read it I am sure you would be quicker to notice, and more careful about disturbing the homes of birds and insects that are constructed with such skill and patient labor. And I am sure you would feel that while your own homes are the pleasantest in the world, that equally well adapted to the wants of the builders are these "Homes Without Hands."

SANDS OF GOLD.

One never loses by doing a good turn.

To raise esteem we must benefit others; to procure love we must please them.

Wealth gained by the loss of character, self respect and virtue, is dearly purchased.

Kind words are balm to the soul. They oil up the entire machinery of life, and keep it in good running order.—*Elm Orion.*

A man has no more right to say an uncivil thing than to act one; no more right to say a rude thing to another than to knock him down.

SEMI-BUSINESS PARAGRAPHS.

Homes in the West.—The attention of those interested is called to the announcement of the land department of the Northern Pacific Railroad, published elsewhere. That Company offers for sale to settlers and colonies a large body of excellent farming and timber lands in Central Minnesota at low prices, and on seven years' credit. A large portion of the offered lands are situated in and near the Red River Valley, famous for its beauty and fertility, and the current of emigration is setting strongly in that direction. With wise liberality the Company agrees to carry free over its road all purchasers of land with their families, and offers transportation from leading points at greatly reduced rates to all who desire to settle on the line of their road, whether they purchase railroad lands or take free Government homesteads. The public lands along the line of the Northern Pacific Railroad in Minnesota subject to homestead entry are represented to be of excellent quality and are convenient to markets.

The People's Stamp of Value.—The Government endorsement, which legalizes the sale of Plantation Bitters, is not the only stamp affixed to that famous Vegetable Tonic. It bears, in addition to that official sanction, the still more valuable stamp of public approbation. This inestimable voucher of its rare properties as a Tonic, Corrective and Alterative is world wide.

Watch No. 1894, Stem Winder—bearing Trade Mark "Frederic Atherton & Co., Marion, N. J."—manufactured by United States Watch Co., (Giles, Wales & Co.,) has been carried by me six months; its total variation from mean time being eight seconds.—H. Cottrell, 128 Front St., New York.

Facts for the Ladies.—Mrs. H. F. Taylor, Brasher Falls, N. Y., has used a Wheeler & Wilson Lock-Stitch Machine since 1858, in dress-making and family sewing, without any repairs, and has broken but two needles in thirteen years. See the new Improvements and Woods' Lock-Stitch Ripper.

All the first-class Agricultural Journals in the country give the Blanchard Churn as one of their premiums for a certain number of subscribers. This is a pretty good endorsement of the churn, as they are in a position to known which is *the best*.

No Agents, no Discounts, no Commissions. One price to all. Purchasers save two profits. Sold on trial anywhere in the United States. Free Price List. The Jones Scale Works, Binghamton, N. Y.

THE MARKETS.

MONEY AND TRADE AFFAIRS.

New York, Saturday, May 25, 1872.

Since our last report it is pretty well ascertained that the Senate will advise the President to admit the supplementary article to the Washington Treaty proposed by the British Government. This removes a cause of serious anxiety to trade and financial interests, besides opening the way to renewed American Stock negotiations abroad.

Our City Bank movement continues to gain strength, and the ease of the Money Market for the Summer months, at 6@7 per cent., is already fairly assured.

General Trade moves steadily, but not so actively, of course, as earlier in the season. The importations are now large in such staple Foreign Merchandise as Sugars, Metals, Teas, &c., while the current entries of Foreign Dry Goods are light. The Cotton receipts are running down to a few thousand bales per week, and the Cotton exports continue very light. The active shipment of American Gold Coin is now supplying a good share of the Foreign Exchanges, and the amount going from this port for the week is nearly four millions. The price of Gold is no higher (but a fraction lower) than our previous quotation. The Treasury is selling and disbursing nearly as much as the export demand requires.

The session of Congress is drawing to a close, and we shall probably know in a week or ten days the final disposition of the Tariff and Taxes amendments. The bill has gone from the House to the Senate, but in so crude a shape that radical changes will no doubt be made by the Senate Finance Committee.

The following are the comparative movements of the City Banks for the past fortnight:

	May 11.	May 18.
Capital	$87,154,000	$87,154,000
Loans	285,302,800	285,914,100
Gold and Greenbacks	67,310,700	69,115,700
Deposits	217,267,600	219,267,600
Circulation	27,714,209	27,658,409

PRICE OF STOCKS AND BONDS.

American Gold	113⅜	N. Y. Central Scrip	93⅜
U. S. 5-20's of 1867	116⅝	Rock Island	111⅛
U. S. 6s of 1881	119	N. West	75¾
U. S. 10-40s, 5 ⅌ cts	112	Do. Preferred	91
U. S. New Loan	112¾	St. Paul	58
N. Y. Bounty Loan	109	Do. Preferred	78½
Tennessees	73	Lake Shore	95⅜
Virginias, new	56	Ohio and Mississippi	48
Missouri Bonds	93⅜	Toledo & Wabash	75
U. S. Currency 6s	116⅝	Erie	60¼
Central Pacifics	103¼	Union Pacific Stock	40
Union do	92⅜	Adams Express	*96⅛
Western Telegraph	77⅛	American Express	80
Pacific Mail	78⅛	United States Exp's	80½
N. Y. Central Stock	96¾	Bills on London	109⅝

* Dividend off.

The principal fluctuations since our previous table of quotations have been in Pacific Mail and Erie Stock. The business in Pacific was very large throughout the week. Sales ran up to 87¼ and down to 77⅜ per cent., under the manipulations of the leaders in the stock. The Company have secured all they petitioned for at Albany—an amended charter—and also the extra subsidy from Congress of a half a million per annum for the China and Japan mail service. The Erie Stock advanced from 69 to 76 per cent., and returned to 69¼ per cent. The Express Stocks have advanced from 2 to 5 per cent. The Western Railroad Stocks are quoted about the same as at the close of the week before.

PRODUCE AND PROVISIONS.

New York, Friday, May 24, 1872.

Receipts.—The receipts of the principal kinds of produce since our last embrace 6,378 bales of cotton; dried fruits, 92 pkgs.; eggs, 16,715 bbls.; flour, 47,464 bbl.; wheat, 170,523 bush.; corn, 614,705 do.; oats, 157,788 do.; barley, 16,885 do.; grass seed,—bags; hops, 47 bales; beans, 360 bbls.; pork, 1,886 pkgs.; cut meats, 7,269 do.; lard, 2,752; kegs do., 250; butter, 11,641 pkgs.; cheese, 18,107 do.; peanuts, 2,554 bags; t,582 hhds. tobacco; 11,225 pkgs do.; 4,558 bbls. whisky; 1,200 bales wool; corn meal, bbls, 4,314; do. bags, 1,385; rye, bu., 8,150; malt do., 5,570; beef, pkgs., 68.

Beans and Peas.—The arrivals of medium beans have been a little larger, and with a slight accumulation of stock there has been more disposition to realize. Marrowfats are held firmly with some export demand; other descriptions are in small stock and in the buyer's favor. We quote prime mediums $3.35@3.45, good do. $3.10@3.25, fair do. $2.80, prime marrowfats $3.45@3.50, good do. $3.15@3.30, fair do. $2.90, pea $3.40@3.60, kidney $3.40@3.50, red kidney $2.25@3. Peas dull at $1.20@1.21 for Canada free and $1.90@2 for prime green.

Beeswax—Supplies have been a little larger and prices are lower. Sales of Southern at 40@40½c.

Broom Corn—Is hard to sell at the moment. New hurl, 7@8c.; new green, 5@7c.; do. red, 3@5c.; old do., 3@5c.

Butter.—The weather has become more favorable for production and sellers keep well sold up without straining for the higher prices that the small receipts would to some extent justify. There is a good steady trade, and on some of the particularly short days dealers have been enabled to work off some of the small accumulation of white and common stock. At the close prices are quoted at the utmost limit, as sudden heavy receipts will soften a market that is forced to use up the grades of new offered at this season. With the evidence of a local supply in California we can look for no outlet through that section this season. Still, our trade to manufacturing points Eastward is increasing yearly, and the withdrawal of California buyers will be somewhat compensated for by the fact. Yellow butter for Southern use is scarce and wanted and receivers are instructed to save good parcels for the purpose when they arrive. We quote:

State pails, fine, 33@35c.; do. common to fair, 28@29c.; State half tubs, fine, 30@31c.; selections, 32c.; Welsh, packages, fine, 28@30c.; common State, 25@26c. Western ranges at 25@27c. for nice Western reserve; common Western, 22c. Grease and inferior, 7@15c.

Cheese.—The result of the sales in the interior lately gives a more confident tone to the market here, and at the close the feeling is further enhanced by reports from the other side, which represent an increased inquiry and better figures paid. The receipts are somewhat larger than for the same period last year, but they have been worked up pretty close. Sales have been made to shippers of fine factory at 14½@14¾c., with the home trade paying 15c.; good do., 13@14c.; do. skimmed, 5@9c.; Ohio factory, 12½@13c.; do. common, 9c. Dairy at 12@13c. for good lots, and 6c. for common.

Cotton.—The tone of the market is more in the seller's favor. The receipts are small, with better foreign news, and a fair inquiry from spinners.

	Uplands.	Alabama.	N. Orleans.	Texas.
Ordinary	20¼	20⅜	20⅝	20⅞
Good Ordinary	22⅜	23	23¼	23⅝
Low Middling	24⅛	24¼	24½	24⅝
Middling	24⅞	25	25¼	25⅝
Good Middling	25⅝	25⅞	26	26⅜

For forward delivery there is an active business in early months, with prices higher. Sales on the basis of low middling at 21⅝ for June, 21⅞ for July, 24⅝ for Aug., 22⅜ for Sept., 20⅜ for Oct., 19⅞ for Nov., and 19⅜ for Dec.

Dried Fruits.—Apples are firm, with a fair local trade. There would be more business, but holders are pushing the low grade upon the market. Peaches are steady after the late free sales. Blackberries are firm, helped by the fact that the stock is far below the quantity of this date last year.

Apples—Old State, qrs., 6@7c.; Western, new, 10@10½c.; Southern, new, qrs., 9@9½c.; do. fine, sliced, 12@13c; new State qrs., 11@11½c.; do. sliced, fine, 13@14c.; Peaches, peeled, new N. C., 17@18½c.; do. Ga., 15@16½c.; peeled E. Sh. Va., 16@17c.; new unpeeled halves, 7½c.; do. quarters, 6@6¼c. Plums, 27@28c. Cherries, new, ℔ b., 30@31c. Blackberries, 12@13½c. Raspberries 33@35c.

Eggs.—This has been a very unsatisfactory week in this market. Stocks have been coming in largely in excess of the wants of the trade, and with the warm weather, very low prices have been touched. Parcels from distant points have been sold as low as 12c., with the best marks of Western 14@14½c., and State and Penn. 15½@16c.; at the close there is a better feeling, with the arrivals falling off; but the above prices are rarely exceeded.

Flour.—The market has been very dull the last few days, with adverse foreign news and free receipts. Concessions of 20 to 30 on the high grades, and 40 to 50 on common and medium stock are offered, the market closing depressed. The quotations are $6.50@7.20 for superfine State; $7.30@7.70 for common extra do.; $7.75@7.80 for good to choice do; $7.85@8.50 for fancy do.; $6.50@7.20 for superfine Michigan, Indiana, Ohio, Iowa, &c.; $7.45@8.00 for extra do; $8.05@9.00 for choice extra do., including shipping brands of round hoop Ohio at $7.85@8.50, and trade brands of do. at $8.55@10.25; good to choice white wheat extras at $9@10.35; Minnesota, fair to very choice extra, at $7.75@10.50; St. Louis at $9.50@11 for common to fair extra, and $11.05@13.50 for good to choice. Southern at $8.50@11.00 for extras and $11.05@13.50 for good to choice. Rye at $4.10@6 for common to fair.

Fresh Fruits.—Strawberries are now abundant and have dropped to prices that allow a fair supply for market and restaurant use. Norfolk and Maryland now furnish the supply. Apples have only the regular trade incident to the season. Roxbury russets, $5@5.50; others, $2.50@4. Strawberries—Norfolk, 20@30c. per quart; Maryland, 30@35c. Peanuts, prime, $1.50@2; Virginia, fair to prime, $1.60@2.

Grain.—For wheat prices are lower, with less shipping demand and increased receipts. No. 2 spring, in store, $1.68@1.72; No. 1 do., $1.73@1.76; winter red Western, $1.90@2.04; amber Western, $2.05@2.08; and white Western at $2.00@2.15. Rye is steadily held at 94c. for Canada in bond, and $1 for Western. Oats have advanced with insufficient receipts. Sales at 58@60c. for Western, 60½@61½c. for Ohio, 60c. for State. Canada West Barley sold at $1.10. Prime State malt, $1.07½. Corn closed with a fair export trade at firm prices. Sales at 73@74c. for common to prime Western mixed, 76c. for choice white Southern.

Hay and Straw.—Prices still rule higher, the arrivals being remarkably light for this season of the year. The trade is confined to bare wants of local buyers. Sales at $1.75@1.80 for shipping, and $1.90@2.25 for retail qualities. Clover $1.10@1.30. Salt, 95c.@$1. Straw at $1.30@1.35 for long rye; $1.05@1.10 for short rye; 95c.@$1.05 for oat; 70@80c. for wheat.

Hops.—The supplies of choice domestic stock are extremely light, and brewers are compelled to take to foreign. Prices throughout are firm. The quotations are 60@65c. for prime, 25c. for common, Bavarians 65@75c.; English, 60@65c.

Maple Sugar.—The demand has stopped. Prices have fallen to 10@15c. for dark to light.

Milk.—Receipts have been heavy, exceeding 9,200 cans per day. Cool weather has kept down the demand some days, and it was difficult to clear out at $1 per can. The average was $2@3 per can, with $6 the extreme.

Poultry and Game.—Dressed arrives to special receivers who quote about former prices. Live supplies the general market at the following rather firm but lower figures. Live, State and N. J. fowls and chickens, 18@19c.; do. Western 16@18c.; roosters, 12c.; turkeys, 20@22c.; ducks, Western, per pair, 87c.@1.12; Geese, Western, $1.00@1.75; spring chicks, $1@1.25.

Game.—Wild pigeons are in demand and not abundant. Picked, in lee, $1.87@2; unpicked, $1.35@1.87. Wild squab, $1.50. Snipe and plover, $2.50@3 per doz.

Provisions.—Pork is selling slowly, at rather weak prices. Mess for spot delivery $13.75; 14.25 for Aug.; $11.10 for Sept.; $13.70 for June; $13.95 for July. Old mess, $13 for spot; extra prime, $11. Dressed hogs are weak, at 5¾@6¼c.; middles are steadily held, with a fair inquiry from exporters; short clear, 8¼c.; city long clear 7¾c. Cut meats are quiet; hams in pickle, 9¼@10¼c.; do., in salt, 9¼@10¼c.; shoulders in salt, 5½@5¾c.; do., in pickle, 5½@5¾c.; smoked hams at 10½@13c.; do., shoulders, 6@6¼c.; clear rib, 8@8¼c. Lard is dull, at unchanged prices; prime Western steam, 9 5-16c. for spot; 9 5-16c. for June, 9¼c. for July. City at 8¾c. for steam. Stearine at 9¾c. for prime. Beef is quiet, at $7.50@9.50 for plain Western mess, $10@12 for extra mess. Tierce beef at $14@17 for prime, $17@20 for India mess. Beef hams at $23@26. Tallow is firmly held, at 9⅜@9¾c. for prime.

Seeds.—A few speculative purchases of grass have put up prices. Ohio clover at 9½@9¾c; Michigan at 10@10½c.; Timothy at $2.75@3.25.

Tobacco.—Kentucky leaf is selling to the home trade only at steady prices. The business is within the range of 8c. to 11½c. The export movement in seed leaf is brisk at full late prices. Latest sales are at 17c. for old Ohio; 16@18c. for new crop. Pennsylvania, 9½@11c. for new crop Ohio, 8¼@9½c. for new Wisconsin. Sales of Havana are at 95c. to $1.15.

Vegetables.—Potatoes have again declined with the pressure to sell. Bermuda are also easier. Southern green stuff is declining with the advancing season.

Potatoes, Early Rose, bbl., for seed, $1.50@2.00; P. Blows, $1.85@2.25; Prince Albert, $1.75@2; Monitor and Goodrich, $1.25@1.50; Jackson, $1.50@1.75; Dyright, $1.50@2; sweet Del., $4.00@4.50. Onions, red and yellow, $1.00@1.50. Garlic, per 100 bunches, $22@24. Turnips, Russia, bbl., $3. Cabbages, per 100, $6@8. Beets per 100, $1.25. Carrots, per 100, $1.50. Bermuda potatoes, $8@8.50; do. tomatoes, 5-qt. crate, 40c.; do. onions, per crate, $1.00@1.25. Asparagus, N. J., per doz., 75c.@$1.50; do., Oyster Bay, $2.25@2.50. Peas, Va., bbl., $5. String beans, per crate, $3. Cucumbers, S. C., crate, $3@4.

Whisky—Is firmly held at 91c.

Wool.—The market has less tone. The few buyers here name lower prices for fleeces, and for common and medium stock a decline is admitted. Prime grades are held at about late prices. Latest sales are at 75@76c. for Michigan fleece, 68c. for extra pulled, 82½@85c. for choice super pulled, 40c. for Buenos Ayres, 63@72c. for Australian, 37@38c. for East India.

COUNTRY CHEESE MARKETS.

Little Falls, N. Y., May 25, 1872.

THE market at Little Falls for the week ending May 25th was brisk, with an advance in prices above those of last week from ½c. to ¼c. on the bulk of sales.

The delivery of farm dairies numbered about 1,050 boxes, and prices ranged from 11c. to 13½c. The quality of farm lots has improved considerably. The offerings from factories were fully 4,000 boxes, about 3,000 of which were sold. We give transactions in leading factories as follows:

Mohawk Valley, 13½c.; Shells Bush, 14c.; Countryman, 11c.; Manheim Turnpike, 11½c.; Crum Creek, 11c.; Newville, 14½c.; Snells Bush, 14½c.; Brocketts Bridge, 14c.; Cook & Ives, 14½c.; Palatine Union, 13½c.; Spraker, 13½c., Norway Asso., 14½c.; Avery & Ives, 14½c.; Old Fairfield, 11c.; Herkimer, 11c.; Dairy Valley, 11½c.; Fairfield Asso., 11½c.; Florida, 11c.; Henderson Asso., 14½c.; Newport, 11½c.; Herkimer Co. Cent., 11½c.; J. D. Ives, 11½c.; Krys, 14c.; Manheim, 11c.; Manheim Cent., 13½c.; W. Peck, 13½c.; Smith Creek, 11½c.; Top Notch, 11c.; Vanhornsville, 13½c.

In butter there was only a moderate delivery at prices ranging from 26c. to 27½c.

We have advices from abroad to the first week in May. Our London correspondent says that cheese is quiet and no prime in first hands. We give quotations:—American extra fine, 74s.; fine, 68s. to 70s.; good, 60s. to 64s. The other descriptions of cheese sell as follows:—New English Cheddar, 58s. to 60s. Wiltshire double, 52s. to 70s.; Cheshire mellow, 56s. to 60s.; fine, 64s. to 70s.; Scotch, new, 66s. to 70s.; Dutch cheese, Edams, 44s. to 66s.; Gondus, 48s. to 60s.; Derby shape, 50s. to 60s.

In butter only best descriptions of European sell. We quote:—Normandy extra, 120s. to 124s.; Canadian, 84s. to 90s. The corresponding prices last year were Cork's butter, 133s.; American cheese, 74s.

In central New York the much needed rain came on Sunday and continued all day, with showers on Monday, which have given pastures and meadows a good start.

Utica, N. Y., May 20.—Prices advanced ¼ cent. Offerings small and competition sharp. The lowest figure was 13c., and the highest 13½c.—one lot only reaching the latter figure. Sales were made at 13¼@13½c. 13½@13¾@14c. The latter figure, 14c., was the prevailing one. The advance has doubtless been made in consequence of the small supplies, and the prospect of a brisk demand for new cheese by the home trade.

LIVE STOCK MARKETS.

NEW YORK, May 23, 1872.

WITH an increase in all kinds of live stock, hogs excepted, the markets have undergone little change. Fish are very plenty, and one would think their cheapness would lessen the demand for meat. One thing in the beef market is very noticeable, viz:—the difficulty butchers have in disposing of their coarse pieces. Porter-house and sirloin steak are so largely called for that it takes a great many cattle to yield enough. The rumps, too, sell fairly, but plates and navals are hard to sell. Strawberries are also very plenty, and "short-cake" is eaten, to the partial exclusion of beef, and still the consumption of the various meats is large, and prices are well sustained.

The following are the receipts of live stock shown in comparison with other years:

	Beeves.	Cows.	Calves.	Sheep & Lambs.	Hogs.
Totals this week.....	8,505	105	1,413	16,052	28,019
" last week.....	7,518	113	1,369	13,333	39,751
Corresponding week last year.....	6,486	106	4,011	21,458	20,051
Average last year.. .	7,187	88	2,301	25,132	25,177

Beeves.—Late rains at the West are a great relief to some portions of the cattle country, feeders beginning to send stock to market on account of a scarcity of water. Accounts from Texas represent that cattle are being sent into Kansas and neighboring States in large quantities. It is estimated that 250,000 head will be taken from Texas the present season. These cattle are generally thin, and will not be fit for market before the last of July or first of August. The arrivals here during the week just ended have been quite large, and there is a little easiness in price at the close, a few cattle remaining unsold in the pens. There were 5,388 beeves on sale last Monday—181 car loads at Communipaw, 235 at 100th St., and 15 at Weehawken. There was a fair demand, but the numbers were too great for all to sell without some reduction in price, hence a few were held over. Stock has been coming in freely since—126 car loads to-day, and thin stock has declined ¼@½c. ₰ lb. A lot of 6¾ cwt. Texans was sold at 10½c., while 148 Illinois steers, went at 11¾c., and 79 of 7 cwt. at 12c. Some fat 8 cwt. cattle were sold at 12½c., with just a few, picked out, at 13c. The market closes dull, but dealers incline to hold on to their droves rather than reduce the figures very much.

The following are the closing prices for the week in comparison with what cattle brought one week ago, for net weight of beef:

	This week. Cents.	Last week. Cents.
Choice beeves, ₰ lb.....	12¼ @ 12¾	12¾ @ 13
Good to prime.....	11¾ @ 12¼	12 @ 12½
Ordinary to medium.....	11 @ 11½	11¾ @ 11¾
Lowest grade.....	10¼ @ 10¾	10¾ @ 11
Average sales.....	11¾ @ —	11¾ @ 12

Milch Cows.—Milk has been selling badly for some days past, the supply being largely in excess of the demand. This causes a dullness in the fresh cow trade, and prices rule lower as a general thing, most sales being at $35@50. Only good milkers are wanted. A few choice cows are selling at $75@80, but it is rarely the case that a dealer gets over $70 for a fine cow.

Veal Calves.—Arrivals are large, but former low prices added to a scarcity of mutton have lead to a very large consumption of veal. The market has even improved with the increased receipts. Cool weather, too, favors trade. Fat State calves have reached 7¼@8c., a few prime selling at 8¼c., while the finest Jerseys and Hucks Co., Pa., where they get up a No. 1 article, sell at 8¼@8½c. One lot of 80 head 110 lbs. sold at 9c. right through. Thin milk veals go at 6½@7¼c., while those reared on buttermilk and other poor feed sell at 5@6c.

Sheep and Lambs.—There is a new sensation here, for the first lots of Texas sheep and lambs ever sent to this market have just arrived, and were sold at such prices, taken in connection with their cost, as makes the experiment a paying one. The sheep cost about $1.25 per head in Texas, were brought through at a cost of little more than $1 per head, yielded more than $1 worth of wool each after they were brought, and sold for rising $3 on this market. They were small, fine wool sheep, and had previously been sent from the West into Texas for breeding. The general market is rather improved, fair to good sheep selling at 7¼@7¾c., with a car of prime 100 lb. Ohio at 8c. Thin lots go at 6½@7c. The Texans alluded to weighed 61 lbs., and were sold at 5½c. A lot of 47 lb. Texan lambs went at 10c. The lamb trade is good, Jerseys selling at 12½@15c., with Virginia at 11@13c. One very extra lot of Jersey lambs, 50 lbs., sold at 16c., with 72 of 53 lbs., coarse, at 13c., and 361 Virginia, 47 lbs. at 11½c.

Hogs.—Arrivals are much lighter, and the market gained a little strength, but closes tame. The trade is wholly in city dressed, slaughtering firms having their hogs all bought for them at the West. After slaughtering, they are sold mostly on "Change," and the present prices are 5¾@6¼c., a few reaching 6½c.

SPECIAL NOTICES.

FOR MOTH PATCHES, FRECKLES

and TAN, use PERRY'S MOTH and FRECKLE LOTION. The well known and reliable remedy for Brown Discoloration of the Face. Prepared by Dr. B. C. PERRY, Dermatologist, 49 Bond street, New York. Sold by *Druggists*.

RUPTURE CAN BE CURED

without suffering. ELASTIC TRUSSES are superseding all others. Before buying Metal Trusses or Supporters, send for a descriptive circular to the ELASTIC TRUSS CO., No. 683 Broadway, New York.

New Advertisements.

LOOK OUT FOR IMPOSTORS.

The great demand for TIN-LINED LEAD PIPE has excited the cupidity of certain parties who are attempting to palm upon the public a Lead Pipe merely *washed with Tin* for TIN-LINED LEAD PIPE—the sheet is easily detected. Our patent TIN-LINED LEAD PIPE is a BLOCK TIN PIPE heavily coated with solid Lead; it may be distinguished from all other Pipe by the four small ribbed lines running lengthwise, at equal quarter distances. Samples sent by mail free.

Tin-Washed Lead Pipe no more compares in value with TIN-LINED LEAD PIPE than common *Tin-Ware*, which rusts and wears out in a short time, does with BLOCK TIN-WARE, which never rusts and is almost imperishable.

Tin-Washed Lead Pipe was made thirty years ago, and abandoned as utterly useless as a protection against Lead Poison. COLWELLS, SHAW & WILLARD MF'G CO., 213 Centre St., New York, manufacturers of TIN-LINED LEAD PIPE, BLOCK TIN PIPE, SHEET LEAD, LEAD PIPE, SOLDER, &c. Orders filled at sight. TIN-LINED LEAD PIPE is 15 cents a pound for all sizes.

NOT TO BE PAID FOR TILL TRIED.

THE EUCLID.

A desirable Plow, both for stony and smooth ground.

The best two-horse plow for all work ever made. Easy to draw and easy to hold. Price $10.

CAYUGA LAKE RAILROAD.
SAFAE OF NEW YORK
Seven Per Cent.
FIRST MORTGAGE
GOLD BONDS
AT 90 AND ACCRUED INTEREST IN CURRENCY.
THIRTY YEARS TO RUN, AND ISSUED FOR $20,000 PER MILE.

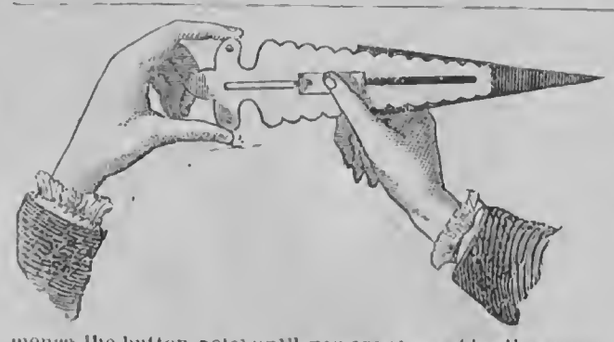
This road forms the shortest and most direct route from the great Anthracite and Semi-Bituminous **COAL** fields of Pennsylvania into the central part of this State, and will run in connection with the New York Central road, which it crosses at Cayuga Bridge. Traversing as it does the finest and most populous agricultural district, generally known as the "Garden of the State," its local traffic will be large, but its greatest source of revenue will be from its **COAL** business. The road is being rapidly built, iron is now being laid on a section covering more than one-quarter of the distance, and work on the whole line being pushed with great vigor, so that it is expected to have Coal trains running by the 1st of November next. From our knowledge of this enterprise, and after the most thorough investigation, we most confidently recommend the Bonds as a safe investment. We offer for the present the Bonds at 90 and accrued interest in currency.

LEONARD, SHELDON & FOSTER,
10 Wall St., New York.

"FAMILY FAVORITE!"
THE
WEED. WEED.

The most perfect, reliable and generally useful machine in existence. For the family of the farmer or mechanic, where the work required of a sewing machine ranges from the heaviest garments of men's wear to the most delicate and ornamental fabrics for ladies and children, it has proved itself thoroughly efficient and entirely satisfactory. Of unequaled simplicity and compactness of construction, capable of being learned and operated with one-fourth the usual expenditure of time and labor, with a capacity for quantity, quality and variety of execution beyond its competitors, and a reputation for durability and reliability known and appreciated by thousands, it is offered to the people for the most critical inspection and comparison, with confidence that its obvious merits cannot fail to convince the careful examiner of its superiority. Manufactured by the

WEED SEWING MACHINE CO.,
HARTFORD, CONN.
REPRESENTED IN ALL THE PRINCIPAL CITIES AND TOWNS.
AGENTS WANTED WHERE NOT ALREADY ESTABLISHED.



THE PROTEAN LANCETTE.

Experience teaches that to secure for an article the favor and patronage of the LADIES, it must combine beauty and elegance of design, with practical utility. The favor with which our modification of the **BUTTON-HOLE CUTTER** has been received predicts that no Lady's Work Basket will be regarded as complete without it. It is also an admirable Envelope, Leaf and Paper Knife.

DIRECTIONS.

To extend the Lancet, hold the instrument as illustrated by the engraving; then holding it as you would a pen, with the cutting edge from you, insert the point (where you wish to commence the button-hole) until you are stopped by the gauge. Be careful not to extend the point too far at first, but cut and try until the hole is a sufficient size to allow the button to pass through; then observe at what point the slide is on the scale, that you may be able to retain the size.

The Lancet can be sharpened like an ordinary knife. Samples mailed post-paid on receipt of 50 cents.

DOOLITTLE MANUFACTURING CO., 599 Broadway, New York.

FOR SALE CHEAP!—Several One-Horse Hay Presses; just the thing for retail or canal barn. Also, second-hand Tread Horse Power, in good order. Now is the time to buy cheap.

CARHART'S
PATENT TWO-HORSE
Pulverizing Cultivator

Was Awarded the First Premium at State and County Fairs in 1870 and '71.

It is superior to the best Wheel Cultivator.
The price is only Twenty Dollars.
The draft is reduced nearly one-half.
The depth you wish it to run is regulated without the use of wheels.
It can be drawn close to a tree or plant without injuring it.
It is not disturbed by short undulations of earth, like the Wheel Cultivator, but pulverizes, levels and fits the ground for the Mowing Machine better than any Cultivator in use, and can be used for more purposes than any other implement on the farm.

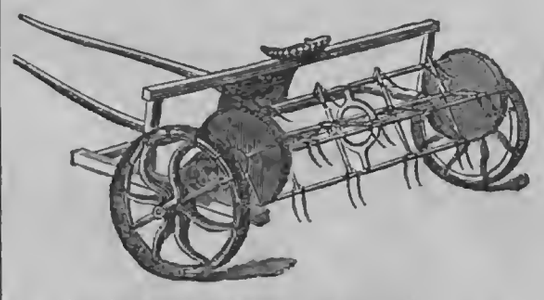
Hay Spreader.

Price at New York, only $55!

The only machine that spreads, disentangles and *turns over* all the grass. Forks easily elevated and depressed. Send for Illustrated Circular to
NEW YORK PLOW CO.,
94 Beekman St., New York.

THE
AMERICAN HAY TEDDER



Enables the most important Agricultural product of America to be cut, cured and stored in the barn in one day. Improves the quality and increases the value of the hay crop. Prevents all risk of damage from storms and sudden showers. Is simple, durable and of light draft. Was awarded the New England Agricultural Society's only first prize, at the Great Field Trial, at Amherst, Mass., as being superior to all others, and the best and only perfect machine for tedding or turning hay.

MADE ONLY BY
AMES PLOW COMPANY,

GARDNER'S PORTABLE
BOOK-RACK, BOOK-CASE, AND WRITING DESK COMBINED.

This is the first good article of furniture that has ever been made, which can be taken apart in less than a minute and packed away or shipped from place to place all easily as a few short boards, and can be set up again by any person in a few moments without the aid of any tools. Small sizes form a substantial and complete Book-Rack. Larger sizes form a substantial Writing-Desk and Book-Case Combined.

Prices for large sizes, 6 feet 4 inches high, solid Black Walnut, from $10 to $23. Prices for smaller sizes down as low as $1. Also, Portable Wardrobes, prices $10 to $20.

A liberal discount to the trade. Ten per cent. off to all preachers.

The First Premium was Awarded
on our Book-Racks and Writing-Desks at the
Great Fair of the American Institute
NEW YORK, 1870.

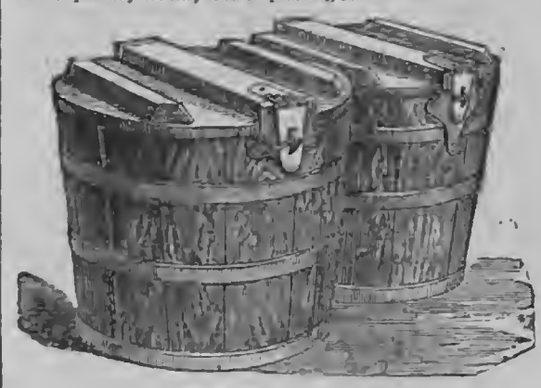
FARMERS, DAIRYMEN AND BUTTER BUYERS!
PACK YOUR BUTTER
IN
WESTCOTT'S
RETURN BUTTER PAIL

Approved and recommended by the leading authorities of our country on dairying, and acknowledged by all butter dealers to be the very best package in use.
Butter packed in this Pail brings **5 to 10 cents more** a pound in the New York City market than the same quality in any other package.



READ THIS:

NEW YORK, Nov. 15, 1871.

We, the undersigned, Produce Commission Merchants of the City of New York, consider Westcott's Return Butter Pail, manufactured by Silsby Bros., Belmont, N. Y., *the best package in the market.* It is our experience that Butter packed in this Pail *sells more readily and commands a higher price* in this market than in any other package, and we heartily recommend its general use by the dealers, dairymen and butter buyers who ship to this city.

Respectfully,

(Signed by 45 leading Commission Merchants.)

The Westcott Return Butter Pail meets my approval as a good butter package. It is one which I always feel safe in recommending.

X. A. WILLARD,
Dairy Editor Moore's Rural New-Yorker.

Dairymen, send for a Circular! Dealers, send for a Price List! We are the sole manufacturers of **Westcott's Return Butter Pail**, and also manufacture very extensively Butter Firkins, Half-Firkin Tubs, 25-pound Butter Pails, Well Buckets, &c., &c.

CHEAP CORN CULTURE.
THOMAS' SMOOTHING HARROW.
81 SLANTING TEETH OF TEMPERED STEEL. $25

LATE SPRING! CROWDED WORK!

This year a large amount of work must be done in a very short time. With our wide Harrow more than twice as much ground can daily be prepared for seed as without it, and all crops *cheaply cultivated* through the season in a *superior* manner.

ALLEN BIGLEY, Windsor, Ohio, says:—"I saved one-half month's labor in two days, getting a much better crop without using a hoe."

ANDREW RAESSLER, Shelbyville, Ill., says: I can harrow twice as much ground with it as with other Harrows."

EDWIN THORNE, Millbrook, N.Y., says:—"We can dispense with cultivating once each way, saving a vast amount of labor."

E. F. SMITH, Morning Sun, Iowa, says:—"It was much easier on the team, though one-third wider, doing more work."

L. R. AUSTIN, Coldwater, Mich., says:—"I have a 40 and a 30-tooth square drag, but with *your* Harrow can do twice the work in half the time."

IRA BEARD, Cahoka, Mo., says:—"I think it equal to three common Harrows."

F. PETITT, Salem, N. J.:—"My brother says his does the work of three old Harrows; mine I think saved me $5 in one and a-half hour's work."

BOYS RIDE AND DO ALL THE HARROWING.

A Railroad Watch.

Travelers by Railroad frequently find their Watches completely demoralized by the continuous jar of the train. To overcome this difficulty has long been a problem with watchmakers, and it is now successfully accomplished in the new grade made by the

American Watch Co. of Waltham.

This Watch is made in the most substantial manner, on the most approved principles, and combines all the recent improvements. It has a new micrometrical regulator, by which the slightest variation can be easily corrected. It is carefully adjusted, and may be entirely relied on to run accurately, wear well, and ENDURE THE HARDEST USAGE, without any derangement whatever. We confidently recommend this Watch to the trade and the public as the BEST WATCH FOR THE PRICE IN THIS MARKET.

The full trade-mark engraved on the plate of each Watch is

"American Watch Co., Crescent-St., Waltham, Mass.,"

and it is distinctively known as the CRESCENT-ST. Watch.

For sale by all leading Jewelers.

The only one ever manufactured that will stand the hard usage to which they are subjected. For sale by all can makers. Stock and Trimmings for sale only by the IRON CLAD CAN CO., Send for Circulars. 51 Dey St., New York.

All genuine are stamped I. C. C. Co.

"ECONOMY IS WEALTH." Franklin. Why will people pay $50 or more for a SEWING MACHINE, when $32 will buy one that has a *standard* reputation, is double thread, complete with Table, constructed upon entirely new and practical principles, runs by friction, and excels all others? These celebrated Machines are intended for poor people who want to save time, labor and money. AGENTS WANTED. Machines sent to Agents and *given away* to needy families. For Circulars and reduced prices, address FRANKLIN & DIAMOND S. M. CO., Box 386, Boston, Mass.

WARREN'S PATENT COOKER.

If you would make sure of never again having a badly cooked piece of meat, use this really invaluable kitchen utensil.

Cheap to Buy; Convenient to Use; and Easy to Manage.

Read recommendation in RURAL NEW-YORKER, March 30, page 216. Send for Circulars to NEWPORT LEAD WORKS, Newport, R. I.

Agents Wanted. $75 to $250 per month, everywhere, male and female, to introduce the GENUINE IMPROVED COMMON SENSE FAMILY SEWING MACHINE. This machine will stitch, hem, fell, tuck, quilt, cord, bind, braid and embroider in a most superior manner. Price only $15. Fully licensed and warranted for five years. We will pay $1,000 for any machine that will sew a stronger, more beautiful, or more elastic seam than ours. It makes the "Elastic Lock Stitch." Every second stitch can be cut, and still the cloth cannot be pulled apart without tearing it. We pay Agents from $75 to $250 per month and expenses, or a commission from which twice that amount can be made. SECOMB & CO., *Boston, Mass.; Pittsburgh, Pa.; Chicago, Ill.; or St. Louis, Mo.*

AGENTS WANTED FOR

"JESUS,"

By CHARLES F. DEEMS, D. D.

His divinity established and rationalism routed. The most popular and rapidly-selling religious work ever issued. For Circulars, address UNITED STATES PUBLISHING CO., 411 Broome St., New York.

Agents Wanted for **THE NATION.**

Is needed in every home; has 60 illustrations; all U. S. Presidents; all U. S. Censuses; all C. S. Senators; all valuable documents. Is prized by all! One agent reports 201 orders in 6 days. In English and German. *Write us.* NEW WORLD PUBLISHING CO., 7th and Market, Sts., Phila., Pa.

GREAT REDUCTION

IN PRICE OF

TEAS AND COFFEES

TO CONFORM TO PRICE OF GOLD.

Increased Facilities to Club Organizers.

Send for New Price List.

THE GREAT AMERICAN TEA CO.

(*P. O. Box* 5043.) 31 & 33 Vesey St. New York.

AGENTS WANTED—BEST TERMS Given for our New and Popular Works, including Bibles, &c. For full particulars, address QUAKER CITY PUBLISHING CO., 217 and 219 Quince St., Philadelphia.

VOL. XXV. NO. 23. WHOLE NO. 1167. | NEW YORK, AND ROCHESTER, N. Y., JUNE 8, 1872. | PRICE SIX CENTS. $2.50 PER YEAR.

[Entered according to Act of Congress, in the year 1872, by D. D. T. MOORE, in the office of the Librarian of Congress, at Washington.]

The Herdsman.

EXPORTING SHORT-HORNS TO ENGLAND.

It seems somewhat like carrying coals to New Castle, but American breeders are sending choice animals from their herds to Old England. New York breeders have already sent animals that have won marked attention from the breeders of the Motherland. The last export of this sort is by RICHARD GIBSON, Esq., London, Canada, who has just shipped nine head of American thorough-bred Short-Horns, purchased in this country for English account, for breeding purposes. The herd consists of six Princesses, two Dutchesses and one Duke, bred respectively by A. J. ALEXANDER, Woodburn Stud Farm, Woodford county, Ky.; Hon. A. B. CONGER, Walburg Stud Farm, Haverstraw, N. Y.; Messrs. PRATT, Brattleboro, Mr. WINSLOW, Putney, Vt.; and Mr. COWAN of Galt, Canada. Mr. GIBSON, who is largely engaged in the business, says there will continue to be a steady draft upon our home breeders for American-bred Short-Horns, with the view of improving the original stock in the counties of Durham and York, Northumberland, Westmorland and Cumberland. Inbred for a period of seventy-six years, the English Short-Horn has begun to exhibit slight signs of deterioration, which, it appears, is happily prevented by crossing the home stock with foreign or distant families of the same breed, the fresh infusion of this foreign strain having almost as marked an effect as that of an entire new cross. This ought to encourage our American breeders to hope that some of the money they have expended in England the past twenty years will be returned to them.

ABORTION IN COWS.

W. R. DUNCAN of Towanda, Illinois, a very successful stock breeder, says in his own herd he could never discover any cause for abortion except the general deficiency of lime in the soil and water, there being no limestone there; and he has supplied this deficiency by supplying his salt troughs with slaked lime and bone meal. Since then he has not had a case of it. He says:—When a cow or mare has aborted once or more, a short time before the period of the former occurrence after conception, I begin to feed a small quantity of hemp seed each week—say from one pint to one quart—mixed with their feed, which they eat readily. This should be kept up till near the time of delivery. With this remedy I have not failed one single time in fifteen years, neither has any one ever told me that it failed for them that I gave it to.

ALDERNEY OR JERSEY BULL.

ALDERNEY OR JERSEY COW.

ALDERNEY OR JERSEY CATTLE.

THE Channel Island cattle, popularly known as Alderneys, consist of two classes—Guernsey and Jersey. The Guernsey is the larger of the two, usually a light fawn color. The Alderney (embracing these two classes) is a cream and butter producing breed, giving more milk, and of richer quality in proportion to its size, than any other cow. The late FISHER HOBBS, at the great International Exhibition of live stock in Paris, in 1855, where nearly all the ox tribe of Europe were represented, came to the conclusion that the Alderneys probably descended from the Swiss mountain breeds, of which many specimens were exhibited—dark and light fawn in color and fine in head and horns. It is claimed that finer specimens of the Alderney breed have been produced in England than on the Islands, in consequence of the application of the principles of selection, which are better understood there.

We give herewith illustrations of English bred Alderneys. In connection we give the scale of points of Alderney or Jersey cattle, adopted by the Jersey Agricultural

Society and to which we would call the especial attention of both breeders and buyers in this country:

Scale for Points in Bulls.

Article.	Points.
1. Head, fine and tapering	1
2. Forehead, broad	1
3. Cheek, small	1
4. Throat, clean	1
5. Muzzle, fine, and encircled by a light color	1
6. Nostrils, high and open	1
7. Horns, smooth, crumpled, not too thick at the base, and tapering, tipped with black	1
8. Ears, small and thin	1
9. Ears, of a deep orange color within	1
10. Eyes, full and lively	1
11. Neck, arched, powerful, but not too coarse and heavy	1
12. Chest, broad and deep	1
13. Barrel, hooped, broad, and deep	1
14. Well ribbed home, having but little space between the last rib and the hip	1
15. Back, straight from the withers to the top of the hip	1
16. Back, straight from the top of the hip to the setting on of the tail, and the tail at right angles with the back	1
17. Tail, fine	1
18. Tail, hanging down to the hocks	1
19. Hide, mellow and movable, but not too loose	1
20. Hide, covered with fine, soft hair	1
21. Hide, of good color	1
22. Fore legs, short and straight	1
23. Fore arm, large and powerful, swelling, and full above the knee, and fine below it	1
24. Hind quarters, from the hock to the point of the rump, long and well filled up	1
25. Hind legs, short and straight (below the hocks), and bones rather fine	1
26. Hind legs, squarely placed, and not too near together when viewed from behind	1
27. Hind legs, not to cross in walking	1
28. Hoofs, small	1
29. Growth	1
30. General appearance	1
31. Condition	1
Perfection	31

No prize shall be awarded to bulls having less than 25 points.

Bulls having obtained 23 points shall be allowed to be branded, but cannot take a prize.

Scale of Points for Cows and Heifers.

Article.	Points.
1. Head, small, fine, tapering	1
2. Cheek, small	1
3. Throat, clean	1
4. Muzzle, fine, and encircled by a light color.	1
5. Nostrils, high and open	1
6. Horns, smooth, crumpled, not too thick at the base, and tapering	1
7. Ears, small and thin	1
8. Ears, of a deep orange color within	1
9. Eye, full and placid	1
10. Neck, straight, fine, and placed lightly on the shoulders	1
11. Chest, broad and deep	1
12. Barrel, hooped, broad and deep	1
13. Well ribbed home, having but little space between the last rib and the hip	1
14. Back, straight from the withers to the top of the hip	1
15. Back, straight from top of the hip to the setting on of the tail, and the tail at right angles with the back,	1
16. Tail, fine	1
17. Tail, hanging down to the hocks	1
18. Hide, thin and movable, but not too loose.	1
19. Hide, covered with fine, soft hair	1
20. Hide, of good color	1
21. Fore legs, short, straight, and fine	1
22. Fore-arm, swelling, and full above the knee	1
23. Hind quarters, from the hock to the point of the rump, long and well filled up	1
24. Hind legs, short and straight (below the hocks), and bones rather fine	1
25. Hind legs, squarely placed, not too close together when viewed from behind	1
26. Hind legs, not to cross in walking	1
27. Hoofs, small	1
28. Udder, full in form—i. e., well in line with the belly	1
29. Udder, well up behind	1
30. Teats, large and squarely placed, behind wide apart	1
31. Milk-veins, very prominent	1
32. Growth	1
33. General appearance	1
34. Condition	1
Perfection	34

No prize shall be awarded to cows having less than 29 points. No prize shall be awarded to heifers having less than 26 points. Cows having obtained 27 points, and heifers 24 points, shall be allowed to be branded, but cannot take a prize.

Three points—viz., Nos. 28, 29 and 31—shall be deducted from the number required for perfection in heifers, as their udder and milk-veins cannot be fully developed; a heifer will therefore be considered perfect at 30 points.

NOTES FOR HERDSMEN.

To Cure Sore Teats.—F. H. S., Macon, Mo., asks for a remedy for sore teats and udder. A correspondent of the RURAL NEW-YORKER in 1870, had a cow with very sore teats. Each time he sat down to the cow to milk her he broke off, with much care, each scab; this made a raw-looking sore. He then thoroughly greased the teat with salted butter, milked as best he could and then, after milking, greased again. He cured the teats within a week. He regards it of more importance to anoint the teat before than after milking; and there should be no failure to remove the scabs.

A Bull Bleeding to Death.—THOMAS HAMILTON had a bull that broke his horn, and it bled freely for 12 hours, and he could not stop it. Asks if any one knows what will stop blood under such circumstances.

A Heifer One Year Old, Never Having Borne a Calf, owned by SOLOMON MACK, Gilsum, N. H., had given milk April 20 for six weeks. Eight days' milk, churned, made six ounces of butter.

Field Crops.

SUGAR BEET CULTURE.

PROF. C. A. GOESSMANS of the Massachusetts Agricultural College recommends observing the following points in sugar beet culture:

1. The ground should have been manured the previous season for corn or potatoes. No fresh dung to be applied for the beets. Plow as deep as the character of the soil will allow.

2. Soak the seed for two days in manure water, or urine, at a temperature of about 55° to 60° Fahr., and then let it lie spread out, 2 to 2½ inches deep and moist, about two days longer before sowing.

3. Sow on the flat, and the rows as close together as will admit of horse-hoeing, and thin the beets to about 6 inches apart, or less if the ground is very rich. It is not desired that they should grow big. A beet weighing 1½ pounds is as large as is profitable.

4. In hoeing, and especially at the last hoeing, keep the crown of the beet well covered with earth. Hoe as often as you can until August 1st, and not afterwards.

5. On no account allow any leaves to be removed until the time of lifting.

6. At all times in hoeing and lifting, take care not to cut or bruise any roots. At lifting, cut off the leaves one inch above the crown.

8. Store or pit immediately, without giving the beets any chance to dry, and if some earth adheres to them it is all the better.

PEANUT CULTURE.

The Rural Messenger describes how Gen. BRYANT GRIMES, Washington, N. C., grows peanuts. He had 450 acres of them last year:—"After plowing and leveling the land, rows were laid off three feet apart with a shovel plow, and then one horse, attached to a piece of scantling by shafts, marked off with pegs three rows across the field 2⅓ feet apart. The planters were women, who dropped the nuts without shelling, simply broken into two pieces, from two to three seed in each check. A man, with turn plow running shallow and at just sufficient distance to lap the earth above the nuts, did the covering. Weeding with the hoe, running shovel and turn plows in the balks, cultivating both ways, keeping the crop clean, and laying by with a broad, flat hill or very slight ridge quite early, was the plan.

"We saw these fields again a month before harvest. The stand was fine, and we learned the crop gave a good yield. The General stated that he had just received return sales of 2,500 bushels of his previous year's crop (1870) in New York at $2 50 per bushel. They were threshed from the vines by Calvin's thresher, driven by steam power. The mode of stacking was not in small shocks, which we consider so necessary, but in large stacks, like fodder or oats, allowing, we presume, the vines to be cured in part on the ground before stacking."

FIELD NOTES AND QUERIES.

Wild Grass for Names.—To-day, while I was hunting for some of my cattle which had strayed away, I found on the top of one of the highest hills in Cattaraugus Co., N. Y., two distinct kinds of grass, or grain, of which I send you samples. They grow in a dense forest, and are unlike anything I ever saw. If they will grow in cleared land, I think they would be far ahead of corn for feeding stock, as the frost does not seem to injure them in the least. It seems strange that the two should grow so close together. —M. B. ANDREWS, *Pleasant Valley, N. Y.*

No. 1 is *Brachyelytrum aristatum*, or the Awned Brachyelytrum, also called the Great Muhlenbergia. It is a coarse, wild grass, native of high, rocky woodlands from New England westward. It is not considered of any particular value, although cattle pasturing in woods will eat it while young and succulent.

No. 2 is *Oryzopis melano carpa*, or Black Mountain Rice; also a native of rocky woods, and not considered worthy of cultivation, inasmuch as we have hundreds of more valuable species.

My Plan of Planting Potatoes.—Plow the land well; harrow thoroughly lengthwise the furrow—do not cross-harrow—furrow out the usual distance apart. If there is not enough loose loam on the surface to cover the seed deep enough, put hands ahead of the planting to make holes deep enough to cover the seed; cover all with fine mold. In this way the potatoes will come up all alike and before they are expected to appear. For early crops, I plant Early Rose and Early Goodrich; for late, Peach Blow, Prince Albert and Albany Seedling.—R. BLOCK.

To Prevent Cut-Worms Working in Corn.—The New England Farmer says: "An old subscriber some years ago informed us that to prevent cut-worms from eating corn, he put a tablespoonful of lime in the hill when planting, and the same on the hill after covering, and that kept the worms away. Another mode, which is stated to be efficacious, is to mix equal parts of Peruvian guano, salt and plaster, and add a tablespoonful to the hill at the time of planting."

Beets on a Dairy Farm.—Mr. HARRIS LEWIS, near Little Falls, N. Y., states the cost of raising beets on his farm last season—including cost of all labor, cost of seed, etc., as $46.50 per acre. The yield was 900 bushels, bringing the cost per bushel to about 5½ cents. Two cents per bushel should be added if the cost of the manure is taken into account.

Clovers for Checking Prairie Fires.—A correspondent of the Farmers' Union recommends sowing Alsike and White clover in belts, for the purpose of checking prairie fires. He says two pounds of seed will surround a quarter section with a great carpet that is as good as water, and then it will spread both ways, and so increase the security.

Plaster on Potatoes.—A correspondent asks us if we have ever used plaster on potatoes with good results. To be sure we have. We should as soon expect to grow good crops of potatoes without culture as without plaster.

Diary of a Ruralist.

DAILY RURAL LIFE.

FROM THE DIARY OF A GENTLEMAN NEAR NEW YORK CITY.

Summer Pruning Grapes.—*May* 18.—I am often amused at the "hue and cry" raised by some persons against summer pruning of the grape vine. The manner in which it is often performed is certainly enough to bring it into ridicule; but in these instances it is only the result of ignorance, not because judicious summer pruning is not as important as pruning at any other season. I have commenced what I call summer pruning of my vines, which is simply breaking out all surplus shoots that appear. Five or six shoots will often issue from a single joint, and common sense ought to teach a man that one or two is sufficient, and that the best way of disposing of the others was to break them out while young. There is no good reason for allowing more branches to grow than will be required next year for fruiting; and if they are few in number, the more vigorous in growth. Judicious summer pruning not only saves much time in the general annual pruning, but concentrates the strength of the vine and directs it into channels where it can be used in years to come. Later in the season I prune the vines again by merely pinching off the ends of bearing canes—just enough to check wood growth and force it into the fruit and leaves adjoining. Cutting off several feet in the length of the young growing shoots is what some persons may call summer pruning; but it should be called "summer slashing with intent to kill."

During my absence last summer, one of my workmen tried his hand upon a row of vines, using a pruning hook instead of his thumb and finger, removing about two feet of the upper portion of each young shoot. The results were that no fruit ripened, and the vines were nearly killed. I have often seen this kind of summer pruning in gardens where grapes were said never to do well.

White Clover in Lawns.—*May* 19.—In making an addition to my lawn last year, I sowed a little white clover seed with several varieties of grass. The dry weather this spring injured the grass considerably, turning it to a dull yellow color; but the clover remained uninjured, and looks bright and green. Those who are seeding down lawns on rather light and dry soils will find that white clover is one of the best plants to form a close, handsome carpet of green, especially in times of drouth. Of course, there is nothing like Kentucky blue grass, and similar fine-leaved species, for a handsome lawn; but a little white clover mixed in will materially assist in times of drouth.

The Purple Beech.—*May* 20.—As I look out upon my lawn, I cannot help admiring a splendid specimen of purple beech, planted seven years ago. The young branches droop and swing about in the wind as gracefully as those of the weeping willow, and their dark, glossy, purple leaves are really magnificent. Then the strong contrast between the color of the common beech and the purple-leaved is so marked that one is inclined to admire each more than if there was but one variety. The purple-leaved, cut-leaved, weeping, and our common wild beech, are all splendid trees, too seldom seen among other species planted about dwellings or in parks and pleasure grounds.

Varieties of the Norway Spruce.—*May* 21.—I presume every one who has noticed a group of the Norway Spruce must have observed how greatly they vary in appearance and growth. These variations are of course natural, the soil or culture having very little effect in changing the habit or form of growth. In raising these trees from seed an almost endless variety has been produced, and some of the most marked, like the *Abies inverta*, with its coarse branches growing, as it were, wrong end up, or the *H. pendula*, with beautiful weeping branches, have been selected for propagation as distinct and desirable varieties. But even among the ordinary seedlings, sold by nurserymen, there is a great diversity in form and habit of growth. Some are very compact, while others are loose in habit, the branches being more or less pendulous. The length of the leaves varies considerably; also the size and number of small lateral shoots, all of which give variety and corresponding beauty to groups. I selected a specimen plant from a quantity of seedlings eight years ago, and it is now only two feet high and about three broad; while other trees, from the same lot, are fifteen feet high. This dwarf tree is apparently as healthy as the larger ones, but of a different habit of growth. When I go to a nursery to purchase trees, I always look for these variations from the original or natural type, because a variety even of the same species of tree will add something to the beauty of one's grounds.

Save the Maple Seed.—*May* 22.—The silver and scarlet maple seed are ripe, and falling from the trees, and now is the time to gather them for planting. The seeds of these trees are very delicate, being very little more than two thin leaves folded up into the form of a bud. If planted within a few days after ripening, they will grow readily and rapidly, and by Fall become plants two or three feet high. How simple an operation it is to grow trees when one knows just how and when to begin! But there is little use of trying to teach people who do not want to learn; although whenever I ride over the Western prairies, and see thousands of farmers' homes with not a tree about them, I feel like turning missionary *and go to preaching about trees.*

A silver maple tree will grow large enough from seed in four or five years to make quite a handsome shade tree; and yet, nurserymen have to beg of people to purchase them, when one year old, for a dollar and a half per thousand, delivered free to any post-office in the United States! Sunstroke ought to be far more prevalent than it is among those land-owners who will neither furnish their cattle nor themselves and families with cool, refreshing shade, when it can be had so cheaply. A dollar and a half per thousand for trees, and still you have none for shade, shelter, or ornament! I wish I could pin this in big letters on your coat tail, you miserable, shiftless specimens of humanity, who have neither a green spot in your hearts, or green leaf spread to the winds before your doors.

Farm Economy.

ECONOMICAL NOTES.

Hen Manure for Corn.—L. S. asks the best method of applying hen manure to corn. The best method we have ever employed was to mix the hen manure with an equal quantity of gypsum, and use it to mix with the soil as a covering for the corn. We have seen good results also by dropping this mixture in the hill, covering slightly with soil before dropping the corn, and then planting on top of it. An excellent way, if one has not gypsum, is to mix it with muck or loam (under cover), dampening the whole, and let it lay three or four days; then mix it up well with a hoe (dry), as you would mortar; then apply it in the hill as above directed.

Industrial Topics.

NECESSITY FOR EDUCATED FARMERS.

BEING one of those farmer's sons who would have had an education if I could, I want to say a word upon the education of farmers' sons generally. It is quite common for them to be spoken of as verdant, slovenish, etc.—adjectives which become doubly cutting when those to whom they are applied feel them to be true to a certain degree, yet are ignorant of the way in which they might improve. The feeling that this is the inevitable result of life on the farm, has done much to make the profession unpopular, and has had no small influence in sending those who were born there, and were well fitted to conduct its business successfully, away to the village or city, to engage in something that would at least free them from this fault.

Why need a farmer's son, any more than any other, be an ignoramus or a clown, even though he cannot get more than a common school education? Nearly all can get this; and then the same amount of application that would be necessary to make it complete under the most favorable circumstances, would do very much towards it, even in their homes, in the spare hours they might find, which are so generally wasted. Books and papers can be obtained at a rate that is, to some extent, within the reach of all. Yet it is not enough to read simply; it must be with some definite purpose. There are cords of books and papers that leave one worse than they found him, and farmers are the very ones who encourage their production by buying them. I know of families who cannot afford to take the RURAL or the Tribune, yet cannot live a week without the New York or Weekly. These papers, from the character of their stories, do more harm among farmers' children than anywhere else, because they do not have enough society most of the time to counteract their influence. The tendency toward light reading is so strong as to produce permanent injury. The country is flooded with stories. They come in books, in magazines, and papers, and are read by farmers' families generally, with far too little discrimination. The effect is to destroy all taste for more solid reading that requires a stronger effort of the mind, and imparts more valuable information. Yet this solid reading that makes thinking a necessity, should be the groundwork upon which to build an education, and the lighter kinds should only be used as a recreation. There is much of it that should not be read at all.

Most of the farmers with whom I am acquainted are comparatively uneducated, and from not having its advantages themselves, fail to appreciate its value to their children, who are growing up to fill the places of their parents with very few ideas beyond the business of the farm. It is this willful blindness to their own true interests that makes so large a number of farmers incapable of taking a higher position in society. You must talk to them of farming or they are not interested. Their minds narrow down to their own petty interests, and they wear themselves out to accomplish what an educated mind would do with ease. Many of them are not conscious of their own defects, and are the most difficult to get along with in the town or church, because their minds work perpetually in the same old rut.

Farmers do not think enough. They use their muscles more freely than they do their intellects, which are weak for want of exercise. If they cannot get this at the right time and in the usual place under instructors, they ought to have a course of reading that would produce a similar effect upon the mind, and fit them not only to form, but also to express opinions upon those questions that concern them in common with others. This would give a new zest to life, and would fit them to do their own work better and easier, while as citizens they would far excel their present reputation. ANON.

West Haven, Vt.

MANAGEMENT OF HIRED HELP.

THE English farm laborers' strike is attracting much attention to the condition, habits and customs of farm laborers in all countries. The laws of labor are the laws of commerce—supply and demand. The rules which should regulate labor are such as will be just to employers and employed. Industrial rights must be recognized. Good care of the laborer is just as important, as a matter of economical policy, as good care of a horse—to say nothing about the fact that a man is a human being and a part of the human brotherhood. Every farmer finds that it pays him well to keep his horse in good condition, give him plenty of feed, rest when necessary and the proper grooming. The hygienic law which operates in the case of the horse should operate in relation to men and women. In one case, it is true, ownership makes it a matter of self interest; in the other self interest should make it a matter of policy to provide for the comfort of those who work the farm, and upon whom we depend for the production and securing of our crops.

We commend local legislation in this matter. We believe it policy for a community of farmers to meet, fix upon the number of hours that shall be regarded a day's work, the prices they will pay the different classes of laborers, the amount that shall be allowed per hour for extra time, and then operate upon the co-operative principle of "helping each other out," on occasions. We have known good results to follow such combinations—results that were not good to the farmers because their co-operation oppressed the laborers, but because it defined distinctly the relations between employer and employe, and enabled each to understand and appreciate the other. There must be mutual concession. We warn the farmers of this country that unless there is some such distinct and definite relationship established by them, the laborers will combine to establish it. The strikes in the cities, the labor unions, self-protective societies, Internationals, etc., etc., are steadily at work seeking to combine labor against capital—seeking to control capital by controling labor. This matter must be met, sooner or later, as it is being met in England, and there will be the same disturbance of relationship and of values, unless a wise discretion induces the taking of steps in advance to recognise the rights and meet the needs of the workingmen.

The Swine-Yard.

PIG-PEN PAPERS.

Origin of Improved Cheshire Swine.—As I am the author of an article on the "Origin of the improved Cheshires of Jefferson County, N. Y.," published in the RURAL NEW-YORKER, the New York weekly papers and the Live Stock Journal, the inquiry of J. A. KEARNY, in RURAL of May 11, as to whether A. C. CLARK, Henderson, Jefferson Co., N. Y., or T. T. CAVANAUGH, Watertown, N. Y., is the "originator of this justly celebrated breed," seems to require of me further explanation. It is a well known fact here, that A. C. CLARK exhibited his stock of hogs at the State Fairs, previous to the purchase of a sow of T. T. CAVANAUGH, as Yorkshire. The sow Mr. CLARK purchased of Mr. CAVANAUGH, he crossed with a boar he imported from Canada. The progeny so nearly resembled Mr. CAVANAUGH'S pigs that they (CAVANAUGH and CLARK) agreed to name them the Improved Cheshires at the State Fair held in Utica in 1863; Mr. CAVANAUGH crossing with Mr. CLARK'S boar, and Mr. CLARK with Mr. CAVANAUGH'S boar. They became the "original breeders," as stated in the article alluded to in RURAL of March 16th. In view of the above facts would it not be just to give Mr. CAVANAUGH the credit of being the originator of the Improved Cheshires?—S. S. GARDNER, *Jefferson Co., N. Y.*

Peas for Pigs.—F. R. S., Hamilton Co., O., asks some of our readers to tell him whether it is profitable to sow land in peas for pigs; and at what time in their growth it is most profitable to turn them into the field; if peas are as profitable as clover. He also asks the best kind of peas to sow for this purpose. On soils adapted to pea culture, if the season is favorable, we have seen good crops grown for pig forage—the pigs being turned in just as the peas get their growth, hurdles being used to prevent them running over the whole field at once. In this case a small pea (we do not know the name) two-thirds the size of the black-eyed marrowfat, was sown. The soil was a rather stiff, rich, clayey loam, well drained.

Sugar Beets for Swine.—A writer in the Practical Farmer says that he finds the sugar beet very good to fatten his hogs with. He begins with the beets and finishes off on corn. As the result of his experience, he found that his hogs fattened earlier, with a material saving of corn.

The Apiarian.

ITALIANIZING BEES.

D. L. ADAIR, in his "Outlines of Culture," states that he finds the following plan for Italianizing bees, the easiest, quickest and best:—Empty all the bees out of the hive to be Italianized, into a box, by taking the sections apart, or frames out, and brushing all the bees off the comb; while doing so hunt out the black queen and capture her. Have about a quart of water sweetened with sugar (not honey) into which put a few drops of oil of anise, or anything that will give a decided perfume, sprinkle the bees with this, thoroughly mixing them up by stirring them, the box being set open side up.

Let the box set in that position for ten or fifteen minutes or longer, until the bees begin to show uneasiness, by running about and over the sides of the box. Now take the Italian queen, thoroughly wet her with the perfumed sweetened water, and drop her in the center of the box among the bees. She will remain quietly on top until some of the bees notice her, when they will immediately set to work to lick her dry, and in a short while she will crawl down among them out of sight, and all will be right. As she disappears, have a tumbler or cup and dip her up with a half pint or more of bees, and put them in the brood chamber, when the remaining bees may be emptied in front of it and will enter.

In handling the sheets of comb, look for queen cells and cut them all out. By clipping the wings of the Italian queen she will be prevented from escaping with a swarm, and the apiarian will be enabled to recognize her afterward. A new swarm, before it is hived, may be Italianized in the same way, if you have a queen.

BEE NOTES AND QUERIES.

Honey Bees and Grapes.—Confirming what has hitherto been said in these columns on this subject, H. B. LAZIER, West Virginia, says the bees, wasps, hornets and yellow jackets almost ruined the grape crop (including Delaware, Catawba, Clinton, Hartford Prolific, Isabella, &c.,) before the fruit was perfected, especially the thin-skinned varieties. WILLIAM BARNSHACK, Troy, Ill., writes that the honey bee destroyed one-third of the grapes in that section in 1871. He had to gather his grapes, in order to save them, ten days before they were fit to make good wine. He finds he has got to give up bees or grapes. He says the hornets and yellow jackets help the bees in this destruction of grapes.

Mortality Among Bees.—The bees in this section came through the winter, till March, for the most part, in good condition; but some lost their queen, and dwindled and died, leaving honey in their hives; others starved, and others died with dysentery, so that a great share are dead—some say one-half. The Bee Journal's report from the Western States says that nearly one-half of the bees are dead—mostly caused by dysentery. Reports from the Eastern States are nearly the same—caused by a long, cold winter, with not warm days enough to admit of their coming out to exercise and discharge their contents.—A. WILSON, *Marcellus, N. Y.*

Cause of Dysentery in Bees the Past Winter.—The Iowa Homestead says:—"C. DOEDANT, than whom no wiser "bee man" lives in America, tells us that he thinks bees in some localities stored inferior honey last Fall, which caused dysentery. He says that from some of his combs last October, he emptied honey very watery, and appearing more like cider than honey. In some cases he thinks bees carried in cider. We think in some places bees may have suffered the past winter from dysentery caused by poor honey; but in all cases we have examined they have died from natural causes."

Honey in Wood.—I saw, the other day, a barrel of extracted honey which had been kept over from last year. It was at the station to be shipped. Now, I would like to know if storing honey in wooden casks will not affect its flavor unfavorably? It seems to me to be an important thing to know. I have not dared to use barrels for this reason.—N. Y. C.

WE have seen old whisky barrels recommended as unlikely to flavor the honey unfavorably; but we cannot speak from experience.

To Prevent Honey Candying.—F. R. P. asks what will prevent honey candying after it has been extracted and put up in bulk. We know no method; perhaps our readers do. We remember a housewife used to set her candied honey in a vessel of warm water on the stove before serving it on the table, and it was as dilute as if freshly made.

Barrels for Extracted Honey.—I should like the bee keepers' experience as to the best kind (of wood, size, etc.,) of barrels in which to store extracted honey. This is an important matter. We do not want to lose our honey nor have its flavor destroyed after it is gathered and extracted.—R. N. Y.

Water for Bees Rearing Brood.—Mrs. TUPPER says she has tried giving water to bees after they have commenced rearing their brood, and has also tried withholding it, but could see no difference in their prosperity.

The Garden.

MUSHROOM CULTURE.

A WRITER in the Canada Farmer says: Many persons regard the culture of mushrooms as a great mystery. But it is not so. On the contrary, it is as simple as raising a crop of corn, or cultivating a grape vine or a bed of cabbages and can be done in out-of-the-way places, taking up little room, and requiring little attention. Mushrooms, too, can be raised in Winter, when no other crop can be, and a regular supply had for family use. Or, if conducted on a larger scale, with a view for disposal in our city markets, there is nothing to hinder, and a most profitable thing can be made of the business. All farmers keep horses and cattle, and have plenty of manure; and it may be mentioned that the quantity used in forming mushroom beds is not lost, for it can, when new beds are made, be returned to the manure yard. It must be borne in mind, too, that there is no necessity to build a place to grow this vegetable. It can be grown almost anywhere in an enclosed place—even in the kitchen or sitting-room; but the best out-of-the-way places are a close *horse-stable*, which is regarded as the best of all; mild cellars, enclosed out-houses of almost every kind, where the soil in beds can be kept from freezing.

Now, for the mode of growing. Take a box, say ten or twelve inches in depth, and as long and broad as the space will admit of or may be desired: pack it down with *six* inches of horse-droppings, on this *three* inches of dry cow droppings, broken somewhat fine; moisten this (not wetting or deluging it) with a strong brine of nitre or saltpetre water. In this cow manure plant the spawn, which can be obtained at the best horticultural stores, in the form of a brick; break in good size pieces, say as large as a walnut, and set in triangular shape, thus ***, and cover with from an eighth to a quarter of an inch (not more than the latter) of fine dry soil. Cover the whole with old carpet or any heavy cloth, *so that the light is completely excluded.* Of course it needs no sun but just the contrary, as perfect darkness is required.

GARDENERS' NOTES.

Good Beans.—Inclosed find sample of bean sent for name. I have raised many, but find it is a good eating bean, as well as a thrifty grower and bearer. The bean, when cooked and put on the table, cracks open and the skin peels off, and the flavor is splendid. I have asked many, and some think it a cross between the Lima and Butter bean; but I herewith leave it to your judgment.—A. D. SMITHERS.

THE purplish, black-spotted bean, is the *Phascolus multiflorus* or Scarlet Runner; and the large white bean is only a variety of the same, with white flowers. They are both sometimes cultivated for the table, but most persons think they are not equal to many other of our choice sorts.

Preserving Garden Stakes.—A correspondent of the Country Gentleman has preserved his stakes—made of pine—by boiling them for a short time in a solution of blue vitriol; and after long use they are as sound as the day they were made, while other stakes, coal-tarred, have failed.

To Secure a Good Crop of Onions.—A neighbor of mine, WM. WALDRON, says the way to secure a crop of onions is to sift pulverized hen manure over the beds, after the seed is sown. No trouble to raise a good crop on almost any land.—H. C. M., *Nyack, N. Y.*

The Canadian Wonder Kidney Bean has proved well adapted to forcing in 10-inch pots. Planted in February, in fine soil, and kept at a temperature of 55° to 60° at night, and 65° to 75° by day, given air at mid-day and kept 6 to 9 inches from the glass, they produce well.

The Poultry-Yard.

THE LEGHORN RUNT.

THIS pigeon is attracting some attention in England. It is described thus in Moore's Columbarium, published in 1735, by MOORE, who says:—"The Leghorn runt is a stately, large pigeon, seven inches or better in the legs, close feathered, and fast fleshed; extremely broad-chested, and very short in the back. He carries his tail when he walks somewhat turned up like a duck, but when he plays he tucks it down. His neck is longer than any other pigeon, which he carries bending like a goose or swan; he is goose-headed, and his eye lies hollow in his head, with a thin skin round it, much like the Dutch tumbler, but broader. His beak is very short for so large a bird, with a small wattle on it, and the upper chap a little bending over the under. They are a very tender bird, and great care ought to be taken of their young ones. I have killed of their young ones, which when on the spit were full as large as middling spring fowls; note that these and all other runts increase in their bulk till they are three or four years old. As to their feather, they are various; but the best that I have seen were either black or red mottled. There is a vast difference in these birds; and I have seen very bad ones that have been brought from Leghorn, little better than a common runt. However, this is the genuine true description of the Leghorn runt, which is more valued than any other sort of runts. This pigeon was originally bred either at Pisa in the Duke of Tuscany's dominions, or at Pisæ in Peloponnesus, and from thence brought to Leghorn, and so transmitted to us."

The illustration herewith given is a portrait of a bird belonging to Mr. TEGETMEIER, who says the artist has caught the true attitude of the bird, and that the luster of the black feathers is very remarkable, surpassing anything he ever saw in a pigeon, excepting, perhaps, in one or two of the black magpie variety.

POULTRY NOTES AND QUERIES.

Packing and Preserving Eggs.—I noticed in RURAL NEW-YORKER, May 18, the inquiry of "One Rural Reader" about packing and preserving eggs. He says he used one pint of salt and one pint of lime to a pail of water, and it discolored the eggs. He used *too much* salt. He can judge from the following:—The firm that I am with preserved 4,200 dozen this month. We used a half a barrel of lime and a quart of salt in 125 gallons of water. Use no more water at first than will conveniently slake the lime; then, after the lime is slaked and still warm, put in the salt and the remainder of the water; stir it well while putting salt and water in. After the eggs are in the pickle, and the package they are in is full, cover them with muslin (but do not let the muslin hang over the edge, as it will absorb all the pickle), and put the sediment of lime on the muslin to hold it down and exclude the air. When taken out, they must be washed off in clean water and well dried before packing for market. If he uses salt at the above proportion, his eggs will never be discolored; but he can use as much lime as he chooses—the more the better, as he can never make the pickle too strong of lime.—W. F. CLAUSEN, *N. Y. City, May* 20, 1872.

Lice on Chickens.—The following will kill lice on the first application: Put six cents worth of cracked *Cocculus Indicus* berries into a bottle that will hold a half pint of alcohol; fill the bottle with alcohol, and let it stand twenty-four hours. When the hen comes off with the young chickens, take the mixture, and, with a small cotton rag, wet the head of each chicken enough to have it reach through the little feathers to the skin; also, with the same rag, wet the hen under her wings. I have used this three years, and know it to be "a dead shot." Be careful that no child, nor any one else, uses it, because it is a *deadly poison*.—N. P. RIKER.

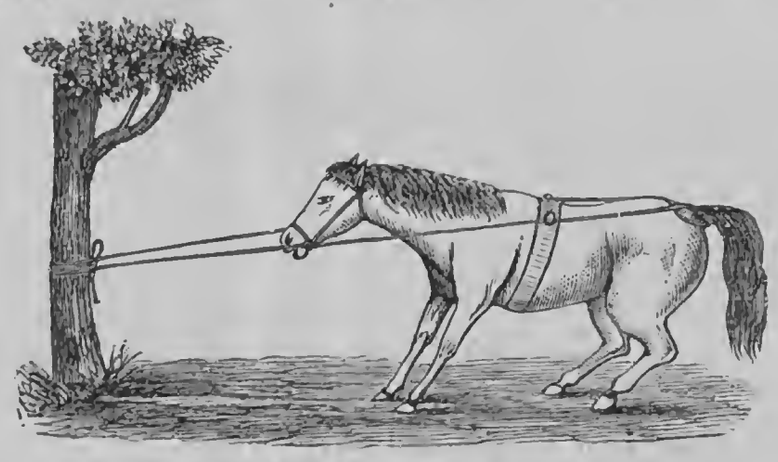
Chicken Story.—We had a bright, lively, yellow, little hen sitting in a box about three feet from the ground. When the first chick made its appearance, it unfortunately fell out of the nest, and was chirping around at a great rate, as it naturally would. The hen flew out, and catching the little fellow in her beak, went back into her nest with it. My wife is witness to the fact.—D. D. HENRY, *White Co., Ark.*

Remedy for Lice on Chickens.—"A Constant Reader" will find a remedy for Lice on young chickens by applying lard under the wings and on top of the head. A preventive is to grease the mother of the chickens when taken off the nest, and pen in a clean coop.—A. G.

The Horseman.

SPRING-HALT.

WM. HORNE, V. S., in the Western Farmer, says:—"From my own experience and close observation, I am inclined to the belief that it is, to some extent at least, curable. One thing is certain, the extreme spasmodic action may, in most cases, be mitigated. These being the facts it follows that a trial is at least justified by common sense.



HORSE PULLING AT THE HALTER.

Spring-halt is clearly a nervous disease; an undue action of nerve power in the region of the hip, and not as some scientists affirm, a lack of nervous energy. The will of the animal or instinct has no power over the action of the limb. In fact volition, so far as the control of the limb is concerned, is either destroyed or very much impaired.

It follows that whatever our remedies, if not of a nature to act directly upon the nervous system, will avail nothing, be worse than useless.

Treatment.—Give upon each morning half an ounce fluid extract of nux vomica. In the evening give an ounce fluid extract valerian. Hold up the head and place each upon the base of the tongue as near as practicable. This is best done by a long-nozzled flexible syringe. Next to this a long-necked bottle, but as the quantity is small the syringe is much the best. For external application —rub along the spine, its whole length, the following: Fluid extract of opium, oil cedar 4 oz., cod liver oil 8 oz. Rub also the hip or hips, if both are affected. Diet as you wish, only change gradually to a fresh one. After above treatment for four mornings, give half oz. fluid ex. Indian hemp, foreign (*cannabis indica*) mix with one ounce rain water. Omit all other internal medicine, when this is given. Repeat this process for two courses. Then withhold for about 3 or 4 days. Then repeat as before, watching its action afterwards, to prevent its recurrence. If you have symptoms of its approach, give a few doses as above and rub as recommended.

NOTES FOR HORSEMEN.

Hip "Sweeny."—I have a very valuable horse—a promising trotter—that has a sink in its hip. It has been pronounced by competent judges a case of hip sweeny. I have used a great many remedies for it, but have not yet been successful in relieving her. I would feel under obligation if you would give a remedy. I have tried piercing it with needles, and putting spirits of turpentine on it, but with no success.—M. H. G., *Lancaster, Ky.*

THE LEGHORN RUNT.

Prof. MAGNER says, "If you wish to pursue local treatment of sweeny, or filling up the cause of sweeny is to be removed and the shoulder filled out.

Horse Pulling at the Halter.—We have several inquiries for a mode of breaking a horse of pulling at the halter. Here is a method (illustrated) that we have known to succeed. Get a strong half-inch cord 22 feet in length; put the center under the tail like a crouper; twist them a few times as you bring them forward over the back; pass forward on each side of the body. Knot them across the breast, then pass them forward through the halter below the jaw. Tie firmly to a tree, post or stall, and excite the animal by any means that will cause him to pull until the habit is overcome. You may even whip across the nose keenly until there is perfect submission, which will not require long. Hitch in this way for a few days, or so long as there is any predisposition to pull on the halter.

Cure for Whistling in Horses.—I have tried the following, and cured a horse that whistled badly. The recipe was furnished me by a skilled horseman. Put from 10 to 20 drops of *spongia tosta* on the tongue of the animal in the morning; and at night the same proportion of Fowler's Solution, in the same manner. Repeat alternately from four to six weeks, giving more or less according to the severity of the case.—R. N. P.

Hygienic Information.

CAN CONSUMPTION BE CURED.

UNDER the above caption I trust you will grant me space in your wide-spread journal, for the benefit of your consumptive readers, to whom I doubt not you are a friend; and I am sure if there is any one in need of friendship, sympathy and encouragement it is the consumptive invalid. I wish to make known the prescription and hygienic rules that have restored me from the second stage of tubercular consumption to the enjoyment of perfect health. There are also other cases I could cite that have been restored by the same means—among the number a niece of mine residing in Vermont, who had all the symptoms of the advanced stage of pulmonary disease—such as hectic fever, cough, emaciation and purulent expectoration—and who is now well and in the enjoyment of uninterrupted good health.

As I wish to be as brief as possible, I will not trouble you with a history of my own case, but will merely say that all my friends who knew my condition regard it as a most remarkable cure. I do not wish to hold out vain hopes to the invalid, but from experience in my own case and many others, I would advise all consumptives, of both sexes, to give this mode of treatment a trial, and I trust it will prove as efficacious as in my own case. I obtained the prescription from a gentleman who had been cured of consumption and asthma by its use during a residence at Guayaquil, Ecuador. The prescription is as follows:

Cundurango bark	one ounce.
Extract carrageen (sea moss)	half ounce.
Calisaya bark	half ounce.
Podophyllin (mandrake)	20 grains.
Powdered horseradish	half ounce.
Port wine	one pint.

The dose is a teaspoonful in a little water half an hour before each meal. The following instructions should govern invalids: Take out-door exercise; live in the open air, exposed to the sunlight; dress in light colors, the nearer white the better—this is important; take deep inhalations of pure air, moderately at first, but latterly from three to five times per day, five minutes at a time—this will, in time, expand the chest and lungs; do not despond, be hopeful; eat plenty of good, nourishing food; take a bath daily in cool or tepid water; avoid night air and damp weather.

The climate of Colorado has great repute as a resort for invalids. The air is pure and dry, very little rain falling, and almost perpetual sunshine. There is no fever and ague or damp night air known here. Thousands, it is said, whose cases were considered hopeless, have here found permanent and gratifying relief—and those who come in the early stages of the disease, generally get well. The altitude—outside of the mountains—varies from 4,000 to 8,000 feet above the level of the sea. Consumptives coming to Colorado should seek the lower altitudes at the start. MRS. MARTHA SOMERBY.

Denver, Col., May 21, '72.

HYGIENIC NOTES AND QUERIES.

Simple Remedy for Dandruff.—JOHN L. DAVIS, in the American Journal of Pharmacy says:—"The writer, during a number of years, tried the different alcoholic solutions of castor oil and many other preparations without permanent benefit, and as a last resort, was led to adopt the plan of cleansing the scalp with borax and carbonate of potassa. This proved effectual, but after a persistent treatment of some months the hair became sensibly thinner, and perhaps would have soon disappeared all together. The belief that dandruff arises from a disease of the skin, although physicians do not seem to agree on this point, and the knowledge that the use of sulphur is frequently attended with very happy results in such diseases, induced me to try it in my own case. A preparation of one ounce flowers of sulphur and one quart of water was made. The clear liquid was poured off, after the mixture had been repeatedly agitated during intervals of a few hours, and the head was saturated with this every morning.

"In a few weeks every trace of dandruff had disappeared, the hair became soft and glossy, and now, after a discontinuance of the treatment for eighteen months, there is no indication of the return of the disease. I do not pretend to explain the *modus operandi* of the treatment, for it is well known that sublimed sulphur is almost or wholly insoluble, and the liquid used was destitute of taste, color or smell. The effect speaks for itself. Other persons to whom it has been recommended have had the same results, and I communicate the result of my experiments in the belief that it may be valuable and acceptable to many who have suffered in the same manner as myself."

Whooping-Cough Remedy.—Tea made of the leaves of the common sweet chestnut tree, sweetened with honey or white sugar, and drank of frequently and quite freely, during the day, will effect a cure in a few days. Every housekeeper should gather chestnut leaves every year, and save them, just as much as they would any medicinal herb, because they are good for any cough. In many places the chestnut does not grow, consequently its leaves cannot be gathered; but the common red clover blossoms, prepared in the same way, are a very good substitute.—EXPERIENCE.

Bronchitis and Catarrh Remedy.—Please say in answer to Mrs. L. PREEBLES, in RURAL NEW-YORKER of May 18th, that salt and water used as a gargle for the throat for bronchitis, and snuffed up the nose for catarrh, will, in most cases, effect a permanent cure. For bronchitis use after each meal and before retiring; for catarrh, as often as the nose becomes stopped up or breathing difficult. I have also found that a small piece of Saltpeter placed upon the tongue and allowed to dissolve slowly and run down the throat, will almost immediately relieve bronchitis or sore throat caused by a cold.—W. A. WEAVER.

Ringworm Remedies.—Take fine gunpowder, mash it very fine with a knife; moisten with water sufficiently to rub on like thin salve; apply to the spot affected, two or three times a day, until it heals.—H. R.

TAKE an old penny, or a piece of copper, put it in a tea cup, and pour enough vinegar on it to cover it; let it stand until verdigris appears; rub the verdigris on the ringworm, and I'll warrant a cure.—A SUBSCRIBER, *Media, Pa.*

Floricultural.

THE ROSE SECRET.

It may perhaps interest your readers to hear that from the different articles which have appeared in THE GARDEN in reference to what is called "The Rose Secret," I got "a notion;" and instead of throwing my prunings away this spring I used them as cuttings, putting a whole lot of them—about a dozen or more—in (I am almost afraid to mention it) a marmalade jar filled with coarse sand and water, with sufficient of the latter to be about a quarter of an inch or so above the sand. I then plunged the jars into a slight hotbed (covered by a Rendle span-roof protector), and let the cuttings have all the light and sun possible—never shading once. This was about eight weeks ago. Last week I thought I would have a look how the cuttings were going on at the bottom, as they appeared very healthy at the top; fancy my delight to find that the new roots had covered the sides of the jar, and were matted together in such a way that I had to wash the sand away under a tap to be able to separate the cuttings without breaking the roots. I call this "striking like willows;" some bits with only one eye at the top struck almost better than any; others, where I put perhaps two eyes beneath the surface of the sand, have struck from every eye. I can assure you I never saw cuttings so well furnished with roots as these were.

Out of about 120 cuttings of some three dozen different kinds of Roses, I only missed striking fifteen, which I think is a very encouraging result; anyhow I shall consider it the road royal, and experiment again in a similar manner in summer, when I shall pay more attention to the preparing of the cuttings and the way they will strike the readiest. The beauty of my system is its extreme simplicity; the trouble or labor is *nil*; beyond the mere procuring of the cuttings, all one has to do is to leave the jars alone, only giving a little water from time to time to replace what has been lost by evaporation.

As to the size of cuttings, I have put in anything—thick or thin, pithy or weedy, straight shoots or jointed ones, shoots with from one to six eyes—only taking care that the cut in every case was a clean one, such as a good sharp knife will make.—MAX KLOSE, *Rose Cottage, Chelford, in Garden.*

SELF-TYING STAKE FOR CARNATIONS AND PICOTEES.

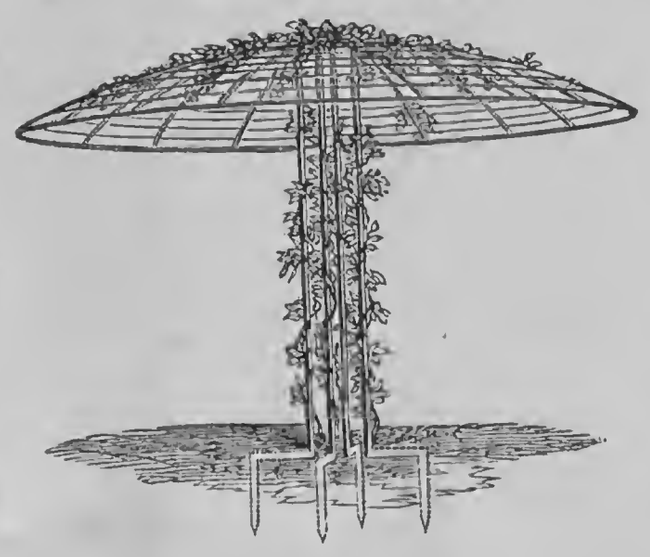
Our lady readers will be interested in this cheap and lasting, self-tying stake. Fig. 1 shows it as it is made for carnations, by taking galvanized wire, about one-twelfth of an inch in diameter, and twisting it in a long spiral, about four times, around a stiff, straight piece of wire, a quarter of an inch in diameter—once around in about three inches, finishing with a sharp turn round the top about three-fourths of a revolution, and then cutting off so as to leave half an inch of straight wire at the tip; the straight part at the bottom being about nine inches in length. Fig. 2 shows it applied to a picotee, and it is stuck in so deep that the top bud shall just rise above it. The plant is then wormed round so as to let it fall into a position in the middle of the spiral stick; and when the top is also slipped into its place it will be found as safe as if it were tied ever so well, being supported by the bit of straight wire left for the purpose. A few yards away this stake is scarcely observed, so neat is it compared with ordinary sticks. Another good point is the freedom which it allows to the foliage and long hanging flower-stalks to fall away from it if they wish; and, in addition, if the stem grows after it is applied—as it nearly always does—it slides up without making any ugly hitch in an attempt to push up against ties, as in the old way.

FLORICULTURAL NOTES.

Climbers for Shading Greenhouses.—The Cottage Gardner says:—We have the following, and find them first-rate, never giving us any trouble as regards insects, and they are not syringed: *Tacsonia mollissima, T. Van-Volxemi, Passiflora cærulea racemosa rubra, P. Imperatrice Eugenie, P. Comte Nesselrode, P. Countess Guiglini.* They give us all the shade required, and are fine flowering climbers. They will succeed if grown in pots, but are best if planted out. Ours are now quite a sight—the shoots hang from the roof as climbers ought, in a month will be all in bloom, and they continue throughout the season. They are admired by everybody.

Vase Decorated With Grasses.—We give herewith an illustration of a vase decorated with grasses. This style of decorating table vases with grasses is growing more and more in favor. A little taste and skill will enable those who grow the ornamental grasses, or who live where they can gather the different species of our native grasses when in their perfection, to produce unique and graceful table ornaments without the aid even of flowers. With the grasses may be used some of the leaf plants with good effect.

A Garden Umbrella, or "Umbrella Trainer," (see illustration,) is now made of strong iron work as shown in the engraving. It is suitable for climbing plants, and the weeping ash is sometimes trained to it. It makes a beautiful garden or lawn shade when covered with foliage. The size represented herewith is twelve feet in diameter and eight feet six inches high.



GARDEN UMBRELLA.

Potting Orchids.—HENDERSON says that the best material he ever found for potting orchids, was a very fibrous kind of turf found in a dry part of a fresh water swamp, and mixed with sphagnum and charcoal.

Geranium Leaves are often made spotted by the rays of the sun striking on them when wet. This occurs indoors, where air enough is not present to evaporate the moisture before the sun's power is felt.

Entomological.

LOOK OUT FOR THE 17-YEAR LOCUST.

DEAR RURAL:—If you can find space, please insert the following notice of a brood of this singular insect, which is to appear along the Atlantic seaboard the present year. I am quite anxious to complete the chronological record of the appearance of the different broods, and shall feel greatly obliged if any of your numerous readers will inform me of the appearance or non-appearance of Cicadas in any parts of the territory mentioned. Let us fix the limits of this brood, as accurately as possible, so that seventeen years hence, and for all time,

VASE DECORATED WITH GRASSES.

those who come after us may know just where to expect these periodical visitors. We shall not have another opportunity for 17 years to come. C. V. RILEY.

St. Louis, Mo.

BROOD VIII.—*Septemdecim*—1855, 1872.

In the year 1872, being the same year as the preceding, and at intervals of 17 years thereafter, they will, in all probability, appear in the southeastern part of Massachusetts; across Long Island; along the Atlantic coast to Chesapeake Bay, and up the Susquehanna at least as far as to Carlisle in Pennsylvania; also, in Kentucky, at Kanawha in Virginia, and Gallipolis, Ohio, on the Ohio river. This is the brood referred to in Brood V, and which there is every reason to believe is the one recorded by Morton in his "Memorial," as occurring in 1633.

Dr. Fitch, in the account of his 3d brood (N. Y. Rep. 1, p. 39), says:—"The third brood appears to have the most extensive geographical range. From the southeastern part of Massachusetts, it extends across Long Island, and along the Atlantic coast to Chesapeake Bay, and up the Susquehanna at least as far as to Carlisle in Pennsylvania; and it probably reaches continuously west to the Ohio, for it occupies the valley of that river at Kanawha in Virginia, and onwards to its mouth, and down the valley of the Mississippi probably to its mouth, and up its tributaries, west, into the Indian Territory. This brood has appeared the present year, 1855, and I have received specimens from Long Island, from South Illinois, and the Creek Indian country west of Arkansas," etc.

There is every reason to believe that Dr. Fitch, in this account, has confounded this *septendecim* Brood VIII, with the great *tredecim* Brood XVIII, for it so happened that they both occurred simultaneously in 1855, but the exact dividing line of these two broods is not so easily ascertained. Certainly, after reaching the Ohio river, the *septendecim* brood extends beyond Gallipolis, Ohio, for Prof. Potter, in his "Notes on the Cicada decem septima," records their appearance at that place in 1821; and Dr. Smith records their appearance at Frankfort, Lexington and Flemingsburg, Kentucky, in 1838, and 1855. But I strongly incline to believe that well nigh the rest of the territory mentioned by Dr. Fitch was occupied by the *tredecim* brood, the reasons for which belief will be found in the account of brood XVIII.—*From the First Missouri Entomological Report.*

LEAF ROLLERS.

PLEASE inform me what kind of an insect is this which I inclose on a leaf of honeysuckle. Also tell me the best method of destroying it.—H. E. B., *Wales, Erie Co., New York.*

THE small, hairy, pale green worm, about a half inch long, which you send rolled in a honeysuckle leaf, is the larva of some one of the many species of *Tortrix*, more commonly known as Leaf Rollers. The eggs from which they hatch are laid by a very small moth, the specific name of which we cannot give without waiting until the caterpillar has passed through its various transformations and become a moth. We do not know of any better method of destroying than by killing the caterpillars by hand. Look over the plants every day and give every leaf you find rolled up a good pinch with your thumb and finger, or a pair of pincers. The caterpillars are so protected in their leafy inclosure that it is difficult to reach them with any liquid that might be thrown upon the plants. Small birds usually find these insects and destroy them; but few persons encourage the presence of our little friends; therefore, they are shy and do not frequent the arbor, or plants growing near a dwelling house; hence the superabundance of such insects as leaf rollers and other caterpillars. Sometimes syringing the plants with a solution of cresylic soap and water, or strong tobacco water, will keep the moths from laying their eggs upon the leaves; but when there are frequent showers the application must also be often repeated to do any good.

FIG. 1. FIG. 2.

SELF-TYING STAKE.

ENTOMOLOGICAL NOTES.

Grape Vine Borer.—Inclosed find a couple of borers and a specimen of their work on the grape vines in this vicinity. They are very numerous on my vines, and new to me. I do not think that Mr. FULLER says anything about them in his treatise on the grape vine.—J. W. MIDDLETON, *Brownsville, Neb.*

THE two specimens inclosed in the letter were smashed past recognition; but we found a perfect beetle in one of the pieces of vine inclosed in your letter. We recognize the beetle as the well known twig borer, *Bostrichus bicaudatus*, SAY. But this is the first time we have ever found it at work on the grape vine, as it usually confines itself to the apple tree. Its mode of attack upon the grape vine is the same as upon the apple, viz:—commencing just above a bud or small lateral twig, boring into the pith and thence downward two or more inches. These beetles feed in their perfect state, while most of the borers which infest our fruit trees are harmless, except in the grub or larval stages. We cannot suggest a better method of destroying these beetles than by burning all the trimmings of the vines—at least those showing the presence of beetles. Perhaps when apple trees become more abundant in Nebraska these pests will leave the vines and attack the apple.

Mounting Beetles.—In your article on Collecting, Transporting and Preserving Insects, you say that beetles should be placed in vials of alcohol. Is it necessary to do this? Can they not be mounted in a case the same as butterflies and moths? Last summer I mounted butterflies so, and would like to know why beetles can't be treated likewise.—YOUNG NATURALIST, *Spencerport, N. Y.*

Certainly, beetles are mounted and preserved in cases the same as other insects; but our directions were intended only for those who were constantly asking how to collect and send specimens to us. But, if you will look over the directions again, you will find that we told how to mount (pin) beetles when they were to be put into a case.

Scientific and Useful.

COAL OIL AND LAMPS.

Now that nearly all civilized people use this best of all portable light, it behooves us to study its nature and properties thoroughly, with a view to safety, in its use, to our persons and property. That there are good and bad oils, and safe and unsafe kinds of lamps, no one can doubt, who has either used them or observed them in use. Without "puffing" any special brand of oil, or any particular patent lamp, we think it the duty of scientific men to investigate the matter thoroughly, and by actual test ascertain which is the safe and which the unsafe kind of oil, and what kind of lamp is the safest and best; and when this is fully established, it occurs to my mind that rigid laws should be enacted and rigorously enforced, forbidding the vending of any other kind of oil or other kind of lamp. Is it true that metal lamps are safest? If so, then glass lamps should not be manufactured, or permitted to be sold to the public. Suppose it be true that a certain patent lamp is absolutely safe? Is it right policy or humane policy to refuse to say so in all our newspapers and other means of communicating such information, simply because it would give a gratuitous advertisement to the patentee? We think not. On the contrary, we feel bound to say that the patentee of such a lamp would deserve the thanks of all men, and his discovery, instead of being "hid under a bushel," should be "heralded from the housetop," and proclaimed by every tongue.

When FRANKLIN "tamed the lightning," when Sir HUMPHREY DAVY gave the world the Safety Lamp, and MORSE the Telegraph, and FULTON the Steamboat—or when any other of the many contrivances, for the use and benefit of man, were discovered, who would have hesitated to proclaim it first, last, and all the time, simply for fear that such proclamation would have given a gratuitous advertisement?

We do not ask for information concerning any particular brand of oil, or any given patent lamp. We only desire to know what specific gravity of oil is best, etc., and what is the best substance—utility considered—of which coal oil lamps are made.

We see it stated in some of our papers, under the advertising headings, that certain *metal* lamps "are *absolutely* safe and *non-explosive* with *any kind* of coal oil" (kerosene). We do not *believe* any such statement; but if we are wrong in our incredulity, then we desire to be "set straight"—not by interested patentees or those who have them for sale; but by those scientists who have the means and knowledge necessary to test the correctness or incorrectness of the assertion. Let us have light on this subject from those who are not groping in the darkness like your correspondent. WOODMAN.

Stanford, Ky.

Dairy Husbandry.

MILK FARMING IN NEW ENGLAND.

Imaginary Profit.

MANY persons have an idea that "milk farming" is not only exceedingly profitable but delightfully pleasant. Taking the price of milk to the city consumers at six to eight cents per quart, and often largely diluted with water at that, it is not strange that favorable estimates as to profits are drawn, nor is it difficult to figure up flattering returns. Say that a cow gives on an average 1,800 quarts of milk per year, and if 500 quarts of water be added, we have 2,300 quarts, which, at the moderate average of six cents per quart, amounts to $138. In the cheese making business the 1,800 quarts of milk will possibly make about 400 pounds cheese, which, deducting the cost of manufacturing, may net the dairyman $44. But then he has the trouble of hauling the milk to the factory twice a day, besides boxing the cheese and carting it to the depot.

The difference of $94 per cow in favor of the milk farmer looks like a very big item of profits for the one business over the other. The consumer, who pays a high price for a very poor quality of milk, naturally complains and not unfrequently charges upon the milk farmer extortion in prices and dishonesty in diluting the milk he sends to market, while a very general impression prevails that milk farming requires less labor and is less vexatious than almost any other branch of agriculture.

The Rugged Facts.

The bitter experience of the New England milk farmers divests this business of some of its imaginary pleasures, and the rugged facts, as detailed by a correspondent of the Massachusetts Ploughman, are not calculated to make one "hanker over much" for a business so uncertain in its profits and filled with so many petty vexations. We have no space for an extended enumeration of the troubles and abuses to which the New England milk producer is subjected, but we shall briefly allude to a few that are brought prominently to light by this correspondent:

In the first place, it appears that when milk is sold by the quart the farmer gets only half the price that the consumer pays for it. Leaving out those farmers in the immediate vicinity of Boston who send their milk in carts directly to market, it may be stated that milk is sent to Boston by railroad, distances varying from twenty to sixty miles. It is sent in small cans, each holding eight and a-quarter quarts. [Gallons, is it not?—ED.]

Now, it seems that from twenty-two to twenty-four cents per can is charged for freight and the delivery of the milk. In other words, the contractor takes one-half of the money for which the milk sells to pay for freight and his services, and the other half goes to the milk producer. The actual railroad freight varies from one to three cents per can, according to the distance and the amount carried in the can. From two to four cents per can is paid by the farmer to the collector who gathers up the milk at the different farms and delivers it at the car. This collector, it seems, although paid by the farmer, is employed, or is under the complete control of the contractor. The business of the collector is to gather up the milk and deliver it in due season on the car, and to carry back to the farmer the empty cans. The whole business is managed by the contractors, notwithstanding different associations among the producers have been formed from time to time to break loose from their thraldom.

Humiliating Annoyances.

The present season is given as an example. The contractors met and agreed to pay five cents a can less for milk than they paid last Winter. "This was late in September. The farmers had all arranged for Winter; they had bought their cows, filled their barns with hay, and many of them purchased their stock of grain. They all believed they could not raise milk a cent cheaper than last Winter; hay was dearer, and grain very little cheaper, and labor, an important element, no lower. They refused to agree to reduce their price. The contractors said, we shall pay you so much, and no more, and what are you going to do about it? We have the cars, and the customers in Boston, and you can't do anything else with your milk now that you have it on hand." Humiliating as this position is for the farmer, that is not the worst of it. He has no arrangement for making butter. He cannot sell his cows. He is prepared to make say $75 to $100 per month by selling milk, and he needs the money, and so, grumbling inwardly, and outwardly protesting, in the end he shamefacedly yields the point.

Losses on Milk.

Again, the contractor says, If you will agree to furnish me just so much milk every day, I will agree to take it; but the farmer cannot, in that way, sell all his milk. "Practically, he is entirely at the mercy of the contractor or the collector. They take eight cans to-day. You notify them that you shall have ten next day. We cannot take it, is the decree, and you cannot help yourself; or, what is worse, when your milk is increasing, the collector throws off two or three cans less than before, and when you ask an explanation, tells you he has not got the cans, they are all full, and again you cannot help yourself."

"After being worried in this way a few weeks, suddenly you find at your door half a dozen cans of milk returned; you ask the reason. 'Well, they say it is sour.' Sure enough it is sour, and would be very likely, after being carried in a wagon three or four miles, then to Boston, and very likely all over Boston and back again to your door, having been traveling two or three days. But the system demands that the producer must lose it. He does not know, and cannot know, where it has been, or how treated. He suspects that the milkmen in Boston, or the grocer, had an over-supply and so sent it back. In many cases he declares he had marked his cans, and is sure this was never his milk, and occasionally he finds milk returned which is still sweet and good so far as he can judge. But it is deducted from his bill and how can he help himself?

Watering the Milk.

"Again, when everything has gone smoothly for some days, and he begins to flatter himself that he shall at last have some comfort in his business, the poor producer is informed that his milk has been watered. He stands aghast at the idea. To be sure he does not milk his cows, and his men have charge of the milk. They *can* put in water without his knowledge. He protests that his men are honest, and in his heart he knows that if his milk was watered, it was done after it left him, in the car, in the milkman's stable, at the corner grocery, anywhere on its travels. He even suspects that the contractor has some spite against him because he advised the farmers to stand out about the price; but it is useless to say so. And, once more, how can he help himself?"

Relief Suggested.

This we call a decidedly rough looking paradise in which the New England milk producer has located himself, to say nothing of the vexations and troubles attendant upon the farm and the production of milk in the first instance. Such a humiliating thraldom we should say ought speedily to be broken; and it can be broken, if the milk farmers will associate together and build creameries in neighborhoods and contract their milk from these points in bulk. Let all surplus milk be made up into butter or cheese at the factory, and if the contractors are not willing to pay a fair compensation, or such price as the members of the association consider right and just, then let all the milk be turned into butter and cheese until such time as contractors shall be willing to recognize that the farmer has some right and voice in the sale and price of his product. Empty resolves, and associations that practically accomplish nothing but "words and smoke," will not reach the case. There must be a power behind the words and a way to carry resolutions into practical operation. When that is done, all these vexations and losses will disappear.

CHEESE RACK AND SETTER IN COURT.

THERE is a man traveling through this section claiming pay from the cheese factories for the use of SCOTT'S Patent Range and Setter. This SCOTT, he says, was a neighbor of JESSE WILLIAMS. Is it a swindle, or is so simple a thing as two pieces of scantling, with a circular piece of board with a rim, patented? He also claims that suit was brought by the patentee against the user of the arrangement, and was decided in his favor the past winter.—J. H. CHAPMAN, *West Rutland, Vt., May 17th.*

ABOUT one year ago, a suit was brought by the owners of what is claimed as SCOTT'S patent, against certain parties in Herkimer Co., who have been using the "Cheese Rack and Setter" for a long time. A number of factories, representing some 5,000 cows, joined in defending this suit, employing counsel, and agreeing to "share and share alike" in all expenses that should be incurred. The suit was referred to a referee, and testimony taken, and we understand the decision in the case went against the factories. The counsel for the factories claim that the testimony was not all in, and that sufficient evidence can be had to reverse this decision in the courts. The advice given, we understand, is for the factories to pay costs and have a new trial. In conversation with one of the prominent parties in the defense, he informed us that the factories did not propose to recognize the patent claimed, and that they should follow the advice of counsel, and contest the claim to the "bitter end." This is the condition of things at present in Herkimer Co.; but what has been done, or what is doing, in other States, we are not informed. Quite a number of letters have been received by us from time to time similar to the one above. As the matter is now in a fair way to be settled in the courts, parties interested will see how the case stands in Herkimer Co., and govern themselves accordingly.

Domestic Economy.

FLOATING ISLAND.

WHEN I read in the RURAL NEW-YORKER the question how to make Floating Island, I hoped to learn a better way than one that I have used for thirty years, but the recipes given so far are very different from what I call Floating Island, and certainly not so good. Put into a clean sauce-pan one quart of sweet milk; when it has been on the stove long enough to become nearly hot, add to it the beaten yolks of three eggs, and stir until it becomes thick as cream. Do not let it boil; then strain through a small sieve, sweeten and flavor to the taste, and set it in a cool place till wanted. Put the whites of the three eggs into a large vegetable dish, with two tablespoonfuls of currant or other jelly to each egg—that is, six spoonfuls to the three eggs—and six tablespoonfuls of white powdered sugar; beat the whole until it resembles thick, white paint, or thin putty in consistency—perhaps half an hour or more; do not stop too soon. Just before dinner drop the islands on the custard, and it will make a delicious dessert: try it. A gentleman once dined with us, and afterward asked a friend of what could our dessert have been made; for though it looked solid, yet when put into the mouth there was nothing of it. It was Floating Island.—W.

ODDS AND ENDS.

Green Pea Soup in Winter and Spring.—Here is a suggestion for housewives, from an English gardener who usually talks of what he knows:—Sow peas thickly in pots and boxes, say six weeks before the soup is wanted. Place them in a temperature of 60° or so, close to the glass in a house or pit. Cut the plants as soon as they attain a hight of from three to six inches, and rub them through a sieve. The shoots alone will make a fair soup. Mixed with dry peas, also passed through a sieve, no one could scarcely distinguish color or flavor from that of real green pea soup. There is, however, considerable difference in the flavor of pea leaves, as well as of the peas themselves. The best marrows, such as Ne Plus Ultra and Veitche's Perfection, yield the most piquant cuttings. Also the more light the plants receive the higher the flavor, plants drawn up or at all blanched, being by no means comparable with those well and strongly grown.

In the spring, a few patches or rows may be sown in open quarters expressly for green cuttings. These are most perfect and full flavored when four inches high. When too long, the flavor seems to have run to wood, and the peculiar aroma of green peas is weaker.

There is yet another mode of making green pea soup at any season at very short notice. Chip the peas by steeping them in water and leaving them in a warm place for a few days. Then slightly boil or stew, chips and all, and pass them through a sieve. The flavor is full and good, though such pea soup lacks color. It is astonishing how much the mere vegetation of seeds develops their more active and predominant flavor or qualities; a fact that might often be turned to useful account in the kitchen in the flavoring of soups or dishes, with turnips, celery, parsley, &c.

To Make a Cap Bag.—Take a round piece of pasteboard for the bottom, large enough to hold the cap without crumpling it. Paste on the outside a piece of cashmere or other worsted cloth, and on the inside a piece of neat white cloth. Then take a piece for the outside a little over half a yard long, so as to turn in an inch or more at the top, and line with nice white cloth; then sew around the bottom, and sew up; then hem the top over the lining as much as you wish it to turn in; but do not have the lining any longer than to go neatly under this seam. Then run a place for a cord so as to make a ruffle of what was turned in at the top. Run in a tape or cord to draw it together and hang up with. Then sew around rattans, or hoops out of a hoop skirt, about midway, so as to keep the lower half in shape with the bottom. These may be sewed in the inside or outside; but if on the outside sew on two about an inch apart, and plait a piece of cloth over them in such a way as to look nice. Such a bag, lined with calico, will, if made neatly, answer for a traveling bag and for many other uses. Smaller ones may be made in this way for carrying one's work, or other things.—E.

Coffee Making.—I venture to give my way. Buy it roasted but not ground. Grind every morning, just enough for one drawing. Put into the coffee pot one table spoonful for every adult member of the family. Pour upon it as much boiling water as you think you need cups of coffee. One person ought not to drink more than two cups if they regard the laws of health. Let it stand where it will not boil, but keep it boiling hot until breakfast is nearly ready. Then let it boil up once or twice. Remove from the stove and let it settle five minutes. Put the sugar and cream into the cup and pour the hot coffee upon it. If milk is used heat it quite hot, or boil it if you choose, and let it cool a little before using. If you get good coffee and make it this way, and your husband don't like it, his taste is very different from that of most people.—MRS. S. B. SAWYER.

How to Utilize Pressed Leaves.—I have some very handsome pressed foliage from plants and trees, and think they could be made ornamental for the parlor if I knew how to use them.—P.

IF you make a handsome album of them, fastening them carefully to the leaves of a nicely bound book, prepared for the purpose, writing the common name of the plant, the scientific name, when they grew and the date when gathered, you will find it as interesting a center table ornament as you can have. In other words make a herbarium of it. You will find it will not only interest yourself in the gathering, studying and arranging, but other people as well. That is the way we should do it.

To Pickle Tomatoes.—Slice, round ways, a quarter of an inch or so in thickness, and put in layers, sprinkled with salt, 24 hours, or over night; then drain thoroughly. To good cider vinegar, add a pint bowl of sugar to a quart—more or less, to your taste—a teaspoon of cloves, and one of cinnamon; a pepper pod, or the black; put the tomatoes in and bring to a boil. They are ready for use, and keep well.—M. N.

Maple Sirup without Graining.—I read the article by a correspondent about how to make maple sirup without graining. I put in the alum and canned and bottled a lot of it, and it has all crystalized into sugar. I should like that correspondent (W. A. GRAHAM, page 134, RURAL NEW-YORKER, Feb. 24,) to tell me how to take a cake of sugar out of a bottle.—LUCY LINSEED.

Button-Hole Worker.—In answer to several inquiries, we say we know nothing of the button-hole worker advertised in our columns, from practical experience. One of our correspondents writes us that she has not succeeded in using it; whether it is her fault, or the fault of the implement, we know not.

Cleaning Paint.—If the paint in the sitting room, which Mrs. F. W. Y. wished to clean, is not badly soiled, she will find washing it with a coarse linen cloth with clean warm water will clean it and not injure the luster. If soiled, a few drops of ammonia in the water will work wonders. Wipe and polish dry with a clean linen towel.—MRS. S. B. SAWYER.

Preserving Eggs in Lime Water.—I have used a brine made of one pint each of lime and salt to every pail of water for two years past. It preserves the eggs perfectly, but they are discolored, which is objected to in market. How can this discoloration be prevented and the eggs preserved?—R. J. PAGE.

Brine for Cucumbers.—L. does not want to use any water in making a brine for cucumbers. At least people here only pack them in salt as they take them from the vines. The brine is made while they stand, from the melting of the salt.—MRS. S. B. S.

The Literary World.

NEW PUBLICATIONS.

Geo. P. Rowell & Co.'s American Newspaper Directory. New York: Geo. P. Rowell & Co.

THIS handsome and immense book of nearly 700 pages, contains accurate lists of all the newspapers and periodicals published in the United States and Territories and the Dominion of Canada and British Colonies of North America, together with a description of the towns and cities in which they are published. Some idea of the size and scope of this work may be formed when we recollect that there are 6,432 periodical publications in the United States. The book is beautifully printed, and is a monument of labor and neatness. It is invaluable as a reference for all who have occasion to know anything about newspapers.

Shooting, Fishing, and Boating, for Young Sportsmen.—By F. ROBINSON WARREN. New York: Charles Scribner & Co.

MR. WARREN is a resident of New Brunswick, N. J., and is fond of the sports of the sea and shore. This handsome little volume he dedicates to his three boys, and in it he writes of "Gunpowder," "The Gun," "Bay Snipe Shooting," "English Snipe," "Ducking," "Quail," "Woodcock," "The Dogs," "Boat-Sailing," and "Fishing." The style of the book is familiar, chatty, and very interesting. It tells boys just what they want to know, in just the manner they like best. The price is $1, and a dollar could hardly be better spent for boys.

Elementary Drawing-Book. By JOHN G. CHAPMAN, N. A. New York: A. S. Barnes & Co.

THIS large and beautiful quarto volume of nearly 100 pages, is made up from a larger work issued some years ago—a work which is admired and valued by all who know it. "Any one who can learn to write can learn to draw," says Mr. CHAPMAN. One of the best means to this end is the book in question. Nothing better could be desired. It is filled with excellent illustrations, and sells for the moderate price of $1.50.

Lord Kilgobbin.—BY CHARLES LEVER. New York: Harper & Brothers.

CHARLES LEVER has long been known as a brilliant and sparkling writer, full of entertainment and fun. He has given the public some eighteen or twenty works, all of which hold a high place in our light literature. Lord Kilgobbin is probably the last from the pen of this clever writer, as he is old, and broken with sorrow. It is a tale of Irish and English life, which cannot fail to be interesting, full of love and romance.

The Cornell University Register, 1871-72.

A HANDSOME book of 150 pages, resembling in style and contents the register issued by the University of Edinburgh. It gives a full and complete account of Cornell and all its colleges, and contains views of the buildings. Every one interested in this great institution should send to Ithaca for a copy. We admire the typographical execution of the work, and have found its contents deeply interesting.

The Woman's Kingdom: A Love Story. By the Author of "John Halifax, Gentleman." New York: Harper and Bros.

THE readers of this smoothly-written, thoroughly domestic, genuine love story, will be deeply pleased with it. The trials of two twin sisters, of a doctor with an invalid brother, of an artist, and other people, in humble English life, are faithfully portrayed. The women of this story are womanly women, which is saying a great deal.

Three Years in a Man Trap. By T. S. ARTHUR. Philadelphia: J. M. Stoddard & Co.

THE author of this book has kept as many men from the vice of intemperance, by his writings, as any writer we know. His last romance is a powerful and interesting one, and deals in an able manner with the question of liquor selling and drinking. The pen of Mr. ARTHUR is profoundly in earnest, and this readable story cannot fail of doing great good.

Sermons of Rev. C. H. Spurgeon. New York: Sheldon & Co.

THIS volume is the ninth series, and contains twenty-eight sermons by the famous London Preacher. Mr. SPURGEON has so many readers and admirers in America, we only need to call attention to the fact of the existence of this volume. Many of the sermons in it are published for the first time in the United States.

Patty: A Novel.—By KATHARINE S. MARQUOIET, Author of "Rookstone."

THIS is No. 372 of HARPERS' Library of Select Novels. Paper, pp. 188, octavo.

BOOKS RECEIVED.

THE LABOR QUESTION.—By William Brown. Philadelphia: J. B. Lippincott & Co.

PLAIN TALK ABOUT INSANITY.—By T. W. Fisher, M. D. Boston: Alexander Moore.

THE COMPLETE PHONOGRAPHER.—By James E. Munson. New York: Harper & Brothers.

MUSIC AND MORALS.—By the Rev. H. R. Howeis, M. A. New York: Harper & Brothers.

HALF TRUTHS AND THE TRUTH.—By Rev. J. M. Manning, D. D. Boston: Lee & Shepard.

MEMOIRS OF THE UNITED STATES SECRET SERVICE.—By Capt. Geo. P. Burnham. Boston: Lee & Shepard.

PHYSIOLOGY OF THE SOUL AND INSTINCT.—By Martyn Paine, LL. D. New York: Harper & Brothers,

THE BEST READING.—New York: G. P Putnam & Sons. Spiritualism answered by Science. By Edward W. Cox, Henry L. Hinton.

New Publications.

WILLARD'S PRACTICAL DAIRY HUSBANDRY: A Complete Treatise on Dairy Farms and Farming, Dairy Stock and Stock Feeding, Milk, its Management and Manufacture into Butter and Cheese, History and Mode of Organization of Butter and Cheese Factories, Dairy Utensils, Etc., Etc.

BY X. A. WILLARD, A. M.,

Dairy Husbandry Editor of Moore's Rural New-Yorker, Lecturer in Cornell University, Maine Agricultural College, Etc., Etc.

THIS is the most full, practical and reliable work on Dairy Husbandry extant; indeed the only one which describes the recent great improvements in the Dairy Business. It is highly commended by leading Agricultural and other influential journals, and must speedily become (in fact is already) the *Standard and Only Authority*. It will pay every one engaged in any branch of dairy business, or who keeps a single cow, to obtain and study this work.

PRACTICAL DAIRY HUSBANDRY embraces **546 Large Octavo Pages,** is handsomely and fully illustrated, printed on superior paper, and elegantly bound. It is a Subscription Book, and a liberal commission is given Agents who canvass Counties, &c. The Agents of the RURAL NEW-YORKER (especially those in Dairy regions) will do well to try the sale of this work. To any person residing where there is no Agent, or who cannot wait for one, the Publisher will send a copy of the work, post-paid, on receipt of the price, $3—(or for $5 the book and RURAL NEW-YORKER one year.) Address

D. D. T. MOORE, Publisher,
5 Beekman St., New York.

RANDALL'S PRACTICAL SHEPHERD: A Complete Treatise on the Breeding, Management and Diseases of Sheep.

THIS Work, by the Hon. HENRY S. RANDALL, LL. D., (author of "Sheep Husbandry in the South," "Fine Wool Sheep Husbandry," &c.,) is the Standard Authority on the Subject. It is the most complete and reliable Treatise on American Sheep Husbandry ever published, and (as the New England Farmer says) "should be in the hand and head of every person owning sheep."

The PRACTICAL SHEPHERD contains 452 pages, and is illustrated, printed and bound in superior style. Twenty-seventh Edition now ready. Sent by mail, post-paid, on receipt of price—$2. Address

D. D. T. MOORE, Publisher,
5 Beekman St., New York.

THE PEOPLE'S PRACTICAL POULTRY BOOK: A Work on the Breeding, Rearing, Care and General Management of Poultry.
By WM. M. LEWIS.

THIS is one of the finest gotten-up works on the subject on which it treats, for its size and price, of any publication of the kind in this country. It is finely and profusely illustrated, and printed and bound in extra style. Contains 224 large octavo pages. Sent, by mail, post-paid, for $1.50. Address

D. D. T. MOORE, Publisher,
5 Beekman St., New York.

MONEY IN THE GARDEN: A Vegetable Manual, Prepared with a view to Economy and Profit.

THIS Work upon Kitchen and Market Gardening, and the Field Culture of Root Crops, is by P. T. QUINN, Practical Horticulturist, (Author of "Pear Culture for Profit,") and should be owned and studied by every one interested in Gardening. It is an able, practical, profusely illustrated work of 268 12mo. pages. Sent, post-paid, for $1.50. Address

D. D. T. MOORE, Publisher,
5 Beekman St., New York.

ALLEN'S AMERICAN CATTLE: Their History, Breeding and Management.

EVERY breeder or owner of Cattle should have this work by Hon. LEWIS F. ALLEN, Ex-Prest. N. Y. State Ag. Society, Editor of "American Short-Horn Herd Book," &c., &c. It is a handsomely illustrated and well printed and bound volume of 523 duodecimo pages. Mailed, post-paid, to any address in United States or Canada, on receipt of reduced price, $2. Address

D. D. T. MOORE, 5 Beekman St., N. Y.

Miscellaneous.

DOWNING'S
Encyclopedia of Fruits.

Encyclopedia of Fruits: or, Fruits and Fruit Trees of America. Part 1: Apples. With an Appendix containing many new varieties, and brought down to 1872. By CHAS. DOWNING. With numerous outline engravings. 8vo. Full cloth, $2.50.

Encyclopedia of Fruits: or, Fruits and Fruit Trees of America. Part 2: Cherries, Grapes, Peaches, Pears, &c. With an Appendix containing many new varieties, and brought down to 1872. By CHAS. DOWNING. With numerous outline engravings. 8vo. Full cloth, $2.50. Published and for sale by

JOHN WILEY & SON, Astor Place, New York.
Mailed, pre-paid, on receipt of price.

10 CTS. will secure the "SUNNYSIDE" one year. It is the best, prettiest and most charming paper for the young published, and is so acknowledged by both old and young. Motto: The good, the true and the beautiful. Only 10 cents a year. Ten copies, with a 20-picture Photograph Album as premium, for $1. Specimen, containing Premium List, sent free. Address Publisher SUNNYSIDE, Kansas City, Mo.

Magic Photographs.—Wonderful and amusing. Price reduced to 20c. a package. Only a few more left! T. FLETCHER, 184 3d St., Williamsburgh, N. Y.

FOR SALE.—Five extra Berkshire Boar Pigs, 6 weeks old. Address R. R. C. BORDWELL, M. D., Penn Yan, Yates Co., N. Y.

THE COMIC YANKEE!

A 16-column monthly, only 50 cts. a year, and one of the $2 Steel Engravings, 15x20, "Grant and Family," "Help Me Up," "Prairie Flower," or a French Chromo, free. A 10x12 Steel Engraving or 13x18 Colored Print and the Yankee one year for 25 cts. Six months on trial, 10 cts. Specimens and Circulars free. Address H. F. GILNACK, Box 2345, New York.

Implements and Machinery.

NOT TO BE PAID FOR TILL TRIED.

THE EUCLID.

A desirable Plow, both for stony and smooth ground.

The best two-horse plow for all work ever made. Easy to draw and easy to hold. Price $10. Send for Illustrated Circular to

PEEKSKILL PLOW WORKS,
94 Beekman St., N. Y.; 61 Merwin St., Cleveland, Ohio.

BROWN'S "ALWAYS COOL" STOVE LID LIFTER.

ARE YOU GOING TO PAINT?
MORE THAN
100,000 HOUSES
HAVE BEEN PAINTED WITH THE
AVERILL CHEMICAL PAINT
IT IS THE BEST

In the world for exterior work upon Cottages, Villas or Buildings of any kind, whether built of brick, wood or iron. It is a liquid, *ready for use*, and requires no oil thinning or drier. Purest white, and any desired shade can be had in packages from one gallon upwards.

EXTRACTS FROM OUR LETTERS:

CHAS. HALLETT, Esq., of Riverhead, L. I.:—"Years ago I had your paint applied by the side of the best white lead. The lead requires repainting, but the Averill Chemical is yet looking well."

Gen. DAVID H. STROTHERS:—"Your Paint fulfils your representations."

Rev. S. C. ALEXANDER:—"Our Institute has saved $150 by using your Paint. It is splendid."

PETER HENDERSON, Esq.:—"I find the Chemical Paint retains the colors and gloss far superior to that done by the lead and oil at the same time."

Gen. JAS. NEGLEY, M. C.:—"I find it the cheapest and best."

SETH THOMAS, Esq.:—"It gives better satisfaction than any paint I ever used."

Sample card of beautiful colors, and recommendations from owners of the finest residences in the country, furnished free by the

AVERILL CHEMICAL PAINT CO., 32 Burling Slip, New York, or 118 Superior St., Cleveland, Ohio.

P. S.—The superiority of these Paints has already brought numerous *worthless* imitations in the market. We caution the public against using them.

The Season for Painting
HAS COME AGAIN.

If you propose to paint, first send stamp for a book called "Plain Talk with Practical Painters, with Samples of Colors." The book is worth a dollar, and costs nothing. JOHN W. MASURY, 111 Fulton St., New York. ☞ Specialty in Pure Paints and Colors. Masury's Ready-Made Colors are the only ones which stand the test of time. Do not be deceived.

Musical Instruments.

DUNHAM & SONS,
(ESTABLISHED IN 1834),
Manufacturers of
PIANO-FORTES.

MOORE'S RURAL NEW-YORKER of November 18, 1871, says:

"Having used one of their instruments in our family for twenty years, we can confidently commend them to our readers as being first-class in every respect. Both professional and amateur players on the piano pronounce our DUNHAM very superior in tone. An instrument that has retained its brilliancy and sweetness of tone for a score of years needs no further commendation."

17 Union Square,
NEW YORK.

A GREAT OFFER!!

SATURDAY, JUNE 8, 1872.

THE NINTH AGRICULTURAL CENSUS.

We have received the Statistics of Agriculture included in the Ninth Census—that of 1870. From it we learn that the total acreage of improved lands, in farms, in the United States, is 188,921,099; acres of woodland, 159,310,177; other unimproved lands, 59,503,765 acres. The present cash value of these farms is placed at $9,262,803,861; of farming implements and machinery, $336,878,429. The total amount of wages paid during the year 1870 to farm laborers, including the value of board, is $310,286,285. The total value of all farm productions, including betterments and additions to stock, is estimated at $2,447,538,058. Total value of orchard products, $47,335,189. The produce of market gardens is valued at $20,719,229; of forest products, $36,808,227; of home manufactures, $23,423,332; of animals slaughtered, or sold for slaughter, $308,956,376; of all live stock, $1,525,276,457.

The number of horses is placed at 7,145,370; of mules and asses, 1,125,415; of milch cows, 8,935,332; of working oxen, 1,319,271; of other cattle, 13,566,005; of sheep, 28,477,951; of swine, 25,134,569.

The total number of bushels of Spring wheat produced is enumerated as 112,549,783; of Winter wheat, 175,105,893; of rye, 16,918,795; of Indian corn, 760,944,549; of oats, 282,107,157; of barley, 29,761,305; of buckwheat, 9,821,721; of rice, 73,635,021 lbs.; of tobacco, 262,735,341 lbs.; of cotton, 3,011,996 bales; of wool, 100,102,387 lbs.; of peas and beans, 5,716,027 bushels; of Irish potatoes, 113,337,473 bushels; of sweet potatoes, 21,709,824 bushels; of wine, 3,092,330 gallons; of butter, 514,032,633 lbs.; of cheese, 53,492,153 lbs.; milk sold, 235,500,599 gallons; hay produced, 27,316,048 tons; clover seed, 639,637 bushels; grass seed, 533,183 bushels; hops, 25,456,669 lbs.; hemp, 12,740 tons; flax, 27,133,031 lbs.; flax seed, 1,730,444 bushels; silk cocoons, 3,937 lbs.; cane sugar, 87,043 hogsheads; sorghum sugar, 24 hogsheads; maple sugar, 28,443,645 lbs.; cane molasses, 6,593,323 gals.; sorghum molasses, 16,050,089 gals.; maple molasses, 921,057 gals.; honey, 14,702,815 lbs.; beeswax, 631,129 lbs.

We find by comparison that the increase of improved land in farms since 1860 is 25,810,379 acres; increase in value of farms, $2,617,758,854; in the value of farming implements and machinery, $90,760,288; in the value of all live stock, $435,016,542; in the number of bushels of wheat produced, 114,640,302; decrease in the Indian corn product, 77,848,193 bushels; decrease in the rye product, 4,182,535 bushels; increase in the barley product, 13,935,407 bushels; increase in oat product, 109,463,972 bushels; decrease in buckwheat product, 7,750,097 bushels; decrease in rice product, 118,532,011 lbs; decrease in tobacco product 101,474,120 lbs.; decrease in cotton product, 2,375,056 bales; increase in number of horses, 896,196; decrease in number of mules and asses, 25,733; increase in number of milch cows, 349,597; decrease in number of working oxen, 935,640; decrease in number of other cattle, 1,233,308; increase in number of sheep, 5,976,676; decrease in number of swine, 8,378,298; increase in pounds of wool produced, 39,837,474; increase in butter product, 51,411,311 lbs.; decrease in cheese product, 50,171,774 lbs.; increase in hop product, 14,464,673 lbs.; decrease in cane sugar, 143,937 hogsheads; decrease in cane molasses, 8,370,673 gallons; decrease in maple sugar product, 11,676,500 lbs.; decrease in maple molasses, 676,532 gallons; increase in sorghum molasses product, 10,300,966 gallons; decrease in honey product, 8,693,542 lbs.; decrease in product of beeswax, 691,658 lbs.; increase in hay product, 8,232,152 tons; decrease in clover seed product, 316,531 bushels; decrease in grass seed product, 316,852 bushels; increase in Irish potato product, 32,188,606 bush., decrease in sweet potato product, 20,385,202 bushels; increase in flax fibre product, 22,412,889 lbs.; increase in flax seed product, 1,163,577 bushels; decrease in hemp produced, 61,747 tons; increase in value of orchard products, $27,343,301; increase in value of market garden produce, $4,559,731; decrease in the value of home manufactures, $1,123,544; increase in the value of animals slaughtered or sold for slaughter, $185,337,684.

We have no space for comments upon this showing of the figures—if any were needed. Our readers must generalize for themselves. Such figures deserve study by every agriculturist.

RURAL NOTES AND QUERIES.

The Rural's Compliments to the Co. Gent's B. F. J., and it wishes to say,—"and its language is plain,"—that neither Mr. Judson, nor any other man, outside the Rural New-Yorker's Editorial Corps, "secured (nor even suggested) the publication of the wonderful production (Branching Corn) first (nor last) in the Rural New-Yorker." The illustration was made at our own instance, without any suggestion or solicitation from any outside party, for the purpose of illustrating a principle of corn propagation and possible improvement fully set forth in the article accompanying our illustration. What we stated as facts in that article are facts; what we stated we believed to be possibilities we still believe to be so. If swindlers show stalks with three out of five ears glued on them, as samples of Judson's Branching Corn, they ought to be punished, just as a man who sells as one kind of potato what proves to be another kind. We simply talked of what we knew. We take nothing back. We are not responsible if the Judsons have taken advantage of our statements, and have sold as Branching Corn what is not, any more than a man who speaks the whole truth is responsible if another segregates from it and converts a part of it into a lie. Will B. F. J. remember that he is just as responsible for the appearance of the engraving as Mr. Judson is, so far as actual influence is concerned?

Milk Swindling in N. Y. City.—There is an immense amount of swindling practiced in the large cities which is charged to producers, with which they have nothing whatever to do. The middlemen are the rascals. It is estimated, for example, that 75,000 quarts of water are daily sold in this (N. Y.) city alone—water introduced into pure milk by the swindling dealers—amounting, in the aggregate, to a fraud upon the consumers of $2,700,000 annually. Add to this the amount of water sold in Brooklyn as milk, and the consumers of the two cities pay $4,000,000 annually for water which should be milk. It is not the milk producers who do this, but the men who receive and distribute it, mixing with it not only water but chalk and other chemicals, constituting "dope" with which the children of the city are poisoned and because of which they die. Ought'nt there to be a little wholesome hanging done?

Ireland Becoming a Pasture Farm.—An Irish correspondent of an English paper, after stating the fact that every steamer is loaded with emigrants for America, many being left behind for want of accommodations on board, says:—"I sincerely hope my poor countrymen are 'improving their position' in going to the 'Far West;' but if emigration on this scale continues a little longer, I think Ireland will become a large pasture farm. Already several large farmers in my locality have sold off their milch cows and turned to feeding dry stock, in consequence of the scarcity of female servants."

Not a Wise Southern Policy.—We see in several of our Southern exchanges the statement that Southern planters in Alabama, Georgia and Mississippi are hypothecating their mules, wagons, and the present year's cotton crop, to get corn with which to support their stock until the cotton is grown. How men with a particle of business sanity will permit themselves to do this, where corn can be so cheaply grown, we cannot conceive. It is the surest way to be always able to complain of "hard times," we know of.

Personal.—Prof. James A. Whitney, late Editor of the American Artisan, has established himself as Patent Solicitor, Expert, and Mechanical Engineer, at 128 Broadway, New York City. Mr. Whitney is qualified, by experience and practical knowledge, for the work specified, and is a conscientious, industrious gentleman, whose life and experiences have been such as to develop the fullest sympathy with men engaged in industrial pursuits—especially inventors.

THE SEASON, CROPS, PRICES, ETC.

Macon, Mo., May 20.—Spring has opened at last, but very wet. We cannot plow our bottom lands, and what corn we have planted is in the mud. It is raining as I write, and the prospect is not propitious for planting for some time.—P. H. S.

Cunningham's Store, Person Co., N. C., May 25.—We have had very fine weather the last dozen days. Plenty of rain has fallen during that time. Nearly all the tobacco has been planted. The farming community have put on a more cheerful countenance since the rains. Wheat will be poor, except on lots that have been highly improved. There will not be a full crop.—R. J. J.

Columbia Co., N. Y., May 21.—Very dry up to 19th inst. Fine showers then, and plenty of rain since. Grass is growing rapidly. Apple, plum and cherry crops promise to be heavy; peach and berry crops fair; grape and pear light; many of the large grape vines are killed to the ground; Concords in the same row with Diana show no signs of starting, yet the Diana is starting well, considering the severity of the winter. Of seven varieties in the immediate vicinity of each other it has suffered the least.—S.

Oregon, Mo., May 21.—The season is very late, with much rain, which makes farm work difficult. Many farmers are five weeks behind with their spring's work, and the present prospects are not very good. A general fruit crop is very promising if we have a favorable season. Some grape growers report some of their vines winter-killed, mostly of the Catawbas. Winter wheat is all frozen out. The acreage of corn will be about an average. Wheat, $1.90; corn, 25@30c.; oats, 25c.; flour, $5.75.—J. W. M.

Dunlap, Iowa, May 21.—The season is very backward, cold and wet. There is plenty of grass now for stock. All Spring grains look well. Corn is not up, but mostly all planted. There is a great breadth of wheat sown, and every one thinks the season will be a good one. This is the best county for grass and grain I was ever in. Oats, 25c.; corn, 20c.; potatoes, 40c.; wheat, $1.20; barley, 50c.; butter, 20c.; eggs, 8c.; cows, $25@35; oxen, $90@140 per yoke; horses, $90@150 each; hired help, $18@25 per month. Prairie breaking at $4 per acre.—R. B. Ransom.

Morgantown, West Va., May 24.—Weather unusually cold up to the first of May. Not more than half a crop of wheat; very dry spring, affecting oats and meadows unfavorably. Corn promising and large breadth planted. Hay, $20 per ton; wheat, $2; flour, $10 per bbl.; horses, $100@200; cattle, 2 years, $25@35; 3 years, $40@50; sheep, $3@5. Land, unimproved, $10@35; improved, $10@60 per acre. This county, Monongahela, lies along the Pennsylvania State line; the Monongahela River flows through the central part of it; soil very fine; limestone and bituminous coal in vast quantities. State University at Morgantown, and in a flourishing condition.—G. M. H.

Perry, Wyoming Co., N. Y., May 25.—The Spring is very backward. Even now there are sharp, white frosts nearly every morning. "Winter lingered" long "in the lap of Spring" with us. A large snow drift under our window did not leave until the middle of April, and there was snow by the roadside this month. Prices change often. Monday butter will be worth 20c. per lb., Wednesday, 16c., and Saturday of the same week no sale at 12½c. Eggs have been 13c. per doz. for some time. Potatoes, 50c., and oats 40c. Owing to the long, cold weather, many young lambs have been chilled to death. This will be rather hard on those who are anticipating selling their wool at $1 per lb. Fruit trees have blossomed full, and we are hoping to have (or see) a full crop of apples the coming Fall, and trust no Chicago fires will cut down the prices as they did last year. This is about as fine a county to ride through as can be seen anywhere in Western New York.—M. A. D.

BUSINESS INFORMATION.

Buckeye Agricultural Works.—The Buckeye pertains to Ohio, as the Pine tree does to the Northeast, the Palmetto to the South, and the Cottonwood to the lower Mississippi. The Buckeye Agricultural Works also pertain to Ohio, in the county of Clarke and the city of Springfield, where for the last fifteen years I have made my annual, semi-annual, or other occasional visits. There I saw the old firm of Thomas & Mast grow up from a small beginning to one of the most extensive and prosperous manufactories of the Buckeye State. John H. Thomas had become wealthy and was getting tired of work; he had some genius for politics, and perhaps had his eye on the Presidency. Certain it is he had a narrow escape from being sent to Congress two years ago. Mr. Phineas P. Mast had become wealthy too, but being a younger man and still full of work and enterprise, was reaching out for new conquests in the field of manufacture. The old firm dissolved, Mr. Thomas retiring on his well-earned laurels, and Mr. Mast entering into new combinations for enlargement and extension.

I was over to Springfield the other day, and on the steps of the Lagonda House I met Mr. Thomas, quite at his leisure. "How's business?" I asked. "I am not in any business now," replied the veteran mechanic. So it seems that Mr. Mast had purchased all the buildings, power, machinery, patterns and patents, of the late firm, and Mr. Thomas had agreed that he would not engage in the manufacture or sale of grain drills, seeders, &c., for the term of ten years. According to the terms of this agreement Mr. Mast has exclusive control, for all the Western States, of the important features of the Buckeye Grain Drill, especially the Davis patent for a Shifting Lever, for changing hoes from straight line to zig-zag, notwithstanding the claim of other parties.

An inspection of the works of P. P. Mast & Co., showed a very healthy state of business. They are turning out a large number of Buckeye Riding Plows, Buckeye Grain Drills, and Broadcast Seeders, Buckeye Cider Mills, Anderson Feed Steamers, etc.—in all over eight thousand machines, all made on the latest improved patterns and of the best materials; and what is most noticeable of all, these machines go off as fast as they are finished, and the house is nearly clear of all finished work. I call that a healthy state of affairs for this time of year, and a good note for the Buckeye Agricultural Works of P. P. Mast & Co., of Springfield, Ohio.—S. D. H.

A Toy Steamboat, strong, light, and the swiftest for its size ever known, has been constructed for the especial delectation of Young America, by Messrs. Bramhall, Smith & Co. 128 Chambers street, N. Y. It is only eleven inches long, requires little depth of water, weighs one pound, with fuel and water on board; is driven by a steam engine of improved construction, and, with one-quarter of an ounce of alcohol for fuel, will "travel" for thirty-five to forty minutes. It will steam round a wash-tub or across a pond, or in larger or smaller circles, as the rudder is set. It is a handsome toy, and will rival in popularity the land engines supplied in such enormous quantities by the same firm. They send the Toy Steamer by express, charges paid, for $2.50.

Electros of Wood Engravings.—Our friends of the Press, and all others wishing any illustrations given in the Rural New-Yorker, are informed that we furnish electrotypes at very low rates compared to the original cost of the wood engravings. Those wishing casts of any of the illustrations in this or former numbers, have only to designate what they desire and their orders will be promptly filled. As the Rural is printed from electrotype plates, our Wood Cuts are uninjured, so that we can furnish perfect casts. Our prices are from 20 to 30 cents per square inch, only, while others charge from 35 to 50 cents for the same class of cuts.

Catalogues, Etc., Received.—Pamphlet descriptive of the Buckeye Steamer, Drier, Baker and Range, with an essay on the advantages of cooking food for stock, from Engle, Keller & Co., Lancaster, Pa. From Col. S. D. Harris, Secretary and Treasurer, Cleveland, Ohio, the Eighth Annual Report of the Ohio Dairymen's Association, with Transactions, Addresses, Discussions, etc. From John H. Klippart, premiums and regulations for the 23d annual fair of the Ohio State Board of Agriculture, to be held at Mansfield, Sept. 2-6.

RURAL BREVITIES.

The officers of the Illinois State Grange of Patrons of Husbandry were installed at Sterling, Ill., May 1.

A Grand international exhibition, under the direction of the Spanish Government is to be held at Madrid in 1873.

Will C. F. Manis tell us whose horse fork tackle he attempted to use and cannot adjust? It may enable us to help him.

The New York State Fair is to be held at Elmira, commencing September 30 instead of the date previously fixed by the executive committee.

President Clark of the Massachusetts Agricultural College has been induced to withdraw his resignation, tendered in order to accept a similar position in Indiana.

A Subscriber, Washington Co., N. Y., is informed that we do not think his calves will suffer in the clover, if he keeps them well salted; it certainly will not cause black-leg. Hoven may result, for which we have given many remedies.

No better bonds for investment have been in the market for many a long day than those of the Northern Pacific Railroad. Many people are exchanging United States Bonds for them. They have a permanent land basis to rest upon, which neither hostile Indians nor a California earthquake can disturb. Whoever invests in real estate, and at the same time helps forward a great national enterprise, exhibits both shrewd business tact and patriotism.

PUBLISHER'S SPECIAL NOTICES.

The Rural New-Yorker is electrotyped, and hence Back Numbers can always be supplied. Copies for sale by all News Dealers; price Six Cents.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or more. A host of people are subscribing for papers about these days, and we hope our Agent-Friends will give everybody an opportunity to subscribe for the best.

THE GRAND CENTRAL DEPOT.

PROBABLY, the finest and largest Railroad Depot in the world is the Grand Central, on East Forty-Second street and Fourth Avenue, in New York City, representations of which we herewith present to our readers. The Victoria Station in Westminster, London, and the station in Turin, Italy, are secondary in size to this great structure, which Commodore VANDERBILT, the Railway King, has recently caused to be erected for the accommodation of the traveling public of the Metropolis. This depot was commenced on September 15th, 1869, and on October 7th, 1871, the first train left the building. The depot is 240 feet wide, by 696 feet in length; it is made of stone, brick, iron, and glass, with wood for inside finishing. Ten millions of bricks were used, and the house covers four acres, and has two acres of glass in the roof. There are 182 windows, 41 doors, 18 stairways, and 2,000 gas burners, which are lighted by 25,000 feet of electric wire. Fifty intersecting railway tracks diverge from the building, covering a yard of four acres. This depot serves as a junction for the Hudson River, the New York Central, the New York and Harlem, and the New York and New Haven Railroads. On the Hudson River Railroad alone, 11,000 passengers are daily conveyed, employing 100 officers and clerks, 90 brakesmen, 29 baggagemen, 30 conductors, 200 engineers and firemen, 18 women to clean cars, 20 porters, etc. The interior of the passenger room, where the cars arrive and depart, is imposing, as the illustration shows. Trains are constantly arriving and departing, and so admirable is the system, everything moves like clock-work.

There are 100 offices in the building. The offices of the Hudson River and New York Central Railroads are on the west front of the building; those of the New York and Harlem, on the southwest angle; and those of the New York and New Haven are on the southern front. The business and reception rooms of the Presidents and Vice-Presidents of the several connecting roads are situated on the center of the western front. Mr. J. C. BUCKHOUT, Superintendent of the Harlem Railroad, and still a comparatively young man, was the architect and engineer of the building and its dependencies, and is entitled to great credit for the fine arrangement and completion of the gigantic and magnificent structure.

GRAND CENTRAL DEPOT, NEW YORK CITY.

THE USE OF EARTHQUAKES.

THE usefulness of earthquakes, was a favorite subject with the late Sir John Herschel. Were it not for the changes in the earth's crust which are constantly being effected by the action of subterranean forces, of which the earthquake is the most active manifestation, there can be no doubt that the action of the sea beating upon the land, together with the denuding power of rain would inevitably cover the entire earth with one vast ocean. "Had the primeval world been constructed as it now exists," says Sir John Herschel, "time enough has elapsed, and force enough directed to that end has been in activity, to have long ago destroyed every vestige of land." Mr. Proctor shows most clearly the beneficent manner in which the restorative action of the earth's subterranean forces is arranged. Of course every upheaval of the surface must be either accompanied or followed by a depression elsewhere. "On a comparison of the various effects, it has been found that the forces of upheaval act (on the whole) more powerfully under continents, and especially under the shore-lines of continents, while the forces of depression act most powerfully (on the whole) under the bed of the ocean. It seems as if nature had provided against the inroads of the ocean by seating the earth's upheaving forces just where they are most wanted."

THE CUSTOM OF TREATING.

IF I could persuade all the young people of Elmira never to treat each other, nor be treated, I think one half of the danger from our strong drink would be gone. If I cannot get you to sign the total abstinence pledge, binding until you are 35, I would be glad to have you promise three things: First, never to drink on the sly, alone; second, never to drink socially, treating or being treated; third, when you drink, do it openly, and in the presence of some man or woman whom you respect.

Now, boys, if you wish to be generous and treat each other, why not select some other shop beside the liquor shop? Suppose, as you go by the post-office, you say, "Come, boys, come in and take some stamps." These stamps will do your friends a real good, and will cost you no more than drinks all round. Or go by the tailor's store and say, "Boys, come in and take a box of collars." Walk up to the counter, free and generous, and say, "What style will you have?" Why not treat to collars as well as treat to drinks? Or go by a confectioner's and propose to chocolate drops all round. Or say, "Boys, take a newspaper." Or say, "I'll stand a jack-knife all round."

How does it happen that we have fallen into a habit almost compulsory, of social drinking? You drink many a time when asked to, when really you do not want to. When a man has treated you, you feel mean and indebted, and keep a sort of account current in your mind and treat him. And so in the use of just that agent, which at the very best is a dangerous one, you join hand in hand to help each other to ruin, instead of hand in hand to help each other to temperance.—*Rev Thos. K. Beecher.*

TRAVELING IN CALIFORNIA.

MR. CHARLES NORDHOFF writes as follows in *Harper's Monthly* about traveling in California:—Certainly in no part of the continent is pleasure traveling so exquisite and unalloyed a pleasure as in California. Not only are the sights grand, wonderful, and surprising in the highest degree, but the climate is exhilarating and favorable to an active life; the weather is so certain that you need not lose a day, and may lay out your whole tour in the State without reference to rainy days, unless it is in the rainy season; the roads are surprisingly good, the country inns are clean, the beds good, the food abundant and almost always well cooked, and the charge moderate; and the journey by rail from New-York to San Francisco, which costs no more than the steamer fare to London, and is shorter than a voyage across the Atlantic, is in itself delightful as well as instructive. Probably twenty Americans go to Europe for one who goes to California; yet no American who has not seen the plains, the Rocky Mountains, the Great Salt Lake, and the wonders of California, can honestly say that he has seen his own country, or even that he has an intelligent idea of its greatness."

GRAND CENTRAL DEPOT—INTERIOR VIEW.

SENSIBLE SENTIMENTS.

Do not kick every stone in the path.

LEARN to think and act for yourself.

PAY strict attention to your own affairs.

KEEP ahead rather than behind the times.

Do not stop to tell stories in business hours.

HAVE but few confidants, and the fewer the better.

USE your own brains, rather than those of others.

A MAN of honor respects his word as he does his bond.

IT is folly to break down order, as atheism must, and he is daftest of idiots or wildest of maniacs who supposes a world can be governed without some thought of God.

NEVER buy an article you do not need simply because it is cheap, and the man who sells it will take it out in trade.

NATIONS, TAKE HANDS!

NATIONS, take hands! The centuries past
Have known too much of crime;
Shall hate and war forever last,
And steep in blood all time?
Pah! Christians slaughtering Christians still—
At length that trade should cease;
Men can do better things than kill,
Ranked in the wars of peace.
Fling by thy sword, O suffering lands!
Brothers at last, in love take hands!
Nations, take hands!

Peoples, for conquest do you long?
Say, brothers, that's untrue.
You, plundered slaves: your despots' wrong,
Charging their sins on you.
How long, O used and flung-by tools!
For emperors will you war,
And fertilize the earth with fools,
At word of king or czar?
Deaf to the calls, O wiser lands,
Henceforth in lasting love take hands!
Nations, take hands!

See a new earth, a happier day
For man than yet hath shone!
The thunder-clouds of war away,
The earth rolls smiling on.
Millions, the rifle lapl aside,
Now bend to forge or plow;
The craftsman's triumphs how they pride—
Harvest their glory now.
Untaxed, unfearing, happy lands,
For good in lasting love take hands!
Nations, take hands!

Our Story-Teller.

Mr. Bolton's Trip To The City.

BY O. S. ADAMS.

MR. SIMON BOLTON prided himself on being one of the shrewdest men in Danbury. Danbury was a small place—indeed so small, many said, that they wondered how it could hold a man of Mr. BOLTON'S caliber. He was a large, full-framed, full-fleshed individual, with a head set ostentatiously back on his shoulders, a warlike-looking mouth, and a pair of cold, calculating eyes. He walked with an obtrusive swagger, and always seemed ready to discharge a shower of abuse at any one who should be so unlucky as to cross his path or be in his way. He had accumulated considerable property, and was reckoned one of the most substantial men of the town, as he was in reality one of the most overbearing. He attributed his success in making money solely to his inimitable shrewdness; and truly, if shrewdness consisted in finding out the details of his neighbors' affairs, ascertaining their wants and needs, and appearing in the right time with a few hundred dollars to extort ten per cent. a month or so, then Mr. BOLTON was a very shrewd man. Ah, how shrewd!

He never wasted anything, or squandered money for needless luxuries. One of his proudest boasts was that he had never spent one dollar for a newspaper of any kind or description. And thereby hangs a tale—in fact, *this* tale, for if Mr. BOLTON had read the newspapers it is exceedingly improbable that the present history would have been written.

One fine spring morning Mr. BOLTON astonished his family and neighbors by announcing that he was going to take a pleasure trip to New York. Many were the expressions of wonder and curious questions in regard to the inspiring cause of this unwonted extravagance, all of which he treated in a manner comporting with his dignity. With very few would he deign to converse on the subject at all—these favored ones being as wealthy, or wealthier, than himself. Until the hour of departure his whole family was in a state of confusion and uproar, and, it might be added, terror, over the preparations for the grand event, for Mr. BOLTON made his importance felt at home as offensively as elsewhere.

The day arrived. Mr. BOLTON placed in his wallet a hundred dollar greenback and one hundred dollars in smaller bills, and hired a conveyance to the railroad station, four miles distant. He was in due time comfortably seated in a car, where he glanced around at his fellow passengers, as if expecting all of them to stare at him in awe; for this journey to New York was a grand event in his life—an event in which he fondly imagined himself to be an exceptionably favored individual. When he returned, his importance would be magnified ten-fold—he would tower above his fellow citizens with more unbearable haughtiness, if possible, than ever before.

However, he did not attract any particular attention; in fact the majestic bearing he assumed seemed quite lost on the obtuse crowd around him. So, with a feeling of disgust, he soon settled himself back in his

seat as comfortable as possible, and, gazing out of the window at the flying trees and fields, surrendered himself to the novelty of the situation. When the conductor came along, Mr. BOLTON found some gratification in displaying, ostentatiously, his hundred dollar greenback and thick roll of smaller bill, as he took out his ticket. He noticed that a few stared at him rather curiously as he did this, but he did *not* observe the sharp, eager glance of a respectable looking, rather young and very meek appearing man who sat on the opposite side of the car. It was not long before the meek appearing man rose, with a yawn and a stretch, and accosted Mr. BOLTON.

"Pretty tedious work," he said, wearily, "traveling three days and three nights without stopping."

"Yes," said Mr. BOLTON, "I should think it would be."

"Awful!" said the man. "I beg your pardon, is this seat occupied? The sun comes in the other side so, that I'll sit with you, if you have no objections?"

"Oh, no!" said Mr. BOLTON, affably

The man's tone and manner seemed to convey a little covert homage to his imposing appearance, and he made room for him.

"Going to the city!" asked the stranger.

"Yes—to New York."

"Beautiful tract of country we are passing through."

"Yes, we have some very good farming lands."

"I should judge, too, that they were in the right hands to make the most of them," said the stranger, significantly. "I'll wager anything that the people in this section are intelligent and shrewd."

"Well, perhaps so," said Mr. BOLTON.

"Oh, I know it. I infer that you live about here. I saw you get aboard."

"Yes, but I am not a farmer."

"That may be. But the presence of enterprising and wide-awake men has an immense influence over a community. Industry is encouraged, and all that, you know."

"Well, you may be right," replied Mr. BOLTON, with a slight smile and inflation of his chest.

"Going to buy goods?" asked the stranger.

"No. I thought I would run down and take a look at the city for a few days."

"Oh! well, its a pretty good sized town"—in a facetious tone.

"You are right, there," replied Mr. BOLTON, laughing, as if the metropolis were as familiar to him as the handwriting of his numerous debtors.

"Well, I shall be your companion nearly to New York. My name is GRABBER. Yours, if I might be so bold, is——"

"BOLTON, sir, SIMON BOLTON."

"I am happy to know you, Mr. BOLTON. We may find it agreeable to remain together until our journeys diverge."

"Certainly," responded Mr. BOLTON.

"There is nothing like having an agreeable companion on a long journey," said Mr. GRABBER. "And, by the way, where shall you stop. I am going on to-morrow. We may meet in the city."

"I hadn't thought of that yet," said Mr. BOLTON. "I shall, of course, put up at the best hotel."

"Of course. The Metropolitan is as good as any. If you will be there to-morrow toward evening, I will meet you."

"Very well," said Mr. BOLTON, "I will stop at the Metropolitan."

"Any of the hack drivers will take you there."

"Yes, I know it"—with a little upheaval of dignity.

"You are posted, I should judge," said Mr. GRABBER, with an admiring smile. "I should take you to be a man that couldn't be hoodwinked very easily."

"Well, without boasting——"

"Oh, yes. I don't need anything to satisfy me on that point. I can see it in your eye."

Thus the time was consumed with entertaining conversation, and Mr. BOLTON was highly pleased with his new acquaintance. He was charmingly frank, and they chatted together like old friends. After the lapse of an hour or so, Mr. BOLTON noticed a gruff looking man, with a fierce, red mustache and a pair of glittering eye-glasses, come walking slowly through the car, peering into the faces of the passengers. He stopped suddenly and scanned Mr. GRABBER intently. The latter seemed a little uneasy under the scrutiny.

The gruff looking man took a document from his pocket and briefly inspected its contents.

"Is your name GRABBER?" he demanded, at length, looking up.

"Yes," said Mr. GRABBER, in apparent surprise.

"I thought so. I have a little business with you. Will you step this way?"

"Oh, if you have any business with me," said Mr. GRABBER, courteously, "it can be transacted right here. The presence of my friend"—pointing to Mr. BOLTON—"need not interfere."

"Very well; suit yourself. I have a freight bill of a hundred and four dollars on those goods of yours."

"A freight bill!"

"Yes, sir, a freight bill. I suppose you are ready to pay it?"

"Your supposition is incorrect, sir. This is a pretty time to come to a man on such business. I'll pay the freight when I get the goods."

"The goods will not go five miles further until the bill is paid," said the gruff man, firmly.

"By George! This is an outrage!"

"Come, now, don't get huffy, it won't do any good."

"But it is a very strange proceeding."

"I have my instructions, which are to collect the bill. You had better pay it."

"Shouldn't you call this a strange way of doing business?" asked Mr. GRABBER, turning to Mr. BOLTON. "I bought a lot of goods at an assignee's sale, up in the interior, and shipped them, supposing everything to be all right; and now they demand freight. If I had been expecting such a thing, I would have been prepared. However, I suppose it has got to be paid. See here, my friend"—turning to the freight agent—"I'll pay that bill, but you will have to take a check on a New York bank."

"Can't do it. The rules forbid us to take anything but currency."

"Rules be bothered!" exclaimed Mr. GRABBER, drawing from his pocket-book a check. "Take this; it's as good as the gold."

"I presume it's all right, but I can't take it. If I was going through to the city, it might be different. But, as things are, it can't be helped. Sorry."

"Then I'm in a bad fix," said Mr. GRABBER, gloomily. "But, Mr. BOLTON, perhaps you can help me out. Here is a check for a hundred and fifty dollars on the Park Bank of New York. If you can advance me a hundred and four dollars, I will leave the check in your hands, and you can draw the money when you reach the city. You can hand me the balance to-morrow evening, at the Metropolitan. I dislike to ask such a favor, but I wouldn't mind allowing you a handsome percentage."

"It's all right," said Mr. BOLTON. "I will let you have the money. A hundred and four dollars, is it?"

"That is the amount. I am a thousand times obliged. It will help me out of a most embarrassing scrape."

"There are a hundred and five," said Mr. BOLTON, producing his hundred dollar greenback and a five dollar bill.

"Thanks! Thanks! Can you give me a dollar, Mr. Agent?"—handing him the two bills.

"No, but we can get some small bills of the conductor. He is in the forward car."

"We will wait till he comes through."

"I am sorry to have caused you so much trouble," said the agent, "but you mustn't blame me. The Company's instructions have to be carried out."

"We will not discuss the matter," said Mr. GRABBER, stiffly; "but I shall take care what line I patronize in the future. As for you, Mr. BOLTON, I cannot find words to thank you."

"Don't speak of it," returned Mr. BOLTON. "I am always willing to accommodate a friend when it lies in my power."

The train was now approaching a station, and coming to a halt.

"Now will be a good time to see the conductor and get the change," said the agent. "We might as well have everything straight at once."

"I'll go with him," said Mr. GRABBER, in a low voice, to Mr. BOLTON, "and make sure of the dollar that's coming to me."

Mr. BOLTON saw them approach the conductor who had stepped out upon the platform in front of the depot. They spoke a few words to him, but he shook his head. They then went into the ticket office. Mr. BOLTON watched for their reappearance. But they were detained an unaccountably long time. Finally the whistle sounded, and the train started, but they did not appear. Mr. BOLTON grew anxious on his friend's account. He opened the window and shouted, but to no effect. The speed with which the train was moving off increased until a good headway was attained. It was not until then that the tardy ones appeared. They looked around wildly for a moment, and then, as if the truth had just dawned upon them, started on a run to catch the train. Mr. BOLTON encouraged them by wild gesticulations. But the chase was a vain one. They gave it up after the most frantic efforts, Mr. GRABBER signifying by gestures that he would be with Mr. BOLTON on the following day.

"All on account of that confounded freight agent," muttered Mr. BOLTON, drawing his flushed and perspiring face in the window.

"Friend left?" asked one who sat near him.

"Yes," growled Mr. BOLTON shortly, wiping his brow.

He was moody and taciturn for the remainder of the journey, and when the shades of night began to gather, composed himself as best he could and dropped off into a slumber.

The night brought forth nothing worthy of note. About eight o'clock in the morning they were in the great city. Mr. BOLTON stretched himself, and alighted from the cars. The bustle and din deafened him almost to distraction. He took refuge behind a huge pile of trunks, and surveyed the field. His mind was soon made up. With rapid strides he made his way out of the scene of confusion, heedless of the hackmen's frantic yells, and the eager offers of small boys to carry his satchel.

He was soon in a narrow street, lined on either side with stores that presented an unprecedentedly busy appearance. Everybody was in a hurry. Mr. BOLTON contemplated his surroundings in wonder, but soon found that he must exercise all his wits to prevent being jostled off the sidewalk. The spirit of the place took posession of him, and he began to walk at such a pace that the perspiration rolled from his brow in huge drops, and he panted furiously. He was proceeding at this unwonted gait when a placard in front of a clothing store attracted his attention. He came to an abrupt halt, and read as follows:

"*Splendid Lot of Fashionable Clothes, Bought at a Bankrupt Sale, to be Disposed of at a Sacrifice.*"

"Here's a chance," thought Mr. BOLTON, I might as well have a coat of city cut, and no doubt one can be bought here cheap. I'll go in."

He was met at the door by an elegantly dressed personage, with a smiling countenance.

"Shall I show you something, sir?" asked the man politely.

"I don't know," replied Mr. BOLTON; "I thought if you had a coat——"

"Coat? Yes sir. We claim to have the best assortment of coats to be found in the city. You are just in time, too, for they are going off like hot cakes."

"I want something stylish, you know."

"Exactly. We don't keep anything else. Just step this way. It wont do any harm to look, even if you don't buy. But you *will* buy, if you are a man of taste, as I take you to be."

Several coats were handed to Mr. BOLTON, who tried them on. At last, one seemed to fit exactly.

"How much do you ask for this one?"

"Let me see—twenty-two dollars for that, and dirt cheap, too. They wholesaled three months ago for twenty-nine."

"Did they?" asked Mr. BOLTON.

"Yes; but the man who owned the stock was closed up, as you saw by the placard outside. Melancholy circumstances, too. But, sir, isn't that a little tight under the arms?"

"I don't know but it is," said Mr. BOLTON, working his shoulders back and forth.

"It is, as true as you live. We would rather lose a sale, you know, than not have everything just right. JOHN, where is that coat that Mr. CLEMENT returned last night?"

"CLEMENT, the banker?" asked JOHN, from the other end of the store."

"Yes—the one who carries so much money with him all the time. Very careless of him, too, for he is liable to be robbed any time. The coat was a little too large for him. Find it, JOHN, and bring it here."

"Here it is," said JOHN, approaching with the desired article.

"I think it will just fit you, sir. Try it on."

Mr. BOLTON obeyed. The gentlemanly proprietor helped him to draw it on, and smoothed it about the shoulders.

"Walk around a little—button it up—unbutton it again—work your arms—just see what a splendid fit about the chest—try the pockets."

Mr. BOLTON went through these successive manœuvres with great complacency, when, happening to pat himself on the chest, something startled him exceedingly. *There was something in the inside breast pocket!* After the first thrill of surprise he looked cautiously around at the proprietor and clerk. But their attention was at that moment diverted to something else.

Mr. BOLTON hastily thrust his hand in the inside breast pocket. Yes, *there was a wallet*, and it was a good plump one, too! Here was a stroke of luck! Had not the coat been returned by Mr. CLEMENT, the banker, who was in the habit of carrying money with him? The conclusion in Mr. BOLTON's mind was obvious and instantaneous. Evidently Mr. CLEMENT had worn the coat for a day or two, and had forgotten to remove his pocketbook before returning it.

Mr. BOLTON was not the man to cast fortune from him. No squeamishness or qualms of conscience ever caused him to flee from good luck. He made up his mind that that coat should not leave his back. Who would ever be the wiser?

"Well," he said, trying to assume an indifferent air, "what do you ask for this garment?"

"I will sell that," murmured the proprietor, slowly, as if entering into an abstruse mental calculation, "for thirty-one dollars. And I make less than three dollars on it at that. Mr. CLEMENT was to have paid thirty-five."

"I'll take it," said Mr. BOLTON, promptly. "It's a pretty heavy price, but then it is such a good fit."

"Just so; excellent. Shall I do it up for you?"

"No. I'll keep it on," said Mr. BOLTON, hastily. "But you may do up my old one, if you please."

"Yes, sir. JOHN, do up this gentleman's old coat. Upon my word, sir, you look like Mr. CLEMENT himself. It just sets you off to perfection."

Mr. BOLTON was not anxious to prolong the conversation, and, after hurriedly counting out the money, he took his old coat under his arm and left the store. He proceeded rapidly up the street in a jubilant mood.

After his joy had calmed down somewhat, he began to consider his next proceeding.

"It won't do for me to remain in the city a great while," he thought, "for Mr. CLEMENT will discover his loss and make inquiries. What if he should remember about the coat and trace it? I believe I will go to the Park Bank now and draw the money on that check. I might keep the whole of it and never go near the Metropolitan. But no; I told GRABBER my name and residence, and he would follow me up. What a fool I was. I'll go now and draw the money."

By making numerous inquiries and tramping many miles, as it seemed to him, through the crowded streets, he at length found himself in front of the Park Bank. Entering, he passed the check over the counter to the paying teller. That functionary looked briefly and curiously at the piece of paper, and then scanned Mr. BOLTON's countenance closely.

"Where did you get this?" he asked.

"What difference does that make?" demanded Mr. BOLTON, with some asperity.

"It makes a good deal of difference to you. It isn't worth anything."

"What do you mean?" asked Mr. BOLTON, with a stare of surprise.

"The check is worthless."

"Worthless!" Mr. BOLTON's knees began to quake.

"The person who signed it has no account here. Where did you get it?"

"I cashed it for a friend on the cars," faltered Mr. BOLTON.

"A *friend!* How long have you known him?"

"Not long."

"No—I should say not. My dear sir, you have been swindled. I guess you don't read the papers."

"Papers be hanged!" roared Mr. BOLTON; "of course I don't."

A shout of laughter came from three or four bystanders at this.

"What the devil are you laughing at, I should like to know?" demanded Mr. BOLTON. "Here, give me the check. I shall see GRABBER this afternoon. He is to meet me at the Metropolitan."

"I hope you won't hold your breath till he comes," remarked a policeman, who had been attracted by the slight confusion that had occurred. "Come here, and I'll put a flea in your ear."

Mr. BOLTON, with a rueful countenance, walked out with the policeman, who informed him that Mr. GRABBER was one of a class of swindlers who make a practice of picking up acquaintances on the cars, and obtaining money from them by means of fraudulent checks and other documents. He also heard, to his great astonishment, that Mr. GRABBER and the freight agent were confederates; that they had probably divided the spoils, and were, very likely, at that very moment, in some far off locality, playing the same game on other unsuspecting parties.

Mr. BOLTON was amazed, horrified, and utterly cast down by his loss. He soon parted from the policeman, and made his way, with a heavy heart, to the Metropolitan Hotel. He still cherished a forlorn hope that GRABBER would meet him, according to appointment. Of course, he was doomed to disappointment.

"Any how," he reflected, "Mr. CLEMENT's pocket-book may make me whole."

Immediately on arriving at the hotel, he asked to be shown to a private room, and when once within its walls, tremblingly drew the wallet from the pocket of his new coat. First taking the precaution to hang his hat over the keyhole of the door, he sat down to a table, and opened the supposed treasure with quivering fingers.

Horror of horrors! It was filled with worthless scraps of paper! Nothing bearing the remotest resemblance to a bank note met his expectant vision! He almost swooned away as he gasped:—"Another swindle!"

For several minutes he sat in a sort of stupor, after recovering from which, he mounted angrily to his feet. He would go forthwith to the clothing store, boldly accuse them of placing the empty pocket-book in the coat as a bait to tempt purchasers, and demand reimbursement for the money he had spent. But here another consideration presented itself. He would have to confess that he had bought the coat with the expectation of obtaining what did not lawfully belong to him, and thus place himself on a par with those who had so successfully appealed to his cupidity. That would never do. He groaned aloud as he contemplated his helpless situation.

It soon occurred to Mr. BOLTON to investigate the state of his finances. He found that after having paid his fare to New York, cashed the check and bought the coat, he had only a trifle over thirty dollars remaining. This would not be more than sufficient to keep him at the Metropolitan for two or three days and take him home again. He groaned in bitterness of spirit, and resolved to return to Danbury without delay. Whom, among the depraved denizens of the metropolis and the piratical traveling public, could he trust? They would cheat him out of his skin, next!

With such thoughts coursing through his brain, he made inquiries concerning the railroad trains, and before night was speeding homeward as fast as the fastest express train could carry him. He resolutely kept his own counsel on this journey, and resisted all attempts at conversation on the part of his fellow travelers, even to a mild inquiry from a weary looking woman with five children as to what time the train would reach Blankville.

We pass over his reception on his arrival home, and the account he gave of his adventures. It may be proper to remark, however, that within a week he subscribed for the RURAL NEW-YORKER, his own local paper and a city daily. He hopes to keep posted hereafter in regard to the progress and deluge, the devices and snares of this wicked world.

Ladies' Port-Folio.

A YEAR AGO.

BY MARY C. BARTLETT.

I'm thinking of a night, love,—
A year has since gone by,—
When side by side we stood and gazed
Out on a winter sky.
The whole earth lay in shadow,
No star could yet be seen,
But where the setting sun had burned
Lingered a golden sheen.

Out on that clear, calm light we gazed,
Till but as things of naught
Seemed darkened earth and starless sky
And the life with sorrow fraught,—
In all the universe there seemed,
That night a year ago,
But two hearts full of untold love
And a golden sunset glow.

The sun has set to-night, love,
And golden are the skies,
And between these two bright sunsets
A year of suffering lies.
But forgetting all to-night, love,
In the clear calm sunset glow,
I revel in the memory
Of that night one year ago.

Perchance thou too, to-night, love,
In this little lapse of rest,
Art looking out with weary eyes
Upon the glowing West;
And thinking of our deep, true love,
Thou dost rebellious grow,
That there's left us but the mem'ry
Of that night a year ago.

Our way is hard, beloved,
Rough the ascent and steep,
And round us as we toil, apart,
The twilight shadows creep;
But looking up with eyes of faith,
A golden light serene
Is shown us, from the glorious Sun
Of Righteousness, unseen.

Then upward let us struggle,
Regardless of the pain,
Until at last, together,
The wondrous hight we gain
Where nevermore a twilight,
Through all the endless days,
Can draw the Sun of Righteousness
From our enraptured gaze.

EVERY-DAY LIFE.

BY LEAD PENCIL, ESQ.

I MET my friend ROSEMARY yesterday with her hands full of flowers. She had caught the sunlight on her cheeks and the sun had loaned her something with which to illuminate her eyes. Indeed, she is one of those of whom LEONTES must have thought when he said,

"Whilst I remember
Her and her virtues, I cannot forget
My blemishes in them."

"Fresh from the country, I see?"

"Yes! And, oh! how lovely it is! I've rode over the hills, rowed on the lake, rambled in the woods, inhaled the fragrance that all Nature is distilling, and yet——"

"And yet?"

"Yes; and yet, I do not know why it is, but something is wanting—*something has forever gone out of all this*, and which I seem unable to recover. I do not know but I enjoy it all as much as ever, but I do not get from it *what* I once did. Can you tell why?"

"Yes; I think so. It is evidence of change—not in the objects themselves, but in the medium through which you look at them. In other words, the process of growth has changed you. The gentle breeze that swayed the young willow from its roots upward does not now sway and stir the body of the mature tree, but contents itself with playing among the foliage with which the old willow is crowned. Care and Duty have taken the place of Hope. Worship fills the heart, and Love sanctifies it; but now it is born of knowledge rather than sensuous enjoyment. If a sponge is full of water, it can take up no more. The hand continues to be a hand, though hardened by labor and paralytic from age—though it has lost the supple deftness of youth. And these almost unconscious changes that are working in us are only revealed to us by such opportunities for contrast as you have just had. Such revelations should not sadden; they should teach. They should not paralyze; they should strengthen. We should be glad we are not what we have been. Regrets for the Past are only indices that we are wasting the Present. Anxiety about the future is like the boatman at sea, watching the shore, wishing he was there, forgetting to row and steadily drifting away from it."

What ROSEMARY thought of what I said I do not know; she went her way without a word.

ROBERT came to me in great trouble the other day. Lady G. had requested him to call upon her. He did call, and received an answer to his card, that she was tired and could receive no one. Meantime, Lady G. waited impatiently to see ROBERT. He did not come. What could be the reason? She had deferred other matters, expecting to meet him. A day or two after, she wrote him, upbraiding him for neglect, and saying she thought that he might have sent an excuse, at least. Here were two hurt and indignant friends—ROBERT, that he should have foregone other engagements and got rebuffed; Lady G., that she was of so little account as to be thought unworthy even an apology from her friend. ROBERT asked me what I thought about it. I suggested there might have been two Lady G.'s in the same house. Investigation proved that I was correct, though neither knew the other.

I mention this little incident to illustrate how circumstances separate lives, alienate friends, destroy friendships, beget anxieties, heart burnings, jealousies, resentments, unhappiness, when there is really no reason for such results. Thus men and women lose faith and trust in each other, when both are innocent and true. Thus fends generate from no real cause. Thus lives are blighted that might have been ever green. Thus Hope is paralyzed when it should have been strongest. There is such a condition of mind as one that is too sensitive to be just. There are hearts that demand a loyalty which, in its demonstrations, is impracticable, ignoring the existence of a higher loyalty that trusts implicitly and loses faith never. We are all of us far too willing to believe what will make us miserable, and are not loyal enough to that sweet Charity which beareth all things, believeth all things, hopeth all things, endureth all things, and which *never fails!*

WHAT IT IS TO BE A WIDOW.

"I think it must be a jolly thing to be a young widow!" I heard this remark the other day in a group of laughing girls. I think I remember saying such a thing myself in my girlish times. Do you know, girls, what it is to be a widow? It is to be ten times more open to comment and criticism than any demoiselle could possibly be. It is to have men gaze as you pass, first at your black dress and then at your widow's cap, until your sensitive nerves quiver under the infliction. It is to have one ill-natured person say, "I wonder how long she will wait before she marries again?" and another answer, "until she gets a good chance, I suppose." It is now and then to meet the glance of real sympathy, generally from the poorest and humblest woman that you meet, and feel your eyes fill at the token, so rare that it is, alas! unlooked for. It is to have your dear fashionable friends console you after the following fashion:—"Oh, well, it is a dreadful loss. We knew you'd feel it, dear." And, in the next breath, "You will be sure to marry again, and your widow's cap is very becoming to you."

But it is more than this to be a widow. It is to miss the strong arm you have leaned upon, the true faith that you knew could never fail you, though all the world might forsake you. It is to miss the dear voice that uttered your name with a tenderness that none other could give it. It is to hear no more the well-known footsteps that you flew so gladly once to meet. To see no more the face that to your adoring eyes seemed as the angels of God. To feel no more the twining arms that folded you so lovingly; the dear eyes that, looking into your own, said plainly, whatever it might seem to others, yours was the fairest face earth held for him. It is to fight with a mighty sorrow as a man fights with the waves that overwhelm him, and to hold it at arm's length for awhile only to have—in the hours of loneliness and weakness—the torrent roll over you, while—poor storm-driven dove—you see no haven.—*New York Home Journal.*

NERVOUS OR SICK HEADACHE can generally be cured, if taken in time, by the use of bromide of potassium. When the attack is felt to be coming on, take twenty grains of the bromide dissolved in water; go to bed and sleep two or three hours and you are cured. Sometimes it may be necessary to repeat the dose, which may be done, in two or three hours. The bromide is perfectly harmless, unless taken in very large doses. There will be no danger in taking twenty grains every two hours, until you have taken three doses. But most cases, if taken in hand early, will need only one, or at most two doses.

IF we are willing to brave danger just as much under an indulgent system as under constant toil, and by spontaneous courage as under force of law, we are gainers in the end by not vexing ourselves beforehand with sufferings to come.—*Pericles.*

Reading for the Young.

ROME WASN'T BUILT IN A DAY.

THE boy who does a stroke and stops
Will ne'er a great man be;
'Tis the aggregate of single drops
That makes the sea the sea.

The mountain was not at its birth
A mountain, so to speak;
The little atoms of sand and earth
Have made its peak a peak.

Not all at once the morning streams
The gold above the gray;
'Tis a thousand little yellow gleams
That make the day the day.

Not from the snow-drift May awakes,
In purples, reds and greens;
Spring's whole bright retinue it takes
To make her queen of queens.

Upon the orchard rain must fall
And soak from branch to root,
And blossoms bloom and fade withal
Before the fruit is fruit.

The farmer needs must sow and till,
And wait the wheaten bread;
Then cradle, thresh and go to mill,
Before the bread is bread.

Swift heels may get the early shout,
But spite of all the din,
It is the patient holding out
That makes the winner win.

Make this your motto, then, at start,
'Twill help to smooth the way;
And steady up both hand and heart,
"Rome wasn't built in a day!"

[*Alice Cary.*

LETTERS TO YOUNG RURALISTS.—VIII.

FROM COUSIN JOHNNIE.

MY little cousin, MARTHA A. W., has given a very good "grown up" answer to the question, "What is Education?"—and though I would rather have had her own childish idea of it, in her own words, I thank her for trying to do her best. She is mistaken, however, in thinking my education is finished. Though I am—well, never mind how old, MARTHA—I am being educated every day. The mental discipline which I underwent at school, and which you are now undergoing, was simply a preparation for future education, but yet as *necessary* as plowing and enriching the ground is to raising any production of the soil. So do not think when you leave school that your education is finished either. Look upon it as just begun, and do not let any opportunity for gaining information escape you. The more you learn, the more you will see how much there is yet to learn, and that education, in this life, can *never* be finished. But there, my dear, I have given you enough "dry" remarks for you to digest this time.

There is nothing that I should like better than to ride with you on horseback, but alas, I was never on a horse but once, and then one person led him and another held me on! Neither do I spin, MARTHA; neither have I ever seen any one spin; neither have I ever *seen* a spinning wheel! so tell me all about it next time. I do not believe we are too far apart ever to meet. You are at Jerusalem I believe, eight miles from Albany, and I am at Matuwan, New Jersey. Now, as I am very often in the city of New York, and you, I dare say, are sometimes too, we might some day try and meet there.

I am very sorry to hear WILLIE A. H. is so afflicted; but I trust his prayer will soon be answered and his hearing restored. In the meantime, he must try and be very patient, remembering that this trial may be sent to him by a loving Father.

I hope none of my little cousins have been tempted by the warm weather to go in swimming yet; and that they will not think of going before June. Two days ago I stood by the coffin of a fine boy of fifteen, whom I had loved very dearly, and who, while swimming on the thirteenth of May, was seized with cramps, and drowned. So you see my dear children, I have good reason for giving you such advice.

And now, with a wish that I could see EFFIE'S picture of the eight sisters, I must bid my little cousins good-by for this time.

SENSIBLE THOUGHTS ON FARM LIFE.

BY A WISCONSIN GIRL.

A BOY who assists an agent in putting up lightning rods, remarked, the other day, that he would not work on a farm for fifty dollars a month—meaning, I suppose, that he would not work there for any consideration whatever. Now, is farm life so *very* disgraceful, or is it thought to be all drudgery, with no enjoyment, that so many, of both sexes, shun it and seek for employment elsewhere? I know from experience that it is a life of labor. Father earned his bread by the sweat of his brow, and by hard labor he secured a comfortable home for his family, so that his children have never endured the privations which were his lot in early life; yet he did not bring us up in idleness. My parents believed that girls, as well as boys, were intended to be useful, so I was brought up to work—not only helping mother in the kitchen with the baking, washing, churning, and numerous other things which make up daily life on a farm, but also milking cows, gardening, and in busy seasons lending a helping hand in the field.

Every day brings work to be done at our house, and my life is a busy one; yet I love the country, and the old homestead is the dearest place in the world to me. I think I find as much real enjoyment, here on the farm, as do many others who have less and easier work to do. There is pleasure in rising before the sun these beautiful mornings, even though it is to begin a hard day's work. I enjoy watching the plants and flowers grow, and wandering through the fields and woods in search of berries, wild grapes, plums and nuts, which grow in abundance on our farm. Oftentimes when returning from the fields, I have paused on the summit of the hill, just back of the house, and gazed with unalloyed pleasure on the surrounding scenery; though tired and weary, I have felt at such times that it is a joy to live in this beautiful world. When the crops are stored away and winter brings a little leisure, my great delight then is in taking sleigh rides to the weekly singing school. Sometimes I sigh for the advantages which the town affords, yet I could hardly relinquish my simple country life, with its pleasure and toil, for a life of ease in the city. Others may seek for happiness away from the farm, but I am content to remain a WISCONSIN FARMER'S DAUGHTER.

The Puzzler.

ILLUSTRATED REBUS.—No. 23.

☞ Answer in two weeks, when we will publish the names of those sending us correct answers.

PROBLEM.—No. 8.

AN island in a certain lake is a frustrum of a cone, the top diameter being 500 feet. If from the center of said diameter a balloon should ascend and be held by a rope 1,000 feet in length, when the rope is tight and forming an angle of 45 degrees with the point of elevation, a cannon ball let fall from the balloon would strike the water, 50 feet from the island, at the end of 10 seconds; if the upper part of the island should be cut away and placed about its base so as to form a square island, having a uniform elevation of five feet above the surface of the water, what would the area of the island thus formed be, the average depth of water about the island being 15 feet. WM. H. HULE.

☞ Answer in two weeks, with the names of those who send correct answers.

ORNITHOLOGICAL ENIGMA.—No. 1.

I AM composed of eighteen letters:
My 7, 2, 9 is a large water fowl.
My 5, 1, 11, 12, 2, 14, 8 is a marine bird that cannot fly.
My 4, 15, 15, 10, 13, 18, 7, 12, 17 is an unclean bird, mentioned in Leviticus and Deuteronomy.
My 16, 6, 8, 16, 7, 3, 3, 14, 6, 3 is a species of hawk or kite.
My whole is a bird of plumage. J. A. COX.

PUZZLER ANSWERS.—May 25.

ILLUSTRATED REBUS NO. 21.—Arizona. No answers have been received to this rebus.

PUZZLE NO. 4.—1, Ants; 2, Tars; 3, Rats; 4, Stars.

BIOGRAPHICAL ENIGMA NO. 1.—The heavens declare the glory of God, and the firmament showeth His handiwork.

News of the Week.

GENERAL REVIEW.

THE Senate has advised the President to negotiate for a supplementary article to the Washington Treaty. The article was modified to meet the views of the Senate, and was then telegraphed to London. The 30th ult. rumor said it was unacceptable to the English Cabinet.... There has been a dissolution of the Spanish Ministry....An effort is being made to pass the Ku-Klux act in Congress...All the Republican State Conventions indorse Gen. Grant, and send delegates to Philadelphia.... It is now conceded that the Democrats at Baltimore will nominate Horace Greeley....James Gordon Bennett is dying... A number of tornadoes are reported... Several steamships have been wrecked....Fred. Grant has been presented to the Czar....The eight-hour strikes are extending all over the country. They have been successful in New York and Brooklyn.

DOMESTIC NEWS.

New York City and Vicinity.

FROM six to ten thousand people assembled in Central Park, on May 23d, to dedicate the statue of Shakspeare; Mr. Bryant made the oration, and Edwin Booth recited a poem by Stoddard....The 8-hour strikes continue, and have extended to all branches of industry....The next Methodist General Conference will meet in St. Louis ..The will of Prof. Morse has been made public; he gives $10,000 to charitable institutions....The Tribune's exposure of those who adulterate their milk has had a good effect, and produced a marked sensation....The eight new Methodist Bishops were consecrated in the Brooklyn Academy of Music, May 25th; the ceremony was imposing ... The Methodist Book Concern war rages bitterly in the papers; J. F. Porter has published a stinging reply to Dr. Lanahan ...On May 25th, it was estimated that 30,000 men were on strike for eight hours....Railway men have held a conference at the St. Nicholas to agree upon a freight tariff....Unusual preparations are being made for the expected approach of cholera....The marble-cutters, upholsterers, piano-makers, and painters, have struck for eight hours....On May 25th, ann Robert L. Crawford, brother-in-law of Commodore Vanderbilt, in an affray, shot a policeman and a citizen, wounding them seriously; he has been admitted to bail in the sum of $25,000....On May 25th, Paul E Lowe, son of ex-Governor Lowe, of Maryland, shot three men soon after leaving a brothel on Mercer street; the men are seriously wounded ...Thieving is on the increase....The purity of the Croton water has been established. ....Ebenezer Crawford committed suicide on the 27th ult....An eight-hour mass meeting was held, on May 28th, in City Hall Park; the movement is everywhere a success; workingmen's leagues are to be formed all over the country; in Brooklyn, the fire bells will strike at 8 A.M. and 5 P.M.; all contracts for city work are to be made on the eight-hour basis....The 10,000 men employed on the public parks and boulevards will strike for eight hours....The Committee of Seventy has issued another address .. Forty thousand Sunday-school children in Brooklyn took their May walk on May 28th. ....The coffin-makers are on a strike....The 30th ult. James Gordon Bennett, of the Herald, was at the point of death... Mount Sinai Hospital was dedicated on May 29th....Henry G. Stebbins, President of the Park Department, has resigned....The Society of Friends is holding its yearly meeting.

Political.

IT is probable the Ku-Klux bill and Mr. Sumner's Civil Rights bill will not pass the House....All votes for Representatives in Congress are hereafter to be printed or written, Single laws to the contrary....The House has granted a pension to Mrs. Farragut....A bill to abolish the Iron-Clad oath has been introduced into the Senate ...The Civil Appropriation bill has passed the House. ..Arkansas Republicans have endorsed Cincinnati....Confederate Gen. J. D. Imboden endorses Greeley.....New Jersey and West Virginia have endorsed Grant. ..The Workingmen's Central Union of New York have nominated Grant and Wilson....The Post-office Appropriation bill has been agreed to in the Senate....Senator Ferry of Connecticut is out with a letter in support of the Administration ....Senator Logan of Illinois supports Grant.... The Senate approved the Supplementary article to the Washington Treaty on the 25th, by a vote of 42 to 9 An extra session of the Senate may be called to ratify the Treaty... Col. Mosby is said to have dined with the President... The Tribune thinks the Senate has fallen below the House of Representatives in character.. ..A large number of private bills have passed the House of Representatives ... Gov. Hoffman has signed the Poughkeepsie Hudson River Bridge bill ...New York free traders have issued a call for a meeting to protest against Cincinnati..... Hon. D. W. Voorhees has taken the stump in Indiana against Greeley....Theodore Tilton has taken the stump for Greeley....It is said that many important campaign reports of the late war have been taken from the War Department .....Rumor says Congress will continue the President's power to suspend the *habeas corpus* ....All the petitions sent to Congress respecting God in the Constitution and a National Prohibitory law have been reported upon adversely.... A delegation of Sioux Indians has arrived in Washington....Senator Sumner favors the Eight Hour law....Wendell Phillips and Fred Douglass oppose Greeley. ..Red Cloud and some other Indians visited the White House on the 28th ult. Thirty-four States have endorsed Grant, and eleven have voted for the nomination of Colfax ...A Grant club has been organized in Philadelphia....The Committee of Seventy say the city of New York is left in a much worse condition than before the meeting of the Legislature. So much for "Reform." ...The furniture of the famous Americus Club is to be sold for debt.... Joel Benton is for Greeley....The Ku-Klux bill has been defeated in the House. ..The scheme of putting the Ku-Klux bill through Congress has not yet been given up....Collector Casey has not yet given up his position in New Orleans, because no one has been found to succeed him....The Labor Reformers met in convention in Boston on the 25th ult....There is reported another hitch in the Washington Treaty. England is unable to understand the Senate's amendments to the Supplementary Article.

Disasters.

DURING a fire at Ithaca, N. Y., on the 24th of May, a bridge over Fall Creek, crowded with people, fell 20 feet into the water. Fifteen persons were badly injured, some of them students of Cornell University....The bark Atlanta recently arrived in New York from Bremen, with 475 passengers on board. Thirty-two died during the voyage from smallpox, measles and scarlet fever....Tornadoes, with much damage to property, are reported in Ohio, Iowa and Illinois....The tug boat Epsilon exploded on the 27th, ult., foot of Maiden Lane, East River, N. Y. Two men were instantly killed, and many were wounded....A boiler in some bleaching works on Crease St, Philadelphia, exploded on the 27th ult., killing a man and girl, and wounding many....Reports of a great disaster to the shipping at New Foundland prove to be false. Only two steamers, two brigs, and a few coasting schooners were lost. The steamers Cambria and Emperor have been wrecked on the coast of Nova Scotia.

Fires.

DRUGSTORE in Toledo, O., on the 22d; loss $30,000....A part of the town of Mannington, W. Va., on the 23d ult.; loss $18,000....The safe manufactory of Marvin & Co., 27th St., N. Y. City, was burned on the 24th ult.; loss $95,000....Silk factory near Union Hill, N. J., on the 24th ult.; loss $50,000....Faber's pencil factory in N. Y. City was destroyed on the 29th of May.

Miscellaneous Home News.

THE Centennial Exhibition will open on the 19th of April, 1876, and close on the 19th of October....The American Institute of Homeopathy will meet in Cleveland, O., in 1873....It is said that 2,000 hostile Indians will oppose the building of the Northern Pacific R. R., this Summer ....Two coal mines of the Delaware and Hudson Company have suspended operations to reduce the supply of coal....A tornado in Nebraska on the 29th ult., did much damage....The Yale Boat Club had its barge race on the 29th ult....A Grand Temple of Honor was held in Albany on the 29th ult.

Obituaries.

PROF. ALBERT HOPKINS of Williams College, after a long sickness, on the 24th ult.... Baron Bulwer, known as Sir Henry Lytton Bulwer, brother of the author, died on the 26th ult. in London ..The Duke of Bedford died on the 27th ult., in England....Daniel Webster Appleton, a grand-son of the great statesman....The Archduchess Sophia, mother of the Emperor of Austria, died on the 28th ult., of typhoid fever. She was mother of the unfortunate Emperor of Mexico.

Crimes.

A WOMAN named Gallagher has been killed in New York by one Clifford....In a shooting affray near Wellsville, Ohio, between detectives and counterfeiters, one G. Tyler jumped into the Ohio, and was drowned....Robert Fuller of Troy, O., shot his wife and himself on the 26th.

Valmaseda offered pardon to all Cuban insurgents who surrendered before May 30th,...The revolutionists have had a success in Mexico....There have been great floods in Bohemia, near Prague....The clerks of Havana are demanding their liberty on Sunday ... The steamer Edgar Stuart has escaped from the American and Spanish gunboats, and appeared off the coast of Cuba.

SEMI-BUSINESS PARAGRAPHS.

The Best Fork, Grapple, etc., for depositing hay or grain in barn, or on stack, is what A. J. NELLIS & Co., Pittsburgh, Pa., claim to have. See their advertisement on page 385.

Lyon's Kathairon.—This matchless preparation not only keeps the hair alive and the skin of the head in a healthy and clean condition, but actually multiplies the filaments and imparts to them a luster, flexibility and wavy beauty unattainable by any other mode of treatment. It does not, like the metallic and sulphurous hair dyes, dry up the natural moisture of the scalp, but supplies nutriment to the roots of the hair.

Watch No. 24061, Stem Winder—bearing Trade Mark "United States Watch Co., Marion, N. J."—manufactured by United States Watch Co., (Giles, Wales & Co.,) has been carried by me three months; its total variation from mean time being one second.—NOAH D. PAYNE, Publisher Providence, (R. I.) Herald.

Facts for the Ladies.—Mrs. S. W. Clark, Washington, D. C., with a Wheeler & Wilson Lock-Stitch Machine, used her first needle, No. 2, nearly three years, until it was worn out, doing all kinds of family and fancy sewing. See the new Improvements and Woods' Lock-Stitch Ripper.

Locusts do not equal traveling agents in devouring *green* things. We do not employ them; thus such low prices. Scales sold on trial anywhere in the United States. THE JONES SCALE WORKS, Binghamton, N. Y.

Butter made in the Blanchard Churn commands the highest price, as the buttermilk is sure to be worked out more thoroughly than it can possibly be by hand. Expert butter buyers well know this.

THE MARKETS.

MONEY AND TRADE AFFAIRS.

NEW YORK, Saturday, June 1, 1872.

THERE is a fair general trade for the close of May going forward in this market. There will be some backwardness in the Summer demand for certain articles of Foreign Merchandise, affected by the duties to come off on first of July. The general Tariff revision has not yet been perfected in Congress, but it seems to be concluded that the new bill, whatever it may be, will go into operation the same day as the free tax on Tea and Coffee. The proposed reduction on most staple manufactures is one-tenth of the present duties. On Coal, Salt, and perhaps Lumber and Leather, the reduction will be larger, and the free list will be enlarged. Congress is expected to adjourn in a few days.

Owing to the very light receipts and small stocks of Cotton, the price has gone up about two cents a pound for June, July and August deliveries. The crop will wind up 31st August about 3,050,000 or 3,100,000 bales.

There is increased ease in the supply of Money on temporary loan, and the rates are below 7 per cent, on most transactions among the Stock Brokers. Prime Merchant paper of moderate dates is going at 6@7 per cent. per annum. The Bank return shows a further accession of five millions deposits, of which three millions are in Gold and Greenbacks.

The speculation in Stocks may be called bearish—that is, the majority of the Brokers are operating on the calculation of lower figures as we go into the Summer months. Against this feeling, however, is cheaper Money and excellent Railroad traffic, to which the prospect of good crops holds out encouragement throughout the season. The increase of traffic in May, over the same month last year, on the New York and most of the Western Roads, is 12½ to 20 per cent.

The following are the comparative movements of the City Banks for the past fortnight:

	May 18.	May 25.
Capital	$87,154,000	$87,154,000
Loans	285,914,400	283,631,100
Gold and Greenbacks	69,115,700	72,315,500
Deposits	219,267,600	222,351,800
Circulation	27,538,400	27,545,300

PRICE OF STOCKS AND BONDS.

American Gold	114	N. Y. Central Scrip	93
U. S. 5-20's of 1867	117¾	Rock Island	110¼
U. S. 6s of 1881	119¾	N. West	73¾
U. S. 10-40s, 5 ₱ cts	112¾	Do. Preferred	92½
U. S. New Loan	113	St. Paul	57⅝
N. Y. Bounty Loan	109¾	Do. Preferred	78¼
Tennessees	73	Lake Shore	95
Virginias, new	56	Ohio and Mississippi	46¾
Missouri Bonds	96¼	Toledo & Wabash	75
U. S. Currency 6s	117½	Erie	54
Central Pacifics	101½	Union Pacific Stock	38¾
Union do	93	Adams Express	96
Western Telegraph	74½	American Express	78
Pacific Mail	74½	United States Exp's	84
N. Y. Central Stock	96¾	Bills on London	109¾

The Share list is generally lower than last week, on our present table. The market is weakened by the unsettled Treaty question, and by large and persistent bearish sales for a further decline. At the close the feeling is somewhat better, but the changes in prices, since last week, are, on New York Central, 1¼ per cent.; Rock Island, 1; Northwest, 2; Ohios, 1¾; Erie, 5; Union Pacific, 1¼; Lake Shore, ⅝; on the Express Stocks, 2@2½ per cent. The Government Stocks continue firm and the Pacific Mortgages (all dealt in abroad,) are higher, denoting no real trouble growing out of the delay about the Treaty. Gold is steady, buyers for a rise failing to make much out of the Treaty. Pacific Mail and Western Telegraph are 3 per cent. lower.

PRODUCE AND PROVISIONS.

NEW YORK, Friday, May 31, 1872.

Receipts.—The receipts of the principal kinds of produce since our last embrace 6,824 bales of cotton; dried fruits, 100 pkgs.; eggs, 14,068 bbls.; flour, 72,778 bbl.; wheat, 552,518 bush.; corn, 891,518 do.; oats, 425,894 do.; barley, 96,209 do.; grass seed, 25 bags; hops, 130 bales; beans, 210 bbls.; pork, 3,911 pkgs.; cut meats, 3,574 do.; lard, 2,733; kegs do., 350; butter, 12,976 pkgs.; cheese, 21,357 do.; peanuts, 968 bags; 1,316 hhds. tobacco; 8,331 pkgs do.; 3,419 bbls. whisky; 1,373 bales wool; corn meal, bbls, 1,553; do. bags, 1,334; rye, bu., 52,325; malt do., 35,448; beef, pkgs., 68.

Beans and Peas.—Several lots of German beans have arrived and have weakened the market for mediums. Marrowfats meet with some speculative attention; the stock is well controlled. Other descriptions are in light stock and steadily held. The quotations are for prime mediums $3.35@3.40, with fair lots at $3.30@3.00. Prime marrowfats $3.65@3.75, with lots $3@3.15. Kidney $3.40@3.50; red kidney $2.25 @3. Peas, both Canada and green, sell slowly. Canada quoted at $1.18@1.20; green at $1.90@2, barreled lots.

Beeswax.—Recent fair arrivals have been well worked up, and prices are again higher. Sales of Southern at 41c.

Butter.—There is an easy feeling in butter this week partly attributable to the presence and promise of a fair supply of Western, the quality of which suits the rapid retail trade of market men. Again, the general quality of receipts from all points now render it less requisite for buyers to keep a daily look-out for fine grades. The Eastern and other out of town demand has temporarily subsided, as pasture brings in a better local supply for these places. Our prices show a decline for State Welsh and half tubs. Pails have dropped to 30c. Choice Western is a little higher, but the quality is greatly in buyer's favor.

State pails, fine, 30c.; do. common to fair, 25@27c.; State half tubs, fine, 28@30c.; selections, 31c.; Welsh, packages, fine, 28@29c.; common State, 23@26c. Western ranges at 26@28c. for nice Western reserve; common Western, 22c. Grease and inferior, 7@15c.

A few Western firkins, all yellow, have sold for Southern shipment at 30c., but the market for them is not strong at the price.

Cotton.—The market is is a little firmer, owing mainly to a fair inquiry for stock to use on contracts. There is a little better inquiry from shippers.

	Uplands.	Alabama.	N. Orleans.	Texas.
Ordinary	20¾	20¾	20¾	20¾
Good Ordinary	23⅜	23⅜	23⅜	23⅜
Low Middling	25⅜	25⅜	25⅜	25⅜
Middling	26¾	26¾	26¾	26¾
Good Middling	27¾	27¾	27¾	27¾

For forward delivery prices are firm. Latest sales at 25⅝c. for June, 26c. for July, 25⅝c. for Aug., 23½c. for Sept., 21c. for Oct., 20c. for Nov., 19½c. for Dec., on the basis of low middling.

Cheese.—The cable quotes a further advance in prices, but the price abroad is hardly high enough to admit of free business from exporters at the current quotations. The tone of the sales in the interior gives confidence to holders here, and they will not part with supplies unless at full prices. The arrivals are larger, and ahead of this period last year, but they have been pretty well worked up. We quote prime State factory, 14½@14¾c.; good do., down to 13½c.; do. skimmed, 5@10c.; Ohio factory, prime, 13c.; do. common, 9c. Dairy at 13¼c. for prime, 12c. good, and 6@10c. for common.

Dried Fruits.—Apples are firm, with a fair local trade. Peaches are steady for peeled; unpeeled are decidedly lower, offered freely at 5c. for quarters and 7c. for halves. Blackberries are quiet, at 13c., which is easier.

Apples—Old State, qrs., 6@7c.; Western, new, 10@10½c.; Southern, new, qrs., 9@9½c.; do. fine, sliced, 12@13c.; new State qrs., 11@11½c.; do. sliced, fine, 13@14c.; Peaches, peeled, new N. C., 17@18½c.; do. Ga., 15@16½c.; peeled E. Sh. Va., 16@17c.; new unpeeled halves, 7c.; do. quarters, 5c. Plums, 27@28c. Cherries, new, ₱ lb., 33@34c. Blackberries, 13@13¼c. Raspberries 33@35c.

Eggs.—There is a better tone to the market, although no marked changes have occurred in prices. Receipts have been lighter, and this has given holders a chance to work some off the accumulated stock. For parcels from near points relatively higher prices are quoted. Sales at 15@16c. for Western, 16@16½c. for State, and 17@18c. for Jersey.

Flour.—The recent advance in prices has been pretty well lost the past week. The orders from the other side have been unimportant. The business from the home trade has been small. Stocks have accumulated materially, and the market, at the close, was weak.. The quotations are $6.10@6.65 for superfine State; $7.10@7.40 for common extra do.; $7.45@7.50 for good to choice do.; $7.55@8.00 for fancy do.; $6.00@6.60 for superfine Michigan, Indiana, Ohio, Iowa, &c.; $7.00@7.60 for extra do.; $7.65@8.50 for choice extra do., including shipping brands of round hoop Ohio at $7.40@8.00, and trade brands of do. at $8.05@9.75; good to choice white wheat extras at $8.55@10.00; Minnesota, fair to very choice extra, at $7.25@10.50; St. Louis at $8.75@10.50 for common to fair extra, and $10.55@12.00 for good to choice. Southern at $8.00@10.50 for extras and $10.55@13.00 for good to choice. Rye at $4.50@5.75 for common to fair. Jersey corn meal, $3.65.

Fresh Fruits.—The increase of Southern Strawberry gardeners is immense this season. There has been really a glut of berries one or two days since our last, and when the stock arrived late the range of prices was very unsettled. Fine Delaware and Maryland seedlings have sold as low as 10@15c. To-day the general quotation is 16@18c. A few N. J. small baskets are quoted at 5@6c. Southern cherries and gooseberries are offering, but are slow of sale at this date. Cherries quoted at 20@22c. for prime, and 12@15c. for inferior. Gooseberries, small, $4@4.50 ₱ bush. For apples there is no prospect of improvement now that the variety of fruit is larger. Peanuts are lower. Common Wilmington, $1.25; for choice $2 is extreme.

Grain.—Wheat is held 3@5c. higher, with some business at the advance. The arrivals are moderate, and there is not much afloat on the canals. No. 2, in store, $1.68@1.70; No. 1 do., $1.75@1.77; winter red Western, $1.90@2.00; amber Western, $2.05@2.10; and white Western at $2.00@2.15. Rye is lower, quoted at 95c. for Western. Oats have been coming in freely, and have sold lower. Quoted at 58c. for Western afloat, 57@58c. for Ohio, 55½c. for State. Barley is entirely nominal. Malt at $1.50 for two-rowed State, and $1.20 for four-rowed do. Corn meets with a good export trade at firm prices. Sales at 70@72½c. for Western mixed, 75c. for old Western mixed and yellow. Sales for July at 68¼c., and for August, 69c.

Hay and Straw.—Farmers have been sending forward their supplies pretty freely to market the past week in order to realize as near the top of the market as possible, and they are enabled to do this on account of the benefits to the crop from the recent rains. The result is we have a very fair stock and shippers here have refused to purchase unless at material concessions—10 off from last week's figures; the market closed weak. Sales at $1.00 for shipping, and $1.70@1.85 for retail qualities. Clover, $1.15. Salt, 95c.@$1. Straw at $1.20@1.30 for long rye; $1.00@1.10 for short rye; 95c.@$1.05 for oat; 70@75c. for wheat.

Hops.—Sales are small of domestic, owing to a lack of suitable qualities. Fine foreign brings good prices. Sale prime State at 55@56c.; prime Eastern, 55@60. Bavarians 65@75c.; English, 100@65c.

Milk.—Receipts continue heavy, and prices have averaged low, 9½c. ₱ can for week ending Tuesday last. The milk agent of the Harlem Road, Mr. F. T. Hopkins, speaks thus of the trade in the Tribune: "Milk has not been so plenty during the past four years, especially on the Harlem Road. Farmers are holding back somewhat on the other roads, and they should do so on this. One can per day held back by each farmer and made into butter would relieve the market of the present glut, and help sustain the prices. Cans are less safe when held and scattered about as they generally are in a glutted market. Beside falling to 60c. per can to-day, there were 300 cans left unsold at the Harlem depot."

Provisions.—Pork is much lower and weak owing to large receipts of hogs at the West. Mess for spot delivery $13.25; $13.30 for June; 13.40 for July; $13.65 for Aug. Prime mess, $12.75@13; extra prime, $11. Dressed hogs weak, at 5½@6c.; middles are held too high for shippers; short clear, 8¾@8¾c.; long clear 7¾c. Cut meats are inactive, quoted at 9¾@10¾c. for hams in pickle; 9@10¾c. for do., in salt, 5¾@5¾c. for shoulders in salt; 5¾@5¾c. for do. in pickle. Smoked meats sell in a small way at 10¾@13c. for hams; 6@6¾c. for shoulders; 8@8¾c. for clear rib. Lard is in the buyer's favor, with a dull trade. Western steam, 9¾c. for spot; 9¾c. for Aug. Stearine is steadily held at 9¾@10c. Beef, plain Western mess, $7.50@9.50 and extra mess, $10@12.; prime mess, $14@17, and India mess, $17@20. Beef hams at $25@26.

Poultry and Game.—This is a very poor time for this trade. Live turkeys are down to 15@16c., and they can scarcely be sold at this price. Pigeons bring $1.75 per doz. for feathered, and $1.75@1.88 for picked. The quotations are:—Live, State and N. J. fowls and chickens, 18@19c.; do. Western 17@18c.; roosters, 9@10c.; turkeys, 15@16c.; ducks, Western, per pair, 85c.@1.00; Geese, Western, $1.62@1.75; spring chicks, 75@$1.12.

Seeds.—There are no receipts of grass, and, with a small accumulated stock, prices are in the seller's favor, notwithstanding the demand is limited. We quote Ohio clover at 9¼@9¾c.; Michigan and Indiana at 9¾@10c.; State do. at 10¾c. Timothy at $3@3.40.

Tallow.—The offerings are small, and prices are in the seller's favor. Prime city, 9¾c.; prime Western, 9 9-16c.

Tobacco.—The sales of Kentucky are confined to the home trade, at 8@14¼c. Seed leaf sells freely to shippers. Latest sales are of new crop State, 9¼@11¾c., new crop Pennsylvania, 15@17c., do. Ohio, 10½@11¾c., do. Wisconsin, 8¾@9¾c.

Vegetables.—Green peas are coming in now pretty nearly from all directions, and prices are lower. The new potatoes coming in are mostly small, and sell low. Old potatoes are found in the market at lower prices.

Potatoes, Early Rose, bbl., for seed, $1.50@2.00; P. Blows, $1.50@1.75; Prince Albert, $1.50@1.75; Monitor and Goodrich, $1.25@1.50; Jackson, $1.50@1.75; Dyright, $1.50@2; sweet Del., $4.00@4.50. Onions, red and yellow, $1.00@1.50. Garlic, per 100 bunches, $2@21. Turnips, Russia, bbl., $1. Cabbages, per 100, $3@4. Beets per 100, $1.25. Carrots, per 100, $1.50. Bermuda potatoes, $8@8.50; do. tomatoes, 5-qt. crate, 90c.; do. onions, per crate, $1.00@1.25. Asparagus, N. J., per doz., 75c.@$1.00; do., Oyster Bay, $2@2.50. Peas, Va., bbl., 50c.@$1.50; do. N. J., $4. String beans, per crate, $2.25. Cucumbers, S. C., crate, $3@4. Turnips, N. J., 100 bunches, $6.

Wool.—There is no change in the market. Prime stock is held firmly, but common qualities are offered at prices in the buyer's favor. The demand is small. The attention of the trade is centered in the clip in the West. Farmers say they will not sell under 70@75c., and are not offering stock to any extent. Latest sales are at 77c. for XX fleeces, unwashed at 50c.; tubbed at 80c.

Whisky—Is lower. Sales of Western at 90c.

COUNTRY CHEESE MARKETS.

Little Falls, N. Y., June, 1, 1872.

THE market at Little Falls for the week ending June 1st has been brisk, with large offerings, amounting in the aggregate to 10,000 boxes, about 6,000 of which were sold.

The delivery of farm dairies numbered about 1,300 boxes, and prices ranged from 11c. to 13c. The bulk of sales going at 12½c. to 13¼c. The quality of farm dairies is steadily improving, the larger proporion of skims having gone forward. The factories were largely represented, and prices on an average were ¼c. better than last week. We give quotations as follows:
